prescribed. Bleeding is occasionally resorted to. Trephining was practised in the Polynesian Islands, and is met with in certain more western islands, *e.g.* Loyalty Island, Duke of York Island, Neu Mecklenburg (New Ireland), and in the Gazelle Peninsula of New Britain, for the relief of severe headache and epilepsy. Hot baths are often employed in Polynesia and in other islands, *e.g.* the Solomon Islands, the patient being wrapped in a cloth and seated over a pile of heated stones, which are covered with herbs and leaves. Fractured bones are set with splints of bamboo. Herbs are pounded, made into decoctions, and administered to the patient internally. Sometimes they are merely warmed in a coco-nut shell over the fire, and the steam therefrom, being applied to the patient, is expected to drive away the pain or the disease. Especially in Melanesia, into which the areca has been introduced from the Malay Archipelago where it is similarly valued, betel nut, betel leaves, and lime are considered powerful medicinal substances, both for internal and for outward application.

We have attempted to trace in vague outline various stages in the attitude of different Oceanic peoples towards disease. But, as we have already pointed out (p. 724[a]), a people, when passing to a higher plane, does not discard the beliefs of the lower, but carries them with it, perhaps adapting them to suit its further development. Thus the Hawaians, although they attribute disease to the gods, nevertheless believe that a sorcerer may be employed by a man to bring disease or death to his enemy. Consequently presents are made to the god, not only to appease his anger, but also to turn the disease back to the person who sent it (Ellis, *op. cit.* iv. 293). So the Samoan, despite his belief that disease is due to the wrath of a deity, protects his property by various tabus. For example, he may suspend a stick horizontally from one of his trees; this expresses 'the wish of the owner that any thief touching it might have a disease running right across his body, and remaining fixed there till he died' (Turner, *op. cit.* 186). Or he may bring some pieces of clam shell, 'erecting at the spot three or four reeds tied together at the top in a bunch like the head of a man' (*ib.*). This was recognized as expressing a wish that the thief might be seized with ulcerous sores. Thus punished, the thief would confess and make a present to the owner, who would send him in return some native herb as medicine.

We have already drawn attention to the Australian belief in the potency of human bones as a cause of disease. It is also met with in various parts of Melanesia and New Guinea. In the Banks Islands, where, as we have seen, illness is attributed to the ghosts of the deceased, a piece of human bone, belonging to the corpse of the ghost whose services are required, is applied to a fragment of food stolen from the victim. The whole is then 'charmed,' and allowed to decompose or to burn. In the same islands and in Florida (Solomon Islands) a piece of bamboo is stuffed with leaves, a dead man's bone, and other magical substances. The aggressor covers up the open end of the bamboo until he meets his foe, when he opens it and lets fly the magic influence against him (Codrington, *op. cit.* 204). So, too, among the Roro-speaking peoples of New Guinea (Seligmann, *op. cit.* 289) there is a widely spread belief that parts of newly dead bodies are of value in the preparation of charms, and amongst the Eastern Papuo-Melanesians about Milne Bay (*ib.* 551) sorcerers are supposed to open graves of the dead and to eat their bodies.

From the powers over disease attributed to the human dead we may pass to those attributed to living animals, chief among which is that of the snake. The most potent of evil spirits in the Gazelle Peninsula of New Britain preferably manifests itself in the form of a snake. The man who wishes to injure another cuts up sea snakes and mixes them with leaves, roots, lime, and something —*e.g.* hair, blood, or footprints—connected with the victim. He places the whole in a short piece of bamboo, mutters secret words over it, and throws it into the sea, or buries it in the bush (Kleintitschen, *op. cit.* 343). In Pentecost Island (New Hebrides) delirium is attributed to a *mae*, a mysterious snake, which can be removed from the patient if he sits over the smoke of a heated coco-nut husk into which the medicine-man has breathed his charm (Codrington, *op. cit.* 200). If the *mae* snake took away a piece of food into the place that was sacred to a spirit, the man who had eaten the rest of the food would become ill as the fragment decayed. Among the Roro-speaking tribes of New Guinea disease is commonly attributed to snakes and to certain magical stones. The sorcerer is thought to be able to extract a deadly stone from the black snake, and this stone kills every person who touches it. Even the sorcerer, it is said, takes care not to come into immediate contact with it. In order to obtain a snake-stone, the sorcerer fasts in the bush alone for a fortnight, his food being limited to roasted bananas. He is particularly careful to avoid the sight of women. Sooner or later he dreams of the whereabouts of a very poisonous snake. Protecting his limbs by means of bandages, he proceeds to find and then to worry the snake, and 'as it glides away, it exposes a small stone,' which he picks up by thrusting against it a kind of fishing-spear provided with numerous closely set points. It is dropped from the spear into a bamboo tube. The snake-stone is described as being the size of a filbert, and red-hot, hissing and losing its power if dropped into salt-water. The snake can be sent by the sorcerer to bite his victim, if it has been allowed to smell the clothes or some other object belonging to the latter (Seligmann, *op. cit.* 28).

The charming of any objects belonging to the victim is believed to play so important a part in producing disease, not only in Oceania, but over the greater part of the world, that it is only natural for primitive man to take every care lest cuttings from his hair, parings from his nails, refuse from his food, his expectoration, excretions, footprints, or clothing pass into the hands of his enemy. In New Britain, for example, one or other of these objects (*panait*) is used by the sorcerer (*papait*), who murmurs an incantation over it, burns it with lime, and blows it from his hand into the air (Parkinson, *op. cit.* 118). In Tana (New Hebrides) a sorcerer, on seeing a discarded banana-skin, will pick it up and wear it all day in a leaf hanging round his neck, thus frightening every one into thinking, 'He has got something; he will do for somebody by and by at night' (Turner, *op. cit.* 320). In Florida (Solomon Islands) a man could make another ill by secretly taking a morsel of the latter's food, and throwing it into a spot which was the known habitat of a certain ghost of the dead.

4. **Malay Archipelago.**—Let us now pass to another people culturally and physically most closely related to the Polynesians, among whom, in consequence, we may expect to find disease attributed to gods or spirits, and cured by the offering of prayer and sacrifices to them—the inhabitants of the Malay Archipelago. Thence it will be possible to pass to the Malay Peninsula, and to trace the native ideas of disease westward to the Indian, and northward to the Mongolian, peoples.

Among the various tribes, and in the various

islands of the Malay Archipelago, there is considerable diversity in their beliefs; but, generally speaking, their spiritual world may be described as inhabited by the souls of animals (*e.g.* hawks, fowls, pigs, etc.), by spirits of the river, home, etc., and by the gods of thunder, harvest, life, death, etc., one of whom may be supreme over the rest. Consequently, of the two main causes attributed in this region to disease, evil spirits are one; and the treatment consists in effecting the departure of the evil spirit either by the persuasions of prayers and sacrifices or by the more cogent means of magical charms (Timor, Celebes, Bali, Java, Sumatra). The ceremony is often attended with much noise of gong- and drum-beating. Commonly, *e.g.* in Borneo, Ceram, Timor Laut, Buro (cf. Frazer, *GB*[2], 1900, iii. 97 f.), the evil spirit or the disease—for it is difficult to separate cause from effect—is induced to enter a well-provisioned model boat, which is made to sail down the river, carrying its noxious burden out to sea. This custom of sending away the disease down river extends throughout the Malay Peninsula to Burma, Siam, Annam, and even to Ceylon. Among the Milano of Sarawak the ceremony is performed in the following way:

The medicine-man (*orang bayoh*), having decided which spirit (*antu*) is responsible for the disease, returns home and prepares a log of sago palm cut in the image of that *antu*. This image, or *dakan*, may be enclosed in the model of a house or a boat. The patient's room is decorated with coloured cloths, flowers of the areca palm, and leaves fantastically plaited to represent objects, especially birds. A swing of rattan is erected, and plaited leaves connect it with the receptacle containing the *dakan*, so that the spirit may enter the latter after having been summoned by the *orang bayoh* to the swing. Several people may successively mount the swing, swaying their bodies in every possible attitude, to the sound of drums played in the background. Himself swaying on the swing, the *orang bayoh* recites 'almost in a monotone an incantation in the old language, addressed to the spirit, begging him to come down and take the sickness out of the patient's body' (Lawrence and Hewitt, *JAI* xxxviii. [1908] 391). 'The whole incantation is a succession of appeals . . . to the spirits, who come gradually nearer and nearer until the chant addresses them as if they were just outside the house, and finally as though present in the room' (*ib.* 408). At length the medicine-man falls from the swing apparently insensible; and after recovery he crosses to the patient, muttering incantations, sprinkling yellow rice, and waving over him an areca flower. Whenever the swing is unoccupied, an areca flower is hung across it. Finally, the patient himself may be transferred to the swing, and now, when the long-besought spirit is declared to be present, the patient and the *orang bayoh* proceed to enter the boat or house, the latter spitting betel-nut juice on the *dakan*, pouring water over it, and then sprinkling the drops over the patient's body, still murmuring incantations. Next day the *dakan*, provided with *padi* and yellow rice and adorned with areca flowers, is taken in procession to a stream, where it is left to rot in its receptacle, except when the receptacle takes the form of a boat. In that case, the boat is decorated with flags, manned with a crew, and armed with cannon all of pith, and it is made to float down the river or towed out to sea. No Milano, save the *orang bayoh*, will dare to touch the *dakan* after the performance of this ceremony. Generally there is a 'sound, logical connection between the sickness and dakan used,' the spirits of the water being responsible for dysentery, those of the air for headache and fever, those of the jungle for malaria, swellings of the legs, and other diseases attendant on jungle life (*ib.* 393).

This account is interesting as showing the complexity of the ritual which may be attained in endeavouring to drive the evil into a boat, which is then floated out to sea. The ceremony in one form or another is spread, as we have stated, throughout the Malay-peopled countries; it is also found in the Solomon Islands, which perhaps it reached with the advent of the areca or betel-nut from Malaysia. The above account is also interesting, inasmuch as it introduces certain new features—the use of the swing in driving out the disease, the transference of the disease (or evil spirit) to an image, the swooning of the medicine-man, and the attribution of different diseases to different spirits or causes.

In some cases a more simple and less public form of treatment is observed. The *dakan*, after having been incarnated by the spirit (*antu*), is taken by the medicine-man into the jungle, or hung on a tree, *i.e.* in the air, or placed in the river, according as the spirit's real home is jungle, air, or water (*ib.* 390). In Amboyna a white cock is used, with which the patient is rubbed. It is then placed on a model boat and sent out to sea (Frazer, *GB*[2] iii. 99).

The swooning of the medicine-man brings us to another important feature in the cure of disease among primitive peoples. So far as we have considered the mental state of the individual at all, it has been that of the patient, not that of the doctor. It is true that in certain parts of New Guinea and Melanesia the medicine-man finds that his magic is more efficacious if he enters upon it in a fasting state or in other ways maltreats himself. But probably in these peoples there is not that mental instability which is to be found among the Malayan races, leading, under provocation, to loss of consciousness, auto-hypnosis, or other forms of change in 'personality,' such as are exemplified in running *amok* and in *látah*. The altered mental state of the medicine-man during his treatment of disease is well exemplified in the second of the two main ideas in regard to disease which prevail in the Malay Archipelago. One of these ideas we have already considered, viz. possession or visitation by an evil spirit. The other idea, also wide-spread throughout this region, extending to Burma, the Andaman Islands, Tibet, and Northern Asia (Tylor, *Primitive Culture*, 1873, i. 437), is that disease is due to a wandering of the soul. Just as in death the soul has finally left the body, so in sickness it is temporarily absent; therefore it has to be pursued and caught by the medicine-man. The writer happened to see this ceremony of catching the wandering soul during a chance evening stroll along one of the long verandahs of a house in Sarawak, Borneo. It has been picturesquely described elsewhere (Hose and McDougall, *JAI* xxxi. [1901] 184), and may be thus summarized:

The medicine-man, after chanting several verses with closed eyes, receives, in a dreamy state, his war-coat, shield, and sword (*parang*) from the hands of an assistant. With a short wand he sprinkles water on his *parang*, and then on each of the patients ranged before him. A young fowl is handed to him. Before cutting off its head, he prays its soul to take a message to the supreme god to remove all sickness and to preserve the people from harm. Then, waving the bird over each patient and murmuring some archaic formulæ, he kills it and sprinkles its blood over the patients. With a second fowl in his hand, he describes the wanderings of his own spirit, how he has to cross a great river, where finally he meets with the soul of one of his sick patients. He lays his fingers on the head of one of the patients, and at that moment the patient's soul is believed to re-enter his body. At the same time he ties a piece of rattan cord round the patient's right wrist, to confine the soul to the body. The same performance is repeated in the case of the other patients, and then the medicine-man, after further chanting, during which his own soul is returning to his body, ties a piece of the string round his own wrist. The second fowl is now killed, and the blood-stained *parang* is wiped on the arm of the patient, and is used to cut off the ends of the wrist-string. The chanting continues, until suddenly the medicine-man gives a slight stagger and recovers consciousness. During the ceremony he had been heedless of his surroundings; and, from experiments which the writer knows to have been made at other times on such medicine-men, the claim is probably correct.

The use of strings in the cure of disease (from which perhaps the unthinking use of ligatures was derived) extends over other parts of Oceania (*e.g.* Queensland) which we have already studied. In the Gazelle Peninsula of New Britain, threads are prepared and are charmed in order to cure and to prevent disease. For the former purpose, they are worn round the affected part; for the latter, round the neck (Parkinson, *op. cit.* 119).

In the Banks Islands, a charm consisting of 'a bit of human bone, a fragment of coral, a splinter of wood or of an arrow by which a man has died,' is bound up with leaves and placed in the victim's path to strike him with disease. This charm, called *talamatai*, depends for its efficacy on the tying and binding tight with fibre (Codrington, *op. cit.* 204). The use of archaic incantations is also common in these parts. Frequently, words which are not understood are borrowed from other tribes. We have already stated that a mau may

recognize his inability to cause disease, yet may fear the existence of that power in others. So, frequently a tribe may consider another tribe specially versed in the causation or treatment of disease, and may use its language or summon members of it to its aid.

In the Malay Archipelago, bits of wood, stones, or rags are sometimes drawn out of the patient's body, as demonstrating the cure of the disease. The medicine-man's chest will often contain curiously twisted roots, knotty sticks, pebbles, coloured marbles, pieces of quartz, etc., many of which, he claims, are revealed to him as medicines by benevolent spirits in his dreams. It is said that by means of the quartz crystal the medicine-man can diagnose the disease, see the soul, and catch it in its wanderings (Ling Roth, *Natives of Sarawak and British N. Borneo*, London, 1896, i. 273). Possibly this is another example of the susceptibility of the Malayan to auto-hypnosis (crystal-gazing).

Another important feature of Malayan medicine consists in the prominence of women doctors. There are instances of this feature throughout Oceania, but in certain parts of the Malay Archipelago it reaches its highest development. It is stated that in Borneo, for instance, at least in the past, a certain class of medicine-men, on adopting their profession, were emasculated, dressed in women's clothes, and thereafter treated as women (Ling Roth, *ib.* i. 270, 282). At the present day many cures in that country are undertaken by women, and most of the spirits invoked by the medicine-men receive the prefix *ini*, 'grandmother'—perhaps in accordance with the former importance of womanhood in the treatment of disease.

In the Malay Archipelago, betel-nut and pepper are the common outward remedies for almost any disease. Turmeric, honey, spices, and onions are taken internally. Cholera is treated by rubbing with *kayu putih* oil, and by water from certain sacred jars. Bleeding is practised; cupping is common—usually by means of a bamboo cane, the air within which is exhausted either by suction or by lighting a fire at the upper end. A wound may be cauterized by burning with a red-hot wire. A patient may be exposed to the smoke of a fire lighted below a bamboo grating on which he sits.

5. Malay Peninsula.—Coming now to the Malay Peninsula, we find that diseases become more distinctly personified as demons. Each disease *is* (not, is *caused by*) a different demon; the demons all arise from the thunder-god, who sends them by the winds, because of the sins of the people. There are ape-demons, black-dog-demons, tiger-demons, jungle- and river-demons, any one of which may cause disease. Certain new features, possibly of Indian or Chinese origin, begin to make their appearance here. Amulets now become important. Women obtain protection from disease by wearing combs, with inscribed patterns on them, and the patterns cause the disease-bearing wind to fall to the ground until the wearer has passed. A Semang woman may possess twenty or thirty such combs, which apparently depend for their efficacy on the particular pattern that they bear. The men's 'talismans are . . . incised on the quivers and charm-holders' (Skeat and Blagden, *Pagan Races of the Malay Peninsula*, London, 1906, i. 423). There is supposed to be some connexion between these patterns and the flowers which the good god, Ple, at one time allotted as remedies for the various diseases. The diseases were also thought to be laid by the winds on the parasitic plants of trees, between death and burial of the victims. Now, so runs the legend (which, however, must be accepted with caution), as new diseases have arisen since Ple dwelt on earth, and since the vegetable kingdom then apportioned by him to different diseases is exhausted, such illnesses as smallpox and cholera 'have no rest, but, as soon as they have killed one man, fall straightway upon another even before the soul of the first has left the body' (*ib.* ii. 212). Among the Mantra (of Malacca) also amulets are much in use; they are made of pieces of turmeric or other substance, strung on a shred of bark, and worn round the neck, wrists, or waist. The Sakai have bamboos decorated with magical patterns, which are kept from the public gaze (*ib.* ii. 252).

Incense is used in the Malay Peninsula. The Blandas of Selangor exorcize the evil demon by burning benzoin and invoking the spirits (*hantu*) of tigers or elephants or monkeys to enter the medicine-man's body. The patient lies on his back within a shelter of *nibong*-palm leaves. As soon as the spirit enters the medicine-man, he brushes the patient seven times from head to foot with certain leaves, repeating an incantation which evidently is intended to expel the demon from the body. Among the Sakai the invalid is similarly beaten with leaves, after a censer of burning benzoin has been swung over his couch. The object here is to drive the demon within a cage which is suspended over the head of the patient (*ib.* ii. 257).

Trees also assume more importance. Disease may be cured by removing roots and stumps which are suspected to be the home of the demon, and by casting saplings into the jungle so that evil spirits may accompany them.

Among all the peoples of Eastern Asia sticks are of great value for the treatment of and protection from disease. Thus among the Ainus the demons of disease are propitiated by making them what is called *inao*. An *inao* is a whittled wand; groups of *inao* are collectively called *misa*. They are sometimes worshipped as messengers to the gods; sometimes they are regarded as offerings to the gods; or they may be regarded as mere charms. 'So, when a person falls sick, the elders often meet together and make *inao* of this [willow] tree. After they have been worshipped they are taken out to the sacred place and stuck up among the *misa*' (J. Batchelor, *op. cit.* 88). Sticks of elder about four feet high are set up in a village for protection from a prevailing epidemic (see art. AINUS). So, too, in the Andaman Islands, when an epidemic occurs, the medicine-man, who is called *ôko-pai'ad* (lit. = dreamer), brandishing a burning log, bids the evil spirit retire, and plants before each hut stakes painted in stripes with black bees' wax, the smell of which helps to keep the demons at a distance (Man, *JAI* xii. [1883] 97). In the Malay Archipelago, sticks with fine shavings attached also play a similar part. Among the Tibeto-Burman peoples, a kind of arbour is erected before the sick man's house, made of grass and boughs supported on four poles, round which are hung little balls of split cane rolled tightly together. Strands of cane are stretched round the house from this arbour. The demons cannot pass through this barrier, consequently those already inside the house cannot be assisted by others from without (Shakespear, *JAI* xxxix. [1909] 378 f.).

6. Africa.—In Africa illness is commonly attributed either to the machinations of an enemy or—more usually perhaps—to resentment on the part of the ghost of a dead man owing to the disrespect with which he has been treated. In West Africa, apparently, it may even be one of the sick man's own spirits which thus vents his annoyance on the body (Tylor, ii. 130). Almost universally, before treatment is begun, the name of the ghost must be discovered. Among the Nandi, this takes place by divination. Some near relative is sent for, who takes four (for a woman, three) stalks of the castor

oil plant or of millet, and tries to stand each upright in a fragment of pot containing water, which is placed near the patient's bed. As he takes each stalk, he calls on one of the deceased relatives of the patient by name. When one of the stalks stands erect, he exclaims, 'I have got thee, O medicine-man,' and the patient solemnly kicks it over with his big toe. The stalks are distributed in various places in or around the house; a little mud or sand mixed with the water is smeared on the forehead and throat of the invalid; 'the rest, together with some eleusine grain, beer, and milk, is sprinkled between the bed and the door and also thrown outside the house,' the relative beseeching the ghost to depart in return for the food which is being offered it (A. C. Hollis, *The Nandi*, London, 1909, p. 69). Among the A-Kikúyu (W. Scoresby Routledge, *With a Prehistoric People, the Akikuyu of British East Africa*, London, 1910, p. 263) such divination is practised by arranging a number of counters in equal heaps and observing the remaining unit. Among the Baganda small pieces of buffalo- or cow-hide are cast (J. Roscoe, *JAI* xxxii. [1902] 40). Among the Bangala on the Upper Congo River the *ñanga*, or medicine-man, addresses questions to the patient to discover what particular *bwete*, or spirit, is causing the disease. He beats his drum, talks excitedly, and chants various incomprehensible phrases before the patient. 'The lilt of the metre together with the rhythm of the drum make the patient sway to and fro and have a hypnotic effect on him.' His body jerks and twitches, as he is now plied with questions by the *ñanga*. In this way the cause of the illness is found out (J. H. Weeks, *JAI* xl. [1910] 425). In the Sudan the writer received a description of a similar divination by means of music; the rite, which is known as *zar*, is said to be employed even in Cairo, among women. The patient is visited several times by the practitioner, who wears a different coloured dress and sings a different incantation at each visit. Ultimately one dress or incantation is discovered which presumably by its action on the demon causes the patient to swoon. This knowledge having been obtained, the patient is seated astride a live sheep, and the same dress and incantation are employed again. After the patient's second swoon the sheep is killed, the blood is smeared over her, and the meat is partly sacrificed, partly given her to eat.

The use of animals in the cure of disease is a characteristic feature throughout Africa. Thus among the Hottentots, the hand of a sick patient is introduced within the leg of an ox, which is then killed and eaten by married people who have children. A child recently recovered from a severe illness is dragged through an arch over which an ox is made to stand. The ox is killed, and eaten only by married people who have children (Frazer, (*op. cit.* iii. 405). Among the Bondei, a white chicken is tied to the head of the bed-post; and later, when it has grown to a fowl, it is taken to a tall tree, killed, and eaten. The medicine-man and patient, on their return, take care not to look behind them (Dale, *JAI* xxv. [1896] 219). In these cases it appears that some good influence is derived by eating an animal which has been brought into contact with a person recently affected by disease.

But, generally speaking, the animal is used only for the transference of the disease to it. Thus, in Bechuanaland, a king after an illness seats himself on an ox stretched on the ground, the head of which is then held in water until it dies of suffocation. To cure a headache, a man will sometimes beat a lamb or goat until it falls down, with the object of transferring to it his pain (Frazer, *op. cit.* iii. 14). A Guinea negro will tie a live chicken round his neck to cure disease (*ib.*). In such cases the animal or bird is generally driven away or killed. In the Upper Congo, the *mieta* (spirits), 'when they are troubling a family, can be driven into animals by the *ñanga ya bwaka* ['medicine-man of the mat'], and killed by him' (Weeks, *op. cit.* 378). Of all the *ñanga*, this 'medicine-man of the mat' was the most powerful. On his arrival at the sick-house, he put stakes into the ground, and, by tying a mat round them, made an enclosure, in which he sat speaking to the various *mieta*, answering 'himself in assumed voices, pretending he was holding a conversation with them' (*ib.* 383). 'A string was tied from the roof of his clients' house to one of the stakes in his mat enclosure, and the end of the string dropped inside. From this string there dangled dried plantain leaves, twigs, etc.' (*ib.*). When he was tired he shook the leaves—a signal for the lads sitting outside the enclosure to start beating their drums, and for the folk to sing their chorus. Thus he would spend several days in trying to find out which of the *mieta* was troubling the family. Finally, he makes

'a terrific noise inside the mat, as though he were fighting for his life. Shouts, screams, derisive laughter, whacks, thuds, and smacks proceed from the interior of the mat, and at last the *ñanga* rushes out, panting and sweating profusely, holding in his hand a bleeding head [really the head of a rat or lizard, but believed by the people to belong to a mysterious animal dug up from within the mat], and declaring that he has killed the animal that was possessed by the spirit that was troubling the family' (*ib.* 384).

So in Uganda, the evil spirit, which is supposed to dwell at the top of the centre hut-pole, is caught by raising a buffalo's or cow's horn, within which shells are placed so as to make a squeaking noise when the horn is shaken, which is supposed to be the spirit of the horn. When the evil spirit is thus caught, the horn is simply covered with a piece of bark-cloth, placed in a water-pot, and thrown into the river or burnt in the jungle (Roscoe, *JAI* xxxi. [1901] 125 f.).

In addition, of course, to the determination of the particular spirit causing the disease, and to the transference of it to an animal, other therapeutic measures, some of considerable complexity, are prescribed by the medicine-man. Among the Bondei, dieting is common: certain objects of food are tabued. Among the Bageshu (Roscoe, *JAI* xxxix. [1909] 187), 'sometimes herbs are rubbed over the sick man and buried in the path. It is believed that the first person who steps over the herbs will contract the disease. . . .' In the Upper Congo, cupping is often practised, usually by sucking a horn placed over the skin. Massage is a common treatment, often terminated by the pretended extraction of a small object—a palm-nut, stone, or piece of iron—from the patient's body. Enemas and fomentations are also used. Rheumatic pains in the limbs are relieved by tying certain medicines to a brass rod, which is then worn by the patient. Knotted strings are tied round the sufferer's wrists and feet. Among the people of British Central Africa (Stannus, *JAI* xl. [1910] 285), many children's illnesses are treated by boiling certain leaves in water and holding the child over the medicated vapour-bath. Bleeding is arrested by the powdered bark of an astringent tree. Internal remedies are only sparingly used. The treatment of snake-bite is by ligature.

Among the A-Kamba (British East Africa) the medicine-man's gourd commonly contains pebbles, hard seeds, nuts, and such objects as the bone of a lion's paw, a cock's spur, pieces of porcupine quills, etc. He also carries various powders, *e.g.* a grey powder made from certain trees, and believed to be an antidote to magic and poison; a white powder called *iga* (also used by the A-Kikúyu, and called by

them *ira*); a blackish mixture prepared from some tree, and used to cure swellings of the limbs; a dark medicine contained in a gazelle's horn, which is of value when pointed at the abdomen of a woman in labour; and a medicine which, when mixed with water, is given internally for diarrhœa (C. W. Hobley, *Ethnology of A-Kamba and other East African Tribes*, Cambridge, 1910, p. 100). The A-Kikúyu sew up sword-slashes and spear-stabs. Their *chembu* is made of castor-oil, sheep fat, honey, goat's milk, water of various streams in Kikúyu, urine of a male and female goat and sheep, magumo wool, and the milky sap of wild figs. A little of this mixture placed on the penis cures hæmaturia; it is also good for a cough. Indeed, it will revive a dying man if he be touched with it on the forehead, tongue, navel, buttocks, and toes, and if some be passed five times round his head. Other Kikúyu medicines are made from seeds, leaves, roots, and from the ashes of roots and barks. They are usually kept in the form of a dry powder, and are applied by touching the patient much in the manner described. Expectoration plays an important part in the ritual of treatment, the patient at the same time exclaiming, 'I expel what is bad' (Routledge, *op. cit.* 262; Hobley, *JAI* xl. [1910] 448).

7. **Central and S. America.**—Among the Indians of America we naturally look for those characteristics in their attitude towards disease which we have met with in Eastern Asia and Malayo-Polynesia (see 'American' section of this article, below). As regards S. America, in South Chili the medicine-man is dressed as a woman, and the great nervous excitement, followed by a state of coma or trance into which he is thrown, forcibly recalls the shamanistic condition existing in Asia and Malaysia. But there is one striking feature in S. America which is on a distinctly lower plane of culture, viz. the persistent attribution of disease to material objects. Thus, among the Araucanos of Chili, the principal god, formerly called Pillan, the thunder-god, was served by malignant spirits called *Huecuvus*, who could transform themselves into any shape and produce invisible wounds by means of invisible weapons. All disease is attributed by them to evil spirits, which produce an invisible wound or introduce some foreign body within the victim. Not only Divine beings, but the living and the dead, may, as malign spirits, assume a form, *e.g.* snake, ant, or lizard, which may produce disease (R. E. Latcham, *JAI* xxxix. [1909] 346). Consequently diseases are treated first by discovering their source, and then by expelling the harmful substance from the body. In Central Brazil the 'good' medicine-man finds the poison which has been sent to the victim by the 'bad' medicine-man, and lays it in water, thus rendering it harmless. The sorcerer may have obtained some hair or blood from the victim, which he then mixes with the poison of wasps, ants, and other insects, prepared with oil and certain resins in a calabash. But, if he cannot obtain blood or hair, he poisons a twig or a woollen thread. He then introduces this into the victim's house, or shoots it with an arrow into a tree near where he lives. The twig is supposed to wound the victim; and so the 'good' medicine-man sucks the wound until the twig (or woollen thread) appears, and then he spits it out. Tobacco-narcosis is a very common mode of treatment, the medicine-man blowing tobacco smoke over the patient's body, kneading it with great force, while the medicine-man's groans and lamentations resound through the village. At length he begins to suck, and ultimately expectorates the cause of the illness (K. von den Steinen, *Unter den Naturvölkern Zentral-Brasiliens*, Berlin, 1897, p. 300).

Similarly, in Paraguay the witch-doctor is supposed to have the power of introducing beetles into a man's stomach. So, when a man is ill, he summons the medicine-man, who, to an accompaniment of rattles and the excited singing of his assistants, spits on and sucks at the patient's stomach until at length he produces a beetle, a palm-nut, or a fish-bone. The witch-doctors usually wear ear-disks faced 'with bright pieces of glass or bits of polished tin' (S. H. C. Hawtrey, *JAI* xxxi. [1901] 291).

LITERATURE.—This is given throughout the article. The only general book known to the writer, Max Bartels' *Die Medizin der Naturvölker* (Leipzig, 1893), cannot be strongly recommended.

C. S. MYERS.

DISEASE AND MEDICINE (American).—As certain aspects of primitive medicine will be treated in art. MEDICINE-MEN, the present discussion will be limited to the consideration of disease itself from the various points of view of the American aborigines' ideas, customs, ceremonials, etc., connected with its prevention, relief, and cure. Among a race as widely scattered as the American Indians, and occupying, for long periods of time, all kinds of environments—from the Arctic north to the tropical south, from the seashore and coastal regions to the high plateaus and mountainous areas of the continent, island regions like the Caribbean, arid plains like those of the south-western United States and parts of south-western South America, the thick forests and well-watered lands in some other directions, the valleys of the great rivers and the basins of great lakes—the prevalence of diseases, the susceptibility to them, the methods of treatment, and the psychological reaction to the general situation were naturally subject to considerable variation.

1. **American Indians a comparatively healthy race.**—At the time of the Columbian discovery, the Indians were, on the whole, a healthy people, and, in spite of the effects of intertribal wars and their attendant evils, were holding their own in point of numbers, or, as some authorities believe, were even increasing in population, especially in some parts of the continent. Our knowledge of diseases among the American Indians, before the coming of the whites, is not very satisfactory even for the semi-civilized peoples of Mexico, Central America, and Peru; for many of the uncivilized tribes of both North and South America the data at hand are scanty indeed. Where direct statements of early explorers, missionaries, pioneers, and colonists are lacking, certain inferences can be made from the mention of diseases in myths and legends and cognate folk-lore material. Dr. Hrdlička, our best and most recent authority on the matter, says (*Bull. 30 BE*, pt. i. [1907] p. 540):

'The condition of the skeletal remains, the testimony of early observers, and the present state of some of the tribes in this regard, warrant the conclusion that on the whole the Indian race was a comparatively healthy one. It was probably spared at least some of the epidemics and diseases of the Old World, such as smallpox and rachitis, while other scourges, such as tuberculosis, syphilis (precolumbian), typhus, cholera, scarlet fever, cancer, etc., were rare, if occurring at all. Taking into consideration the warlike nature of many of the tribes and the evidence presented by their bones (especially the skulls), injuries, etc., particularly those received by offensive weapons, must have been common, although fractures are less frequent than among white people.'

Since contact with the whites, a marked decrease in numbers has taken place nearly everywhere, the causes of this diminution being 'the introduction of diseases (particularly smallpox), the spread of alcoholism, syphilis, and especially tuberculosis . . . and increased mortality due to changes in the habits of the people through the encroachment of civilization.' Certain tribes, however, are now beginning to show a slight increase in population, and Dr. Hrdlička thinks that, 'as more attention is paid to the hygienic conditions of the Indians, an increase comparable with that in whites may be

expected in many sections.' The writer of the present article has pointed out several cases of such increase in his art. 'Indians, North American' in *EBr*[11], xiv. 452. Mixed bloods are said to suffer, more than the pure bloods, from 'many disorders and diseases known to the whites,' but the evidence in this matter is by no means convincing.

2. Epidemics, etc.—As has been already noted, epidemics of disease appear to have been rare in pre-Columbian America. According to Dr. H. U. Williams (p. 342), the New World, up to the period of its discovery and occupation by the whites, offered a marked contrast to the Old in the fact that 'the American race, during its sojourn of some thousands of years apart from the rest of mankind, developed a surprisingly small number of infections peculiar to it.' Concerning certain epidemics and wide-spread outbreaks of disease contemporaneous with the settlement of various parts of the continent by Europeans, it is still somewhat doubtful whether the infection in question came from Europe (by way of white people, or, possibly, through Indians who had been taken to Europe) or was of native origin. An interesting example is the epidemic among the Indians of New England in 1616–1620, of which a critical study has recently been made by Dr. Williams. This pestilence, which was accompanied by great mortality among the Indians, from Cape Cod to the Penobscot, and sporadically outside these limits, but from which the English seem to have been mostly immune, may have been a variety of the 'bubonic' plague prevalent in London during the early years of the 17th cent., and transferred to America by sailors, colonists, or returning Indians. It could hardly have been smallpox, as some have thought; this disease raged among the Indians later on (*e.g.* in 1633). The idea that it may have been carried to the Indians by certain shipwrecked French sailors held captive among them is also to be considered. The European settlers of the period were prone to regard such calamities as visitations of God, just as many Indian tribes looked upon them as the work of evil spirits, etc. The idea also prevailed among the Indians that epidemics of diseases unknown before the advent of the whites were in some way let loose among the natives by the English and other white peoples. Interesting on this point is the following extract from Winslow's *Good News from New England* (1624), cited by Dr. Williams (p. 345):

'Here let me not omit one notable, though wicked, practice of this Tisquantum (Squanto); who to the end he might possess his countrymen with the greater fear of us, and so consequently of himself, told them we had the plague buried in our storehouse; which, at our pleasure, we could send forth to what place or people we would and destroy them therewith, though we stirred not from home. Being, upon the aforenamed brabbles, sent for by the governour to this place, where Hobbamock (an Indian) was and some other of us, the ground being broke in the midst of the house, whereunder certain barrels of powder were buried, though unknown to him, Hobbamock asked him what it meant. To whom he readily answered: That was the place, wherein the plague was buried, whereof he formerly told him and others. After this Hobbamock asked one of our people, whether such a thing were, and whether we had such a command of it. Who answered No; but the God of the English had it in store, and could send it, at his pleasure, to this destruction of His and our enemies. This was, as I take it, about the end of May 1622.'

Ethically, at least, some of the English and some of the Indians were not far removed from one another.

There has been much discussion of the question whether syphilis is of pre-Columbian origin in America, or has been introduced from Europe since the discovery. Dr. A. S. Ashmead (*Amer. Journ. Dermat.*, 1908, pp. 226–233) is convinced of its pre-Columbian origin, and Dr. F. Grana identifies it with the Peruvian *huanti*; Dr. Iwan Bloch (*Intern. Amerik.-Kongr.* xiv. [1904] 57–79), from historical and osteological evidence—he has recently also published a volume on the subject—is another believer in the pre-Columbian theory, which is also shared by E. G. Bourne, the American historian, who considers the legend of the culture-hero Guahagiona and his sores 'conclusive evidence that syphilis had existed in the West Indies long before the coming of the Spaniards' (*Proc. Amer. Antiq. Soc.*, N.S., xvii. [1906]). Drs. Tello and Palma of Peru, who have studied the question, seem also to share the opinion that syphilis is pre-Hispanic in Peru, citing in evidence certain representations of the effects of the disease in anthropomorphic pottery, etc.; so also R. D. Wagner and Dr. Capitan, the French anthropologist (*Journ. Soc. des Amér. de Paris*, N.S., vi. [1909]). Dr. Lehmann (*Globus*, xcviii. [1910] 12–13) is of opinion that the evidence in Tello and Palma does not settle the matter satisfactorily, and Dr. Hrdlička is by no means convinced of the prevalence of syphilis in pre-Columbian America. The exact character of the Peruvian *uta*, the Columbian and Paraguayan *buba*, and some other diseases, all of which may possibly on some occasions be mistaken for syphilis, is not yet clearly decided. The idea of syphilis-infection of man from the llama—a belief occurring in certain regions of South America—is not sustained (in man and in the llama the disease is comparatively rare now in Peru). Leprosy, according to Dr. Ashmead, was introduced into America from Spain. There are other interesting S. American diseases that call for further investigation, such, *e.g.*, as the Ecuadorian *huicho*, which seems to have some analogies with the African 'sleeping sickness.'

Among a number of American Indian peoples (*e.g.* the Oregonian Klamath) there are general dances and like ceremonies carried out for the purpose of avoiding or driving away epidemics and outbreaks of disease. Some of the Indians of the south-western United States tried to 'capture' the spirit of smallpox during an epidemic of that disease, and similar procedures are reported from elsewhere.

3. Conceptions of the nature, source, etc., of disease.—Under this head could be cited illustrations of all manner of ideas, from the most natural and simple to the most far-fetched and complicated, or even metaphysical. On this point Dr. Hrdlička remarks (*Bull. 30 BE*, pt. i. [1907] p. 837):

'The causation and the nature of disease being to the Indian in large part mysteries, he assigned them to supernatural agencies. In general, every illness that could not plainly be connected with a visible influence was regarded as the effect of an introduction into the body, by malevolent or offended supernatural beings or through sorcery practised by an enemy, of noxious objects capable of producing and continuing pain or other symptoms, or of absorbing the patient's vitality. These beliefs, and the more rational ones concerning many minor indispositions and injuries, led to the development of separate forms of treatment, and varieties of healers.'

Among the American aborigines one finds examples of the attribution of disease and illness in man to his own misdeeds and sinfulness, to his neglect of his ancestors, to violations of innumerable kinds of tabus and prohibitions, to the malevolence or ill-will of the dead, to the touch of ghosts, to the actions of the wind and the moon, to the machination of enemies through magic and witchcraft, etc., to the desire for revenge of the animal world ill-treated by man, to temporary loss of the soul, to the introduction of foreign objects into the body, to the shadows of certain other people (*e.g.* mourning widows and widowers), to women (particularly when menstruating), etc. For certain special diseases and pathological conditions very curious reasons are sometimes given. Some of the names of diseases and terms relating to or describing their symptoms are interesting psychologically. In Tsimshian the

term for 'having epileptic fits' really signifies 'like a bear'; and the word for 'crazy' means 'like a land-otter.' The Chinook term for 'rheumatism' means lit. 'tired all over'—quite an expressive name. In Kutenai the general term for 'sick' is *sānitlqōinē*, lit. 'bad-bodied he is'; the corresponding word for 'well' being *sūkitlqōinē*, 'good-bodied he is.' The term 'sick' is applied in a number of Indian languages to denote emotions and the like. Thus in the speech of the Mosquito Indians the term for 'angry' signifies lit. 'liver-sick'; in Haida, 'downcast' is 'heart-sick,' etc. By the Mosquito Indians the liver is regarded as the seat of emotional life; among the Kutenai and many other Indian tribes it is the heart. With some of them, unless the heart can be touched or struck, the efforts of the shaman to injure or kill a man turn out useless. Certain tribes believe that diseases are 'shot' into the body (*e.g.* 'pains' with some Californian tribes).

4. Ceremonials, magic and religious, in relation to disease and its cure.—The employment of magic rites and formulæ, of religious or semi-religious ceremonials, ritual and other performances, for the purpose of preventing or curing diseases of various sorts is common in all regions of the globe, especially among uncivilized peoples, and the aborigines of America are no exception to the rule. These rites and ceremonies vary, from the simple procedures of the 'medicine-men' and 'medicine-women,' shamans, or sorcerers, who by rude incantations and noise-making with rattles, drums, etc., sought to drive away disease, or by laying on of hands, sucking, tricks of legerdemain, and the like, pretended to extract noxious objects from the body of the patient, to the more elaborate and highly developed ritual activities of 'medicine-societies' carried out sometimes for the benefit of an individual, or a whole family, and again on behalf of the entire community. The whole wide range is occasionally to be found within the limits of a single linguistic stock. Thus we have the crude rites of the lowest Athapascan tribes of Alaska and north-western Canada, on the one hand, and, on the other, the complicated system of the 'night chant' of the Navaho, who are of the same lineage; in like manner, also, the simple procedures of the shamans of the barbarous Utes and Shoshones, the lowest representatives of the Uto-Aztecan stock, contrasting with the rites and ceremonies of the Aztecs of ancient Mexico and their semi-civilized kindred, who mark the highest limit attained by this people. And S. America, while not exhibiting, perhaps, such extremes of diversity within one and the same stock, shows equal variety, if one compares the barbarous and completely uncivilized tribes of the Brazilian, Peruvian, and Venezuelan forests with the ancient Peruvians. Healing ceremonies of great interest occur among many American Indian peoples; the best known and those described in greatest detail belong to some of the Plains tribes and peoples of the Algonquian stock.. As Dr. Hrdlička remarks (*Bull. 30 BE*, pt. i. p. 838):

'Among most of the populous tribes the medicine-men of this class (the priest-healer type) were associated in guilds or societies, and on special occasions performed great healing or "life- (vitality-) giving" ceremonies, which abounded in songs, prayers, ritual, and drama, and extended over a period of a few hours to nine days.'

There also existed among some tribes

'large medicine-societies, composed principally of patients cured of serious ailments. This was particularly the case among the Pueblos. At Zuñi there still exist several such societies, whose members include the greater part of the tribe and whose organization and functions are complex. The ordinary members are not actual healers, but are believed to be more competent to assist in the particular line of diseases which are the specialty of their society, and therefore may be called by the actual medicine-men for assistance. They participate also in the ceremonies of their own society' (p. 838 f.).

The curative ceremonies of such people as the Navaho, when employed for the benefit of individuals, are both prolonged and costly, being exceedingly elaborate both in ritual and in paraphernalia. According to Dr. G. A. Dorsey (*ib.* p. 229):

'Among the non-Pueblo tribes of the S.W., especially among the Navaho and Apache, the extended ceremonies are almost entirely the property of the medicine-men, and must be regarded as medicine-dances. Many of these are of an elaborate and complicated nature, but all are designed for the restoration of the sick. In these ceremonies masks are often worn, and complicated and elaborate dry-pictures are made, both these features probably having been borrowed from the Pueblo tribes.

Some of these great 'medicine' ceremonies have gathered about them practically all the ritual lore and legend of the tribe, and serve as a general outlet for the observance and dramatic sense of all the people. The great *Midē'wiwin*, or 'grand medicine society,' of the Algonquian Ojibwa and related tribes is described in detail by Hoffman (*7 RBEW* [1891] 143–300); the medicine-men of the Athapascan Apache by J. G. Bourke (*9 RBEW* [1892] 443–603); the esoteric fraternities of the Zuñi by Mrs. Stevenson (*23 RBEW* [1904]); the Cherokee medicine-men and their sacred formulæ by Mooney (*7 RBEW* 301–397); the secret societies of the Kwakiutl by Boas (*Rep. U.S. Nat. Mus.*, 1895); the organizations of the Algonquian Cheyenne by Dorsey (*Anthr. Publ. Field Columb. Mus.* ix. [1905]); the 'mountain chant' of the Navaho (*5 RBEW* 379–467), and the great 'night chant' of the same people, by Matthews (*Mem. Amer. Mus. Nat. Hist.*, N.Y., vol. vi. [1902]). For other N. Amer. Indian tribes much valuable information will be found in the various monographs of Boas (Eskimo and peoples of North Pacific coast), Dixon and Kroeber (Californian tribes), Kroeber, Wissler, Lowie (tribes of the Great Plains), etc. For general information concerning the American Indian shaman, the article of Dr. R. B. Dixon (*JAFL* xxi. [1908] 1–12) is of importance. From some points of view, the ceremonials of the Navaho are the most remarkable of American healing-rituals. For S. America, we have not much accurate and detailed material of a reliable character concerning the rites and ceremonies of the secret societies having to do with 'medicine.' The best is to be found in the recent works of Koch, Nordenskiöld, Ehrenreich, Hawtrey, Guevara, Latcham, etc. Some data are also contained in the writings of certain of the early missionaries, explorers, and historians, such as Charlevoix and others. Concerning the great 'night chant' of the Navaho, a ceremony lasting nine days, Dr. Matthews says (*Amer. Anthrop.* ix. [1896] 50):

'The principal purpose of this great ceremony is to heal the ailing man or woman, who defrays all the expenses of the ceremony; but the occasion is used, also, to implore the gods for various temporal blessings, not only for the sick man, but for all who participate in the work, with their friends and relations. This ceremony, like nearly all ceremonies, ancient and modern, is connected with a myth or legend (several myths, indeed, in this case), and many of the acts in the ceremony are illustrative of the mythic events.'

He also observes further:

'In them we find a nocturnal vigil analogous to that of the mediæval knight over his armour; we find a vigil in which men and gods, or the properties that represent the gods, alike take part; we find evidence of the belief in a community of feeling and interest between gods and men, and we have an instance of a primal feast in common or love-feast closely resembling certain ceremonial acts performed among ourselves to-day.'

5. Games and gaming implements as preventives and as remedies for disease.—That games among savage and barbarous peoples have certain preventive and curative rôles with regard to disease as well as other afflictions and calamities of mankind is not at all surprising, especially if one takes the view of their magic and religious origin expressed by Stewart Culin in his monograph on 'Games of the North American Indians' (*24 RBEW* [1907]). Among the Sacs and Foxes (Culin, p. 448 f.) the

game of ring and pole was played about the house, because 'people believe there is a spirit of sickness, Apenaweni, always hovering about to get into the lodges, and this game is encouraged in order to keep it away.' The employment among the Kwakiutl Indians of Vancouver Island of a sort of 'bean-shooter' (Dr. Newcombe calls it 'the figure 4 dart-shooter') in a medical ceremony is thus described (Culin, p. 761, quoting Newcombe):

'Among the Kwakiutl of the Nimpkish tribe, this is called *Hendlem*. In use a small stick is placed across the top of the pliant side-pieces, and is shot to some little distance by pressing on the trigger-piece, which is horizontal to the figure 4. The figure is held in front of the body with both hands, with the short end of the trigger downwards, and the perpendicular stem of the 4 horizontally. It is frequently used when children are sick, and small sticks are shot in different directions to chase away the spirit supposed to be causing the sickness. It was used as lately as two years ago at Alert Bay. Sets of four of this instrument are employed by grown-up people—relatives of the sick. The sticks are left lying about after the performance, but the guns are burned when done with. This goes on for four nights in succession. The noise of the two flexible sides coming together when the stick is ejected is supposed to aid the good work. At night the four shooters are left loaded near the sick child, to scare the ghost or spirit. They are also used as a game by children.'

This is an interesting example of the employment of the same implement or instrument in a children's game and in a 'medical' procedure. Rings or hoops, similar to those used in the hoop and pole game, are used in certain 'medicine' ceremonials by the shamans of the Oglala Dakota Indians (Culin, p. 435) for the purpose of aiding in the cure of the sick. On the first day of the healing rite of the Navaho, known as *Yebitchai*, similar gaming rings are made. These rings were used to touch the mouth and other parts of the patient's body, and were afterwards rolled out of the lodge. Of the 12 rings used in this ceremonial, as described by Col. J. Stevenson (*8 RBEW* [1891] 239), 'three were afterwards taken to the east, three to the south, three to the west, and three to the north, and deposited at the base of piñon trees.' We are further informed: 'The rings were placed over the invalid's mouth to give him strength, cause him to talk with one tongue, and to have a good mind and heart. The other portions of the body were touched with them for physical benefit.' Culin (p. 437) reports having seen 'actual practical game rings' used in ceremonies. Naturally, where the beginnings of the priest and the doctor are found together in the primitive shaman, the implements and objects in ceremonial use must often be the same or very similar. And the lines between 'games' and other more or less ceremonial performances are not always very marked; indeed, the former are not infrequently made a part of religious or quasi-religious observances—and this is not at all peculiar to the aborigines of the New World.

6. Medical operations, surgery, etc.—Some of the performances of the American 'medicine-men' belong rather to the field of jugglery and legerdemain than to that of operative therapeutics. Others have, doubtless, more of a religious or mystical than of a medical significance. There are, however, a number that may justifiably be classed as relating to the beginnings of medical operations and surgery as we understand them. The range of these among even quite primitive tribes may be seen from Father Morice's article (see Lit.) on the surgery of the Dénés, an Athapascan people of British Columbia, where items relating to bleeding, burning, blistering, treatment of broken limbs, deformities, uterine troubles, child-birth, cataract, etc., are briefly considered, some new and interesting facts being reported. Some of the procedures in vogue are as follows:

Blood-sucking is in use both as a general practice and as a special procedure for wounds, cuts, bites, and stings of animals and insects, particularly those of a poisonous nature, including wounds due to arrows and other weapons that have been tipped with deadly substances, snake-bites, abscesses, etc.

Blood-letting by means of flint-knives, arrow-heads, etc., was practised by the ancient Peruvians and Mexicans, and is also reported from a number of uncivilized tribes, such as the Central Californian Indians, the Kwikpagmint of the Yukon (Alaska), certain tribes of the Isthmian region of Central America, the Brazilian Carayá, etc. The place of venesection differs according to the trouble, and varies with divers peoples. Bartels (p. 269) notes that for headache the Carayá incise the veins of the forehead; the ancient Peruvians cut into the veins of the root of the nose, the Indians of Honduras the veins of the leg or the shoulder; for troubles in the upper part of the body, certain Californian tribes practised venesection on the right arm, and on the left arm when the limbs were affected. Certain Indians of the Isthmian region are said to have practised venesection by shooting small arrows from a special bow into various parts of the patient's body until a vein was opened.

Scarification and kindred procedures are wide-spread over primitive America, ancient and modern, the implements used being knives, sharp pieces of stone, bits of shell, pieces of flint or obsidian, thorns, fish-spines, teeth of animals; some tribes have developed special implements for the purpose, as, *e.g.*, the Carayá of Brazil.

Cauterization with cedar-bark is practised by several tribes of the North Pacific coast (*e.g.* Bilqula, Twana) for rheumatism and other diseases of a like order; by some Southern-Californian tribes with a hot coal for syphilis; by some Central American peoples with hot ashes and heated leaves for wounds, etc.; by the Choctaws and certain Nicaraguan tribes. Many North American Indian peoples practise cauterization for obstinate sores, etc.

Bone-setting is accomplished quite cleverly by a number of tribes all over the continent, particularly the Siouan Winnebagos, the Creeks of the south-eastern United States, some of the peoples of the North Pacific coast, and certain of the Brazilian tribes; splints and bandaging are employed especially by the Bilqula, Creeks, Winnebagos, and others.

Amputation does not seem to have been generally practised among the American Indians, even such peoples as the Creeks and Winnebagos, who were skilful in bone-setting, seldom or never resorting to it.

Trephining was in use in ancient Peru, as indicated by the crania from various pre-Columbian burial-places, and a special study of these has been made by Muniz and McGee (*16 RBEW* [1897] 3–72). Dr. Hrdlička (*Bull. 30 BE*, pt. i. p. 838) says: 'The highest surgical achievement, undoubtedly practised in part at least as a curative method, was trephining. This operation was of common occurrence, and is still practised in Peru, where it reached its highest development among American tribes. Trephining was also known in quite recent times among the Tarahumare of Chihuahua, but has never been found north of Mexico.'

For the purpose of *stopping bleeding* of a dangerous sort, many American tribes used down of various birds (Haida), mineral and plant substances (Dakotas, Winnebagos), hot ashes (for nose-bleeding); and the Brazilian Carayá (Bartels, p. 286) are credited with the use of bindings for the limbs. With the whites the use of gunpowder for stopping blood has come into practice with many tribes all over the continent. According to Hrdlička (*loc. cit.*, p. 837), '*antiseptics* are unknown, but some of the cleansing agents or healing powders employed probably serve as such, though undesignedly on the part of the Indians.'

7. Materia medica, etc.—In both the procedures of individual shamans and the more elaborate and extensive ceremonies, such as those carried out by the Navaho, etc., a large number of 'fetishes,' charms, amulets, and the like are employed, and the principles of *similia similibus* and sympathetic magic are appealed to in innumerable ways, sometimes with exceeding skill and cunningness. Dr. Hrdlička (*l.c.*, p. 836) says:

'The fetishes used are peculiarly shaped stones or wooden objects, lightning-riven wood, feathers, claws, hair, figurines of mythic animals, representations of the sun, of lightning, etc., and are supposed to embody a mysterious power capable of preventing disease or of counteracting its effects.'

Of real materia medica, animal and mineral substances are comparatively rarely employed. Dr. Hrdlička (p. 837) says:

'Animal and mineral substances are also occasionally used as remedies. Among South-western tribes the bite of a snake is often treated by applying to the wound a portion of the ventral surface of the body of the same snake. The Papago use crickets as medicine; the Tarahumare, lizards; the Apache, spiders' eggs. Among the Navaho and others red ochre combined with fat is used externally to prevent sunburn. The red, barren clay from beneath a camp-fire is used by White Mountain Apache women to induce sterility; the Hopi blow charcoal, ashes, or other products of fire, on an inflamed surface to counteract the supposed fire which causes the ailment.'

The oil, grease, etc., of certain animals are used for external and internal application, often as antidotes—thus, among certain tribes of Central Mexico, scorpion-oil for scorpion-bites; among

the Caribs, snake-oil for snake-bites. Among the Yamamadi and neighbouring tribes of Brazil (Bartels, p. 120) we meet with the curious custom of plastering the affected portion of the patient's body all over with feathers. Some of the Southern-Californian Indians used pills of wild dove's dung as a remedy for gonorrhœa. Pounded charred bones are in use by the Kutenai for sore eyes. The great mass of primitive remedies, however, come from the plant-world—roots (most commonly), twigs, leaves, bark, flowers and seeds (rarely)—and are most frequently employed in the form of a decoction, made from either the fresh or the dry plant (sometimes from its powder). The 'doctrine of signatures' and similar ideas controlled a good deal of the botanical medicine of the aborigines of America, which reached its height with such peoples as the ancient Mexicans, as may be seen from Father Gerste's monograph on the subject, where the data in the old historians, are carefully brought together. In the warmer and tropical regions of America numerous vegetable gums and balsams, the use of many of which has passed over now to the white population as well, were employed for medical purposes, for stopping bleeding, curing and cleansing wounds, etc. The number of plant-remedies in use even among the uncivilized tribes is often quite large. Among the Californian Karok, 13 species of medicinal plants were reported; among the Twana and neighbouring tribes of the State of Washington, 18; among the Ojibwa (according to Hoffman), 56; the list of Schoolcraft, representing several N. American tribes, contains 89; of the plants known to the Moqui or Hopi, according to Hough (*Amer. Anthrop.*, 1898), 45 are employed for medical purposes—there being probably not over 160 indigenous species in the environment. As Bartels (p. 209) notes, the Indians possess quite a large number of plant-remedies for diseases and troubles of the eyes. Abundant emetics and astringents are also provided. Plant-remedies are in vogue for the treatment of cuts, burns, bruises, wounds, bites, stings, and stomach-ache and kindred ills, diseases of the respiratory tract, and nasal troubles, in the form of poultices and plasters (often of hot leaves), decoctions, lotions, and inhalations. With the Cherokee Indians the plants furnished all the remedies as against the animal world, which inflicted diseases upon mankind. The formulæ of the medicine-men of this interesting Iroquoian people have been recorded by Mooney, and they form a body of data of great importance for the study of primitive medicine in its incantational and invocational aspects. With the sowing and gathering of medical plants there are sometimes connected certain rites and ceremonies, as, *e.g.*, is the case with the 'medicine tobacco' of the Crow Indians of the Siouan stock. Interesting also is the sacred *tule* pollen in use among the Apache, known as *hodentin*, and 'given or applied because of its supposed supernatural beneficial effect.' Many plants 'are employed as remedies simply for traditional reasons, without any formulated opinion as to their modes of action' (Hrdlička, p. 837).

8. Drugs, narcotics, etc.—In connexion with puberty-rites, 'man-making' ceremonies, and performances of a kindred nature, certain narcotic and stupefying substances were employed among tribes representing all stages of culture all over the continent. In the *huskanaw*-ceremonies carried out on boys at the age of puberty among the Virginian Indians, the subjects were stupefied by a decoction of *Datura* ('jimson weed'). A variety of *Datura* was used by the shamans of the Californian Yokuts to induce religious frenzy. This was done also, in all probability, by those of the Indian tribes of the south-western United States (Navaho, Hopi, etc.) who are acquainted with the properties of the *Datura*. Various tribes of the Gulf States employed in their ceremonial purifications the 'medicine' known as the 'black drink,' a decoction made from the leaves of the *Ilex cassine*. This 'medicine' figures in the great *Busk*, or annual green-corn thanksgiving ceremony of the Creeks. According to Hall (*Rep. U.S. Nat. Mus.*, 1885), the Creeks were in the habit of preparing and drinking it before council-meetings, because they believed that 'it invigorated the mind and body and prepared for thought and debate.' In various regions of North, Central, and South America several kinds of tobacco furnished medicine for divers diseases. Pipe-smoking for asthmatic troubles is reported from the Dakotas, Winnebagos, Creeks, and other tribes; in several parts of Mexico, tobacco was used for similar purposes, and likewise against rheumatism. Among the Ipurina Indians of Brazil, incurable sick people are completely narcotized by tobacco and thrown into the river. In South America, tobacco was chiefly used in the form of snuff, and, according to McGuire (*Bull. 30 BE*, pt. ii. [1910] p. 768), 'there is some evidence that the plant was chewed in Central America.' McGuire (p. 768) says:

'Tobacco was cultivated in most tribes by the men alone, and was usually smoked by them only; among the Iroquois and some of the Pueblos trade tobacco was not smoked in solemn ceremonies. At times both priests and laymen smoked plants or compounds that were strongly narcotic, those using them becoming ecstatic and seeing visions. To the Indian the tobacco-plant had a sacred character; it was almost invariably used on solemn occasions, accompanied by suitable invocations to their deities. It was ceremonially used to aid in disease or distress, to ward off danger, to bring good fortune, to generally assist one in need, and to allay fear.'

The general use of tobacco all over America was much furthered when many of the European colonists devoted themselves to the planting and sale of this plant. Its fame as a medicine was really the first basis of its popularity when introduced into the Old World. Among some Indian tribes the planting, cultivating, and harvesting of tobacco had many religious or semi-religious rites and ceremonies attached to them. According to Simms (*Amer. Anthrop.*, N.S., vi. [1904]), as cited by McGuire (p. 768),

'the planting of medicine tobacco is one of the oldest ceremonies of the Crows, consisting, among other observances, of a solemn march, a foot race among the young men, the planting of seed, the building of a hedge of green branches around the seed-bed, a visit to the sweat-house, followed by a bath and a solemn smoke, all ending with a feast; when ripe, the plant was stored away, and seeds were put in a deerskin pouch and kept for another planting.'

In S. America a number of plant-juices were employed for the purpose of making more or less intoxicating or stupefying drinks, used on ceremonial occasions, etc.; and 'getting drunk' was not infrequently a common and regular occurrence, on festival occasions, with certain Brazilian and Paraguayan tribes. In N. America, according to Dr. Hrdlička (p. 837), 'among the tribes who prepare *tiswin*, or *tesvino*, particularly the Apache, parts of a number of bitter, aromatic, and even poisonous plants, especially a species of *Datura*, are added to the liquid to make it "stronger"; these are termed medicines.' Certain Californian tribes made drinks from *manzanita* berries, and the Pima and other tribes of the Arizonian region manufactured an intoxicating liquor from the fruit of the cactus. Among many tribes of ancient and modern Mexico, a decoction of *peyotl* (*Anhalonium lewinii*), a small variety of cactus, had, and still has, a very extensive use; so also in the region of the United States north of Mexico. According to Mooney (*Bull. 30 BE*, pt. ii. p. 237), it was 'formerly and [is] still much used for ceremonial and medicinal purposes by all the tribes between the Rocky Mountains and the Gulf of Mexico, from Arkansas river southward, almost to

the city of Mexico.' The Nahuatl *peyotl* corresponds to the Kiowa *señi*, Comanche *wokowi*, Tarahumare *hikuli*, etc. Under the incorrect title of *mescal* it is well known to the whites, and has been even used for psychological and medical experimentation.

The 'eating of mescal buttons' takes place during ceremonies of considerable length among the Kiowa (where they have been studied by Mooney), Comanche, and other tribes. With these peoples, 'it is rather a ceremony of prayer and quiet contemplation. It is usually performed as an invocation for the recovery of some sick person; it is held in a *tipi* specially erected for the purpose, and begins usually at night, continuing until the sun is well up in the morning.' Women, as a rule, do not take part in the ceremony proper, but 'occupy themselves with the preparation of the sacred food and of the feast in which all join at the close of the performance.' 'At some point during the ceremony the sick person is usually brought in to be prayed for, and is allowed to eat one or more specially consecrated *peyotls*.' Mooney says further: 'The number of "buttons" eaten by one individual during the night varies from 10 to 40, and even more, the drug producing a sort of spiritual exaltation differing entirely from that produced by any other known drug, and apparently without any reaction. The effect is heightened by the weird lullaby of the songs, the constant sound of the drum and rattle, and the fitful glare of the fire.' The Tarahumare and some other Mexican tribes have a *peyotl* dance. The effects of 'mescal buttons' have been studied experimentally by Havelock Ellis (*Pop. Sci. Mo.* lxi. [1902] 57–71), and, as Mooney notes (p. 237), 'tests thus far made indicate that it possesses varied and valuable medical properties, tending to confirm the idea of the Indians who regard it almost as a panacea.' Father Gerste (pp. 68–69) records its use, not only as a sort of panacea for fatigue, etc., but also as a means of obtaining hallucinations, which were then taken for messages from the gods, and prophecies of the future. The Chichimecs, according to Sahagun, consumed large quantities of *peyotl*, and they believed that 'it gave them courage, took away all fear during battle, rendered them insensible to hunger, thirst, etc., and preserved them from all dangers.'

The 'mescal button' or 'mescal' here described is not to be confounded with the mescal (food and intoxicating drink, the latter post-Columbian) produced in this region from the agave.

9. **Inventions for use in 'medicine.'**—Besides the vast number of amulets, charms, and talismans, of which some account is given in art. CHARMS AND AMULETS (Amer.), a few 'inventions' of a medical or quasi-medical order, in use among American Indian peoples, deserve mention here. Such are, *e.g.*, a sort of respirator of fine woven grass used by the Kwikpagmiut Eskimo of Alaska (Bartels, p. 222) to prevent the smoke from getting into the lungs of the people in the 'sweat-house'; the scarification-implements of fish-teeth made by the Carayás of Brazil (p. 267), which are of peculiar interest; the bone and horn tubes used by several North American tribes (Navaho, Ojibwa, Creek, Siouan peoples) for scarification, blood-sucking, and similar procedures. Note may be taken here also of the litters for the sick and wounded among a number of tribes (*e.g.* Dakotas); and the snow-spectacles of the Eskimo.

10. **Hygiene, sanitation, etc.**—The idea that 'cleanliness is next to godliness' was wide-spread among many American Indian peoples, as their frequent bathing, and other cleansing procedures, the very common use of the 'sweat-house' (accompanied often by elaborate ceremonials), the washing of the sexual parts, and the attention to the body during menstruation, after *coitus*, etc., abundantly indicate. Some of the tribes lowest in intelligence, apparently, are very careful to bathe frequently and thoroughly—the process beginning with the new-born infant, which, even in the cold north, is immediately plunged into the water; the mother also cleansing herself as soon as possible. This treatment of child and mother is discussed at some length in the works of Ploss and others who have written in particular of menstruation and of childbirth among primitive peoples. Fasting, bathing, and sprinkling ceremonials are found accompanying the great religious performances as well as the smaller, and they are also to be met with in connexion with preparation for and participation in games, which have often a more or less religious character. Of the Tsimshian Indians of British Columbia, who are sun-worshippers, Boas says (*5th Rep. on N.W. Tribes of Canada*, 1889, p. 50):

'Men make themselves agreeable to the deity by cleanliness. Therefore they must bathe and wash their whole bodies before praying. For the same reason they take a vomitive when they wish to please the deity well. They fast and abstain from touching their wives, if they desire their prayers to be successful.'

It is evident that many tabus, among the American Indians, no less than among primitive peoples in other parts of the globe, are of this hygienic, or quasi-hygienic nature. Sometimes, as among the Tsimshian (Boas, p. 50), when a special object is to be attained, 'to make the ceremony very successful, their wives must join them; if the wife should not be true to the husband, the effect of the fasting is destroyed.' Bathing and cleansing appear also frequently, and sometimes elaborately, in connexion with mourning rites and ceremonies connected with the handling and disposal of the dead. The use of water reaches its maximum, perhaps, with the ancient Mexicans, who 'washed the soul.' The 'purification' of the soul as a means of curing the body of disease was in vogue among a number of the peoples of ancient Mexico, as Father Gerste notes (p. 18). Water was regarded as a remedy *par excellence*, because 'it cured the body by washing the stains of the soul.'

The use of the bath (with some tribes daily) as a hygienic or medical procedure, often complicated with religious or mystical ceremonies, was wide-spread in all parts of primitive America, the water used having added to it sometimes (*e.g.* among the Dakotas) certain decoctions of plants—occasionally for the purpose of irritating the skin. Some Indian tribes, like the Hopi or Moqui, and the Pueblos, avoided cold baths altogether; others, like the Pimas and some tribes of Lower California, preferred them. With quite a number of tribes (Dakotas, Creeks, Ojibwa, Klamath), especially in the Rocky Mountain region, hot baths were followed immediately by cold, the individual rushing at once from the 'sweat-house' and plunging into the nearest stream. Cold baths for fever were in vogue among many tribes, and the Huastecs of Mexico even submitted smallpox patients to this procedure, thereby greatly increasing the mortality from that disease. The Moqui, when suffering from fever (Bartels, p. 134), 'used to lie down in the cold water until they got well or died'—a sort of 'perpetual bath,' as the author remarks. Similar practices are reported from the Winnebagos. Aspersion with cold water is resorted to by several tribes. Among the tribes of the Columbia region and the North Pacific coast, many are very fond of hot baths, and the institution of the 'sweat-house' or primitive 'steam-bath' is wide-spread all over the continent, from the uncivilized tribes of the Plains and the Rocky Mountain regions to the more or less civilized Aztecs of ancient Mexico, with their *temezcalli*, etc. The Mayan peoples, likewise, had their *tuh*. In Mexico, Central America, and the Pueblo region, the 'sweat-houses' were more imposing constructions, but over a large part of the continent they were simply made of willows or the like, large enough to contain a single individual, the steam being produced by pouring water over heated stones. The structure usually had a temporary covering of skins and blankets. The body was sometimes scraped before leaving the sweat-house, and some of the Eskimo are said to 'rub themselves after the bath with grass and twigs.' According to Henshaw (*Bull. 30 BE*, pt. ii. p. 661) sweating was practised among the American aborigines for three different purposes: (1) as a purely religious rite or ceremony for the purpose of purifying the body and propitiating spirits; (2) as a medical

practice for the cure of disease; (3) often as purely social and hygienic — 'a number of individuals entered the sweat-house together, apparently actuated only by social instinct and appreciation of the luxury of a steam bath' (p. 662). As a religious ceremony it was used by warriors before going forth, by hunters previous to departing for the chase, by boys and girls at puberty, and by all sorts of people in time of danger, or before undertaking special exploits, etc. Moreover, 'among the Plains tribes all priests who perform ceremonies have usually to pass through the sweat-house to be purified, and the sweating is accompanied by special rituals' (p. 661). The ceremonials of the sweat-house with some tribes are elaborate and complicated, especially where there is a village or a general *temezcalli* or *estufa*. Nelson informs us that, among the Alaskan Eskimo, the *kashim* used for the sweat-bath was 'the centre of social and religious life in every village.' With most tribes also the construction of the sweat-house 'was attended with many rules and observances.'

Massage was practised in various ways by numerous American peoples (rubbing, pressure with hands or feet, etc.). Purifications of various sorts, including fasting, bathing, taking various 'medicines,' were in vogue among many tribes, previous to participation in games and other more or less ceremonial performances. Culin (*op. cit.*) refers to such 'medicines' in connexion with the foot-races of the Tarahumare, the ball-games of Zuñi, Cherokee, Ojibwa, Choctaws, Mohawks, etc. Care regarding the satisfaction of natural necessities is reported from a number of American Indian peoples. According to Joest (*Int. Arch. f. Ethn.* vol. v. Suppl., 1893), the Caribs and Arawaks, who live near rivers, etc., go thither for such purposes. Otherwise, they go to some distance from the village, scratch a hole in the sand, and carefully cover up their excrement, cleansing themselves with sand. Concerning the Carayá Indians of Brazil, Ehrenreich (Bartels, p. 261) remarks on

'the feeling of decency of these savages exhibited in their manner of defecating, which is of culture-historical interest. It is done as far away as possible from the village. A hole is made in the sand. The individual sits over it with outspread legs, biding the upper part of his body behind a mat. The excrements are always carefully buried.'

Certain North American Indians also are very careful in the matter of relieving themselves, always doing so out of the public way, and not in view of any one.

Some of the food-tabus of American Indian peoples have at least a *prima facie* hygienic value. Careful regard for the purity of water is evident both in the Pueblo region of the south-western United States and from the early accounts of the semi-civilized peoples of ancient Mexico.

Ehrenreich reports the Carayá Indians of Brazil (cited by Bartels, p. 238) as inquiring of every stranger, 'Have you catarrh?' and permitting him to enter their cabin only after assuring themselves that there is no danger from tuberculosis — a disease upon the increase among them, and of whose infectious character they are fully aware. But this is post-European. Among the Indians of northern Mexico individuals suffering from contagious or infectious diseases are abandoned by their fellows, who, however, place water and wild fruits within easy reach before leaving (Bartels, p. 242). The ancient Aztecs, according to Gerste (p. 18), had the same fashion of treating severe cases of disease, where death might be expected. The family of the patient carried him to the highest point of some near-by mountain, placed beside him food and a vessel of water, and left him to himself, for death or cure, as the case might be, after forbidding all persons to go near him. The segregation of the patient in order to keep away evil spirits, etc., was in vogue among many tribes. Some, like the Winnebago Indians of Wisconsin and the Mosquitos of Honduras, went so far as to surround the bed of the sick with poles on which were hung various animals, or to hedge him in with painted sticks, allowing no one but the 'medicine-man' to approach the spot (Bartels, p. 244). Hygienic motives may also enter here in part, as also in the case of the abandonment of persons suffering from contagious or infectious diseases. Here perhaps ought also to be mentioned the fact reported by Dr. Farabee of the very primitive Macheyengas of eastern Peru, that they 'are more afraid of the disease from which he died than of the dead man.'

11. **Personification and forms of disease.**—The disease or sickness is often given some special form and recognized as having the shape of some object or creature, whose expulsion by the shaman or other qualified person, with or without the accompaniment of primitive music, incantations, conjurer's tricks, and similar devices (the evil object is frequently 'sucked out' by the medicine-man), is followed by relief or cure, temporary or permanent. Such procedures are known all over America, from Alaska to Patagonia, and from Greenland to Brazil. The representation of the disease as a piece of bone is wide-spread; common also is the conception of it as a piece of stone or some similar object. The claws of such animals as the bear, the spines of the porcupine, etc., likewise figure in the same way. Living creatures, corporeally or spiritually, constitute the disease-cause with many American tribes, having in some way or other, of themselves, or through the machinations of shamans or other evil-disposed individuals, been introduced into the body of the patient. The Sioux Indians, like some of the tribes of Central Mexico, personify disease as a worm; the Klamath and certain of the Sioux as some sort of insect; some Indians of Central Mexico as a large ant; the Klamath, Karok, and other Californian tribes of the north as a frog; and the Dakotas as a tortoise. Another common personification is a snake. The Twana, Chimakum, and Klallam Indians of the State of Washington believe that certain diseases are caused by a wood-pecker pecking at the heart of the person affected. Even quite large animals are believed by some Indian tribes to make their way into the human body and cause disease and sometimes death. Such are the bear and deer among the Dakotas; the squirrel among the Twana and neighbouring tribes; the porcupine among the Sioux; the otter among certain tribes of the North Pacific coast region (some birds figure here also, of considerable size). Among the Twana, Chimakum, and Klallam it is believed that evil-minded shamans or sorcerers can send into the body of a man a bear, which eats at his heart and so causes him to become sick (Eells, *Ann. Rep. Smiths. Inst.*, 1887, pt. i.). Among the Nutka Indians of Vancouver Island, according to Boas (*6th Rep. N.W. Tribes*, 1890, p. 44),

'the cause of sickness is either what is called *māyatlē*, i.e. sickness flying about in the shape of an insect and entering the body without some enemy being the cause of it; or the sick person has been struck by sickness thrown by a hostile shaman, which is called *menu'qcitl*. Their ordinary method of removing disease is by sucking and singing over the patient.'

12. **Prognostics, etc.**—Devices for the prognostication and prophesying of the issues of diseases of various sorts are reported from many American tribes. Among the Kutenai Indians of south-eastern British Columbia, according to Boas (*5th Rep.* p. 46), 'if the hands of a dead man (before the body is buried) are closed so firmly that they cannot be opened, it indicates that the

tribe will be healthy and strong and free from disease.' The Indians of Michoacan (Bartels, p. 168), in Central Mexico, believe that, if the leaf of a certain plant, when placed on the sore place of the body, stays there, the man will recover; if it drops off, his death is certain. The Mayas of Yucatan are said to have used a crystal for purposes of prognostication. In other parts of the continent the medicine-men, the priests of the Mayas, used to cast lots in order to determine what offering should be made for the restoration of the patient to health.

13. Transference of disease, 'scape-animals,' etc.—The idea of curing a sick person by transferring the disease or illness with which he is afflicted to some other creature, animal or human, is met with in various regions of primitive America. Some of the Nahuas or Aztecan peoples of ancient Mexico (Gerste, p. 47) had the custom, in cases of violent fever, of fabricating a little dog of maize-flour, which was then placed on a maguey-plant in the public way; it was believed that the first passer-by would carry off the disease, and thus enable the patient to recover. In like manner, certain Peruvian coastal tribes used to expose on the public road the clothes of the sick man, in the belief that any passer-by who touched them would take the disease upon himself and so relieve the patient.

14. The animal world as the cause of disease.—A typical American Indian legend of the origin of disease is that of the Cherokee reported by Mooney, and given at length in art. CHEROKEES (vol. iii. p. 505). According to this myth, the animals became so offended and outraged at the carelessness of man and the invasions of their rights on the part of mankind that they held a council and determined to obtain revenge by each of them inflicting some disease upon their human oppressors. This they did, the smallest as well as the greatest providing his share. This is why the incantations and rites of the Cherokee medicine-men are so full of references to animals, and why each disease is represented as being caused by some one of them (the interesting details will be found in Mooney's monograph upon this subject). As a result of the action of the animals, the legend goes on to state, all the plants held a council and resolved to present man with remedies for all the diseases inflicted upon him by the former. Thus it happens, also, that for every disease brought about by the animals, there is a remedy to be found in the plant world. The idea of the origin of disease from the animal world obtains among many other American tribes as well, and the doctrine sometimes suggests comparison with the modern scientific theories as to the microbe origin of many human diseases. Among the Klamath Indians of Oregon, birds such as the wood-pecker, the lark, the crane, and various sorts of ducks are believed to be the causers of disease. With them also the otter is made responsible for smallpox.

15. Natural phenomena as causes of disease.—With some American Indian peoples, the shadow of another person is often harmful. Among the Shushwap of British Columbia (Boas, *6th Rep.* p. 92) widows and widowers, while observing mourning regulations, 'must avoid letting their shadows fall upon a person, as the latter would fall sick at once.' Similar beliefs prevail among the Bilqula (*7th Rep.*, 1891, p. 13). Lightning, the moon's light, etc., are sometimes supposed to cause illness. The Klamath Indians seem to have believed that the wind had something to do with the causation of disease. In some of the incantations of these Indians the west wind, in particular, is represented as 'blowing disease' out of its mouth; the rainstorm also 'calls up' disease.

16. Human beings as causers of disease.—Besides enchantment, witchcraft, sorcery, and other active procedures of medicine-men and medicine-women, by means of which sickness or disease is caused in another individual or transferred to him, there are other ways in which men and women may infect one another or bring about a condition of ill-health. As may be seen from the abundant data in Ploss's *Das Weib*, the menstruating woman is often regarded as a disease-bringer or a disease-causer, and her segregation is justified for that reason. Among the Songish Indians of Vancouver Island, according to Boas (*6th Rep.* p. 22), 'menstruating women may not come near sick persons, as they would make them weak.' The maximum theory of woman's responsibility for disease is met with among the Chiquitos of Bolivia, concerning whose 'medical code' Charlevoix states (Gerste, p. 45) that 'it consists of two prescriptions,—first, to suck the part of the body of the patient affected, and, second, to kill some woman, since women are responsible for all the misfortunes of mankind.' Among the Shushwap Indians of British Columbia, according to Boas (*l.c.* p. 90), 'women during their monthly periods are forbidden to cook for their families, as it is believed that the food would be poisonous.' Among the causes of disease or sickness given by the shamans of the Shushwap (p. 94) are 'that a woman passed by the head of the patient, or that the shadow of a mourner fell upon him.' Ideas cognate, more or less, with the 'evil eye' superstitions of the Old World are met with in various parts of primitive America. The shamans of many tribes (*e.g.* Shahaptin, Klamath, and other peoples of the Oregonian-Columbian region) are believed to be able to 'shoot' diseases from their eyes. Against these instances of maleficent human beings may be cited cases of *twins as disease curers*. As already noted in art. CHILDREN (vol. iii. p. 526), several American Indian tribes, particularly in the North Pacific coast region, believe that twins are gifted with the power of curing diseases.

Thus, among the Kwakiutl (Boas, *5th Rep.* p. 51), twins, who are thought to be transformed salmon, 'have the power of curing diseases, and use for this purpose a rattle called *K'oāqaten*, which has the shape of a flat box about three feet long by two feet wide'; among the Nak·ómgylisila (*6th Rep.* p. 62), 'twins, if of the same sex, were salmon before they were born. . . . The father dances for four days after the children have been born, with a large, square rattle. The children, by swinging this rattle, can cure disease and procure favourable winds and weather.'

17. Soul and disease.—In primitive America a great variety of ideas as to the relationship of the soul to disease and kindred phenomena of the human body prevailed. Indeed, we meet with all grades—from the simple belief of the Arawakan Macheyengas of eastern Peru, who, according to Dr. W. C. Farabee (*Proc. Amer. Antiq. Society*, N.S., xx.), think that the soul 'has nothing to do with life, sleep, disease, or death,' to the elaborate and quite metaphysical doctrines of some of the tribes occupying higher cultural stages, where life, sleep, disease, and death have often to be interpreted in relation to the existence of a plurality of souls, constituting sometimes a hierarchical series. Among the Indians of the North Pacific coast regions there are some (for example, certain tribes of the Fraser River, in British Columbia) who believe in the existence of 'several souls, the loss of one of which causes partial loss of life, *i.e.* sickness, while the loss of all, or of the principal one, entails death'; but, according to Boas (*Bull. 30 BE*, pt. ii. p. 617), the idea that the 'life' is associated with the vital organs (blood, breath, etc.), the loss of which causes death, 'is not strongly developed among the American aborigines.' The Hidatsa Indians of the Siouan stock,

like the Fraser River tribes, believe in a plurality of souls, as do a number of other American peoples. The doctrine of souls and of disease among the Chinook Indians has been discussed by Boas (*JAFL*, 1893, pp. 39–43). Here there are said to be two souls, a larger and a smaller; when a man is sick, it is because the latter has left his body, and he recovers when the shaman or medicine-man has caught the soul and returned it to him. In various parts of America the devices for 'soul-catching' are sometimes detailed, with extensive ceremonial, ritual, etc. Among the Tlinkit, Haida, and Tsimshian Indians, according to Boas (*5th Rep.* p. 58),

'their art consists in extracting the sickness or in finding and restoring the soul of the sick person. In trying to find it, three or four shamans sing and rattle over the sick person until they declare they have found the whereabouts of his soul, which is supposed to be in the possession of the salmon or *olachen* (candle-fish), or in that of the deceased shaman. Then they go to the place where it is supposed to be, and by singing and incantations obtain possession of it, and enclose it in a hollow carved bone. Then mountain-goat tallow, red paint, eagle-down, and other valuable objects are burnt, and the soul held over the fire. The bone is then laid upon the sick man's head, the shaman saying, "Here is your soul. Now you will be better and eat again." Sometimes the soul is supposed to be held by a shaman, who is paid for returning it.'

The soul of an individual can be removed from his body through the 'magic' of his enemies, their more powerful *orenda*, to use the term of Hewitt, and can be brought back only by the exercise of the same practices of a higher order or a greater cunning. Among the Songish Indians the lower sort of shamans, or *sīōua*, who are generally women, are able to cure such diseases as are not due to the soul's absence from the body. The higher class of shamans, or *squnäám*, are able to see the soul and to catch it when it has left the body and its owner is sick. A man becomes a *squnäám* by intercourse with supernatural powers in the woods, where he acquires a guardian spirit, 'called the *tl'k'āyin*, corresponding to what is known as the *tamanowus* in the Chinook jargon, and "medicine" east of the Rocky Mountains.' The method of procedure of the *squnäám* in disease-curing and soul-catching is thus described by Boas (*6th Rep.* 30):

'When he returns from the woods, the shaman is able to cure diseases, to see and to catch souls, etc. The best time of the day for curing disease is at nightfall. A number of people are invited to attend the ceremonies. The patient is deposited near the fire, the guests sit around him. Then they begin to sing and beat time with sticks. The shaman (who uses no rattle) has a cup of water standing next to him. He takes a mouthful, blows it into his hands, and sprinkles it over the sick person. Then he applies his mouth to the place where the disease is supposed to be, and sucks at it. As soon as he has finished sucking, he produces a piece of deer-skin or the like as though he had extracted it from the body, and which is supposed to have produced the sickness. If the soul of the sick person is supposed to be absent from the body, the shaman sends his *tl'k'āyin* (not his soul) in search. The *tl'k'āyin* brings it, and then the shaman takes it and puts it on the vertex of the patient, whence it returns into his body. These performances are accompanied by a dance of the shaman. Before the dance the *sīōua* must give a name to the earth, which else would swallow the shaman. When acting as conjurer for sick persons, he must keep away from his wife, as else his powers might be interfered with. He never treats members of his own family, but engages another shaman for this purpose. It is believed that he cannot cure his own relatives. Rich persons sometimes engage a shaman to look after their welfare.'

Shamans are able to make people sick, no less than to cure them of illness. The Nutka Indians, according to Boas (*6th Rep.* p. 44), have the following curious belief as to the cause of sickness:

'The soul has the shape of a tiny man; its seat is in the crown of the head. As long as it stands erect, the person to whom it belongs is hale and well; but, when it loses its upright position for any reason, its owner loses his senses. The soul is capable of leaving the body; then the owner grows sick, and, if the soul is not speedily restored, he must die. To restore it, the higher class of shamans, called *k·ok·oatsmaah* (soul-workers), are summoned.'

Among the Kwakiutl Indians (p. 59):

'If a man feels weak and looks pale, the seer (shaman) is sent for. He feels the head and root of the nose of the patient, and finds that his soul has left his body.'

The soul is caught again at night by the shaman to the accompaniment of incantations, etc., as already described for the Songish. Among the Shushwap the bringing back of the soul is an elaborate performance. Among the Bilqula (Bellacoola) the following belief obtains (*7th Rep.* p. 14):

'The soul is believed to dwell in the nape. It is similar in shape to a bird enclosed in an egg. If the shell of the egg breaks and the soul flies away, its owner must die. Shamans are able to see and to recover souls. By laying their hands on the nape of a person they are able to tell whether his soul is present or whether it has left the body. If the soul should become weak, they are able to restore it to its former vigour. If a person swoons, it is believed that his soul has flown away without breaking its shell. The shaman hears its buzzing wings, which give a sound like that of a mosquito. He may catch and replace it in the nape of its owner. If the soul leaves the body without breaking its shell the owner becomes crazy.'

Unlike many other Indian tribes, the Bilqula believe that the art of shamanism is a direct gift of the deity called Snq, obtained during illness, and not procurable by means of fasting, praying, etc. Among the Chilliwack, according to Hill-Tout (*Rep. on Ethnol. Surv. of Canada*, 1902, p. 9), the shaman sends his own soul out to catch the soul which has escaped from the body of his patient. Among the Twana Indians, who have the practice of 'soul-catching,' the reason given for its performance at night is that night on earth corresponds to day-time in the spirit-world. Among the Klamath Indians of Oregon, the treatment of the sick takes place in the winter-house in complete darkness.

18. **Ghosts or spirits of the dead and disease.**—An opinion met with among many of the aborigines of America is that, in some way or other, the ghosts or spirits of the dead are responsible for the diseases and sicknesses that afflict mankind. Among the Kwakiutl of Vancouver Island, to see the ghosts of the dead, when they re-appear on earth, entails sickness and death (Boas, *5th Rep.* p. 43); with certain Siouan tribes, to touch them or be touched by them as they move unseen through the air has the same effect. Many peoples, however, believe in an active rôle of these spirits in afflicting human beings with disease; this sometimes amounts to taking possession of the body or of some part or member of it. Among the coast Salish (Boas, *ib.* p. 52), it is believed that 'the touch or the seeing of ghosts brings sickness and death.' So, also, with the Songish (*6th Rep.* p. 28), who believe that

'their touch causes sickness. They make those who have not regarded the regulations regarding food and work mad. Their touch paralyzes man. When one feels afraid, being alone in the woods or in the dark, it is a sign that a ghost is near.'

The following is reported by Boas (*6th Rep.* p. 61) from the Kwakiutl:

'The sight of a ghost is deadly. A few years ago, a woman, who was wailing for her mother, suddenly fell into a swoon. The people first believed her to be dead, and carried the corpse into the woods. There they discovered that she continued to breathe. They watched her for two days, when she recovered. She told them that she had seen two people enter the house. One of them had said: "Don't cry; I am your mother's ghost. We are well off where we live." She had replied: "No; I mourn because you have left me alone." Then she had fallen into a deep swoon.'

This explanation of swooning, fainting, and similar states is common all over primitive America. Among the Shushwaps (p. 93), 'when a person faints, it is a sign that a ghost pursues him.'

19. **The hereafter of those dying from sickness and disease.**—Among the American Indians, one frequently meets the idea that those dying by violent deaths, women dying in childbirth, and people whose death is due to sickness or disease go to certain special abodes in the hereafter. Thus the Tlinkit, according to Boas (*5th Rep.* p. 47),

'believe that the soul, after death, lives in a country similar to ours. Those who have died a violent death go to heaven, to a country ruled by Tahit; those who die by sickness (also women dying in childbed) go to a country beyond the borders of the

earth, but on the same level. It is said that the dead from both countries join during the daytime. I believe that this idea, which is also held by the Haida, must be ascribed to Eskimo influence.'

A special heaven for women dying in childbed is met with elsewhere among uncivilized tribes; also in ancient Mexico.

20. Disease and the gods and demons.—The conception of disease as the work of deity or of demons has not yet vanished altogether from the minds of the civilized Christian peoples of the globe, and it is strongly entertained by many tribes of American Indians representing practically all grades of culture in the primitive New World. The Iroquoian Onondaga, *e.g.*, believe that the evil demons known as *Hondoi* cause both disease and misfortune among men and women, but, when appeased by dances and other ceremonies and by offerings of food, tobacco, and the like, they become friendly and protect them from sickness and disease, as well as from witchcraft. In the dances and kindred ceremonials of the Iroquoian 'medicine-societies,' women masked, representing these disease-demons with distorted human faces, are employed. The secret medicine-societies of the pagan Seneca have recently been studied by A. C. Parker, himself of Iroquoian descent. These societies serve for the healing of disease and the furtherance of well-being in the broadest sense. In a Tsimshian myth (Boas, *5th Rep.* p. 50) 'the master of the moon,' the pestilence (*Haiatiloq*), appears as a powerful deity—something ascribable to the influence of the neighbouring Kwakintl. The Sacs and Foxes believe that the spirit of sickness, *Apenaweni*, hovers about, seeking entrance into the lodges of the Indians. Among the Nez-Percé Indians there is a general ceremony, lasting from 3 to 7 days, carried on by all the men of the community who are between 18 and 40 years of age, with the object of conquering *Mawish*, the spirit of fatigue (Bartels, p. 235); and the Indians believe firmly that by means of it they ensure themselves great bodily strength and capacity for resistance to fatigue.

Water-demons are sometimes credited with keeping the souls of men, and thus causing various diseases and sicknesses. Examples of this are the *Tsakan* of the Mexican Coras, described by Preuss, and the *Pujio* of the Indians of the Bolivian-Argentinian border-land, of which an account is given by Boman (*Antiq. de la rég. and.*, vol. i. [1908]). In the case of the Pujio, a rather complicated offering is made, after which the soul is called back. The soul is also called back when one is 'frightened to death.' Among the Ipurina Indians of Brazil, persons whose recovery from illness or disease is not expected, and upon whom all the arts of the shaman have been exercised in vain, are devoted to *Inkisi*, 'the great water-snake,' a prominent figure in their mythology. Ehrenreich thus describes their actions in this matter (cited in Bartels, p. 248):

'If there are any sick people who are beyond anything but the help of the Snake, one of the shamans proceeds to the river to call the Water-Spirit. After all accompanying him have disappeared, the Spirit comes forth, and asks first after what gifts have been brought. If he is satisfied with these, he declares himself ready for the reception of the sick man. The latter is stupefied with tobacco and thrown into the river, on the bottom of which he falls "with a dull thud," and wakes up. The Water-Spirit takes him into his house and restores him. The method of cure is not clearly given, but the recovered patient remains for ever in the realm of the Water-Snake, and lives there happily and gloriously, with no desire to return to earth. The accidentally drowned find the same reception, while those already dead on earth are rejected. Moribund people are often hurried into the next world by the clubs of the shamans.'

21. Disease as punishment.—The conception of disease as punishment for the known or unknown sins and offences of the individual, the family, or the community is wide-spread, and is not confined to any particular stage of culture, either in the Old World or in the New. Primitive America furnishes a number of interesting examples. The breaking of tabus, and the disregarding of various other religious or semi-religious commandments and regulations, are believed by tribes all over the continent to be followed by punishments which often take the form of some sickness or affliction of body or mind, or of both together. The breaking of food-tabus, in particular, is thought to bring diseases of various sorts on the guilty; likewise, the non-observance or neglect of the customs and ceremonies relating to menstruation, puberty, childbirth, *coitus*, etc. The Mayas of Yucatan and the Aztecs of ancient Mexico, both representing the highest reaches of primitive American civilization, believe that certain diseases were sent upon the individual, etc., in consequence of sin; the former holding also that it sometimes was for sins unconfessed. This topic is discussed by Preuss in his article on sin in ancient Mexican religion (see Lit.). It appears that the Aztecs believed diseases and misfortunes of many sorts to be due to the sinful nature of man. Sacrilege and offences against the State were punished by the gods. Tezcatlipoca, *e.g.*, sent leprosy, sexual diseases, gout, skin diseases, dropsy, etc. Father Gerste (p. 19) says on this point that, in cases of severe illness or grave diseases, the 'doctor' told the patient that he must have committed some sin, and kept questioning him until he confessed some offence—very old, perhaps, and almost forgotten. The principle of medication here was to purify the soul first, and then the body might get well. Certain Central American peoples, of the Mayan stock, had practically the same ideas and method of procedure by confession, etc.

22. Special and protective deities of shamans, etc.—Among not a few tribes, especially those belonging to the ancient civilized peoples of Mexico, Central and South America, the 'doctors,' 'medicine-men,' etc., had their special protective divinities. Such, *e.g.*, were, among the Aztecs and closely related peoples, *Toçi*, the great, ancient mother, particularly friendly to women-doctors and midwives, who figured in the ceremonials in her honour; *Xilonen*, a goddess to whom a young maiden was offered in sacrifice; *Tzapotla tenan*, or 'the mother of Tzapotlan,' to whom was attributed the discovery of the medicinal resin called *oxitl*, and who was specially worshipped by male 'doctors'; *Ixtlilton* (also called *Tlaltecuin*), god of song, dancing, games, etc., into whose temple sick children were taken, to dance (if they could) before his image, and drink of the holy water preserved in the sanctuary. The deities Tlaltecuin, Xochicauacan, Oxomoco, and Cipactonal especially were credited with the beginnings of medical art. Among the Mayas, the culture-hero, Itzamna, is said to have been the originator of medicine; the same thing is said of Xmucan and Xpiyacoc among the kindred Quichés of Guatemala. The culture-hero, as primal shaman, appears also in S. America, *e.g.*, in the Yurupari legend reported by Stradelli from the head-waters of the Orinoco. The Guarayan (Bolivia) Abaangui prepares the first *chicha*, or intoxicating drink, from maize. Many myths relate that the 'medicine' was received directly or indirectly from the gods themselves or their representatives, the Twins, who figure so conspicuously in the mythologies of the south-western United States, etc.; the 'transformers' of the North Pacific coast; or such animal-deities as the coyote in the Rocky Mountain region and among the Plains tribes. Hoffman has recorded the great Ojibwa myth of the transference to man by the culture-hero, Manabozho, of the 'grand medicine.' Cushing has also published the Zuñi account of the teaching of 'medicine' to the first

men by the Twins, who are the chief culture-figures in Pueblo mythology.

23. Human sacrifice as a cure for disease.—The sacrifice of animals, etc., as a more or less religious ceremonial in connexion with the ritual of 'medicine' is known from various regions of the globe, where the process of getting well in body is carried out on lines similar to getting well in mind, and maintaining harmony between man and the powers beyond and above him. In this way human sacrifice sometimes occurs. Some of the Indian tribes of ancient Mexico, according to Orozco y Berra, cited by Father Gerste (p. 19), used, in cases of very grave illness of the father or the mother, to kill the youngest child as an expiatory sacrifice.

LITERATURE.—Besides the other references in the text, the following works may be cited as of first importance: A. S. Ashmead, 'Some Observations on certain Pathological Questions concerning the Mutilations represented on the Anthropomorphous huacos Pottery of Old Peru,' *N.Y. Med. Jour.*, 1909, pp. 857–861, and other writings on the subject of syphilis in America; M. Bartels, *Die Medizin der Naturvölker*, Leipzig, 1893; I. Bloch, 'Der Ursprung der Syphilis, Morbus Americanus,' *Intern. Amerik.-Kongr.* xiv. (1904) 57–79, and recent volume on same topic; F. Boas, 'The Doctrine of Souls and of Disease among the Chinook Indians,' *JAFL*, 1893, pp. 39–43, and other contributions; J. G. Bourke, 'The Medicine-men of the Apache,' *9 RBEW*, 1892, pp. 443–600; S. Culin, 'Games of the North American Indians,' *24 RBEW*, 1907, pp. 3–809; R. B. Dixon, 'Some Aspects of the American Shaman,' *JAFL* xxi. (1908) 1–12, and other writings; A. Gerste, *Notes sur la médecine et la botanique des anciens Mexicains*[2], Paris, 1910; W. J. Hoffman, 'The Midē'wiwin or "Grand Medicine Society" of the Ojibwa,' *7 RBEW*, 1891, pp. 143–300; A. Hrdlička, various contributions, but especially *Physiological and Medical Observations among the Indians of South-Western United States and Northern Mexico* (*Bull. 34 BE*, 1908); J. G. McGuire, 'Pipes and Smoking Customs of the American Aborigines,' *Rep. U.S. Nat. Mus.*, 1897; J. Mooney, 'The Sacred Formulas of the Cherokees,' *7 RBEW*, 1885–1886, pp. 301–397, and other writings; A. G. Morice, 'Déné Surgery,' *Trans. Canadian Inst.* (Toronto) vol. vii. (1901), pp. 15–27; E. von Nordenskiöld, 'Recettes magiques et médicales du Pérou et de la Bolivie,' *Journ. Soc. des Amér. de Paris*, N.S., iv. (1907) 153–174; R. Palma, *La uta del Perú*, Lima, 1908; Ploss-Bartels, *Das Weib in der Natur- und Völkerkunde*[8], Leipzig, 1891, and *Das Kind in Brauch und Sitte der Völker*[2], 2 vols., Leipzig, 1884; K. T. A. F. CHAMBERLAIN.

DISEASE AND MEDICINE (Assyro-Babylonian).—The chief difficulty in treating of the subject of diseases in Babylonia is to separate the ideas of magic from medicine proper in the native methods of healing. The Assyrian physician never shook himself entirely free from the more supernatural side of his profession, and, apart from the magical incantations for the sick, even the more scientific medical texts depend largely on 'white magic.' The latter consist, for the most part, of short material recipes on which much of our knowledge of the Assyrian pharmacopœia rests, but they also prescribe spells to be used simultaneously with the administration of drugs. It is therefore clear that, although many of the recipes in use were efficacious from a purely medical standpoint, they were frequently combined with a series of chanted *abracadabra* of more value to the anthropologist than to the student of medicine.

The present inhabitants of the plains of Mesopotamia and the hills of the neighbourhood are probably liable to the same diseases as their ancestors were some thousands of years ago, and we may therefore start on this hypothesis. Sudden plagues, of which cholera is one of the most appalling in its effects, are met with at all periods of the history of this country:[1] dysentery, typhoid, and like diseases, common to all countries where the drainage is of a casual nature; smallpox and similar pests; malaria, particularly in the swamps of Babylonia; and such other ailments as are common to all mankind without distinction of locality. Particularly, too, must be mentioned the peculiar skin-eruption known variously as the 'Baghdad boil,' or 'Mosul (or Aleppo) button,' and the various forms of ophthalmia common to Eastern peoples. Naturally there are many forms of sickness on the cuneiform tablets that we cannot identify with certainty until our knowledge of the medical literature is more advanced.

The principal causes to which sickness was ascribed were the visitation of some god or goddess, the attack of a devil, and the machinations of sorcerers.[1] Demoniac possession was firmly believed in, and it is for this reason that the priest was as likely to be called in to help a patient as the real doctor. The whole of the cuneiform incantations are full of the belief that some god, demon, or ghost is plaguing the sick man, and must be expelled before the patient can be healed; and similarly we may presume that the so-called Penitential Psalms have their origin, not in the remorse of the suppliant, but in his actual physical malady, which he believes to be due to some supernatural blow. The medical texts are often explicit on this point: 'When (a man) is smitten on his neck, it is the hand of Adad; when he is smitten on his neck, and his breast hurts him, it is the hand of Ištar on the necklace.'[2] 'When a man's temples pain him, and the neck muscles hurt him, it is the hand of a ghost.'[3] 'When a ghost seizes upon a man, then mix (various substances) together, anoint him (with them), and the hand of the ghost will be removed.'[4]

There is little doubt that sickness, as understood among the Assyrians, may be reckoned to be due to breaches of the savage tabu. The man so attacked has transgressed a ban; indeed, much of the incantation series known by the name of *Šurpu* deals with long lists of possible uncleanness which has caused the patient's malady, the word used being *mamit*. In one tablet there is a categorical list of as many as one hundred and sixty-three *mamit*, or tabus, each severally described briefly in one line, and the magician is supposed to repeat all these, as it is hoped that he will thereby light on the correct cause of the trouble, diagnose his case properly, and show that he possesses a knowledge of the cause of the sickness. That physical ills were held to be the result of incurring some tabu of uncleanness is quite clear from certain *mamit* of the Third Tablet, which are as follows:

To go before the Sun-god when *'ātsûr* [*i.e.* under a tabu] (l. 114), to touch a man when one is under a tabu, or to pray in the same state (ll. 115, 116), or to hold converse, eat the bread, or drink the water of one under a tabu (ll. 117–119), or to drink what he has left (l. 120); or, in the Second tablet, to go before a man under a tabu, or to have a man under a tabu come before one (ll. 99, 100), to sleep on the bed, sit on the chair, or to eat or drink from vessels, belonging to such a man (ll. 101–104).

According to modern ideas, many of these might be merely an unintelligent development of the principle of infectious diseases (which will provide an explanation in part), but the first three show distinctly that there are other principles in question. The savage tabu of 'uncleanness' is here in a later dress, and sickness is considered as the result of a breach of this very intricate belief. For, if the man for whom the series *Šurpu* provides a means of relief be not really and obviously physically ill, there is no reason for the existence of such a series; we cannot suppose that a man called in a priest to relieve him from the obscure tabus which he might have incurred, unless there was some unusual physical condition demanding it.

[1] Joshua the Stylite (ed. Wright, Camb. 1882, p. 17) says, 'as all the people had sinned, all of them were smitten with the plague' in the year of Alexander. The destruction of Sennacherib's army (2 K 19[35], Is 37[36]) must have been due to some such cause.

[1] For these, see art. CHARMS AND AMULETS (Assyr.-Bab.).
[2] S. 951. [3] S. 1063. [4] K. 4075 · cf. K. 4609 b.

Just as we may presume the 'unwitting' tabus (in whatever way the word שְׁגָגָה may be translated) of the OT to have manifested themselves in some physical way, so must we suppose that an Assyrian would not have recourse to a priest-physician unless absolutely driven by pain or fear. Sickness is due to a demoniac or Divine influence, and it is well known that a savage fears to incur a breach of tabu from some ill-defined sense of danger from god or devil; it is clear, therefore, that the Assyrians had the same terror in their minds when they edited the *Surpu*-series for the benefit of sick men. The sorcerer must discover—or trick the powers into believing that he has discovered—the tabu which the patient has transgressed, and he can then proceed to cleanse the man from his breach, and lift the ban from him.

The principal god connected with healing is Ea, but it is his son Marduk who is appealed to by the physician as intermediary with the higher power. Marduk, when called on for help, is supposed to repair to his father to ask him for his advice as to what the sick man must do to be healed. This episode is constantly repeated in cuneiform incantations for the sick; indeed, to such an extent was it recognized as the usual procedure that it is frequently inserted in these texts in one line containing abbreviations of the three principal sentences, thus: 'Marduk hath seen'; 'What I'; 'Go, my son.' The full formula is as follows:

'Marduk hath seen him (the sick man), and hath entered the house of his father Ea, and hath said, "Father, headache from the under world hath gone forth."[1] Twice he hath said unto him, "What this man hath done he knoweth not; whereby shall he be relieved?" Ea hath answered his son Marduk, "O my son, what dost thou not know, what more can I give thee? O Marduk, what dost thou not know, what can I add unto thy knowledge? What I know, thou knowest also. Go, my son, Marduk. . . ."'

Then follows the actual prescription for the patient. This method of bringing in a Divine episode is nothing more than a development of the principle of the Word of Power, which tradition demands shall be one of the sorcerer's most potent aids in spell-working. A scene is represented on certain of the magical plaques which is apparently intended to portray the sick man and the forces arrayed against him: the celestial powers, demons, protecting gods and spirits, the sick man on his bed, etc., form an interesting picture (see Frank, *LSSt* iii. 3).

Now, this Word of Power, so generally recognized in all magic, consists in its simplest form of the name of some Divine being or thing invoked against the power of evil which the physician is expelling. Hence many of the Assyrian incantations end with the line, 'By Heaven be ye exorcized! By Earth be ye exorcized!' and numerous gods are invoked in the same way.

Two other concomitants to the exorcisms are necessary to the exorcist: first, the knowledge of the name or description of the devil which is being expelled; and, second, some material with either medicinal or magical value whereby the cure may be effected. The former is as necessary as the Word of Power for a complete incantation; when the wizard has a knowledge of the name of his foe, or, in the case of demons, a full description of the ghost attacking the man, he has assumed some considerable influence over him which will finally bring him entirely into subjection. The genesis of such a belief is to be sought in the same source as the collateral superstitions where portions are collected of the hair, nails, or footprint-dust of any one whom the enchanter wishes to bewitch, or the waxen figures made in the victim's likeness. It is enough if something belonging to the person, not necessarily concrete, has been secured, and the name is considered as an equivalent for more tangible evidence, such as nail-parings.

The Assyrian sorcerer is compelled to recite long lists of ghosts or devils when he is trying to conjure the evil away from his patient. The idea is that, since obviously he cannot obtain the more fleshly portions of his foe as he might do in the case of a human enemy, he shall mention, in place of this, the name or powers of all possible evil spirits, and ultimately, by his much speaking, hit on the correct identification of the demon, who will then admit the magician's superiority. Hence we find in the Assyrian texts such constantly recurring phrases as, 'Whether thou art an evil spirit, or an evil demon, or an evil ghost, or an evil devil, or an evil god, or an evil fiend, or sickness, or death, or phantom of night, or wraith of night, or fever, or evil pestilence, be thou removed from before me';[1] or even longer descriptions of ghosts of people who have died unnatural deaths, or who have been left unburied, and whose only hope is to torment the living until they perform the necessary rites to give them peace.[2]

The third and last element of the incantation is some drug, to which in early times a magical, Divine potency was attributed, or some charm or amulet, or, in the broadest sense, some material which will aid the physician in his final effort. The simplest is pure water, which was frequently sprinkled over the patient as a cleansing medium, and this is easily intelligible. One incantation (*WAI* ii. 51b, line 1 ff.) runs thus: 'All that is evil, . . . [which exists in the body] of N. [may it be carried off], with the water of his body, the washings from his hands, and may the river carry it away downstream!' There seems also to have been some principle of enclosing the possessed man in a ring of flour or other powder spread in a circle on the ground, as a kind of *hēram* through which spirits could not break. For instance, after an 'atonement' ceremony has been made, the wizard fumigates the man with a lighted censer, and then throws away the 'atonement' (in this case a kid) into the street; he then surrounds the man with flour,[3] as a magic circle through which no evil demon can pass to injure him. In another incantation the sorcerer says of certain figures which he has made:

'On their raised arm I have spread a dark robe,
A variegated cord I have wound round their hands, I have placed tamarisk (and) palm-pith,
I have completed the *uṣurtu* (magic circle), I have surrounded them with a sprinkling of lime,
With the flour of Nisaba (the corn-god), the tabu of the great gods, I have surrounded them,
I have set for the Seven of them, mighty-winged, a figure of Nergal at their heads.'[4]

The tamarisk (or some allied species of tree) was held aloft in the hand during the priest's exorcism; one of the rituals prescribes this to the magician, who says, during his ceremonial:

'The man of Ea am I, the man of Damkina am I, the messenger of Marduk am I, my spell is the spell of Ea, my incantation is the incantation of Marduk. The ban of Ea is in my hand, the tamarisk, the powerful weapon of Anu, in my hand I hold; the date-spathe (?), mighty in decision, in my hand I hold.'[5]

On one of the late Hebrew magical bowls discovered at Niffer there is the figure of a man rudely

[1] This is the only variation in the formula, being the first line of the tablet.

[1] See Thompson, *Devils and Evil Spirits of Babylonia*, London, 1903, i. 16–17, ll. 153 ff.

[2] *Ib.* xxiv ff., also *Semitic Magic*, p. 7 ff.

[3] Tablet XI. of the *Aššakku*-series (Thompson, *Devils*, ii. 35). This is probably the meaning conveyed by *amelu šuâti kusurrâ eṣir*, and not as the present writer has translated it in the passage. See also Thompson, *Semitic Magic*, p. lvii ff.

[4] Zimmern, 'Ritualtafeln,' in *Beiträge zur Kenntnis*, etc., ii. 169. The curious may see much about these magic circles in the Middle Ages in Francis Barrett, *The Magus*, 1801, p. 99 ff., or even what is believed about them at the present day by certain who dabble in the 'occult,' in Mathers' *Book of Sacred Magic*, 1898, p. xxxvii.

[5] *Utukku*-series, Tablet III. l. 204 (Thompson, *Devils*, i. 23). The word translated 'tamarisk' is *GIS.MA.NU*, undoubtedly some form of tree, the Assyrian equivalent being *eru*, probably the Syriac *'arʿâ'*.

drawn, holding up the branch of some tree in his hand.[1] From Sozomen[2] we learn that, when Julian was about to enter a temple in Gaul, the priest, in accordance with the pagan custom, sprinkled water upon him with the branch of a tree, doubtless symbolical of a purificatory rite. It is possible that we may see some such ceremony prescribed in the Assyrian cleansing rite:

'Perform thy goodly incantation and make perfect the water thereof with priestcraft, and with thy pure incantation do thou cleanse (the man?); and take a bundle of twigs (?), pour the water thereof on it, and the laver (or water) that cleanseth the temple of the gods,' etc.[3]

The comparison is, however, uncertain, as we have no right to assume that in this case the water was sprinkled upon the sick man; but Sozomen's anecdote is of value as showing that branches were used in sprinkling water.[4] There is, however, a parallel to the Assyrian rite in another tablet,[5] where Ea says:

'Take a bundle of twigs (?) and take water at the confluence of two streams, and perform thy pure incantation over this water, and cleanse (the man) with thy pure exorcism, and sprinkle the man, the son of his god, with this water, and bind his head with. . . .'

Of other mystic plants, we find the *piri'* (which is probably the Syr. *per'ā*, St. John's wort), the *balti* (which may be the Syr. *bal*, the caper), and the *ḫulâ* (prob. the Syr. *ḫlā*, the fleabane) all used to hang up on the doors of houses when a ceremony was going on, as a prophylactic against demons.[6] The first-named, the St. John's wort, has always had great power in magic. 'Gathered on Midsummer Eve, or on Midsummer Day before sunrise, the blossoms are hung on doorways and windows to preserve the house against thunder, witches, and evil spirits.'[7] The number of plants which occur in the medical and magical texts is very large; but, unfortunately, they are difficult to identify, and the lexicographical tablets which give the names of hundreds do not really afford much clue.

Before proceeding to the medical recipes, we have to notice that peculiar method of healing, used by all savages, and known in modern times as 'sympathetic magic.' It is quite unnecessary here to go into the various forms in which this occurs in modern witchcraft; it is enough to take as a text the homœopathic 'hair of the dog that bit one,' and quote some of the cuneiform texts in which this method is employed.[8] The best-known examples occur in the *Šurpu*-series, where the magician recites various formulæ over a clove of garlic, a date, a flock of wool, some goat's hair, etc., pulling each in pieces and burning it as he does so. As he destroys each, so will the sickness depart. One quotation of an incantation will show the method:

'As this date is cut, and cast in the fire,
The devouring flame consumes it,
Never to return to its reft branch,
Nor grace the board of god or king;
So may the ban, the tabu, the pain (?), the woe (?),
The sickness, the agony, the sin, the misdeed, the wrong-doing, the iniquity,
The sickness which is in my body, my limbs, my muscles,
Be cut off like this date,
So may the devouring flame consume it,
The tabu go forth, and I behold the light!'[9]

This is the most marked form of sympathetic magic, but the principle is used obviously in much of the cuneiform priestcraft, and it occurs in various forms in the examples given in this article.

The name of the physician proper was *asû*, but, as the treatment was frequently of a magical nature rather than purely medical, it was oftener the *ašipu*-priest than a doctor who was called in to heal a sick man. The *ašipu* is the magician who can release the patient from the tabu under which he lies; the same word occurs in Hebrew under the form *aśśâph*; and the name in Assyrian for the incantation is *šiptu* (from the same root).[1] He claims in his exorcism that he has come supported by the power of Ea, Damkina, and Marduk:

'The man of Ea am I, the man of Damkina am I, the messenger of Marduk am I. The great lord Ea hath sent me to revive the . . . sick man; he hath added his pure spell to mine, he hath added his pure voice to mine, he hath added his pure spittle to mine, he hath added his pure prayer to mine; the destroyer(s) of the limbs, which are in the body of the sick man, hath the power to destroy the limbs—by the magic of the word of Ea may these evil ones be put to flight.'[2]

Similarly, when the priest comes into the house of the patient, he declares that he is aided by several gods:

'When [I] enter the house, Šamaš is before me, Sin is behind [me], Nergal is at [my] right hand, Ninib is at my left hand; when I draw near unto the sick man, when I lay my hand on the head of the sick man, may a kindly spirit, may a kindly guardian angel stand at my side! Whether thou art an evil spirit or an evil demon, or an evil ghost, or an evil devil, or an evil god, or an evil fiend, or sickness, or death, or phantom of night, or wraith of night, or fever, or evil pestilence, be thou removed from before me, out of the house go forth! (For) I am the sorcerer-priest of Ea, it is I who [recite] the incantation for the sick man.'[3]

He completes the spell of the Third Tablet of the same series with the words:

'O Ea, King of the Deep, [turn thou?] to see; I, the magician, am thy slave. March thou on my right hand, help on my left; add thy pure spell to mine, add thy pure voice to mine, vouchsafe (to me) pure words; make fortunate the utterance of my mouth, ordain that my decisions be happy. Let me be blessed where'er I tread, let the man whom I (now) touch be blessed. Before me may lucky thoughts be spoken, after me may a lucky finger be pointed. O that thou wert my guardian genius, and my guardian spirit! O Marduk, who blesseth (even) gods, let me be blessed where'er my path may be! Thy power shall god and man proclaim, this man shall do thy service, and I, too, the magician thy slave.'[4]

Armed with these heavenly powers, the priest might exorcize any of the demons which assail mankind, and one of the commonest methods of treatment among the priestly gild was an 'atonement.' The word used is *kuppuru* (the noun is *takpirtu*), the same as the Heb. כִּפֻּר, as was pointed out by Zimmern ('Ritualtafeln,' p. 92). The idea in the Assyrian method is that the demon causing the sickness is to be offered a substitute for his victim, and hence a young pig or kid is taken, slaughtered, and placed near the patient. The devil goes forth at the physician's exorcism and takes up its abode in the carcass of the substitute, which can then be made away with, and the baneful influence destroyed. This is fully laid down in one of the magical texts against the *ašakku* (provisionally translated 'fever'), where it is told how Ea, the lord of the incantation, in showing a method of treating the sick man, lays a kid before Marduk, saying:

'The kid is the substitute for mankind,
He giveth the kid for his life,
He giveth the head of the kid for the head of the man,
He giveth the neck of the kid for the neck of the man,
He giveth the breast of the kid for the breast of the man.'[5]

Instead of the kid, the substitute might be a sucking-pig, and the directions are to put it at the head of the sick man,[6] take out its heart and put it above that of the patient, and [sprinkle] its blood on the sides of the bed; then the carcass

[4] *Ib.* l. 260 ff. (Thompson, *Devils*, i. 27; *Semitic Magic*, xxiii.).

[5] Tablet N, col. iii. l. 37 ff. (Thompson, *Devils*, ii. 21; *Semitic Magic*, 211). The reader is referred to Frazer's *GB*[2] for many similar instances of the transfereoce of ills to animals.

[6] This is rather doubtful, owing to a mutilated line in the text.

must be divided over the man, and apparently spread upon him. The ritual continues with a purification by pure water and fumigation by a censer (as in the story of Tobit), and ends:

'Place twice seven loaves cooked in the ashes against the shut door, and
Give the pig in his stead, and
Let the flesh be as his flesh,
And the blood as his blood,
And let him hold it;
Let the heart (which thou hast placed on his heart) be as his heart,
And let him hold it. . . .'[1]

The migration of demoniac influence to the pig is closely paralleled in the story of the Gadarene swine (Mk 5).[2] The Indian Muslims of the present day who come to Abdulḳadir, the largest mosque in Baghdad, to make a pilgrimage and offer sacrifices, 'vow that if a man who is ill begins to recover he shall go to the shrine.'

'He is stripped to the waist. Then two men lift a lamb or a kid above his head, and bathe his face, shoulders, and the upper part of his body with the blood. While the butcher kills the animal the sheik repeats the first sura of the Koran. They also wrap him in the skin of the animal.'[3]

The 'twice seven loaves' is paralleled in the Seventh Tablet of the *Šurpu*-series: when a man has incurred a certain tabu, seven loaves of pure dough are to be taken, and, after various ceremonies, the magician makes an 'atonement' for the patient, and puts his spittle on the 'atonement' as symbolical of the removal of the tabu from the man to the substitute. The loaves are then to be carried into the desert to a 'clean place,' as in the Levitical ritual, and left under one of the thorn bushes growing there. At the present day in the Hejaz, if a child is very ill, its mother will take seven flat loaves of bread and put them under its pillow, giving them in the morning to the dogs.[4] Another exorcism gives directions more fully; Marduk is advised by Ea to take a white kid of Tammūz:

'Lay it down facing the sick man,
Take out its heart, and
Place it in the hand of that man;
Perform the Incantation of Eridu.
(The kid whose heart thou hast taken out
Is unclean [?] meat wherewith thou shalt make an atonement for this man.)
Bring to him a censer (and) a torch,
Scatter it (the kid) in the street.'[5]

But the Assyrians did not confine the 'atonement' ceremonies to the carcasses of animals; they had other methods for ridding a sick man of his devil, notably that of inducing the incubus to leave the human body to enter a little figure fashioned in the likeness of the patient. The magician took various herbs, put them in a pot of water, sprinkled the sick man with them, and made 'atonement' for him; he then modelled a dough image of his patient, poured out his magic water on him, and fumigated him with incense. Then, just as the water trickled away from his body, the pestilence in his body was supposed to trickle off, the water being caught in some receptacle beneath, and poured forth abroad that the sickness might be dissipated.[6]

Sympathetic magic was likewise called in as an aid in other cases. A sickness-tabu might be removed by the use of charms made of black and white hair, just as they are among modern savage tribes. Three examples from different peoples will be ample to show how closely the Babylonian methods resemble those of other nations.

In India the 'fairy-women' take three different coloured threads and knot them twenty-one or twenty-two times, and when the work is finished it is fastened to the neck or upper arm of the patient.[1] Among the Malays it is customary to make little images of dough of beasts, etc., and to place them on a tray with betel-leaves, cigarettes, and tapers. One of the tapers is set on a silver dollar, with the end of a parti-coloured thread inserted between the dollar and the foot of the taper; this thread the patient holds during the repetition of the charm. The disease-devil is supposed to enter the images, and as soon as this has happened the magician looses three slip-knots and throws them away.[2] Among the modern Persians, O'Donovan saw a similar method for removing fever; a khan spun some camel's hair to a stout thread, and folding it three times on itself spun it again. He tied seven knots therein, blowing on each one, and this was to be worn on the patient's wrist, a knot being untied each day. When the last knot was loosed, the thread was to be thrown in a hall into the river.[3]

The prescription, as given in Assyrian, in the Sixth Tablet of the *Šurpu*-series runs as follows:

'He hath turned his [steps?] to a temple-woman (?), Ištar hath sent her temple-woman (?), hath seated the wise-woman on a couch (?) that she may spin a white and black wool into a double cord, a strong cord, a mighty cord, a twi-coloured cord, on a spindle, a cord to overcome the ban: against the evil curse of human ban, against a divine curse, a cord to overcome the ban. He (she) hath bound it on the head, hand, and foot of this man; Marduk, the son of Eridu, the prince, with his undefiled hands cutteth it off, that the ban, its cord, may go forth to the desert to a clean place.'[4]

Or again, in the case of headache, a method is recommended, as usual, by Ea to his son Marduk:

'Take the hair of a virgin kid, let a wise woman spin (it) on the right side, and double it on the left, bind knots twice seven times, and perform the Incantation of Eridu, and bind the head of the sick man, and bind the neck of the sick man, and bind the soul of the sick man, and bind up his limbs.'[5]

Without going further afield into details of comparative magic, it is worth mention here that the same superstition is still believed in at Mosul, close to the mound of Nineveh. A recipe for fever was given the present writer by a boy employed on the excavations, in which the physician, in this case a shaikh, takes a thread of cotton and ties seven knots in it, putting it on the patient's wrist. After seven or eight days, if the fever continues, he must keep it on; if the fever passes, then he may throw it away.[6]

In one of the Assyrian charms for ophthalmia, black and white threads or hairs are to be woven together, with seven and seven knots tied therein, and during the knotting an incantation is to be muttered; the strand[7] of black hair is then to be fastened to the sick eye, and the white one to the sound eye.[8] Or in another case (for a disease of the eyes called *amurriḳanu*) 'pure strands of red wool, which by the pure hand of . . . have been brought . . . bind on the right hand.'[9] A parallel to the untying of the knots in the modern charms quoted above is prescribed in one of the Assyr. tablets published by King (*Bab. Magic and Sorcery*, p. 58, l. 99 ff.); the priest must say over the sick man 'Ea hath sent me' three times, and then untie the knot which has been tied; and the man must go home without looking behind him.

We may now for the moment leave the magical side of the physician's art for the more scientific study of drugs and their administration. The efficacy of medicine on an empty stomach was well recognized by Assyrian doctors, and the prescriptions constantly end with directions for such a procedure:

'Bray these seven plants together, and put them in fermented

drink; at the approach of the star in the morning let the patient drink them without eating, and he will recover.'[1]

Not only this, but the use of the enema also was well known, the directions being quite explicit:

'An enema (*ḫuš*) of oil thou shalt make, and introduce *per anum*.'[2]

For stomachic troubles there were many remedies. Pains were treated with a mixture of 'salt of the mountain' and *amanu*-salt pounded together and put in fermented liquor, which was to be drunk on an empty stomach, used also as an enema, and sprinkled upon the patient;[3] or a mixture of the *nuḫurtu*-plant and seven corns of *ši-ši*, similarly to be used as a draught and an enema.[4] As a simpler method, the patient was to sit on his haunches and let cold water flow on his head;[5] or the physician was to lay his head lower than his feet, and knead or stroke the back gently, repeating the formula: 'It shall be good.'[6] If the patient have colic and his stomach will not retain its food, and there is flatulence, the prescription is to bray up together ½ *ḳa* of date-juice, ½ *ḳa* of cassia juice with oil and wine, three shekels of purified oil, two shekels of honey, and ten shekels of the *ammi*-plant. The patient is to drink this before the rising of the *Enzu*-star in the morning, without eating; and then this is to be followed by a draught and an enema of ½ *ḳa* of *ŠI-ḲA*, with which he is also to be sprinkled.[7] If there are internal pains—the Assyrian being in this case, 'When a man's inside eats him'—he is to be given *ḫaltappanu*-plant and salt pounded up and dissolved in water or fermented drink, or simply *ḫaltappanu*, or *tiyâtu*, or *ŠI-ŠI*. in fermented drink.[8] When the patient's internal organs burn and he is constipated, let him drink a medicine of garlic and cummin,[9] or the pounded rind of green *il* (a plant) mixed with swine-fat.[10] Remedies are prescribed when 'garlic, leeks, beef, pork, and beer are unretained by a man,' and 'in his belching the gall is withheld (?).'[11] For what the Assyrian doctor describes as 'the food being returned to the mouth' the head and breast were to be bound and certain drugs eaten in honey, mutton fat, or butter, while the patient was to be kept off certain food for three days, and was not allowed to wash.[12] For liver complaints, garlic was prescribed,[13] or cassia drunk in beer, or large draughts of beer or 'wine-water.'[14] In the case of jaundice, of which the symptoms are given fully, the physicians were not so hopeful of recovery; but some prescriptions seem to have been potent:

'When a man's body is yellow, his face is yellow and black, the root of his tongue black, *aḫḫazu* ('seizer') is its name; thou must bake great wild *mušdimgurinna*, he shall drink it in fermented drink. Then will the *aḫḫazu* which is in him be silent.'[15]

In constipation, the patient drank a mixture of green garlic and *kukru*-rind in fermented drink, followed by dates in swine-fat or oil; or another prescription is cypress-cones pounded up and mixed with fermented drink. If, in addition to constipation, 'his inside is much inflamed,' the prescription is a decoction of *ḫaltappanu*-plant, sweet reed, *ballukku*-plant, and cypress administered as an enema. An enema is also prescribed when a man is constipated after heavy eating and drinking, and his inside is 'angry.'[16] In the case of drunkenness, the following remedy is given for the morning after:

'When a man has drunk fermented drink and his head aches and he forgets his speech, and in speaking is incoherent, and his understanding is lost, and his eyes are fixed, bray (eleven plants) together and let him drink them in oil and fermented drink before the approach of Oula in the morning before dawn, before any one kisses him.'[1]

Venereal diseases are prescribed for in various tablets;[2] the colour of the urine was also observed in diagnosis.[3]

It is curious to see how persistently the old beliefs survive among the Arabs of Mesopotamia of to-day. Toothache is still attributed to a worm, and the writer heard this story on good Mosul authority, that a man with toothache had only to fumigate his aching teeth with the smoke from dried *withanifera* (*solanaceæ*), and the worm would drop out of his mouth. This is a belief not confined to the Arabs, occurring, as it does, among other peoples,[4] and it certainly dates back to several centuries B.C., for we find a Babylonian tablet describing the genesis of this tooth-worm:

'After Anu [had created the heavens],
The heavens created [the earth],
The earth created the rivers,
The rivers created the canals,
The canals created the marshes,
The marshes created the Worm.
The Worm came and wept before the Sun-god,
Before Ea came her plaint:
"What wilt thou give me to eat,
What wilt thou give me to gnaw?"
"I will give thee ripe figs,
And sweet-scented . . . -wood."
"What are your ripe figs to me,
Or your sweet-scented . . . -wood?
Let me drink amid the teeth,
And let me rest amid the gums (?),
Of the teeth will I suck the blood,
And destroy the strength (?) of their gums (?);
So shall I hold the bolt of the door."
"Since thou hast said this, O worm!
May Ea smite thee with the might of his fist."'

The incantation prescribed for the toothache is:

'Thou shalt do this: Mix beer, *sakilbir*-plant, and oil together. Repeat the incantation three times thereon, and put in on the tooth.'[5]

Just in the same way as the tooth has a semi-medical, semi-magical incantation prescribed for it, so do we find similar texts for the heart and eyes. For some form of 'heart' medicine the following incantation is given:

'The heart-plant sprang up in Makan, and the Moon-god [rooted it out and]
[Planted it in the mountains]; the Sun-god brought it down from the mountains, [and]
[Planted it in] the earth; its root filleth the earth, its horns stretch out to heaven.
[It seized on the heart of the Sun-god when] he . . .; it seized on the heart of the Moon-god in the clouds,
It seized on the heart of the ox in the stall,
[It seized on the heart of the goat] in the fold,
It seized on the heart of the ass in the stable,
[It seized on the heart of the] dog in the kennel,
It seized on the heart of the pig in the sty,
[It seized on the heart of the] man in his pleasure,
It seized on the heart of the maid in her sleeping-chamber,
[It seized on the heart of N., son of N. . . .'[6]

Magan or Makan is supposed to be the Sinaitic Peninsula, and it is there that the *Hyoscyamus muticus* grows. The Arabs call it the *sakrân* ('drunken'), from its intoxicating effect; it has long spikes very much like the fox-glove, only purple in colour, which may be compared with the 'horns' mentioned in the incantation. It seems quite possible that the Assyrians may have had a knowledge of its existence and properties; at any rate, the name 'heart-plant,' coupled with its provenance, Sinai, another description given of it, is suggestive.

In certain cases of ophthalmia, the prescription is carefully led up to by a description of the cause of the blindness:

'The eye of the man is sick, the eye of the woman is sick. The eye of man or woman is sick—who can heal (him)? Thou shalt send them to bring pure *KU-SA* of the date-palm; chew (*te-ḫi-pi*) it in thy mouth, twist (*te-pi-til*) it in thy hand: thou shalt bind it on the temples of the man or woman, and the man or woman shall recover . . .'

6 Küchler, *loc. cit.* p. 9.

'The wind blew in heaven and brought blindness (*simme*) to the eye of the man: from the distant heavens it blew and brought blindness to the eye of the man; unto sick eyes it brought blindness. The eye of this man troubleth; his eye is hurt(?) (*a-ša-a*); this man weepeth for himself grievously. Nâru hath seen the sickness of this man, and (hath said), "Take pounded cassia, perform the Incantation of the Deep, and bind up the eye of the sick man." When Nâru toucheth the eye of the man with her pure hand, may the wind which hath afflicted the eye of the man go forth from his eyes!'[1]

Similarly, the sting of a scorpion is treated with an incantation against the poisonous creature, to be recited while anointing the hurt:

'Her horns stretch out like those of a wild bull,[2]
Her tail curls like that of a mighty lion,
Bêl hath made a house—when he maketh fast the enclosure,
When he breaketh the wall of lapis-lazuli,
May the little finger of Bêl carry it off,
May it carry off the water . . . (*i.e.* collected by the inflammation)!'[3]

It is a little uncertain what the text actually means, but it seems as if the patient puts the scorpion in the model of a house, which Bêl is supposed to have made, and, after fastening the door, he takes it out with his little finger by a hole in the wall.

Another prescription for scorpion-sting is to mix in oil of cedar various substances that have been brayed up, and anoint the wound.[4] For snake-bite the wounded man was to peel willow root and eat it, or drink a potion of *ŠI-ŠI* plant in fermented liquor.[5]

The 'Baghdad boil,' or 'Mosul button,' was apparently as troublesome in ancient times as it is to-day. A tablet exists in the British Museum, giving the omens for what follows from the 'button' appearing on certain parts of the body.[6] A case of the boil appears to be referred to in an astrological report to the king of Assyria:

'Concerning this evil of the skin, the King, my lord, hath not spoken from his heart. The sickness lasts a year: people that are sick all recover.'[7]

The boil is popularly supposed to last for a year.

Prescriptions are found for diseases of all parts of the body: the tongue and lips[8] (K. 9433), the nails and fingers (K. 10464), the hands and feet (K. 9156), or the neck (K. 3687); 'if a man's ears "sing"' (*išagguma*) (K. 9059); 'if a man's breast and *MAŠ-KAPI* hurt him' (K. 10726); 'when a man has palpitation (*?širiḫti*) of the heart and his heart . . . [holds] fire(?)' (K. 8760). If a man's left side hurts him (*usammamšu*), then 'water and oil, heaven and earth—Incantation, repeat seven times and rub (*tumašša'*, Arab.) his left side, and repeat the following incantation over his side and he will recover' (K. 8449). Two tablets (KK. 2413 and 11647) give rites and ceremonies for a woman during pregnancy. (On stones used for conception, see Oefele, *ZA* xiv. 356, and compare the Hebrew 'stones of preservation' against miscarriage called אבן חמוסה.) There is a long series called by its first line, 'When a man's brain boils fire,' in which the various symptoms are carefully described, such as neuralgia of the temples, blood-shot and weeping eyes, etc. (see the present writer's tr. in *AJSL*, Oct. 1907). The following are specimens (Tablet ii. K. 2611, col. ii. l. 8 ff.; *Cun. Texts from Bab. Tablets*, 1906, vol. xxiii. p. 43): 'When a man's right temple hurts him and his right eye is swollen and weeps tears, it is the hand of a ghost or the hatred of a goddess against (or for) his life; mix *sibu*-(tree), *arganu*-(tree), *bariratu*-(tree), one shekel of "river-foam," *dilbat*-plant, ginger(?) in ground meal, steep it in beer (and) bind on as a poultice.' Similarly, when the left temple and eye are afflicted (col. iii. l. 1), the physician must bray together dates from Dilmun, thyme, and cedar-sap in oil of *gir*, and apply them before the patient breaks his fast. If the patient, in addition to the neuralgia, vomits, and his eyes are inflamed, it is the 'hand of a ghost,' and the remedy is to calcine human bones and bray them, and then rub them on the place with oil of cedar (l. 5).

These instances might be multiplied, even from the texts which are already published; but there are many tablets on this subject in the British Museum which still remain to be copied. When this is done, it will be possible to speak with less uncertainty about the methods employed by the Assyrian physicians.

Hitherto nothing has been found in the cuneiform texts to confirm the statement of Herodotus (i. 197) that the Babylonians were wont to bring sick folk into the market-place for the advice of any that might suggest a remedy. Both the magical and the medical series go far to show that the profession of medicine was well organized and systematic, although it may well have been that the poorer folk did what Herodotus relates; but, again, if any comparison can be made between ancient and modern Semites in this respect, the deformed, maim, halt, and blind were probably to be found in the *sûḳ* of every town begging alms of every passer-by, and this perhaps is what Herodotus saw. The profession of the doctor carried with it grave responsibilities, even as far back as the time of Ḥammurabi. One has only to read the list of fines to which a surgeon was liable if he accidentally inflicted unnecessary damage on a patient in treating him.

The more human side of the healing art is shown in the cuneiform correspondence. Several letters from the physician Arad-Nanâ relating to his patients are extant, dating from the 7th cent. B.C., and, inasmuch as he is writing to the king in every case, we may presume that he is the Court physician whom the king has in these instances allowed to visit certain of his staff. That this may well be so is shown by an astrological letter (No. 18 of the writer's *Reports of the Magicians and Astrologers*), which, in addition to giving the formal report, adds, 'Bêl-epuš, the Babylonian magician, is very ill; let the King command that a physician come and see him.' The following specimens will throw some light on the professional skill of Arad-Nanâ (we append Johnston's translations, *JAOS* xviii. 162 ff., which are the best that can at present be made of a most difficult subject):

'To the King, my lord, thy servant, Arad-Nanâ. A hearty greeting to the King, my lord! May Adar and Gula grant health of mind and body to the King, my lord! All goes well in regard to that poor fellow whose eyes are diseased. I had applied a dressing covering his face. Yesterday, towards evening, undoing the bandage which held it (in place), I removed the dressing. There was pus upon the dressing about the size of the tip of the little finger. If any of thy gods has put his hand to the matter, that (god) must surely have given express commands. All is well. Let the heart of my lord the king be of good cheer! Within seven or eight days he will be well' (S. 1064; see Harper, *Assyr. and Bab. Letters*, Lond. 1909, no. 392).

Similarly in K. 519: 'With regard to the patient who has a bleeding from his nose, the Rab-*MUGI* reports: "Yesterday, towards evening, there was much hæmorrhage." These dressings are not scientifically applied. They are placed upon the alæ of the nose, oppress the nose, and come off when there is hæmorrhage. Let them be placed within the nostrils, and then the air will be kept away, and the hæmorrhage restrained. If it is agreeable to my lord, the King, I will go to-morrow and give instructions; (in the meantime) let me hear how he does' (Harper, no. 108).

As an example of death from a wound, an incident related in a late Bab. letter (*c.* 400 [?] B.C.) is worth quoting, although the translation of some of the words is not certain.

'. . . In a brawl(?) I heard that [So-and-so, whom] the noble(?) smote, when he was smitten fell sick of a suppuration(?). He did not understand it, (and) it enlarged and spread, so that he died therefrom.'[1]

It is clear, therefore, from the texts which we possess, that Assyrian medicine was worthy of being held in high repute, and, although its trend towards magic detracts much from its science, it was probably a worthy forerunner of the methods in vogue during the Middle Ages.

LITERATURE.—F. Lenormant, *La Magie chez les Chaldéens*, Paris, 1874 (Eng. tr. *Chaldean Magic*, 1878); A. H. Sayce, *Hibbert Lectures*, London, 1887, *Religions of Ancient Egypt*

1 *WAI* iv. 29*, 4, C. ii. 6 ff.

2 The translation of the first line preceding this is uncertain. The last line, which has been omitted here, runs (according to the copy in Bezold's *Catalogue of the Kouyunjik Collection*), 'May he smite a great fist upon the man(?)!'

3 Rm. ii. 149. 4 K. 7845. 5 S. 1357.

6 Virolleaud, *Babyloniaca*, Paris, 1906, i. 91.

7 See the writer's *Reports of the Magicians and Astrologers*, Lond. 1900, no. 257.

8 Something equivalent to unilateral paralysis appears to be mentioned on the tablet Rm. ii. 143: 'When a man's lip *kuppul* to the right and he [cannot] speak.' *Kuppul* is perhaps to be referred to the Hebrew root כפל, 'to double.'

R. CAMPBELL THOMPSON.

DISEASE AND MEDICINE (Celtic).—The classic authority is the statement of Cæsar in his *Gallic War*. The terror of disease, and the art and science of healing, came within the sphere of religion among the Celts. The nation was religious: 'Natio est omnis Gallorum admodum dedita religionibus.' All matters connected with religion were submitted to the judgment of the Druids. They were the 'medicine-men' as well as the teachers and the priests of the Celts: 'atque ob eam causam, qui sunt affecti gravioribus morbis . . . aut pro victimis homines immolant, aut se immolaturos vovent, administrisque ad ea sacrificia Druidibus utuntur.' The principle of life for life was recognized (cf. art. BLOOD-FEUD [Celtic], vol. ii. p. 725): 'quod, pro vita hominis nisi hominis vita reddatur, non posse aliter Deorum immortalium numen placari arbitrantur' (*de Bell. Gall.* vi. 16).

1. **Gods of medicine.**—The God of healing is identified by Cæsar with Apollo, who held the place of honour next to Mercury: 'post hunc, Apollinem et Martem et Jovem et Minervam. De his eandem fere, quam reliquae gentes, habent opinionem: Apollinem morbos depellere . . .' (*ib.* vi. 17). The Druidic doctrine of immortality emphasized the value of life and health, and gave Apollo at this period a higher position than Mars.

> 'regit idem spiritus artus
> Orbe alio; longae (canitis si cognita) vitae
> Mors media est' (Lucan. *Phars.* i. 456 ff.).

Several Celtic deities of healing have been identified with Apollo. One appears as a presiding deity of healing springs and health resorts. The name occurs sometimes on inscriptions as *Borvo*: 'Deo Apollini Borvoni et Damonae' (at Bourbonne-les-Bains in the Haute-Marne). Other forms are *Bormo*, in Central France, *Bormanus* in Provence, *Bormanicus* in Spain. This deity is associated sometimes with *Damona*, as at Bourbonne-les-Bains and Bourbon-Lancy in Saône-et-Loire; sometimes with *Bormana*, as at Aix-en-Diois in the Drôme. The word is akin to the Welsh *berwi*, 'boil,' and has reference to the hot springs (Rhys, *Celtic Heathendom*, p. 25 f.; Anwyl, *Celtic Religion*, p. 40).

Another deity was *Grannos*. In an inscription at Horberg in the Haut-Rhin, he is called 'Apollo Grannos Mogounos.' The name Grannos has been connected with the Skr. word *ghar*, 'glow,' 'burn,' 'shine.' It is considered equivalent to the 'Posphorus' of the Dacian inscription: 'Deus Bonus Puer Posphorus Apollo Pythius.' Apollo, the dispenser of light and warmth, was regarded as the repeller of disease. The name is associated with several hot springs. The old name of Aix-la-Chapelle, or Aachen, was *Aquæ Granni*. Inscriptions to him have been found at Graux in the Vosges and at Granheim near Mengen in Württemberg. The stream which receives the hot waters of Plombières in the Vosges is called *Eaux Graunnes*. Grannos was identified with Asklepios and Serapis by Caracalla (Dio Cassius, lxxvii. 15). The other name Mogounos in the Horberg inscription appears in the old name of Mainz, *Moguntiacum*. The word Mogounos points to the *bonus puer* of the Dacian inscription (Rhys, *op. cit.* p. 22).

The name *Maponos* occurs in inscriptions in the north of England. The Armthwaite inscription reads: 'Deo Maponi' (*Mon. Hist. Brit. Inscr.* 121). It is the old Welsh *mapon*, now *mabon*, 'boy' or 'male child.' The name is therefore identical in meaning with the *bonus puer* of the Dacian inscription from Carlsburg in Transylvania. The witness to the Celtic god of healing stretches across Europe along the line of the Celtic advance (Rhys, p. 21). The memory of Grannos is still preserved in the Auvergne at the Festival of the Brands on the first Sunday in Lent. Fires are lighted in every village. The ceremony of the Grannasmias takes place after a dance round the fire. A torch of straw called *granno-mio* is lighted at the fire, and carried round the orchards. The old Gaulish deity, in his aspect as the sun-god, is invoked with song:

> 'Granno, mo mio!
> Granno, mon pouère!
> Granno, mo mouère!'

('Granno, my friend . . . my father . . . my mother!'). It is considered by Pommerol to be a survival of solar worship, and the rite illustrates Rhys's derivation of the name (*Antiquary*, xxxviii. [1902] 80).

An altar found near Annecy is dedicated to a deity *Virotutes* or *Virotus*: 'Apollini Virotuti.' Rhys tentatively suggests that the word may be compounded of a Gaulish equivalent for *vir* and *tutor*, and may mean 'man-healing' or 'man-protecting' (*op. cit.* p. 21).

A bas-relief at Munich represents Apollo Grannos associated with *Sirona*. Sirona is connected with the Irish *sír*, 'long.' The two deities represent the ever young sun-god and the old goddess, and may be compared with Apollo and his mother Leto in Greek mythology. The hero Mabon mab Modron of the story of Kulhwch and Olwen is probably the same deity, Maponos. Mabon and Modron are suspected of being the exact equivalents of Grannos and Sirona (Rhys, p. 29). An inscription from Wiesbaden reads: 'Apollini Toutiorigi.' The name Toutiorix means 'king of the people,' and expresses the same thought as the title ἀρχηγέτης given to Apollo as 'leader,' in Greek mythology. The name appears transmuted and transformed in Theodoric, and the mythical legends associated with Dietrich of Bern belong more to Toutiorix than to the historical Theodoric the Ostrogoth (Rhys, p. 30).

The *Brigit triad* in Irish mythology holds a place of honour among the Celtic gods of medicine. The Irish god, the Dagda, had three daughters—Brigit, the poetess and seer, worshipped by the poets of ancient Erinn; Brigit, the patroness of healing; and Brigit, the patroness of smiths. This points to a Goidelic goddess, Brigit, who corresponded to the Minerva of whom Cæsar says, 'Minervam operum atque artificiorum initia tradere' (*op. cit.* vi. 17). She has also been identified with the *Brigantia* of the inscriptions, from whom the Brigantes took their name (Rhys, p. 74). Brigit has also the attributes of the ancient goddess of fire (Whitley Stokes, *Mart. of Oengus*, p. l). The hymns in honour of St. Brigid and the legends attaching to her name suggest that she has stepped into the place occupied by the Brigit of Irish mythology. In the hymn *Brigit be bithmaith*, she is addressed as 'flame golden, sparkling' (line 2), and asked to guard against disease: 'May she win for us battles over every disease!' (Irish *Liber Hymnorum*, H. Bradshaw Soc., 1897, ii. 39). In the story of the visit of the three disciples of Brigid to Blasantia (Piacenza), they are preserved from the effects of a drink of poisoned ale by reciting this hymn (*ib.* ii. 37). The story illustrates not only the healing craft of Brigid, but the memory of her ancient fame among the Celts of Italy. It is perhaps due to the same tradition of

Celtic heathenism that as late as the middle of the 18th cent. human blood was considered in Italy to be a cure for apoplexy (*Antiquary*, xxxviii. 205).

The 'cauldron of renovation' is represented as a talisman of healing in the Welsh story of Branwen, the daughter of Llyr: 'The Irish kindled a fire under the cauldron of renovation, and they cast the dead bodies into the cauldron until it was full, and the next day they came forth fighting-men as good as before, except that they were not able to speak' (*Mabinogion*, ed. A. Nutt, p. 39). This cauldron of regeneration had been brought up out of a lake in Ireland and given to Bran, son of Llyr (*ib.* p. 31). It is equivalent to the cauldron of the Dagda in Irish legend, one of the treasures of the Tuatha Dé Danann. It was called the 'undry' cauldron, for it was never empty (Rhys, p. 256 f.). It was brought from the mythical Murias, some place beneath the sea. The fire beneath the cauldron was fed by nine maidens (*ib.* p. 373). In the Taliessin verses of the *Mabinogion* it is represented as the cauldron of sciences, from which Gwion received three drops. It is with this cauldron that Caridwen was associated (*Mabinog.* pp. 295, 307). In the early tales underlying the Quest of the Holy Grail the healing qualities of the Grail or Cauldron rather than its gift of fertility may have been emphasized (A. Nutt, *Studies in the Legend of the Holy Grail*, London, 1888, p. 57).

2. **Diseases and their cure.**—Among the diseases which have left a lasting impression on Celtic tradition is the *buidechar*, 'yellow plague.' It is probable that it was the occasion of the composition of the *Lorica* of Gildas:

> 'ut non secum trahat me mortalitas
> hujus anni neque mundi vanitas.'

The first outbreak of this disease was in 547 (Irish *Lib. Hymn.* i. 206, ii. 243). Ireland was especially subject to it in the 7th century. The hymn *Sen Dé* of Colman was written against it. 'Colman mac Ui Cluasaig, a scholar from Cork, made this hymn to save himself from the Yellow Plague' (*ib.* ii. 12). Gillies (*Gaelic Names of Diseases*, pp. 10, 23) states that he is unable to identify it. It could scarcely be yellow fever: 'probably it was typhoid, or perhaps typhus under its known aspect of bilious fever.'

Much of the folk-lore of disease may be traced back to the magic and medicine of Celtic heathendom. The healing powers of the *ash-tree*, whether the true ash or the mountain ash, are to be attributed to its association with ancient Celtic and Norse deities. In a Leicestershire wart-charm it is addressed:

> 'Ashen-tree, Ashen-tree,
> Pray buy these warts of me.'

The 'shrew-ash' in Richmond Park recalls an old cure for lameness and cramp in cattle by boring a hole and enclosing a live shrew-mouse in the tree. In this there is an echo of the ancient magic of exchange or transference of disease. In the case of the wart-charm, a pin is stuck in the tree, then in the wart, finally in the tree again (*Antiquary*, xlii. [1906] 423). A curious example of the practice of exchange of disease occurs in the *Martyrology of Oengus*:

> 'Fursa once happened to visit Maignenn o' Kilmainham, and they make their union and exchange their troubles in token of their union, to wit, the headache or piles from which Fursa suffered to be on Maignenn, and the reptile that was in Maignean to enter Fursa' (*Mart. Oeng.*, ed. Whitley Stokes, p. 45).

The first of August was dedicated to Lug, the Sun-hero. This festival, known in Wales as *Gwyl Awst*, was transferred in Brecknockshire to the first Sunday in August. Early in the morning a visit was paid to the Little Van Lake in the Beacons, to greet the expected appearance of the Lady of the Lake. She has been regarded as a goddess of the dawn, who returned at times to converse with her children. The eldest of them was named Rhiwallon, and had been instructed by her in the virtues of herbs. He was the founder of a family of physicians in South Wales. The physicians of Myddvai, as they were called, were attached to the house of Dynevor. Their ancestor was of mythical descent, and may be identified in the *Triads* with Rhiwallon of the broom (yellow) hair. He was thus invested with a solar character (Rhys, p. 423).

Folk-medicine consists partly in charms, partly in superstition, partly in a real knowledge of herbs. It rests ultimately on the religious ideas of Celtic heathenism. Witchcraft and medicine were different aspects of Celtic priestcraft in its better sense. The priests, if they were the sorcerers and wizards of their people, were their healers also.

Among the plants and herbs associated with Celtic medicine, the *mistletoe* takes the first rank. It was the sacred bough of the Druids, the gift of the Divine oak-tree, the gift of the Celtic Zeus himself. The Celtic Zeus was 'the Blazer of the mountain-top,' and the great stone-circles mark the sites sacred to him. A story of the Irish hero Diarmaid makes mention of the tree, the well, the pillar-stone, and the stone-circle consecrated to the Celtic Zeus.

> 'He saw, right before him, a great tree laden with fruit. . . . It was surrounded at a little distance by a circle of pillar-stones; and one stone, taller than the others, stood in the centre near the tree. Beside this pillar-stone was a spring-well, with a large round pool as clear as crystal' (Rhys, p. 188).

These sanctuaries in ancient days were places of healing, as well as places of worship. In the *Tripartite Life* of St. Patrick the idol of Cenn Cruaich, covered with gold and silver, was surrounded by a circle of twelve other idols, covered with brass. Even in the 7th cent. these had nearly disappeared. They represent the primitive pagan sanctuary of the Goidels. The name *Cenn Cruaich*, 'Head *or* Chief of the Mound,' when transmuted from Goidelic to Brythonic, re-appears in the old place-name *Pennocrucium* on the Watling Street. The site is at Stretton, not far from its modern representative Penkridge in Staffordshire (Rhys, p. 203; *North Staff. Field Club Transactions*, vol. xlii. pp. 116–118).

The mistletoe, the gift of the Celtic Zeus, was the all-healer (*olliach*: 'omnia sanans' [Pliny, *HN* xvi. 95]). It was cut at a New Year Festival with peculiar ceremony—a priest in white, a golden sickle, two white oxen. 'The oxen were sacrificed, the sacrificial meal followed. The mistletoe had great life-giving powers. It healed unfruitfulness in man and beast, and was a protection against poison' (Grupp, *Kultur der alt. Kelten u. Germanen*, p. 149).

Another plant mentioned by Pliny is the *Selago*, which has been identified with the Savin-tree, a species of juniper, and with the club-moss. It had to be plucked stealthily. Bread and wine were offered, and the priest with bare feet and white robe drew near, and, putting his right hand through the left fold of his tunic, gathered it without using a knife. Like the mistletoe, it was then placed on a white cloth. For healing purposes the plant was burnt, and the fumes were regarded as beneficial for the eye (Grupp, *op. cit.* p. 150).

A similar ceremony was followed at the gathering of the *samolus*, whether the brook-weed (*Samolus valerandi*) or the watercress. It was gathered fasting, with the left hand, and with averted face. The *centaury* was also used as a cure (Grupp, p. 151). The *St. John's wort* and other plants were burnt or hung over the door to keep off disease. The St. John's wort (*Hypericum perfoliatum*) is known as *chasse-diable*.

Inscriptions and folk-lore have preserved the traditions of the gods of healing and the healing craft among the Celts.

The deities honoured in different localities would have their own peculiar rites, their own special gifts. Juvavius was a deity who gave his name to Salzburg. Alaunus also occurs in certain place-names. Some of the goddesses had healing power. Stanna was the companion of Apollo Stannus. Minerva Belisama and Sulevia were associated with Apollo Belenus. Alauna was the consort of Alaunus (Grupp, pp. 150–162). There is still much to do in grouping together the facts preserved in the folk-lore of herbs and healing, with a view to learning more of the ancient cult of the local gods of medicine.

The folk-lore of Ireland is rich in its memories of old-time medicine. Diancecht, a member of the Tuatha Dé Danann, may almost be regarded as the Irish god of medicine (cf. CELTS, iii. 285a). A magic cauldron of renovation was ascribed to him. The methods of the Irish witch-doctors still form part of the home medicine in country districts to-day. *Snails* pounded in salt were prescribed as a dressing in an Irish MS of 1450. They were still used for that purpose in Staffordshire at the close of the 19th century. *Urine* was in common use for eye-disease and jaundice; *dung* was prescribed by Wesley in his *Primitive Physic*. In Ireland, as in England, these remedies were administered, to the recitation of certain charms (Wood-Martin, *Elder Faiths*, London, 1902, ii. 160–205). The *rag-offerings* tied to trees and bushes in the immediate neighbourhood of holy wells are still met with in many parts of Ireland, especially in the west. They are thought by some to have a reference to the transference of disease to the tree-spirit (*ib.* ii. 84). *Saliva* was also in use as a salve. A part of the cure of epilepsy in 1450 was the *burying of a young cock alive* (*ib.* 188).

A more normal system of healing is traceable in the Irish *sweat-houses*, which were in use as a hot-air cure until the 19th century. These sweat-houses were generally of the beehive shape, covered with clay, with a low entrance. They were heated with turfs, like a brick-oven, and the patient was shut in for a given time. The bath was followed by a plunge in a pool or stream near by. This was the usual cure for rheumatism.

A custom clearly connected with medicine among the Irish was the *couvade*. On the birth of a child, the father was obliged to take to his bed and submit to a vicarious process of nursing at the hands of the doctor and nurse. The custom was widely spread throughout the world in primitive times, especially among races where kinship was reckoned through the mother. At the same time it is a custom which witnesses to the responsibility of fatherhood even under conditions which exalt the privilege of motherhood (Wood-Martin, *op. cit.* ii. 40). See art. BIRTH (Introduction), vol. ii. p. 635.

In the legendary history of the invasion of Ulster by the Fír Bolg, the adult males were *en couvade* and unable to defend the kingdom of Conchobar against the enemy. The defence was made in heroic manner by Cúchulainn and his father only. Rhys (p. 622) refers to this incident as the 'distress of the gods and the sun-hero's aid.' Cf. art. CÚCHULAINN CYCLE.

The Ultonian *couvade* lasted five nights and four days, in accordance with the use of the number 'nine' in the reckoning of time among the Celts. It was called *cess noinden Ulad*, 'the Ulster men's sickness *or* indisposition of a week' (*ib.* p. 363). There is a significant correspondence between the Ultonian *couvade* and the Phrygian idea of the hibernating of the gods. Rhys would place the origin of Aryan myth within the Arctic circle. He sees in the labours of Cúchulainn the sun-hero a mythical witness to the period during which the sun in the ancient home of the Aryans remained above the horizon (*ib.* p. 633). Would not the *couvade*, or 'distress of the gods,' be a trace of the short period during which the sun remained wholly below the horizon, the period mythically preceding its re-birth and re-appearance in the heavens? The Ultonian *couvade* does not explain the origin of the custom, but only the application of a primitive usage to the explanation of the annual birth of the sun-god just within the Arctic circle.

THOMAS BARNS.

DISEASE AND MEDICINE (Egyptian).—1. From the diagnostics of the Egyptian papyri we can distinguish—even identify, in many cases—about 250 different kinds of diseases, and the Ebers Papyrus alone describes 170 varieties. Many of them are the common ills of all humanity, and we cannot even say that they were of more frequent occurrence in the Valley of the Nile than elsewhere: complaints of the stomach, the bowels, the bladder, the respiratory organs, the head, the sinuses of the face, inflammation of the teeth, headache, coryza, ordinary fever, varices, epilepsy, and nervous ailments. Other diseases seem, by comparison with modern Egypt, to have been specially prevalent,—asthma, angina pectoris, anæmia, hæmaturia,—but it cannot be decided whether the chief cause of this is the race or the country. Some are certainly connected with hygiene (or rather its absence), with feeding, and with habits. Skin diseases, smallpox (cf. Elliot Smith's investigations of the mummies in *Annales du service des antiquités de l'Egypte*, Paris, 1900 ff., and *Bulletin de l'institut égyptien*, Alexandria, 1862 ff., *passim*; and Maspero, *Momies royales*, Paris, 1886, p. 532), the infinite variety of parasitic diseases, *e.g.* 'Arabian elephantiasis' (=the 'crocodile disease' of the ancients), worms, and *pyorrhœa alveolaris* are the several consequences of these in varying degrees. In the same way, it was to the manners and customs that the Egyptian woman owed her long list of infirmities as described in the Egyptian treatises from the XIIth dynasty—flux, menstruation, metritis, dysmenorrhœa, erosions, pustules, prolapsus of the vulva, and cancerous tumours. It was, finally, the combined operations of Nature—water, winds, climate—and of the Egyptian's negligence that produced the terrible frequency of ulcers, Nile boils, carbuncles on the breast and legs, and especially the appalling array of eye-troubles, among which are seen all the varieties known at this day: styes, specks, ectropion, blepharitis, leucoma, lippitude, hydrophthalmia, staphyloma, conjunctivitis, purulent ophthalmia, and many more. Such lists as these do not prove the unhealthiness of a country, but rather show the degree to which the knowledge of classical Egypt had advanced in diagnostics and therapeutics; and the close resemblance between ancient and modern Egypt in this respect justifies the conclusion, in agreement with Herodotus (ii. 77) and against Pliny (xxvi. 1), that the Nile Valley was a very healthy country, where the length of life, in spite of the opinion of Chabas ('Prétendue longévité des Egyptiens,' in *Bibl. égyptol.* ii. [1905] 181), was probably in excess of that of the average man of the present day; where the general health was much better than in Greece or Italy, for example; and where, as a rule, the great scourges that so often laid waste the rest of the ancient world—endemic diseases such as malaria—were unknown.

A classification of man's ills so minute leads, even at first sight, to the postulation of ideas already far removed from 'primitive savagery.' This impression is confirmed by the fact that neither the mythology of classical Egypt nor its theologies attribute any special disease to any definite gods. We seem to see in the whole the mark of a considerable scientific and moral advance on the rest of contemporary society. If, however, the pure therapeutics of Egypt witnesses to a relative but very real perfection, on the other hand the Egyptian ideas on the causes and nature of disease exhibit conceptions, even in the historical period, much more akin than one would at first believe to those of 'non-civilized' peoples. At the same time we find that, owing to the special conditions under which Egyptian civilization was formed, this per-

sistent characteristic of the early ages has produced on the rôles of gods, kings, and priests in this connexion systematic views that are capable of finally reaching lofty and noble conceptions.

2. We read in Clement (*ap.* Orig. viii. 41) that, when any part of the body was sick, the demon to which that member belonged was invoked. In a somewhat imperfect form this explains the traditional view of the Egyptian on the nature of disease. It was always regarded as the work of demons, spirits, *jinn*, ghouls, vampires, or spirits of the dead (see DEMONS AND SPIRITS [Egyp.]). They insinuated themselves into the individual by the nostrils, mouth, or ears, and devoured the vital substance. The means by which they surprise man, their constant efforts to do so as they prowl around him unceasingly, and the manner in which they perform their destruction inside his body offer no special interest for the history of religion, though the numerous formal texts describing these peculiarities may interest the specialist in Egyptological science. Compared with other human civilizations the notions on this subject are essentially the same as we find in classical religions, such as the Chaldæo-Assyrian (cf., *e.g.*, *PSBA* xxviii. [1907] 81), or among modern savages all over the world.

The idea that the power of spirits—the causes of disease—increases peculiarly at certain hours of the day, and particularly at certain seasons of the year, is shown by the papyrus of lucky and unlucky days; and, if this idea is found equally among numerous non-civilized and semi-civilized races, and is the product, in Egypt as elsewhere, of experimental pseudo-observation, yet Egyptian astrology has greatly strengthened the initial data by explaining this periodical virulence by fixed rules, based on the influences of dates of the calendar (*q.v.*) and on mythological history. On such days 'numerous harmful germs permeate the clothing,' because the struggle neutralizes the power of the good gods, who are too busy to protect man, or because great evil influences are seen to be re-commencing in this world.

On 19th Tobi and 5th Pashus, the germs 'penetrate the clothing'; then 'infection steps in and causes death.' On 17th Tobi, the anniversary of great cataclysms, any sexual intercourse predisposes to being 'devoured by infection.'[1] Those born on 4th Paophi are liable to death by 'marsh' fever. The 14th of Athyr is dangerous because it is the anniversary of the 'lesion' of the 'majesty of this god.' This last peculiarity is important to observe. Since disease was the result of the attack of a 'spirit' (or of a demon or the dead), it was of the same type for every one, and every one was exposed to it.

The veterinary papyri show that Egyptian thought conceived of animals' diseases as due to the same causes as those of men, and the same mixture of medical and magical practices was applied to both, just as the same collection of writings might contain both the art of curing men and that of curing beasts.

The question as to whether the dead suffer illness is difficult to settle. They certainly suffer hunger and thirst—which were regarded by the Egyptians as things existing *by themselves* and due to harmful spirits. They could die 'the second death,' which logically supposes the possibility of attacks of illness. Finally, the precautions taken that the dead may remain in good health (*udzai*) in the other world assume the contrary possibility of illness. We have, however, no decisive texts on this point. It is probably reasonable to hold that the Egyptian dead were believed to be exposed, in certain conditions, to the same dangers of spirit-attacks as the living.

What held true of animals and men also held of the rest of the world, and therefore of the gods; we know of a great number of cases where their constitution, which did not differ in qualities or in nature from that of other beings, suffered various ills, and had to submit to the intrusion of 'evil spirits.' Epigraphic texts and papyri have left us definite evidence. Every one knows how Rā had to die because a serpent bit his heel; Isis suffered from a mammary phlegmon after the birth of Shu and Tefnut; Horus was stung by a scorpion, had dysentery (London Papyrus), and an anal weakness (see Oefele, *Vorhippokratische Medizin*, 64). The sky-god himself saw his eyes, the Sun and Moon, affected by sudden diseases, attributed to the attacks of evil spirits, and this was one of the numerous ways in which eclipses were explained.

Even eliminating the cases of doubtful authenticity, the official religion recognized positively that the national gods were not exempt from disease. The medical literature of the temples preserves the deposit of prescriptions used in such and such a case of indisposition by ailing gods. A remedy of this kind had been composed 'by the invalid Rā' (Ebers Papyrus, xlvi.), and there were remedies to cure fever 'in gods and men.' There was nothing, essentially, to protect the highest beings from the ills common to all. But here, as elsewhere, their quality of godhead was derived from their superior ability to concentrate their energies (see DEMONS [Egyp.]), and to contrive defences which made them triumph in the struggle. They were able to find or compose prescriptions and formulæ which, in the special case of disease, brought them out of their trouble. The revelation of the secrets of their art or magic, granted only to those men who were their heirs or ministers, is the very foundation of Egyptian medicine. It unfolds at once its characteristics, its history, and, above all, the gradual formation of its knowledge.

The warfare against disease, taught by the gods (or stolen from them), proceeded of necessity and above all from magic (gaining support gradually from medicine properly so called), since it started originally with exorcism. It is accompanied, therefore, by spells and incantations, with all their accessaries, such as fumigation, aspersions, imperative gestures, etc. The knowledge of secret names at first played its usual part, and the doctor of ancient Egypt was a magician-priest, entering upon a struggle with an adversary—to discover the name of the demon causing the illness, to find by secret knowledge the name of a god who had helped in a fight against the same demon in a similar case, and to force the demon to flee. This he accomplished either by disguising himself as the conquering god and imitating his actions, or by summoning this god to his aid, or by employing the relics, talismans, and means of defence which the latter had invented. (These three methods probably constitute three successive phases in the original history of primitive Egyptian therapeutics.) As usual, 'alliteration,' or play on the sound of the words spoken, had its share in all this.

Take a case of the momentary loss of sight, *e.g.*, which was cured by adjuring the crocodile; not only did people think that the same remedy which had saved the eye of the heavens (=the sun), when the crocodile tried to devour it, would also save man, and therefore use the same formula; but at the same time they made a play of words on *shu*, 'blind,' and *shu*, the ostrich-feather held by the operator while making the disease return to the crocodile supposed to have sent it.

The belief that the forces and armies of good and evil beings were grouped, like the astral forces, in the four regions of the world produced the further practice of a fourfold pronouncement of the formulæ of spells and exorcisms preceding or accompanying the giving of the material medicine (*e.g.* Ebers Papyrus, ch. 108). Therapeutics was, therefore, at this stage an operation by which the gods were subjugated by the various processes of magic, 'contagious' or mimetic.

The fundamental nature of this original art of healing was a mark of the Egyptian's struggle against disease right down to his last days. In

[1] On the dangers and harm resulting from connexion with women in the various religious, magical, etc., acts of Egyptian life, see art. MAGIC (Egyp.).

spite of all the gradual attennation of magic in favour of pharmaceutical and actually experimental science, therapeutics remained closely bound to Divine influences, both in its staff of officials and in the composition of its didactic treatises. The remedy proper never entirely supplanted the ritualistic and conjuratory part of the process.

The pharmacopœia proper also suffered this general influence. A great proportion of the substances owed their supposed virtues to the magical powers of the beings or things from which they sprang, or to their supposed mythological connexion with a certain god or spirit. The pharmacopœia of curative and harmful plants is related, in origin at least, and often to the very end, to the theory of 'spirits' causing and protecting from diseases; and the Egyptian ideas on this point are found faithfully represented in the list of thirty-six magical plants of Pamphilus (*de Simplicium medicin. facultatibus*). Finally, it is natural that the magical virtues of certain objects against disease have perpetuated, in Egypt as elsewhere and for the same reasons, the use of amulets (cf. CHARMS AND AMULETS [Egyp.]).

3. For the understanding of Egyptian ideas on disease and the methods of conjuring it, it is essential to study the formation of the books relating to it. The gods having known better than any other beings how to organize a defence, it was their ministers (or their possessors) who had the exclusive monopoly of magico-medical cures, revealed as these were by the gods or seized from their secret powers. The original fetish-doctors, then, had as their inevitable successors priest-doctors; and the growth of knowledge was, above all, a mechanical growth, by the union into collective classes, of the 'arts and mysteries' at first scattered over as many sanctuaries as there were originally independent gods. The primitive connexion between the spirits of gods and protection against disease was likewise the cause of the particular manner in which the books relating to diseases and their cure were composed, and of their double character, in the historic period, of traditional compositions and compilations pure and simple, innocent of all attempts to make a harmonious general whole on a rational plan. Further, there is nothing more opposed to an understanding of them and to the exegetical method than to maintain (like Erman, *e.g.* in his *Religion* [Fr. ed., 1907, p. 226]) that the attribution of such and such a chapter of prescriptions to a certain god or fabulous king is an artifice of the editor and indicates a late date. The observation of diseases and the supposed knowledge of the names or forces to be adjured or driven off were the fruit of experience and of magical prescriptions acquired from the very earliest days of Egypt by its pre-historic 'fetishists'; and the final tradition which in the Græco-Roman period attributed to Hermes Trismegistus (Clement, *Strom.* vi. 4) the composition of six books of medicine (on the forty-two hermetical books) reproduced exactly the belief of classic Egypt in its last stages, representing Thoth as the god who invented the formulæ necessary for giving remedies their power against diseases (cf. Pietschmann, *Hermes Trismegistos*, Leipzig, 1875, pp. 20–45 ff.).

The sacred library of the proto-historic Egyptian temple became the depository of the lists of diseases and their cures, and the evidence of historical times in this regard is fully in accord with the reality of the facts, when it speaks of the library that was at Heliopolis, 'the hall of rolls,' and the prescriptions found in the temple of Ptah at Memphis (cf. Wilkinson, *Manners and Customs*, 1878, ii. 355, 358), or when the inscriptions of the 'library' of the temple of Edfu mention the presence of books there 'for turning aside the cause of disease' (cf. Mallet, *Kasr el Agouz*, Cairo, 1909, p. 24).

The gradual formation of medical treatises properly so called came about in the same way as that of the various compositions forming the annals of the sacerdotal calendar in Egypt, its tales of feasts (see FESTIVALS [Egyp.]), its Books of the Dead, and its 'books' of the different sciences. The important sanctuaries gathered together small local collections, and later on made exchanges with each other of the collections thus obtained. They usually proceeded by simple juxtaposition. To the body of information relating to a certain disease generations gradually joined on the ancient prescriptions of different provincial 'wisdom,' and grouped around a book on eye-diseases, internal complaints, and ulcers all the cures and all the diagnostics—often contradicting each other—obtained by these combinations. The part of the body or the disease stated in the title of the work, having served as the basis for the work of compilation, did duty also as a 'rallying sign' for all works on any analogous subject, without distinction of date or origin. This is the explanation of the common sections that are found in papyrus after papyrus—parts common to the Leipzig Papyrus and those of London and Berlin, or to the latter and the Reisner Papyrus of California, and so on. Those common parts show the common origin of our papyri, and their character of compilations from much older writings. The manner in which the very scanty remains of the XIIth dynasty treatises were composed shows that these processes of compilation, so evident in the XIXth dynasty papyri, had been employed long before. And this fact, in conjunction with a study of grammar and language, leads us to conclude that the Egyptians were stating an absolutely historical truth when they attributed the additions of these great works on diseases to the Memphite kings or to the first legendary dynasties of the Thinites. As leading priest in his kingdom, the king was naturally versed in the magico-medical art of healing, and this was formally said of the most ancient kings; ἰατρὸς γὰρ ἦν, said Manetho (*apud* Africanus) of Athotis. Such an attribution to the Pharaohs of a charge to maintain the health of their subjects agreed in every point with their nature as sons of gods, and with their function, which was, above everything, to continue and maintain the work of the good gods, the founders of Egypt (ἰατρικὴν τε ἐξέσκησε καὶ βίβλους ἀνατομικοὺς συνέγραψε[Manetho, *apud* Eusebius]).

Being logically devoted to everything that was very ancient and so brought him a little nearer to the Divine origin of all that is good on earth, the Egyptian made scarcely any change in the basis or the form of the knowledge thus obtained; he was always eager to show how the new recension of one of these 'ancient books of knowledge beneficial to man' was attached to the origins of national history. And, indeed, criticism has proved that the Theban manuscripts proceed directly from the proto-Theban, and the proto-Theban from still earlier types. The books that had grown too old materially were piously copied. In the actual body of texts relating to a certain disease, the work of generations consisted in inserting glosses, in slightly retouching, or in supporting the efficacy of a certain formula by extolling in the margin its proved excellence (Ebers Papyrus, lxix. 17, xxxv. 18; and Reisner Papyrus, *passim*), or by telling how it had once cured such and such a mighty personage, prince or king (Ebers Papyrus, lxiv. 4, lxvi. 15). The re-copying or re-modelling of several ancient versions in circulation led the scribe to note the variants in the texts used in composing the new edition, or to insert—rather unskilfully and such as they were—the scholia of his predecessors (cf. the excellent, and unfortunately still unique, work on the Ebers Papyrus considered from this point of view, by Schäfer, *Commentationes de Papyro Medicinali Leipsiensi*, Berlin, 1892). The most serious material changes, then, were not in the idea held of disease, or in the manner of defining or conjuring it, but in the increasing of the means combined for this last purpose. This happened very rarely by the invention of new remedies, but usually, and much more mechanically, by joining to the old writings new treatises from other localities, but equally ancient. These were dismembered, and their substance was joined on according to the diseases enumerated. A work, *e.g.*, devoted to 'abscesses on all the members' became the nucleus round which gathered

everything that could be found in the various temples of the nature of formulæ relating to abscesses. Thus it happened that there were sometimes a dozen methods of curing one disease, and sometimes contradictory methods—*e.g.* there occurred side by side, in the same compilation, an explanation of diseases based on an anatomy in which the human body possesses twelve great blood-vessels, and another founded on the assumption that it has forty. It was not, then, that the number of remedies actually increased in Egypt throughout the ages; there was rather the diffusion among a greater number of Egyptians of one and the same material which had formerly been embodied in a multitude of petty provincial theories. A general invocation at the end to the god of the place of compilation was enough, in the compiler's opinion, to guarantee a sort of unity to the work composed in this way.

The whole result was, as we may see, far from equal to a treatise of synthetic—not to mention philosophic—character on disease or diseases. It would nevertheless be inaccurate and unfair to see in such works (as does Pierret, *Dict. d'arch. égyp.*, Paris, 1875) nothing but a collection of pharmaceutical prescriptions.

4. Religious and traditional bases so solid and so closely bound up with national beliefs and institutions have necessarily supported a structure whose characteristic lines have remained almost intact throughout the whole existence of Egypt. The science of disease was marked, to the very end of Egyptian history, by its original characteristics: it was, above all, associated with the world of the gods, and with their ministers; it was traditional and formalistic.

Thus the rule not to use remedies that the masters have not taught is to be explained not so much by the will of the legislator, looking to the social interest, as by the belief in the connexion between the virtues of the remedies and the magic teaching of the gods; and the same explanation helps us to understand the non-responsibility of the doctor in a case of death, if he had observed the rules of canonical therapeutics (Diod. i. 82). The assertion that physicians were paid from the public treasury is simply a misunderstanding in the classics, but a misunderstanding which exactly agrees, leaving out of account inexact terms, with historical truth. Born originally in the 'fetish-hut,' the science of healing fixed its abode in the temple. The masters remained the ministers and interpreters of the gods, and the series of *mastabas*, hypogees, stelæ, and statues show that, from the Memphite Empire to the Ptolemys, the great doctors—those of Pharaoh, *e.g.*, the *Sunu oiru* (=chief physicians)—were at the same time high ecclesiastical dignitaries.

Just as the teaching remained religious, the art of healing in its three great branches (symptomology, therapeutics, and pharmacopœia) remained equally impregnated with animistic and magical concepts; thus the classical doctor continued to prepare his own medicines, like the sorcerer of primitive times, and it was held as a fact that in complicated drugs each element acted on a special part of the organism, or, rather, on the evil specially infecting that part; numerous ingredients were considered curative specially for reasons of sympathetic or contagional magic (chiefly animal substances, skin, oils, and the horrible 'coprotherapy'). And yet the universal reputation of Egyptian medicine, and the very real perfection of its equipment, diagnostics, metrology, and healing processes are, on the other hand, as certainly incontestable facts (see an excellent popular account in Erman, *Life in Anc. Egypt*, tr. Tirard, London, 1894). The distinction of a nation of superior endowment, like Egypt, is precisely the ability to substitute, gradually and without sudden breaks, the conception of the natural healing effect for the unexplained magical effect; and, as science and magic-religion both proceed, essentially, from experimentation, it happens in many cases that only the interpretation of the mechanism of the energies, and not the remedy itself, is evolved. Such as it is, with its original flaws, its lack of theoretical views, its crying errors, its childish complication, and its naive formalism, the Egyptian science of healing nevertheless constituted from the very beginning a system several thousand years in advance of the rest of human society. It retained this pre-eminence as long as Egypt existed. The testimony of Homer (*Il.* iv. 229), the admiration of the Persians (Herod. iii. 1 and 132), the fame and reputation of Egyptian medicine under the Saites and the Ptolemys, and the reputation in Rome of the Alexandrian school can only be mentioned at present. Such enduring fame is an explanation of the fact that the medicine of Greeks and Arabians, successors of the Copts, has given a great deal of the ancient Egyptian medicine to our school of Salerno, *e.g.*, or to any other of our ancient seats of medical knowledge in the Europe of the Middle Ages and down to the time of the Renaissance.

5. The development of Egyptian science succeeded in giving a more distant and lofty character to the priest-doctor's sources of information. But it never completely suppressed the primitive notion of *direct* Divine intervention in cases of illness. We find gods of healing in Egypt as everywhere else; and, similarly, the great scourges —plagues or other great epidemics, *iatu*—are recognized as sent by the gods.

Egypt, however, strikes an original note, in regard to this last point, in the very restricted part played by the idea that great calamities come from the gods, though this idea was known (it may have been less familiar, however, than in the classic East, on account of the proverbial healthiness of the climate). We find mention in Manetho (Müller, *FHG* ii. 539) of the plague which devastated the country in the reign of Semempses, and a connexion is assumed in the text between this scourge and the great sins committed by men. But such statements are very rare in the Egyptian texts. The point is worth noticing, in contrast with other organized religions, for the understanding of the conception formed by the Egyptian of the general rôle of his gods. In the case of individual sicknesses, on the other hand, historical Egypt is already too far removed from the 'non-civilized' stage to establish any connexion between such and such a bodily complaint and the violation of a *tabu*; we ought to notice, moreover, that the idea of disease sent as a punishment by the gods, who either cause it themselves directly or leave the sinner defenceless against the spirits of disease, is quite foreign to the Egyptians. Texts of later date, like the hermetical books, in which mention is made of those 'divine statues which send us disease or heal our pains *according to our deserts*' (Menard, *Hermes Trismegiste*, 1885, p. 146), seem to be somewhat imbued with Greek or Asiatic conceptions. Disease might, however,—at least in popular cults,—be the direct punishment for a *personal* offence against a deity, but this is of course quite different from the conception of an infraction of moral rule (see ETHICS [Egyp.]; and, for offences against the 'goddess of the Summit,' see Maspero, *RTr* ii. [1883] 118-123).

Several, if not all, of the gods who had composed the first means of battling with disease continued to grant or reveal directly to men the means of healing; and the majority of the sanctuaries, to which numerous worshippers journeyed, for their oracles (see DIVINATION [Egyp.]) or on annual pilgrimages, retained the privilege of miraculous cures. The temples of Isis at Coptos, of Min at Panopolis, and, in general, all those temples in which the medical books locate the marvellous discovery of writings in connexion with the teaching of remedies (Hermopolis, Lycopolis, etc.) were the places where the gods were themselves able to rout, with a single blow, the infirmities of the human body. We must add to this list a great number of smaller provincial sanctuaries, the local

gods of which, though very humble, had special powers (Assuân, Gurneh, etc.).

Survivals of these innumerable places of miraculous cures in ancient Egypt are seen in the topographical coincidences with various saints' graves of the Coptic Church—having the same privilege—and, after Muhammad, with all the tombs of Musalmān *shaikhs* which have succeeded to the veneration of ancient days for these places.

Towards the latter days of history, political events tended to group the most important of these centres of medicine round the capitals of Upper and Lower Egypt, and the infiltration of Persian and Hellenistic ideas added new elements to the rôle of the gods against disease.

6. The means used by the gods in such cases to instruct or heal patients are not well known in general. Several texts say that, under the influence of Greek ideas, the custom spread in Egypt of going to sleep inside the precincts of the temples of the gods of healing, or near the supposed tombs of those celebrated historical personages whom legend gradually confused with mythical kings and the gods of healing (see DIVINATION [Egyp.]). This is the case for Imhotep (cf. Psherenptah stela). Invalids were informed of their remedies oftenest in dreams, as is proved by a certain number of allusions in the epigraphical monuments, by the accounts in popular tales, and by the witness of Diod. i. 25. Direct cure, following upon a prayer, and without divinatory revelation, is not formally entertained except in Herod. ii. 65, according to whom sums of money equal in weight to a half or a third of the sick child's hair (?) were vowed to the gods in case of recovery, or a promise was made to buy a beast for the temple herds. The sudden inspiration of the doctor enlightened by Divine grace and working *διὰ τῆς ἰδίας δεισιδαιμονίας* is not a very Egyptian trait, and may be due to foreign influences (cf. Berthelot, *Alchimistes grecs*, 1890, p. 226). The essentially native form of miraculous cure by the intercession of the god appears to have been worked chiefly by the direct application of the healing fluid, either by the priest who carried the Divine relics, the *nibsau*, or, in important cases (demoniac possession, epilepsy, and the like), the god himself. The famous Stela of Bakhtan is a familiar example of this type of curing by exorcism worked by a Divine statue. The adjuration of the demon of disease, his overthrow, and his departure from the body of the princess, are merely an instance of a practice current in all the religions or 'semi-religions' in which there is a 'dispelling of demons.' It is more interesting to note the manner in which the statue of a god was supposed by the Egyptians to be capable of possessing the necessary power. The Egyptian text proves that this power was possible only to a 'secondary' statue of the god—one of those animated, for a special series of activities, by an 'energy-soul' of distinct name. It derived its chief power from the 'essential' statue of Khonsu, the statue which contained the magic soul of the god and made his will known by movements of its head (see DIVINATION [Egyp.]). This famous statue never left Thebes; it kept the best of the Divine substance there, and consented to detach and lend its healing forces only to such and such a one of its doubles, 'by bestowing upon it (by the nape of the neck) its protective fluid *at four intervals*' (which is a very valuable indication of the antiquity of the magical conception). Apparently, then, the power against disease did not belong to all the 'doubles' of a god. It was the privilege of the one image in which dwelt the 'true name,' and this assumes that power against demons was a part of the ultimate reserve of the personality of a being.

Finally—the primitiveness of the practice of exorcism by statues being a traditional survival—we may hold that, at the end of a long period of evolution, the views of the Egyptian upper classes on disease often came near to really lofty conceptions. Though, as everywhere, sorcery, the bastard child of primitive religion, preserved the rudeness of the 'dispelling of spirits' of primitive days, still the fight for healing, while maintaining its character of Divine teaching, became more and more natural and scientific. If, indeed, it attributed a large share to the supernatural intervention of the gods, it also gave an important place to Divine *inspiration*, guiding the man of science. Thoth-Hermes, in his various names and multiple capacities, inspires sacred medicine with a higher knowledge of human infirmities, without, however, assuming the absence of resources founded on therapeutics. The priest-doctor of the later ages of Egypt is a noble figure, resembling that of the magnificent portrait left by Cheremon (*FHG* iii. 497). And between the magic idol (or fetish) of the first healers of Egypt and the Thoth-Hermes of the end there is the same distance (and the same long way laboriously traversed) as between the anthropophagous Osiris of the Pyramid Texts and the Græco-Egyptian Osiris, who gives a seat at his table of honour in Paradise to the poor beggar 'who had not had his share of happy days on this earth.'

LITERATURE.—There is no monograph treating the subject synthetically. A great number of details and partial theories are found scattered throughout the bibliography of Egyptian medicine. Mention may be made, amongst the works and articles treating more specially the ideas discussed above, of: H. Brugsch, *Über die medicinische Kenntniss der alt. Ägypter*, Brunswick, 1853; F. J. Chabas, *Œuvres*, 1903, vol. ii., *Bibl. égyptol.* ii. 173, and *La Médecine des anciens Egyptiens*, Châlon-sur-Saône, 1861; G. Maspero, *Revue Critique*, 1893, ii. 69, *Histoire*, ii. (Paris, 1895) 214–220, 238, 281, *PSBA* xiii. 501–503, xiv. 312–314, *Études mythol. archéol.* iii. (1901) 289, 301, *Journal des Savants*, Apr. 1897 and Feb. 1898, *Journal des Débats*, 28 Feb. 1906; Mallet, *Kasr el Agouz*, Cairo, 1909; E. Naville, *Sphinx*, xiv. (1910) 137; F. Oefele, *Archiv f. Parasitologie*, iv. (1901) 481, v. (1902) 461, *OLZ* ii. 26, v. 157, vi. 375, *AZ* xxxvii. (1899), 55, 140, *Wiener Klinische Wochenschrift*, 1899, no. 47, *Prager Mediz. Wochenschrift*, 1899, nos. 24–29, and especially 'Geschichte der vorbippocratischen Medizin, in the *Handbuch der Geschichte der Medizin*, i., Jena, 1901; W. Wreszinski, *Der grosse medizinische Papyrus des Berliner Museums*, Leipzig, 1909; and J. G. Wilkinson, *Manners and Customs*, ed. London, 1878, ii. 354–358.

GEORGE FOUCART.

DISEASE AND MEDICINE (Greek and Roman).—Disease and its treatment by rational medical means belong to the domain of scientific medicine. The help of the gods was sought in illness and accidents by purely religious means—by prayer, sacrifice, and, above all, the institution of incubation. The gods granted their assistance either directly, by a miracle of healing, or indirectly, through the medium of an oracle of healing. The subject will be fully treated in the artt. HEALTH AND GODS OF HEALING, INCUBATION.

ED. THRAEMER.

DISEASE AND MEDICINE (Hindu).—1. Disease.—The earliest view of disease in India was that all morbid and abnormal states of body and mind for which no special reason was assignable were due to the attacks of demons. In the medical charms of the *Atharvaveda*, the earliest medical book of India, the diseases are constantly addressed as demoniacal beings. Thus Fever, a demon who makes men sallow and inflames them like fire, is implored to leave the body, and is threatened with annihilation if he should not choose to do so. 'O Fever,' says another charm, 'thy missiles are terrible; from these surely exempt us.' Itch (*pāman*) is called Fever's brother's son. The malevolent spirits of disease were regarded as specially dangerous to children. Thus infants were liable to be attacked by Naigameṣa, a demon

with a goat's head, who is mentioned in early Sanskrit literature, and represented in an old sculpture found at Mathurā. Jambha, another Vedic godling of disease, was supposed to cause the trismus of infants. A 'dog-demon' attacking boys is said to mean epilepsy, or perhaps whooping-cough. Another ancient superstition attributed the origin of dropsy to Varuṇa, the god of the waters, who binds the guilty, *e.g.* liars and false witnesses, with his terrible snake-bonds, *i.e.* dropsy. Elves and nightmares, called *Apsaras* and *Gandharvas*, were believed to pay nocturnal visits to men and women. Disorders of the mind were also very generally ascribed to possession by a demon (*bhūta*), even in scientific works on medicine such as the manuals of Charaka and Suśruta. When the belief in transmigration took hold of the Hindu mind, it furnished a new explanation of the origin of disease. Diseases and infirmities were traced to sins and offences committed in a previous birth. According to this doctrine of the 'ripening of deeds' (*karmavipāka*), a mortal sinner will have leprosy in a future birth; a Brāhman-killer, pulmonary consumption; a drinker of spirits, black teeth; a calumniator, a stinking nose; a malignant informer, stinking breath; a thief of food, dyspepsia; a thief of horses, lameness; a poisoner, a stammering tongue; a usurer, epilepsy; an incendiary will be born a madman; one who kills a cow or steals a lamp will be blind, etc. (see *Viṣṇusūtra*, ch. xlv.). Most of these punishments in a future life are symbolical. As a consequence of these beliefs, religious penances were performed, for instance, by lepers in order to atone for the heinous sins in a former existence to which their illness was attributed. A more rational theory of disease was found in the idea that worms gave rise to morbid conditions—a universal belief which may perhaps be viewed as the first germ of the modern bacillus theory. Headache and ear and eye diseases, as well as intestinal diseases, were attributed to worms; worms in children and in cattle also find special mention in the hymns of the *Atharvaveda*. The ancient physician Jīvaka (see below) is alleged in the Buddhist scriptures to have cured a patient by making an incision in his head and pulling two worms out of the wound. The medical Sanskrit works derive the origin of internal diseases principally from a wrong mixture of the three humours (*tridoṣa*) of the human body —wind, bile, and phlegm; and thus distinguish between wind, bile, and phlegm diseases.

Of particular diseases, *fever* is perhaps the most important. It is called in the medical works the 'king of diseases,' and appears to have been already the most dreaded ailment at the time of the composition of the *Atharvaveda*, the symptoms mentioned suggesting true malarial fever. This corresponds with modern statistics, according to which nearly two-thirds of the deaths in India are due to fever. *Leprosy* is said to consist of eighteen varieties, seven heavy, and the remaining ones light. It is evident, however, that true leprosy became confused with various skin diseases. *Smallpox* (*masūrikā*) is first mentioned in mediæval medical works. The *plague* is not mentioned in Sanskrit medical works, and seems to be of recent importation in India.

2. Medicine.—Folk-medicine in India is closely connected with sorcery. 'The most primitive witchcraft looks very like medicine in an embryonic state' (Sir Alfred Lyall, *Asiatic Studies*, 1st ser., 1907, p. 118). The earliest collection of charms found in the *Atharvaveda*, which is reckoned as one of the four Vedas, though it never attained the same degree of sanctity as the other three, probably because it contains incantations for destroying an enemy, the idea of injuring another, be he even an enemy, being opposed to the spirit of Hinduism. In the medical charms of the *Atharvaveda* and of the *Kauśikasūtra*, the diseases, and frequently the curative agencies as well, are addressed as supernatural beings (see above). The remedies applied are based, in many cases, on a rude kind of homœopathic or allopathic principle. Thus the yellow colour of a patient affected with jaundice is sent where it naturally belongs—to the yellow sun and yellow birds—the patient being seated on a couch beneath which yellow birds are tied. The hot fever is sent to the cool frog, who may be supposed to find it enjoyable. Dropsy, the disease sent by Varuṇa, the god of the waters, is cured by sprinkling water over the patient's head by means of twenty-one (three times seven) tufts of sacred grass, the water sprinkled on the body being supposed to cure the water in the body. A coral spear-amulet is used to counteract pains that seem as if from a spear—either rheumatism or colic. White leprosy is cured by applying black plants. Red, the colour of life and blood, is the natural colour of many amulets employed to secure long life and health. Amulets, mostly derived from the vegetable kingdom, are used a great deal, the idea being that the supposed curative substance has to be brought into contact with the body. The sores, tumours, and pustules apparent in scrofulous diseases are conjured to fall off, or fly away, because they were supposed to have settled like birds on the afflicted person. The cure of wounds and fractures is effected by incantations which have been compared by A. Kuhn with the Merseburg charm of German antiquity. Flow of blood is charmed to cease by a hymn which seems to indicate the use of a bandage or compress filled with sand. There are many charms for the cure of the poisonous bites of snakes, also charms directed against poison not derived from serpents. Water and fire are viewed as excellent remedies for many diseases; thus a Vedic charm declares: 'The waters verily are healing, the waters cure all diseases.' Fire is especially invoked in charms against mania, and sacrifices to the god of fire, burning of fragrant substances, and fumigation are amongst the principal rites against possession by demons. Some of the herbs used in medicine seem to owe their employment as remedies to their names only, not to any real curative properties possessed by them. The charms of the *Atharvaveda* have been fitly compared with the sacred formulæ of the Cherokees, and other spells current among the Indians of North America. On the other hand, they must be acknowledged to contain a fairly searching diagnosis of some diseases, as, *e.g.*, of malarial fever with its accompanying symptoms, such as jaundice, headache, cough, and itch.

The second period of Indian medicine is the Buddhist period, ushered in by Jīvaka Komārabhachcha, the contemporary of Buddha himself, of whom the most wonderful cures are reported, and whose name indicates that he was particularly famous for the treatment of children's diseases. The canonical books of the Buddhists contain a number of medical statements. The famous Bower MS, written in the 5th cent. A.D., and called after an English traveller who discovered it at Mingai in Central Asia in 1890, contains three medical treatises, one of them being a spell against snake poison, said to have been applied with success by Buddha himself when a young pupil of his had been bitten on the foot by a cobra. Buddhist kings founded hospitals for men and beasts, and appointed regular physicians. The famous Buddhist convent at Nālanda in Bihār, of which some ruins remain, had ample accommodation, in the 7th cent. A.D., for 10,000 students of philosophy and medicine.

The third period produced the now current Sanskrit treatises of Charaka, Suśruta, Vāgbhaṭa, Mādhavakara, Vaṅgasena, Hārīta, Bheḍa, Vṛnda, and others on medicine in general or on particular subjects, such as pathology, fever, infantile diseases, *materia medica*, etc. Charaka is said to have lived at the court of the Buddhist king Kaniṣka (*c.* A.D. 120); the great work of Suśruta is said to have been re-cast by the celebrated Buddhist sage Nāgārjuna; Vāgbhaṭa was himself a Buddhist. The connexion of the modern period of medical science in India with the Buddhist epoch is thus established, and the high stage of development reached by it seems to date, in the main, from the Buddhist time. The *materia medica* in these works embraces an immense number of drugs belonging to the mineral, vegetable, and animal kingdoms. There are special works on pharmacy and chemistry, containing ingenious processes of preparation, especially of quicksilver and other metallic medicines, which were prescribed internally as well as externally. Indian surgery, as represented in Suśruta and Vāgbhaṭa, can boast of the practice of lithotomy and laparotomy, and of operations performed in cases of cataract, piles, disease in the uterus, for forming new ears and noses (rhinoplasty, which seems to have been borrowed by European surgeons from India), etc., with more than a hundred different surgical instruments. Indian medical works and doctors were exported into Arabia, and Charaka and Suśruta may be found quoted in the writings of Rāzī (*c.* A.D. 900) and other eminent Arabian doctors. Many medical Sanskrit texts were translated into Tibetan, and again from Tibetan into Mongolian and other languages of Central and Northern Asia. On the other hand, it appears probable that the physicians of India at an earlier period learnt a great deal from the Greeks, especially in the field of surgery, their own knowledge of anatomy being too limited to admit of the performance of difficult surgical operations. Moreover, the ancient superstitious notions were retained by them. Thus a certain form of smallpox, which is treated with cold applications, is personified as Śītalā, 'the cold deity,' and is to be worshipped with a prayer in which it is declared that, whenever a person afflicted with smallpox addresses the deity as 'Śītalā, Śītalā,' the eruptions will at once disappear from his skin, and that this goddess possesses a rain of ambrosia for those tormented by pustules. Seven forms of this disease are described, which survive in the seven smallpox sisters, including Śītalā, whose worship is very common in N. India. The more aggravated forms of mental diseases are attributed to possession by a demon, and the cure is to be effected by propitiating the devil with oblations in a fire lighted in a temple, and with gifts consisting of eatables, an umbrella, etc. Infants are particularly liable to be attacked by a demon, the symptoms described pointing to lockjaw. The treatment of snake-bites includes the recitation of charms. When a child is born, various religious ceremonies take place, such as the offering of oblations in a fire kindled for the purpose, with a view to protecting mother and child against the attacks of demons. The prognostics of disease depend in the first place on various omens, such as the appearance and dress of the messenger come to summon the physician, and the objects or persons seen by the latter on his way to the patient. The Indian physicians (*kavirājas*) of the present day, who belong to the Vaidya caste in Bengal, and to Brāhman castes in most other parts of India, have naturally been losing ground owing to the introduction of European scientific medicine into India; nevertheless they continue to be consulted by the common people, who also still adhere to the popular superstitions of old. Various godlings of disease in nearly all parts of India are worshipped with offerings of milk, flowers, fruits, sweets, rice, betel-nuts, and sometimes a goat. When a child becomes dangerously ill with smallpox, it is sometimes carried to an image of Śītalā, and bathed in the water which has been offered to the goddess, some of which it is given to drink. There are also incantations for almost every disease—headache, toothache, fever, dysentery, leprosy, madness, burns, scalds, snake-bites, etc. In S. India devil-dancing is very common. Whenever the 'doctor' attending a sick person finds that the malady will not yield to his remedies, he certifies that it is a case of possession, and the exorcizer is then called in to expel the demon. The malignant spirits, the supposed authors of a plague, are tempted to pass into the wild dancers and so become dissipated, the devil-dancers being also thought to become gifted with clairvoyance and a power of delivering oracular utterances on any subject of common interest. See, further, DISEASE AND MEDICINE (Vedic).

J. JOLLY.

DISEASE AND MEDICINE (Jewish).—I. *DISEASE.*—1. Biblical.

Three initial stages may be traced in the perennial consideration of this subject. Disease—so it was held—is sent from the Deity; it is therefore a punishment for sins committed; that is, every one who suffers from disease has previously done some wrong for which he is atoning by his bodily afflictions. It is obvious that this case is completely covered by the larger and more general question of evil, as dealt with, for example, in Job. Yet, although the Book of Job might be said finally to solve the problem as far as contemporary thought was concerned, inquiry reasserts itself after a brief interval.

In the investigation of Biblical examples of sickness consequent on sin, care must be taken to exclude those cases where the punishment takes the form of a violent or unnatural death. These are included in the larger category of evil. Thus the case of Korah (Nu $16^{29ff.}$) and that of the disobedient prophet (1 K $13^{11ff.}$) do not apply, but the death of Bathsheba's first son (2 S 12^{14}) or the smiting of the Egyptian firstborn (Ex 12^{29}) might certainly be cited. It is also important to differentiate cases where the sinner himself is smitten from those where the punishment falls vicariously on others who may be innocent, but whom the sinner loves more than himself. To the former category belong the punishments of leprosy meted out to Miriam (Nu 12^{10}) and Gehazi (2 K 5^{27}); to the latter, the death of Abijah, son of Jeroboam (1 K 14^{12}), for the death of the child meant the destruction of Jeroboam's fondest hope—the foundation of a dynasty. Further, as a corollary to the latter class may be mentioned those cases in which the community suffers from disease because of (*a*) general and (*b*) individual trespass. The community would seem to be punished because it participates actively or even passively by not rejecting the criminal, for in the absence of duly appointed officials it is every one's duty to take the law into his own hands. It is also suggested that the knowledge that the commission of a certain action may involve others in disease and pain may act upon the evil-doer as a deterrent.

An enumeration of all the cases in the Bible

where disease is a punishment is unnecessary. It may suffice to mention a few examples where it is inflicted as a retribution for sin. In some cases leprosy is the means of chastisement: thus Miriam (Nu 12^{10}), Gehazi (2 K 5^{27}), and Uzziah (2 Ch 26^{21}) were smitten with this disease for slander, avarice, and presumption respectively. Shameful diseases are the result of foul crimes or irreverence (*e.g.* 'Er and Onan, Gn 38^{7} etc.; the Philistines, 1 S $5^{12ff.}$); Pharaoh (Gn 12^{17}) and his household were afflicted with plagues on account of the abduction of Sarah; Abimelech and all his house (Gn 20^{18}) were smitten with barrenness for the same cause; the Sodomites were struck with blindness (Gn 19^{11}) for their attack on Lot; and, finally, Job's sickness is ascribed by his friends to his sinfulness. Gluttony was punished by gastric plague and death at Kibroth-hattaavah (Nu 11^{34}), and in the *Tōkhēḥāh*, or Rebuke chapters (Lv 26^{14} etc., Dt 28^{15} etc.), various diseases are enumerated which will inevitably follow disobedience to God's word.

Turning to the NT, we may trace the same tendency. Thus (1 Co 11^{30}) those who receive communion in an unworthy manner suffer disease in consequence. Further, there is the opposite case of apparently undeserved blindness (Jn $9^{1ff.}$), as an explanation of which the possibility of sin *in utero* used to be suggested; and, finally, there are the instances where disease is said to be due to Satanic agency or demoniac possession (Lk 13^{16}, Mk 9^{17}, Lk 11^{14}).

That diseases follow sin may also be inferred negatively from such passages as Ex 15^{26} ('if thou wilt surely hearken to the voice of the Lord . . . the diseases which I put on the Egyptians I will not put on thee,' cf. Dt 28^{60}); or the Fifth Commandment, where longevity is the reward for obedience to parents; or, in a more general way, Lv 18^{5} ('Ye shall keep my statutes and my judgments by doing which a man shall live').[1]

Although these and similar instances are capable of being classified under various different heads and of being arranged in other ways, yet it is by no means clear that alterations would produce any re-adjustment of ideas with reference to the theory of disease. It is not safe to dogmatize or to differentiate between the attitude of the Pentateuch and the Prophets; it is unwise to establish distinctions of time or place, because in no subject is there greater scope for inconsistency. The human mind hovers between the Scylla of ascribing disease to the work of the Deity, and the Charybdis of making disease accidental and so independent of Divine control, by which circumstance Divine omnipotence would be impugned. The 'golden mean' may offer a workable compromise, but it will not often bear philosophic investigation. The Semites, as has often been shown, identified cause and effect. *Pe'ullāh* means both reward and the deed which merits the reward. *Ḥaṭṭā'th* means both sin and sin-offering. The children who mocked the prophet were devoured by bears (2 K 2^{23}), and the irresistible conclusion to be drawn was *post hoc ergo propter hoc*. The writer of the Books of Kings views history purely from the standpoint of morals; happiness and misfortune, health and disease, are the result of previous conduct; and insistence on this theory was the sole justification for the study of history. The adoption of this attitude was conducive to a belief in free will, since man thus had the power and choice of avoiding disease, while the opposite theory, which made disease fortuitous, led to predestination. To such an extent did the theory that conduct alone is responsible for disease prevail that Asa (2 Ch 16^{12}) is blamed because 'in his disease he sought not the Lord but the physicians.'

The Deity, then, is the source of evil as well as of all good, since He is omnipotent. Yet already in early times it was felt to be impious to ascribe misfortune and disease directly to the Godhead. Hence all manner of expedients were adopted to avoid such a position. In the Books of Samuel 'the spirit of God' is responsible for good and happiness, while sickness and ill were wrought by 'a spirit from (רוּחַ מֵאֵת) God.' This was largely developed in the Targums (cf. Memra, Logos, etc.). There is no escape from attacking Divine omnipotence, if disease is independent of the Godhead. Still disinclination to ascribe disease to God grew and gained strength from the earliest times. The example of Korah's sons is a case in point. All the guilty parties gather together, the innocent are warned to withdraw from their company, and finally (Nu 26^{11}) it is stated: 'notwithstanding, the sons of Korah died not.' Still stronger instances occur which afford negative proof. The wicked cannot involve the righteous in disease and death, but the righteous can, conversely, deliver the wicked. Ten good men can save Sodom (Gn 18^{32}); punishment extends to the third and fourth generation 'of them that hate me,' while loving-kindness prevails to the thousandth generation (Ex $20^{5.\ 6}$). The *Middath ha-Raḥamîm* (attribute of mercy) conquers the *Middath had-Dîn* (attribute of justice). Finally, the teaching of Job and of Ezekiel established the idea of individual responsibility, and the doctrine that suffering and disease are not necessarily the consequence of wrong-doing.

2. Rabbinical.—In considering Rabbinic literature it will be found that the same tendencies may be traced and the same stages observed. We are brought back to earlier views such as may be found in the Pentateuch and Former Prophets, and, seemingly, the teaching of Job and Ezekiel is completely gone. It will, therefore, suffice to adduce a limited number of instances. In the first place, slander is responsible for many diseases: this may be seen most clearly in *Lev. Rabba* xviii. 4 (ed. E. Schraentzel, Stettin, 1863, p. 29, fol. 15*a*, outer col. lines 1 ff.):

'There was *ḥārūth* (engraving) on the tablets of stone [Ex 32^{16}]. Read not *ḥārūth* but *ḥērūth* (freedom). Freedom from what? . . . from chastisements . . . R. Simeon b. Yoḥai says, at the hour when Israel stood at Sinai and said (Ex 24[7]) "All that the Lord hath said we will do and obey," there was not among them either one with an unclean issue or a leper or cripple or blind or dumb or deaf or mad: concerning that hour is it said (Ca 4[7]): "Entirely fair art thou, O my companion, neither is there blemish in thee." When they sinned, not many days passed when there were found among them those with unclean issues and lepers. About that hour it is said (Nu 5^{2-4}), "And they dismissed from the camp every leper, etc." Henceforward Israel was liable to issues and leprosy. R. Huna . . . says . . . leprosy came for slander . . . to teach thee that plagues come only in consequence of slander. . . .' [The whole passage should be studied.]

In the *Mekhilta* on Ex 23^{8} (ed. I. H. Weiss, Vienna, 1865, p. 106*a*, top) acceptance of bribes is said, on the basis of the Scriptural verse, to lead to blindness:

'Every one who accepts money to pervert justice (or even to execute justice) will not leave the world until he is bereft of his eyesight. According to R. Nathan, one of three things will befall him: he will lose his knowledge of the Torah, so that he will declare unclean clean, or declare clean unclean, or he will be in need of human aid, or he will lose his eyesight.'

A similar thought is expressed in the parallel passage in *Siphre* to Dt 16^{18} (ed. M. Friedmann, Vienna, 1864, §144), towards the end of the section. The *Mekhilta* to Ex 15^{26} (fol. 54*a*) should also be regarded. This thought may be followed in a more extended form in Bab. *'Erukhin* fol. 16*a*, where R. Joḥanan (quoted by R. Samuel b. Naḥmani) says:

[1] See Manasseh ben Israel's *Conciliator* (tr. E. H. Lindo, London, 1842), question 89, p. 138, question 104, p. 164; see also pp. 20, 114, and question 139, p. 228.

'Plagues come for seven sins, for bloodshed, perjury, unchastity, pride, embezzlement, pitilessness, and slander, as it is said (Ps 101[5]), "him who slanders his neighbour secretly, him will I cut off. . . ."'

The following verses are then cited to prove each case respectively: 2 S 3[29], 2 K 5[23. 27], Gn 12[17], 2 Ch 26[16], Lv 14[36. 55]. See also *Aboth* v. 11 (Singer's *Prayer Book*[6], London, 1900, p. 200):

'Seven kinds of punishment come into the world for seven important transgressions. If some give tithes and others do not, a dearth ensues from drought, and some suffer hunger while others are full. If they all determine to give no tithes, a dearth ensues from tumult and drought. If they further resolve not to give the dough-cake (Nu 15[20]), an exterminating dearth ensues. Pestilence comes into the world to fulfil those death penalties threatened in the Torah, the execution of which, however, is not within the function of a human tribunal. . . . At four periods pestilence grows apace: in the fourth year, in the seventh, at the conclusion of the seventh year, and at the conclusion of the Feast of Tabernacles in each year; in the fourth year, for default of giving the tithe to the poor in the third year (Dt 14[28-29]); in the seventh year, for default of giving the tithe to the poor in the sixth year; at the conclusion of the seventh year, for the violation of the law regarding the fruits of the seventh year; and at the conclusion of the Feast of Tabernacles in each year, for robbing the poor of the grants legally assigned to them' (*i.e.* gleanings, forgotten sheaves, corners of the field [Lv 19[9], Dt 24[19]]).

The death of women at childbirth is due to three sins,

'because they have been negligent in regard to their periods of separation, in respect to the consecration of the first cake of the dough and in the lighting of the Sabbath lamp' (Mishn. *Shabb.* ii. 6 [Singer's *Prayer Book*, p. 121]).

The effect of sin (*yēṣer hā-rā'*) on man and on the creation generally is to cause great disfigurement, and mysterious diseases are due to sin. The passage from *Bereshith Rabba* and elsewhere dealing with this point may be studied in F. R. Tennant's *Sources of . . . Original Sin*, ch. vii. ff.

Finally, R. Ami says:

'There is no death without sin, and there is no chastisement without crime' (Bab. *Shabb.* 55*a* foot). This passage should be carefully studied.

Outside the immediate range of the Talmud and Midrashim the idea may be traced frequently; *e.g.* Sir 31[22] (p. 24, ed. Strack, Leipzig, 1903): 'In all thy actions be modest, that no misfortune befall thee'; or Judah hal-Levi's *Kitāb al-Khazarī*, pt. ii. § 58:

'It was one of the wonderful traits of God that His displeasure for minor transgressions was shown on the walls of houses and in the clothes, whilst for more grievous sins the bodies were more or less severely stricken' (p. 119, ed. Hirschfeld, 1905: see the whole paragraph).

II. *MEDICINE.*—Connected with the question of disease is the question of cure. The function of the priest as physician is clearly laid down in the Pentateuch; he enjoys far greater authority than the surgeon mentioned in Ḥammurabi's *Code*, probably because his sphere of treatment was more limited: in Assyria surgical operations seem to have been undertaken more commonly. The Rabbis declared that it was a positive commandment (מִצְוָה עֲשֵׂה) for a man to get himself cured, on the basis of Ex 21[19] (see also Rashi, *in loc.*). Healing as a result of special prayer occurs repeatedly in the Bible. According to the Rabbis, all healing is a miracle, and repentance will effect a cure. Thus Bab. *Nedarîm* 41*a* declares:

'No sick man can recover from his disease until his sins are forgiven . . . greater is the miracle performed to a sick man by his restoration to health than that wrought to Hananiah, Mishael, and Azariah (Dn 3[12ff.]). For their fire was earthly and any mortal could quench it, whereas that of the sick man is from heaven and defies human hand' (see also further).

So, too, the Palestinian Rabbis denied that demons could cause or cure disease (see DEMONS AND SPIRITS [Jewish]), for disease came from God without reference to their agency (see also S. Schechter, *Fragment of a Zadokite Work*, Cambridge, 1910, p. 1, ch. xiv. p. 12, line 3). On the other hand, a man must not avoid sin on that account alone.

'A man must not say, "I will abstain from forbidden foods in order to strengthen my body and avoid disease, but in order to do the will of my Father in heaven."'

The technical nature of cures recommended by the Rabbis does not fall within the scope of the present article. Cures by *prayer* were frequent. See Mishn. *Berakhoth*, v. 3 (p. 10, ed. Staerk, Lietzmann's series, Bonn, 1910):

'R. Ḥanina b. Dosa used to pray over the sick and used to say, "Such a one will live," "Such a one will die." They said to him, "Whence knowest thou?"; he replied, "If my prayer is fluent in my mouth, I know that it will be received." . . .'

Reference may also be made to רְפָאֵנוּ (Singer's *Prayer Book*, p. 47; partly also on p. 16, § 8 of no. 58 of Lietzmann's series, *Altjüd. Gebete*, Bonn, 1910); to בְּרָכַת הַגּוֹמֵל (p. 148 top); to the שִׁבְעָה תְהִלִּים, or therapeutic use of Psalms (see also art. CHARMS AND AMULETS [Jewish]); and to the extremely beautiful prayer before reciting the Psalms in cases of sickness.[1] The prayer deserves careful study. It must be observed that, although the Rabbis fully believed in the efficacy of prayer, they did not, as the Christian Scientists do, deny the existence of disease or the power of drugs. The Essenes, for example, according to Philo, joined the care of the body to that of the soul by avoiding cities: 'just as foul air breeds disease, so there is danger of contracting an incurable disease of the soul from . . . bad associations' (*Quod omnis probus liber*, § 12, cited in *JE* v. 227, foot, inner column).

The principle of 'measure for measure,' fitting the punishment to the sin (כְּמָה שֶׁאָדָם כּוֹוֵן כְּמָה or מִדָּה כְּנֶגֶד מִדָּה מוֹדֵד בָּהּ מוֹדְדִין לוֹ), was strongly held by the Rabbis, as may be seen from the extracts cited above, but, in spite of this, the solution of the problem was found in the theory of יִסּוּרִין שֶׁל אַהֲבָה, 'chastisements of love' ('whom the Lord loveth he chasteneth'), and this is, of course, the real solution of the whole problem of evil: man's inability to realize that what is to him evil or misfortune need not in reality be so. See Mishn. *Berakhoth*, ix. 5 (p. 17, ed. Staerk, Bonn, 1910, Lietzmann's series):

בְּכָל מְאֹדֶךָ בְּכָל מִדָּה וגו' 'With all thy might [read not מְאֹדֶךָ but מִדָּה]; for every measure (good or evil) which He meteth to thee, thank Him.'

Misfortune is not necessarily evil, nor is disease necessarily the outcome of sin. Man cannot always distinguish good from evil, and his mind has not the power of perception, beyond a certain well-defined limit. 'From the mouth of the Lord shall there not proceed both evil and good?' (La 3[38]). 'I the Lord make peace and create evil' (Is 45[7]). The inability of man to comprehend the Divine scheme for the government of the universe leads him to erroneous conclusions as to the nature of evil and the origin of disease. This was the generally accepted conclusion.

LITERATURE.—*JE*, art. 'Medicine'; art. CHARMS AND AMULETS (Jewish) in the present work; Hamburger, art. 'Krankheiten'; Maimonides, *Guide*, chs. on the 'Evils,' pt. iii. etc. (see Friedländer's tr., London, 1904); S. Schechter, *Aspects of Rabbinic Theology*, London, 1910, ch. xiv. etc.; C. G. Montefiore, art. 'Retribution,' in *JQR*, vol. v., July 1893; F. R. Tennant, *Sources of . . . Original Sin*, Cambridge, 1903, ch. vii. etc.; S. Levy, 'Doctrine of Original Virtue,' in *Orig. Virt. and Other Studies*, London, 1907; F. Weber, *Jüd. Theol.*[2], Leipzig, 1897.

HERBERT LOEWE.

DISEASE AND MEDICINE (Persian).—The doctrines concerning bodily diseases and their treatment by medical art form a very considerable part of the Avestan system. In strict accordance with the dualistic conception of the universe, bodily disease and its treatment by medical art correspond exactly with sin, regarded as a spiritual malady, and its treatment by religious exercises conceived as an ethical or spiritual medicine. Similarly, owing to the dualistic division of the universe into a good and an evil creation, all bodily diseases are expressly declared to be creations of the Evil Spirit (see under art. DUALISM). In *Vend.* xxii. Ahura Mazda declares that Añra Mainyu created 99,999 diseases (a fanciful number, like that of the Hindu

[1] Both of the last-named items may be seen at the end of Heidenheim's ed. of the Psalms, Roedelheim, 186-

gods), which are variously estimated, however, as 90,000 in the Gujarati translation, or as 10,000 (*Bund.* ix. 4), or even as low as 4333 (*Dīnkart*, ed. Peshotan, vol. iv. cap. 157. 41, 43). A considerable number of names of diseases are preserved in various parts of the Avesta, and have been carefully collected and discussed, especially by Geiger in his *Ostīrān. Kultur*; but most of the names are decidedly obscure, and little improvement has been made since Geiger's study; even Bartholomae's great lexicon throws no further light upon the terms used.

It is fairly certain, however, that we may find in them fevers (*tafnu, dazhu*), and diseases of the head (*sūrastī, sūrama*). As skin diseases were and still are a special scourge of the Iranian countries, we naturally expect to find mention of leprosy, and as a matter of fact this dread disease apparently (in spite of de Harlez's striking argument to the contrary) is indicated by the term *paeso vitareto tanus* (*Vend.* ii. 85; *Yt.* v. 92), probably 'leprosy which segregates the body' (cf. Pahlavi *pēsēh*, Pazend *pīsk*, Mod. Pers. *pes*, Kurdish *pīsī*). In *pāman* (*Yt.* xiv. 48) we may see either leprosy, according to the general interpretation, or itch (S. E. Dubash), which is probably also indicated by *garenu*. Among other terms, more or less obscure, the identification of which is largely conjectural, *vāvereshī* (*Yt.* xiii. 131) probably indicates a venereal disease; *tafnu . . . tanuye zoishnuye* (*Vend.* vii. 173) may be puerperal fever; *skeṇda* (*ib.* v. 160) may indicate a rupture; *aghōsti* (*ib.* vii. 145) and *vazemnoasti* (*ib.* xx. 9, 11) most probably signify rickets and caries of the bone; *duruka* (*ib.* xx. 14, 20) almost certainly calculus; *kurugha* (*ib.*) seems to be the Modern Persian *kurū*, carbuncle (Houtum-Schindler, *ZDMG* xxxvii. [1883] 54 ff.). In *āstairya* we seem to have the name of some eruptive disease, like smallpox or measles. Among a number of hitherto quite unidentified terms, three beginning with *azh-* in all probability refer to diseases caused by snake-bite.

The origin of the art of medicine as recorded in the Avesta is supernatural, and associated with the name of the hero Thrita, who, according to the *Vendīdād*, was the first physician, 'the first of those heroic, active, benevolent men, with magic power, brilliant, powerful, before the giving of the Law, who made the various diseases cease.' He besought Ahura Mazda for a remedy against poisons (*vish-citrem*, or perhaps 'eine von Giftpflanzen stammende Arznei' [Geiger]), and a metal knife (for surgical operations). Ahura Mazda narrates that he gave him thousands and millions of medical plants, among them the mysterious *gaokerena*, the later *gōkart* tree, the source of all medicines (*Vend.* xx. 1–17). The Yashts appear to confound this Thrita with Thraētaona, whose name seems to be a patronymic derived from the former—for his *fravashi* is invoked against diseases. Darmesteter quotes Hamza as stating that Farīdūn (*i.e.* Thraētaona) was the inventor of medicine, and adds that the Modern Persian amulets against disease bear the name of Farīdūn (see CHARMS AND AMULETS [Iran.], vol. iii. p. 449[a]). Moreover, the genius Airyaman (apparently the personification of prayer) is also intimately connected with the medical art. Ahura Mazda calls him to come and expel disease and death (*Vend.* xxii., xxiii.). Later on, in the Pahlavi *Dīnkart* he becomes the tutelary genius of physicians, to whom he gives miraculous help to cure men's bodies. As we shall see, prayer was always regarded as the most efficacious of remedies.

The commonest term to indicate indifferently 'medicine,' 'healing,' 'medicaments,' or 'physician,' is *baeshaza*, corresponding to the Skr. *bhishaj, bhēshaja*. In Pahlavi we find this word as *beshaj*, but more commonly under the curiously inverted form *bijishak*, as in Modern Persian and in the Armen. words *bzhishk*, 'physician,' and *bzhshkel*, 'heal.'

The Avesta attributes great importance to the threefold division of medicine according to the means employed: *kereta*, the knife; *urvara*, herbs; *maṇthra*, formula—as we should say, surgery, medicine, and prayer. This is also the well-known division of the Greeks: Pindar, speaking of Asklepios, says (*Pyth.* iii. 91–95):

> . . . τοὺς μὲν μαλακαῖς
> ἐπαοιδαῖς ἀμφέπων,
> τοὺς δὲ προσανέα, πί-
> νοντας, ἢ γνίοις περάπτων πάντοθεν
> φάρμακα, τανὺς δὲ ταμαῖς ἔστασεν ἀρθανύς.

As Pindar gives the first place to *ἐπαοιδαί*, so the Avesta esteems the cure by prayer or conjuration the best of all; so that the prayer-physician (*maṇthro-baeshaza*) is called 'the physician of physicians.' In fact, the Maṇthra Spenta, or sacred formula, is personified and invoked as a genius: 'Heal me, O Maṇthra Spenta, O brilliant one!' It is Ahura Mazda himself who speaks, and promises thousands of camels, oxen, and sheep (*Vend.* xxii. 7–10). This *maṇthra* is not prayer in our sense, but a conjuratory formula, as employed so often among Eastern peoples. Homer, too, shows it as employed together with surgical treatment:

> ὠτειλὴν δ' Ὀδυσῆος ἀμύμονος, ἀντιθέοιο,
> δῆσαν ἐπισταμένως· ἐπαοιδῇ δ' αἷμα κελαινὸν
> ἔσχεθον (*Od.* xix. 456–8).

There is an excellent specimen of these conjuratory formulæ in *Vend.* xx. 7: 'I conjure thee, disease! I conjure thee, death! I conjure thee, burning! I conjure thee, fever! I conjure thee, headache! . . . I conjure thee, smallpox (?)!' There is a striking analogy between these conjurations and those employed by the Akkadians (Lenormant, *Chaldean Magic*, Eng. tr., 1877, pp. 4, 20, 260). These formulæ, as with the Greeks and Hindus, may, like so many other elements in the Avesta, be derived from an earlier population (perhaps Turanian) absorbed by the Aryans.[1] The genius of metals, Khshathra Vairya, is said to have given the first physician, Thrita, a knife with a golden point for surgical operations (cf. *Vend.* xx. 3). Careful instructions are given for the training and examination of surgeons and physicians, based on the principle of *experimentum in corpore vili*. The candidate is to practise, not on a Mazdæan, but on a *daēva*-worshipper, that is, the follower of any other religion. Should he operate upon one such with fatal result, and again a second and a third time, he is declared incapable for ever of practising either medicine or surgery. Should he persevere and injure a Mazdæan, he is held guilty of a crime equivalent to homicide. After three successful experiments, however, he is considered a fully qualified medical man (*Vend.* vii. 95–104). A serious view was taken of a physician's duties: he must make all speed to visit his patients; if the disease attack one at nightfall, he must hasten to arrive by the second watch; if at the second watch, he must arrive by midnight; if during the night, then by daybreak (*Vend.* xxi. 9–11). The fees of the physician are minutely regulated according to the rank of the patient. A priest pays only by liturgical prayers and blessings. The payment for the various chiefs of a household, a village, a clan, or a province, are respectively an ass, a horse, a camel, and a yoke of four horses; whilst, for the wives, female animals corresponding are required. It would appear that later on these fees were changed into monetary payments: the Pahlavi commentator estimates the prayers paid by the priest at 3000 *stīrs* (Gr. *στατήρ*), whilst the yoke of four horses is valued at 70 *stīrs*. It may be remarked that the Avestan physician was also a veterinary surgeon, for a scale of charges is also fixed for the treatment of cattle, great and small (*Vend.* vii. 105–117), and it is distinctly said that the same means must be employed for the cure of a rabid dog as for one of the faithful (*ib.* xiii. 97–99).

Turning now to the later Pahlavi literature, we find the whole subject of the art of medicine most fully and systematically treated in an interesting tractate incorporated in that encyclopædic work, the *Dīnkart*, and forming ch. 157 of bk. iii. printed in vol. iv. of Peshotan's edition (Bombay, 11 vols., 1874–1910). It is by far the most considerable chapter of the whole work. It falls into

[1] An amusing remark by a more recent Parsi commentator quoted by Darmesteter (note to *Vend.* vii. 120) is thus naively expressed: 'He may not cure, but *he will do no harm!*'

four distinct parts: (1) medicine, (2) the medical man, (3) diseases, (4) remedies.

It is curious to remark that Hindu medical science also distinguished the 'four feet' (*pāda*) of medicine, which, however, were reckoned as: the physician, disease, medicine, the nurse; while Hippocrates has a threefold division: ἡ τέχνη διὰ τριῶν, τὸ νόσημα, ὁ νοσέων, καὶ ὁ ἰητρός (*de Morb. Vulg.* i. 1).

The author begins by defining the basis or foundation (*būn*) and the necessity of medicine, which is, of course, owing to the action of the Evil Spirit. He next distinguishes between spiritual and material medicine, and again between general and individual medicine—the former apparently applying to the maintenance of the public health, and the latter to that of individual patients. It is curious that, whilst on the whole following the medical system of the Avesta as above described, the *Dīnkarṭ* recognizes *five*, instead of three, means of healing, viz. formulæ, fire, herbs, acids, and the knife. Another interesting distinction is that of prophylactic medicine (or hygiene, as we should say) for the preservation of health, and curative medicine for the healing of disease. In accordance with this, two kinds of practitioners are also distinguished: the *drūīstopat*, 'master of health' (as we might say, officer of health), and the *bijishak*, 'healer,' or doctor. In the section specially devoted to the physician several questions are treated. The supreme chief of corporal medicine is the Sovereign (*i.e.* the king); of spiritual medicine, the *Zarathustrōtema*, or supreme high priest. The matter (*māto*) on which the physician exercises his art is defined to be, for the spiritual physician, the human soul endowed with a body; for the corporal physician, the human body endowed with a soul. The reciprocal action of body and soul is then discussed with considerable skill, and corresponds pretty much with our idea of *mens sana in corpore sano*. The description of a perfect physician of the body is worth quoting:

'He should know the limbs of the body, their articulations; remedies for the disease; should possess his own carriage and an assistant; should be amiable, without jealousy, gentle in word, free from haughtiness; an enemy to disease, but the friend of the sick; respecting modesty, free from crime, from injury, from violence; expeditious; the right hand of the widow; noble in action; protecting good reputation; not acting for gain, but for a spiritual reward; ready to listen; having become a physician by favour of Aryaman; possessed of authority and philanthropy; skilled to prepare health-giving plants medically, in order to deliver the body from disease, to expel corruption and impurity; to further peace and multiply the delights of life' (§ 19).

The regulations for the probation of the medical candidate are the same as those we have quoted from the Avesta, whilst, as for fees, the treatise simply refers to the sacred text. In the third part we meet the statement that there are two fundamental maladies, denominated *faraēbūt* and *aībībūt*, which seem to indicate rather some forms of moral evil, but their explanation is extremely obscure, although the words occur in several treatises. The Evil Spirit (*Ganāk Mīnōi*) is the cause of all evils, both of soul and body—for the former, of every kind of vice and evil passion; for the latter, of cold, dryness, evil odour, corruption, hunger, thirst, old age, pain, 'and all other causes of malady and death.' The number of diseases is given as 4333; their names are simply those of the Avesta in a slightly altered form. One interesting division of maladies is that which divides corporal diseases into voluntary (such as venereal disease) and involuntary (such as fevers); whilst the diseases of the vital principle (*jano*) are distingnished as vices tending forward (*e.g.* passion and anger) and those tending backward (*e.g.* idleness).

The fourth and last part of the treatise may be styled therapeutic. The number of remedies derived from the vegetable kingdom is said to be seventy, and they are divided again into those which are by nature beneficent, and those which of their nature are poisonous, but may be so treated as to become medicinal. As an example of the former is given the myrobalan of Cabul—the only plant which is mentioned. The miraculous (*rajdato*) trees, the *Gōkart* and the white *Hōm*—here clearly distinguished from one another—are referred to as sources of healing. Health is next divided into two kinds—health of the soul and health of the body; and the various oppositions between the powers of the former and certain vices co-existent and yet hostile are detailed at length. In the whole passage we have a well-sustained distinction between the *hamēstarīk* (diametrically opposed, contradictory, excluding the opposite) and the *brātarvato* (co-existent but hostile); and the passage entirely confirms the sense of this latter difficult word which the present writer propounded in the *Academy*, xxvi. [1884] 397. A similar distinction is then made between the elements of the body and the hostile forces, cold and dryness, produced by the Evil Spirit—a veritable *bellum intestinum* between the four elementary qualities as described by Galen and other early medical writers. Curiously enough, however, with the Iranians the position of dryness and moisture is reversed, dryness and cold being together reckoned among evil qualities—an inversion, no doubt, to be explained by the rarity and consequent vast importance of humidity in ancient Iran. The action of the blood, of food, and of moderation are next explained, as well as the necessary interdependence of spiritual and corporal medicine.

An interesting question is that of the relations between Iranian medicine and that of India and Greece. The researches of Haas (*ZDMG* xxx., xxxi.) and Müller (*ib.* xxxiv.) have conclusively shown the great influence exercised by Greek medicine on the Hindus, and a question of the latter writer deserves our attention here:

'A fact which concerns not Indianists, but rather students of Middle-Persian and Arabic literature, is this—it may be deduced from the Arabic texts that it is worth while inquiring by what road Indian medical literature reached the Muhammadans. We know that Indian tales reached the realms of the Chalifs through the Pahlavi: is it not therefore obvious to suppose the same road for medical science?' (see also J. Jolly, 'Medicin,' *GIAP* iii. 10, pp. 17–19).

We have indicated above certain parallelisms between Iranian medical theories and those of the Greeks, though none of them can he considered very decided. History, however, bears out the probability of such influence of Greek medicine upon Persian. Greek physicians are to he found at all epochs at the courts of Iranian sovereigns. Such was the case even under the Achæmenians: we need cite only Demokedes under Darius I., the famous Ctesias, and Apollonides mentioned hy the latter. Spiegel thinks it probable that in populous cities foreign physicians often competed with native ones. Under the Sasanians, too, we find Greek physicians at the royal court, and Spiegel is of opinion that Indian physicians made their way there also (*Erân. Alterth.*, Leipzig, 1878, iii. 582).

LITERATURE.—W. Geiger, *Ostīrān. Kultur im Altertum*, Erlangen, 1882, pp. 391–399; L. C. Casartelli, *Traité de médecine mazdéenne traduit du Pehlevi et commenté*, Louvain, 1886, also *La Philosophie religieuse du mazdéisme sous les Sassanides*, Louvain, 1884 (Eng. tr., Bombay, 1889); S. E. Dubash, *The Zoroastrian Sanitary Code*, Bombay, 1906—a skilful attempt, by a highly qualified Parsi medical man, to bring the Avestan medical and hygienic system into correlation with modern European medical science, and 'to show my educated co-religionists how well the laws of the Vendidad, enacted for the preservation of health and for the observance of the purity of things, are in harmony with the laws of hygiene and the principles of the science of medicine.'

L. C. CASARTELLI.

DISEASE AND MEDICINE (Teutonic).—**1. Disease.**—Nothing made so powerful an impression upon the feelings of primitive man as the phenomena of disease and death. Whether the end came as the inevitable result of a prolonged

struggle, or whether it befell with startling suddenness in the heyday of life—in either case the terror-stricken mind was forced to face the question as to the cause and origin of the dread occurrence.

Death from loss of blood and death by strangulation were of course more or less familiar incidents of the chase and of war. But what mysterious power was it that suddenly opened the veins within the body, and brought a comrade's life to an end by hæmorrhage; or, again, obstructed the air-passages from within, and thus caused the hale and hearty youth to perish by suffocation, convulsively clutching at his throat? The inmates of the smoky turf-cabin had often felt this malign power at work, as it squatted—crushing and squeezing—on breast and throat, and had awaked with screams of terror and bathed in perspiration: it was the dreaded *alp* (incubus, nightmare), who had all but strangled them to death. By night likewise they were seized by that frightful something which resides in the body permanently, and thus differs from the *alp* that comes by night, or even in the midday slumber, yet speedily withdraws again. The unwelcome visitations of the incubus must have made a profound impression on their victims; and it was an experience of similar character which now and again befell them in spring, when the storm was raging outside, and alternate chills and burnings seized them, causing the shiver of fever, tormenting them in sleep with wildly-rushing dreams, and at length bringing them in their delirium to the experience of things which, as their house-mates affirmed, no one else had perceived: the fell work, surely, of gruesome creatures, invisible, but to feeling all too real, which hemmed them in, prowled after them, fell upon them like stealthy foes—the spirits and demons of disease, which the causal instinct, with its unconsciously creative tendency and its power of stimulating the imagination, depicted in endlessly varied forms, corresponding to the observed phenomena accompanying the affliction. A special object of misgiving was the unseen, though living and potent, entity which dwelt in friend and foe alike, which passed from the body at death and left it behind, *i.e.* the soul, as primitive man was always obsessed by the suspicion that departed souls still pursued their friendly or hostile activities in the shadowy host of disease-spirits.

Among the Teutons the souls of the dead were believed to join the great demonic host which, comprising elves, 'mares,' *Truden*, *Schrate*, and trolls, swept along in the train of Woden and Holla: winged creatures who appeared everywhere, and had their home in the savage forest. On occasion the disease-demons assumed bodily shape, showing themselves in every variety of form, and appearing in the disease itself as worm-like threads that creep under the skin, or as actual worms living in wounds and sores, or being discharged therefrom. The idea of the wriggling worm as the embodiment of the disease-demon was widely current among the Teutons. The demon was supposed to emerge from the worm in the form of some winged being, or of an ugly, crawling, slimy toad.

Next in importance to the incubi, or spirits of the dead, who afflicted the survivors with horrible nightmares, or consorted with them lasciviously in dreams, and who, in the form of some animal, often forced their way to the fireside through holes and cracks (cf. O.N. *mara kvalði*, 'the torment of the mare,' *mara trað*, also *cauche-mar* [*cauche*, from Lat. *calcare*, 'to tread'], 'the walk of the mare'), it was the horde of *alps*—creatures fabricated by the imagination from the nightmare—the *Elbēn*, the race of elves (A.S. *ælf-cynn*), who, as noxious demons practised their wicked magic (A.S. *ælf-siden*) upon mankind, especially in attacks of fever. They were the personal causes of the so-called elf-disease, which injures mankind as 'elf-shot' (A.S. *ylfa gescot*, O.N. *alfskud*, Danish *elverskud*), striking the skin (A.S. *on fell scoten*), the flesh (*on flæse scoten*), the blood (*on blod scoten*), or the limbs and joints (*on lid scoten*); or as the less injurious elf-breath, which, when merely blown (O.N. *alvgust*, A.S. *ælfblæst*, Swed. *elfveblast*) upon human beings, caused a swelling of the limbs; or even as a voracious sucking (A.S. *ælf-sogoþa*) of blood or marrow or bone; or as some other vagrant affliction (O.N. *álfa-volkum*, 'elf-roll,' cf. 'walk') which falls upon a person in its flight. When a man fell a victim to such an 'onfall' (A.S. *on-feall*), his neighbours said 'the elves are upon him.'

Besides these, however, there were numerous other noxious spirits ill-affected towards mankind, as may be inferred from the personal cast of many of the ancient names applied to particular diseases, as, *e.g.*, *Nessia*, *Nagedo*, *Stechedo*, *Troppho*, *Crampho*. Touching-demons caused dysentery, lymphangitis, and anthrax; stroking-demons (cf. 'moon-struck'), face paralysis and mental derangement; burning-demons, blisters and gangrene; biting-, pinching-, scratching-, and bruising-demons, skin-affection like cancer, extravasation of blood, itch, freckles, or phlegmonous inflammation, but they could also affect the body internally, and give rise to ulcers in the stomach (O.H.G. *mago-bizado*). As tearing-demons they produced gnawing pains in nerves and muscles; as striking-demons they afflicted men with apoplexy and epilepsy, with blindness and mumps; as pushing-demons they brought on hiccup, and the *nösch*, which presses upon the heart and the womb; as pricking-demons they were the cause of pneumonia and pleurisy, with their accompanying pains in the side, and also of sunstroke; as choking-demons they caused disorders which constrict the throat (croup, diphtheria); as binding-demons, rickets and phimosis; as gripping-demons (*hardgreip*, *widgreip*), the swoonings and spasms of uræmia, eclampsia, and epilepsy; as blowing-demons, disorders of the eyes (especially blennorrhœa in the newly born) and the blisters of anthrax, as also smallpox and plague, though these, no doubt, were sometimes figured as dragons and griffins rushing hither and thither, and killing people with the poisonous fumes they exhaled.

Human beings were also exposed to the aggressions of certain repulsive creatures of diminutive size, such as the *dwarfs*, who caused monstrous births, local paralysis, lunacy, mumps, and similar diseases (*e.g.* idiocy, apoplexy, herpes), produced convulsions, molested people at night by crushing and stifling, and, in particular, brought about baneful fevers (thus A.S. *dweorg* practically means an attack of fever). Evil-disposed demonic *Schelme* (cf. Scot. 'skellum') smote man and beast with pestilence, conveying influenza (O.H.G. *skalmo*, *skelmo*) and the 'black death' in fetid effluvia—an idea which reveals a glimmering sense of the danger of infection, as does also the notion of the 'Schelmenbeine' in starveling cattle, the 'Pest-schelme' being supposed to take material shape in these.

Demons of disease dwelling in forests were also regarded as the less noxious *Schrate* (goblins) and *wights*, and were personified as *Düsel* (stupors), or as 'yellow hags,' yellow-bellied *Sälden*, who knit yellow vestments with yellow needles—the yellow smock-frocks which they throw over the bodies of their victims as jaundice (*Gelbsucht*), or as red skin (*Pellmergen*) in erysipelas, or as tumid skin (*Schwellmergen*) in local dropsy. This idea, as implying the personification of local affections, reveals a some-

what more advanced conception of disease, which must have coexisted from the outset with the demonistic view, the latter applying more particularly to acute and chronic infectious diseases, and the whole brood of 'nervous' disorders. The demonistic view of disease has a direct link of connexion with the NT conception of demons in the Gothic word *dáimônareis*, and at length culminates in the mediæval theory of possession by devils (A.S. *dēofolsēoc* and *dēofolsēocnes*).

2. Medicine.—In the practice of healing, likewise, a simple empiricism no doubt prevailed among the ancient Teutons from the first, though naturally the evidence of this fact has almost entirely disappeared. But this experimental therapeutics became almost inseparably combined with demonistic conceptions and modes of thought.

A wound was first of all cleansed and bound up with vulnerary herbs. If the bleeding was profuse, the sore was sprinkled with the dust of dried plants, and the bandage was tightened. But, as this did not always prove effective, recourse was had to the 'more potent' remedies—of which we shall speak below—as preventives, and this mode of treatment was presently applied in all cases and 'for all cases'; *i.e.* it became customary to use such remedies at the very beginning of the treatment, as unexpected and apparently causeless contingencies might supervene in the process of healing—complications as mysterious as they were dangerous, such as inflammation, erysipelas, diphtheria, hospital gangrene, and lock-jaw; in short, all those concomitants of bodily injuries which are now traced to infection. These unwelcome manifestations were regarded as 'gruesome companions,' the personified influences of malicious denizens of the world of spirits and demons, though they might also be due to the machinations of evil-disposed human beings who were able to move the demonic realm and make it subservient to their will. Moreover, there was always the possibility that the invalid had in some respect neglected the claims of religion. He might have fallen short in performance of his duties towards the friendly deities of his people, so that they had sent the injury as a punishment, or had given to the wicked elves, whom they generally held in check, that permission to work injury of which they so fiercely availed themselves. For all such possibilities timely and rapid measures had to be taken. Horror lowered upon primitive man from all sides, and it was the part of wise counsellors—both men and women, but, in all that related to disease, more especially women—to soothe the terror-haunted soul.

Diseases of supernatural origin, and, in fact, all painful things that could not be traced forthwith to sensible causes, might be Divine punishments, from which the sufferer could be absolved only by expiation—by the bloody or unbloody sacrifice. The sacrificing priest secured his people against the demons of plague. Odin himself, however, is the master-magician, the 'magic-father' (O.N. *galdro-father*); as the sun-god he scatters the nocturnal swarm of the 'night-goers' (*nihtgenga*); he is the mighty elf-dispeller, the scourge of the *alps* (*grœti alfa*). Nevertheless, it was also the custom to offer sacrifice to the *alps* themselves (*alfablot*), who were often well-affected towards men, and had some knowledge of the plants that must be dug on moonless nights. The cult of Eir, the special goddess of healing, is of relatively late origin; she was the personification of the gentle hand of woman in nursing the sick (O.N. *eira*, 'to care for,' 'nurse'). But Odin still held his place as the supreme god of healing, and the healing 'touch' of 'Wodan's finger' was long the prerogative of English and Frankish kings—descendants of Odin—as a cure for scrofula and struma ('king's evil'). At an earlier date the power of curing disease was ascribed to the god Thor, the great preserver in times of sickness and danger, the destroyer of evil spirits. But Odin the Wise knew all the secrets of the magic which counteracts the work of demons: 'succouring oracles of healing' (*Hávamál*, 11, 9), 'long, powerful runes of life' (*Rigspula*, 44), 'succouring staffs and protective runes' (*Sigrdrífumál*, 5 and 9), and 'staffs full of healing virtue' (*Hávamál*, 145).

Here we come upon the most important element in the healing magic directed against the demons of disease, viz. the *spell*, which was inscribed on rods, pieces of bark, or the skin, as, *e.g.*, the hand, of the invalid, and which might be whispered, spoken, chanted, or shouted. All the ancient Teutonic languages furnish numerous examples of such spells or charms—more especially formulæ for the healing of wounds, the stanching of blood, and the prevention of swelling and mortification. Thus, Hartmann von Aue tells how, after a wound had been bandaged, Gawan, faithful to ancient Teutonic custom, uttered the spell: 'Zer wunden wundensegen.' Again and again in the 'blood-charms' we find the phrases: 'stant plot fasto,' 'verstand dû, bluotrinna.' Nor are other possible contingencies forgotten; thus 'dyn stekent, dyn swillent, dyn killent, dyn vulent, dyn stinkent, dyn swerent, dyn rennent sholt laten'—a spell which calls for uninterrupted convalescence. But the folk-medicine of the ancient Teutons comprised similar spells for many other ailments. Thus we find charms for worms, designed to expel the *nesso* (worm) with *niun nessinchlinon* ('nine little worms') from the marrow, through veins, flesh, and skin, and so out of the body;[1] or to kill it, or cause it to drop from the sore in the form of maggots. There were also fever-charms, used for destroying or expelling 'ritten'; charms for fracture and dislocation, spoken while the injured limb was being stroked or rubbed, and supposed to help the disconnected bones to reunite; charms for the eye, which arrested runnings, swelling, pain and dimness in that organ; charms for convulsions, curing epilepsy, 'wild shot,' gout, obstruction of bowels, colic (*bermuoter*), 'cold pains,' and 'irregular' gout; charms for consumption, curing all forms of wasting disease; charms for swelling, which removed intumescences (*e.g.* wens) and swollen glands (*kyrrill*); charms for the teeth, which destroyed the worms of toothache and caries; birth-charms, which were uttered before the knees of a woman in labour, and helped to usher the child safely into the world and bring away the afterbirth (as, *e.g.*, in the *Edda*, they were 'sung vigorously' for Börgny by Oddrún, supported by the birth-runes 'painted on hands and joint-bandages' as 'health-marks').

Sometimes the expedients employed took the form of slips of bast inscribed with formulæ similar to the foregoing (*zouborgiscrib*), and suspended in little boxes (*plechir*) around the invalid, or bound upon the diseased part (*ligaturæ*); while they were also used as prophylactics, as amulets for the 'breaking of sickness.' But charms were likewise of avail for the transference of diseases to another place, and for conveying them to animals and trees ('branch-runes,' 'which must be learned by any one who would be a physician,' [*Edda*]). Charms were spoken or chanted in gathering medicinal and magical herbs, in making decoctions, and in other proceedings, such as passing or creeping through split trees; they were uttered over an unconscious invalid, or while a

[1] Cf. the celebrated O.H.G. 'Munich worm-charm,' which will be given in full in the art. MAGIC (Teutonic).

rune-embellished gold ring was being moved in a circle round his wound; probably also when an iron or bronze ring was fixed round a limb as a prophylactic against demons, and even in jumping through the solstitial fire, the smoke of which the leaper tried to catch and retain in his clothes as a protection against fever.

The practical parts of these various expedients, and many other actions of the same kind, were, no doubt, frequently—perhaps more frequently—employed without spells, the place of the latter being gradually taken by new manipulations, articles of clothing, and other paraphernalia, *e.g.* wooden masks, hats, cloaks, bags with the most fantastic contents, such as talons, claws, nails, hair, small bones and similar trumpery—the stock-in-trade of the witch-doctor (shaman, medicine-man) all over the world. Such objects as images of the gods were dipped in water in order to endow it with special remedial virtues; cakes were baked in the form of the powers of healing, and then eaten; wooden arms and legs were hung up in temples or groves as votive offerings, while magic stones, with or without runic writing (stones of life), were worn as amulets.

Such were the 'medical' ideas, practices, and devices by which the ancient Teutons sought to cure existing disorders and to secure themselves against possible injuries to health. But even those remedial measures which might at first sight seem to be purely natural were in many cases conjoined with a superstitious element. Thus, when applying a rolling massage to the abdomen for troubles in that region, the 'doctor' would have in his hand a beetle or some such creature, into which the disease, or the demon causing it, was supposed to pass; while, in trying to dislodge the demons of pain from certain parts of the body by fumigating them with the incense of narcotic herbs, the operator softly uttered a spell, or chanted a magic verse. The demonistic theory of disease was itself of empirical origin. Even here a slight though real element of fact underlies all that is merely fanciful, and it was only as a secondary phase that it unfolded that riotous luxuriance which took shape finally as an imaginary host of disease-demons encompassing mankind. These demons were the outcome of what might be called observation of pathological symptoms, which found its materials in all manner of deformities in men and animals; such deformities, again, adding fresh matter to the ideas born of the nightmare, and constantly confirming them by apparently positive evidence—just as the intestinal or external parasite seemed to corroborate the personifying animistic theory of disease. The parasitical theory of disease is thus intimately related to the demonistic.

The anti-demonic incantation was usually regarded as appertaining specially to the individual, who used it to protect himself against, or deliver himself from, some particular demon; while the bloody sacrifice performed by the tribal priest was designed to guard the whole tribe against surprise attacks by the host of disease-spirits. But we also find incantations of an almost general character used as safeguards against possible onsets of demons — against 'whatever elf it may be' (*sy þæt ylfa þe him sie*). All conceivable combinations of the supernaturalistic therapeutics of magic and the physico-chemical therapeutics of manipulation and pharmacy have been evolved in the course of centuries, nor can it even yet be said that, in the folk-medicine of the Teutons or other races, the purely natural standpoint has finally carried the day.

K. SUDHOFF.

DISEASE AND MEDICINE (Vedic).—*Limitation of the subject.*—The distinction between charms for the cure of disease (*bhaiṣajyāni*) and other charms is frequently evanescent. They approach with special closeness the charms to secure long life (*āyuṣyāṇi*, cf. MAGIC [Vedic]) on the one hand, and the charms of exorcism (cf. WITCHCRAFT [Vedic]) on the other. Moreover, charms for easy childbirth, for abortion, and for the promotion or destruction of virility might properly be classed among them, but are in fact classed regularly among the rites pertaining to women (*strī-karmāṇi*, cf. MAGIC [Vedic]). Instead of attempting any theoretic distinction, it seems best to follow the Hindu classification, and treat in this article only charms of the type contained in the *bhaiṣajya*-chapters (xxv.–xxxii.) of the *Kauśika Sūtra*, reserving the related charms for the articles cited above.

1. Sources.—The chief source for our knowledge of the beliefs relating to disease in Vedic times and of the practices based upon them is the Atharvaveda. Of hymns or parts of hymns intended to secure the cure of more or less sharply defined diseases, the Atharvan *Saṁhitā* contains something over a hundred. The practices by which these were at one time accompanied are given in the *bhaiṣajya*-chapters of the *Kauśika Sūtra*.

It cannot, of course, be always confidently asserted that the practices there described are identical with those employed when the hymns were composed. But that the statements of the ritual are, in the main, based upon a good understanding of the hymns is shown by the flood of light that the study of the ritual has thrown upon the interpretation of the hymns (cf. the history of their interpretation which is given in the Commentary to pages 1–48 of Bloomfield's 'Hymns of the Atharva-veda,' *SBE*, vol. xlii.). That the treatment of the hymn in the ritual is secondary is sometimes too hastily assumed. Thus vi. 44 is clearly a charm against *āsrāva* (diarrhœa) and *vātikāra* (production of wind in the intestines), but *Kauśika* xxxi. 6 is supposed to rubricate it in a remedial rite against slander. The position of the rite in the *Kauśika* shows that it is intended for the cure of some disease, and, if the commentator is right (as he most probably is) in saying that it is to be employed 'in case of slander,' this means only that the origin of the disease *vātikāra* is ascribed to the evil speech of an enemy (cf. below, for disease originating from curses, evil eye, and sorcery) —a naive, but not improbable, conception. On the other hand, both the materia medica of the *Kauśika* and its therapeutic practices—slight as these are—seem more advanced than those of the *Saṁhitā* itself. In some cases also the connexion between the rite and the hymn is so superficial that there can be no doubt of the secondary mechanical adaptation of the one to the other. In such cases it is usual to assume that the rite has been made to fit the charm. In view, however, of the great conservatism that in general controls such practices, and the probable pre-historic origin of certain Atharvan charms (cf. Bloomfield, 'The Atharva Veda,' p. 61, and the literature there cited), the opposite possibility deserves more consideration. In the present state of Vedic studies, at all events, we can seldom hope to do better than understand an Atharvan hymn as the *Kauśika* understood it.

Taken together, the two sources furnish a better

picture of primitive medicine than has been preserved in any literature of so early a period. Further interest is added to the subject by the fact that these medical charms are the germ from which the later Hindu medicine was evolved. The stage of its development represented in the medical *Śāstras* implies several centuries of evolution from the standpoint of the *Kauśika*, and is now known (through the discovery of the Bower MS.) to have been attained previous to the 5th cent. of our era. The relation of the later medicine to the Atharva is recognized by the Hindus themselves, who regard the Yajurveda as an 'after-Veda' (*upaveda*) of the Atharva. Hindu medicine in turn has, through the Arabs, left its effect upon European medicine.

Other Vedic texts, owing to the purpose of their composition, do not have occasion to handle the phenomena of disease in the same concrete fashion, and to the same extent. Apart from the addition of details of a similar nature, their chief contribution consists in a picture of the general attitude of their authors and users towards disease. Into this picture as a background the details of the Atharva fit with perfect harmony. The difference between the hieratic texts (the Rigveda in particular) and the Atharva is neither a difference in time, nor a difference in enlightenment between the adherents of these Vedas. It is rather the difference in attitude of the priest and the physician (each liberal enough to employ on occasion the resources of the other) when brought face to face with disease.

2. The Atharvan practice of medicine.—(1) *Knowledge of anatomy.*—The Atharva evinces a very thorough knowledge of what may be called the coarser anatomy of the human body, naming its various external subdivisions, and many of its internal organs. Thus ii. 33 is a long list of the parts of the body from which the disease is to be torn; similar lists occur also in ix. 8, x. 2, and xi. 8. Beyond this knowledge, which was to a great extent a pre-historic acquisition (cf. O. Schrader, *Reallex. d. indogerm. Altertumskunde*, 1901, *s.v.* 'Körpertheile'), the Atharva can hardly be said to go. The apparent distinction between veins and arteries in i. 17. 3 is offset by the occurrence of the same words in vii. 35. 2, with the more general sense of 'internal canals,' meaning entrails, vagina, etc.—showing how vague were the ideas held with regard to such subjects. The isolated statement of ix. 8. 10, 'what is diseased shall become urine,' may be mentioned as an accidental approximation to a partial truth. To be noted, however, is the fact that the Hindu theory of the constitution of the body of three elements—bile, phlegm, and wind—does not appear in the early Atharvan texts. *Vātīkṛtanāśanī* of vi. 44. 3 cannot be urged as proof to the contrary, as it means, not 'destructive of (diseases) produced by the wind in the body' (*vātakṛtanāśanī*), but 'destructive of that which has been made into wind.' Evidently, from its association with diarrhœa, it refers to wind in the intestines. The later theory, which appears first in the *Svapnādhyāya*, Atharv. Par. 68, is, of course, familiar to the commentators, who endeavour to foist it upon the *Kauśika*.

(2) *Theory of the origin of disease.*—The popular mind is ever ready to see in disease the manifestation of the will of a supernatural power. To the Atharvan this power was generally one of the hosts of demons by which he believed himself surrounded. How slight was the distinction made between disease and possession may be seen from a hymn like Atharv. ii. 4, which is directed against disease and demon alike. Compare also v. 23. 2, where Indra is invoked to destroy the worms in a child, and it is immediately declared that all the *arāti* (certain female demons) are slain. It is also clearly implied by the fact that the *Kauśika* contains, among its remedial practices, ceremonies which consist merely in the driving away of the demons that are causing the disease (cf. xxv. 22–36, xxxi. 3–4); in providing the patient with an amulet to resist their attacks (xxvi. 26 f., xxvii. 5 f., xxviii. 7); or in spells to dissipate and remove the harm they have done (xxvi. 29–32, xxviii. 9–11).

These demons of disease are generally vague in outline and indefinite in number, and are known by the names *piśācha*, *rakṣas*, *atrin*, and *kaṇva*. Of their various pernicious activities, it may be noted that the *piśācha* devour the flesh of their victims (Atharv. iv. 36. 3, v. 29. 5); the etymology of *atrin* points in the same direction, while the *kaṇva* prey especially upon the embryo (ii. 25. 3). Other unnamed demons (*ib.*) are suckers of blood and takers away of fatness, while in xix. 36. 6 figure the dog-like she-demons that recall the dog-demon of epilepsy (*Āpastambīya Gṛhya Sūtra*, xviii. 1) and the dog-like *gandharvas* of Atharv. iv. 37. 11. Another class of beings to whose influences diseases are ascribed are the *gandharvas* and their consorts the 'mind-bewildering' *apsaras* (cf. Atharv. ii. 2. 5, iv. 37, xix. 36. 6). Insanity in particular is ascribed to their influence (cf. vi. 111. 4, also Rigveda x. 11. 2; Pischel, *Vedische Studien*, i. [1889] 188, and the statement of *Tāittirīya Saṁhitā*, iii. 4. 8. 4: 'The *gandharvas* and *apsaras* render mad him that is mad'). The *rakṣas*, too (Atharv. vi. 111. 3), can steal away one's senses. In Atharv. v. 29. 6 f. is indicated one way in which the demons obtain possession of their victim—by entering him with his food. It is with this possibility in view that *Kauśika* xxvi. 10 orders as a hygienic precaution that the sacks of grain belonging to the sick man shall be surrounded with a ring of heated pebbles. As the Atharva makes but slight distinction between demon and human sorcerer, it is not surprising to find the latter causing disease (Atharv. i. 28, iv. 28, xix. 39. 1) or diseases attributed to magic (iii. 7. 6; for methods of thus producing disease, cf. art. WITCHCRAFT [Vedic]), curses, or the evil eye (ii. 7, v. 15 and 16, vi. 96. 2, xix. 35. 3, and *Kauś.* xxvi. 35, xxix. 15–17).

Theoretically the diseases themselves are demons, and in some cases, e.g. *viṣkandha* and *saṁskandha*, it is impossible to decide whether the word should be considered the name of a demon or of a disease. But the personality of disease-demons is rarely strongly marked, and none of them is exactly comparable with the later smallpox goddess Śītalā. The closest approach is to be found in *takman* (fever), the Atharvan name for the disease known to the later medicine as *jvara* (cf. esp. the hymn v. 22, in which he is adjured to go elsewhere; and i. 25, vi. 20, and vii. 116, in which he is offered homage). Certain scrofulous sores called *apachit* are supposed to move of their own volition, as they fly through the air and settle upon their victim. So much is this the case, that earlier interpreters understood the word as the name of a noxious insect. As in other popular systems of medicine (cf. A. Kuhn, in *Kuhn's Zeitschrift*, xiii. 49 ff. and 113 ff.), a number of diseases are ascribed to the presence of worms (practically a form of demon [cf. above]) located in various parts of the body, and most fantastically described (cf. Atharv ii. 31 and 32, v. 23, with numerous parallels in other texts to be cited below).

Less frequently the Atharva ascribes a disease to one of the greater gods, and then often as a punishment for sin. Varuna sends dropsy to punish crime, especially falsehood (cf. Atharv. i. 10. 1–4, ii. 10. 1, iv. 16. 7, vii. 83. 1–4, xix. 44. 8; once also, i. 25. 3, the *takman* is said to be his son

[*i.e.* sent by him], and in vi. 96. 2 [a charm employed by *Kauśika* to heal the dropsy, but probably originally of a wider scope] the prayer is to be 'freed from the toils of Varuṇa, the foot-fetter of Yama [Death], and every sin against the gods'). Certain sharp pains are ascribed to the spear of Rudra (*Kauś.* xxxi. 7); the arrow of the same god causes tumours (Atharv. vi. 57); the *takman* and the *kāsikā* (cough) are his weapons (xi. 2. 22), and in xi. 2. 26 he is said to send the *takman*. A ceremony to his children, the Maruts (*Kauś.* xxvi. 24), serves as a cure for leprosy. Diarrhœa is connected in i. 2 with the arrows of Parjanya (the rain-god), and lightning (Agni) is regarded in i. 12 as productive of fever, headache, and cough. Takṣaka, a serpent-god, is worshipped in *Kauś.* xxviii. 1, xxix. 1, xxxii. 20 (charms to cure the bites of poisonous reptiles).

The supposed hereditary nature of some disease seems implied in the name *kṣetriya* (the interpretation is disputed), but even it has demons that produce it. Finally, the *śamī*-tree is supposed to have some evil influence on the hair (cf. Atharv. vi. 30. 2 f., and *Kauś.* xxxi. 1).

(3) *The diseases treated.*—The identification of the diseases treated in the Atharva is difficult in the extreme. In the first place, there is nothing that can be called diagnosis in our sense of the term. The practitioner is concerned merely with the troublesome symptom; of the cause of the symptom, the disease itself, he knows nothing. Sometimes the symptom, e.g. *jalodara* ('water-belly'), is definite enough to enable us to identify the disease; more frequently it is not, *e.g.* the terms *apachit* ('sores') and *akṣata* ('tumours') must have covered a great variety of afflictions from the most harmless to the most malignant. In the next place, the *Kauśika*, as a rule, does not state the disease for which its charms are intended. This important item is left to be inferred from the hymn rubricated. Unfortunately the hymns often combine the most varied diseases; extreme instances may be found in ii. 33, ix. 8.

The commentators (of much later date) endeavour to supply this deficiency. Their statements, however, are oot only frequently contradictory, but are also evidently affected by their knowledge of the later Hindu medicine. As an example of the way they work may be taken Keśava's statement that *Kauś.* xxx. 13 is a cure for dropsy, heart-disease, and jaundice. Both the ritual and the hymn rubricated (vi. 24) are plainly concerned primarily with dropsy; this disease is frequently complicated with heart-disease, which is, therefore, mentioned in the hymn. But in i. 22 (a cure for jaundice) heart-disease is also incidentally mentioned. Keśava seems to have reasoned that, since the cure for jaundice (i. 22) cured heart-disease, therefore another cure for heart-disease (vi. 24) must also cure jaundice! Finally, there are many obscure terms both in the *Saṁhitā* and in the *Sūtra*.

The most dreaded disease was the 'fever' especially predominant in the autumn (*viśvaśārada*). Its later name *jvara* does not occur in the Atharva, where it is known as *takman*, a name which conversely is confined to this Veda. To it especially are devoted i. 25, v. 22, vi. 20, vii. 116; and to its specific, the *kuṣṭha*-plant (*Costus speciosus*), v. 4 and xix. 39; incidental mention of the disease is found in i. 12. 2, iv. 9. 8, ix. 8. 6, xix. 34. 10, 39. 1 and 10. The *Gaṇamālā*, Atharv. Par. 32, gives a long list (cf. *Kauś.* xxvi. 1 n.) of hymns that encompass its destruction. This list, *takmanāśanagaṇa*, is made by taking the first five hymns cited above, and adding to them the hymns against *kṣetriya* (ii. 8 and 10, iii. 7), against *yakṣma* (iii. 11, vi. 85 and 127), various panacea-hymns (ii. 9, iv. 28, v. 9, vi. 26 and 91, ix. 8), and a hymn (vi. 42) originally intended to appease anger—heat forming the *tertium comparationis*. The symptoms described are alternation between heat and cold, delirium, return of the fever either (at the same hour) every day, or every third day, or omitting every third day. Associated with it are jaundice, certain red eruptions (v. 22. 3), headache, cough, spasm, and itch (*pāman*), the last being its brother's son (v. 22. 12).

Yakṣma (also *rājayakṣma*, *ajñātayakṣma*, to which *Taitt. Saṁ.* ii. 3. 5. 1–3, 5. 6. 4–5 add *pāpayakṣma*) seems to have in the Atharva (cf. ii. 33, iii. 11, v. 29. 13, vi. 127. 3, ix. 8, xix. 36 and 44) no narrower signification than 'disease.' With this accords the statement of *Vāj. Saṁ.* xii. 97 that there are a hundred varieties of *yakṣma*. The employment of its hymns in the *takmanāśanagaṇa* implies either a disease of marked febrile symptoms or (preferably) such an indefinite meaning. So also does the fact that *Śāntikalpa*, xxiii. 2 employs *yakṣmopaghāta* as a synonymous name for this *gaṇa*, while other texts have the form *yakṣman*, congenerically adapted to *takman*. Zimmer (*Altindisches Leben*, 1879, p. 375 ff.), in accord with the later medicine, sees in it a pulmonary disease. But a variety of *yakṣma*, called *jāyenya* (*Taitt. Saṁ. l.c.*), is probably identical with the Atharvan *jāyānya*; for *jāyānya* is associated with *yakṣma* in Atharv. xix. 44. 2, and called *rājayakṣma* by Keśava at *Kauś.* xxxii. 11. All this will be correct if *yakṣma* means simply 'disease,' and still in harmony both with Dārila's statement (*loc. cit.*), that *jāyānya* is some species of tumour (*akṣata*), and the fact that both etymology and the ritual point to *jāyānya's* being a venereal disease. Venereal disease (*grāmya*) is treated in *Kauś.* xxvii. 32 f., while the hymn there rubricated deals with *ajñātayakṣma* and *rājayakṣma*. Sāyaṇa's statement, that consumption produced by sexual excesses is meant, is evidently an attempt to harmonize the ritual with the meaning of *yakṣma* in the later medicine. Here may be added the mention of 'abscesses' (*vidradha*, vi. 127, ix. 8. 20); 'scrofulous swellings' (*apachit*); and the similar, but harder, 'closed tumours' (*akṣata*, vi. 25 and 57, vii. 74. 1–2, 76. 1–3). Leprosy (*kilāsa*) is the object of two hymns (i. 23 and 24). Keśava also assigns to its cure the practice (*Kauś.* xxviii. 13) with the *kuṣṭha*-plant, which Dārila, supported by the *Gaṇamālā*, declares to be a cure for fever. Keśava's statement has probably no deeper basis than the fact that *kuṣṭha* in the later language means leprosy.

Kṣetriya is another term of uncertain meaning. The Atharvavedins regularly explain it as 'inherited disease,' though 'chronic disease' has recently been suggested by Jolly. No description of its symptoms is given. As in the case of *yakṣma*, the inclusion of its hymns (ii. 8 and 10, iii. 7 [cf. besides ii. 14. 5]) in the *takmanāśanagaṇa* suggests either a disease of marked febrile character or a general term for disease. Even if, as is most probable, the word means 'hereditary,' there is no reason to believe that the designation was accurate.

Easily identified, on the other hand, is dropsy (*jalodara*). To its cure i. 10, vi. 22–24 and 96, and vii. 83 are devoted. In vi. 24 it is associated with heart disease—an instance of good diagnosis. The mention in the same hymn of pain in the eyes, heels, and front part of the foot refers to the characteristic puffing of these parts. Heart-disease (*hṛdyota*, *hṛdayāmaya*) is mentioned only incidentally (i. 22. 1, v. 20. 12, 30. 9, vi. 14. 1, 24. 1, 127. 3), and probably referred to any pain in the region of the heart. Paralysis (*pakṣahata*, lit. *hemiplegia*) is mentioned in the *Kauśika* itself (xxxi. 18), but the hymn rubricated is extremely obscure, and was probably not intended for this purpose.

Excessive discharges (*āsrāva*), and in particular diarrhœa (*atisāra* of the later medicine), have for their cure i. 2, ii. 3, and probably also vi. 44 (cf. above). There is perhaps an allusion to it in

connexion with fever in v. 22. 4. The opposite troubles, retention of urine and constipation, are the subject of i. 3 according to *Kauśika* xxv. 10 ff.; the hymn itself seems, however, to be entirely concerned with the first of these diseases.

Cough (*kās, kāsa*) is mentioned in connexion with fever (i. 12. 3, v. 22. 10–12), and is also the object of a separate ceremony in which vi. 105, vii. 107 are rubricated. *Balāsa* is variously interpreted as 'consumption' and as 'internal sores'; the assonance both with *kāsa* and with *kilāsa* is noteworthy, and strengthens both interpretations. The hymn in which it figures most prominently is vi. 14, rubricated by *Kauś.* xxix. 30 in a ceremony which Keśava terms a 'phlegm-cure.' This term cannot, however, be taken to indicate necessarily some throat disease, as it means any disease ascribed to an abnormal condition of the 'phlegm' in the technical sense of the later medicine (for Keśava's use of such terms cf. xxvi. 1 and 28). *Balāsa* is also mentioned in iv. 9. 8, v. 22. 11–12, vi. 127. 1–2, ix. 8. 8, 10, xix. 34. 10. In connexion with it (v. 22. 11) appears *udyuga*, perhaps 'spasm.'

Headache (*śīrṣakti, śīrṣāmaya*) is mentioned in i. 12. 3 and v. 4. 10, both times in connexion with fever, and also in ix. 8—an effort to enumerate all diseases. The practice of *Kauś.* xxviii. 13 is said by Dārila to be a cure for headache, while Keśava applies it in a broader fashion. Neuralgia (*viṣalyaka*) is mentioned in vi. 127, ix. 8. 2, xix. 44. 2; pain in the ribs (*pṛṣṭyāmaya*, inter-costal neuralgia?) in xix. 34. 10; rheumatic troubles are perhaps meant by *viṣkandha*, and *saṁskandha* (i. 16. 3, ii. 4, iii. 9. 6, iv. 9. 5, xix. 34. 5, 35. 1); with these may be associated *viśara* (ii. 4. 2), *āśarīka*, and *viśarīka* (xix. 34. 10). Some sharp internal pain is ascribed in vi. 90 to the spear of Rudra. Its exact nature is indeterminable, but the later medicine applies the same term to colic. A 'limb-splitting' disease (*aṅgabheda*) also occurs in xix. 44. 2, while two hymns (ii. 33, ix. 8) aim at eradicating pain and disease from all parts of the body. Pains in the eyes (cf. also v. 4. 10, 23. 3, vi. 24. 2, 127. 3) and ears may be especially mentioned. A separate charm for diseases of the eye (*alajī* occurs also in ix. 8. 20 as the name of some form of eye disease) is found in vi. 16 according to its manipulation in *Kauś.* xxx. 1–6. The parallelism of the hymn with v. 23 suggests that the pains in the eyes are ascribed to the presence of worms. For diseases ascribed to worms cf. above.

Of more external evils a 'flow of blood' (*lohita*, vi. 127, *vilohita*, ix. 8. 1, xii. 4. 4) means, perhaps, bleeding at the nose (cf. the association with diseases of the head in ix. 8. 1). A special charm against bleeding is i. 17 (rubricated at *Kauś.* xxvi. 10), to stop, according to Keśava, either an external or internal hæmorrhage, or excessive menstruation. Against the last of these troubles is directed the practice of *Kauś.* xxviii. 15, rubricating v. 6. The cure of wounds and fractures is the object of iv. 12 and v. 5 (rubricated at *Kauś.* xxviii. 5–6 and 14). Wounds or sores of unknown origin (*ajñātārus*) are healed with vi. 83. 4. In a snake-infested country like India cures for poison were sure to be in demand. For the poisonous bites of snakes the Atharva contains three charms (v. 13, vi. 12, x. 4), besides one (vii. 56) against the bites of scorpions and other poisonous reptiles, and another (iv. 6 and 7) against the poison of arrows. Internal poisoning does not seem to have been treated separately.

In certain forms of disease, *e.g.* mania, epilepsy, the distinction from possession is very slight. In case of possession, iv. 20 and 37, vi. 2. 2, or 52, or 111 (this last hymn speaking unmistakably of madness), or the *chātanagaṇa* (list of hymns for expulsion of demons) may be employed. In a rite against madness, *Kauś.* xxviii. 12, Atharv. v. 1. 7 is rubricated; epilepsy (*apasmāra*) is said by Keśava to be one of the diseases for which i. 22 is employed at *Kauś.* xxvi. 14–21. *Grāhi*, 'fit,' 'seizure,' is practically a she-demon (cf. ii. 9. 1, 10. 6, iii. 11. 1, vi. 112. 1, viii. 2. 12, xii. 3. 18). Another demon which seizes children is *jambha*—apparently a designation of convulsions or lock-jaw (cf. ii. 4. 2; *Kauś.* xxxii. 1–2).

The *Kauśika*, in accordance with its method of treating symptoms, has also cures for 'thirst' (xxvii. 9–13) and 'fright' (xxvi. 26 f.), which we should hardly class as diseases. The latter may be what we call nervousness, but V. Henry has no warrant for interpreting the former as dipsomania. Inauspicious marks (cf. art. PRODIGIES [Vedic]) on the body (*pāpalakṣaṇa*, xxxi. 1; *ariṣṭa*, xxviii. 15) are also treated as diseases. Keśava thinks that the ceremony to remove wrinkles (*Kauś.* xxv. 4 f.) has reference only to wrinkles in a young man, in whom they are portentous. The ceremony to stop the loss of hair (*Kauś.* xxxi. 28), employing two hymns, vi. 136 f., evidently composed for this very purpose, is to be ascribed to the same motive rather than to vanity. A person whose hair has come into contact with a *śamī*-tree is called *śamīlūna* ('cut by a *śamī*-tree'), and is supposed to be in danger of suffering some injury to his hair. For his benefit is the ceremony of *Kauś.* xxxi. 1, and the hymn rubricated seems to have had the same case in view.

Finally, a number of ceremonies are designated as panaceas (cf. *Kauś.* xxv. 4–5, 20, 21, 22–36, xxvi. 1, 34, xxvii. 5–6, 27, 34, xxviii. 8, 17–20, xxx. 17–18, xxxi. 5, xxxii. 3–4, 18–19, 26–27), though in some cases a more narrow interpretation seems possible.

(4) *The materia medica of the Atharvans.*—That the waters should be considered healing is most natural in virtue of both their cleansing and their cooling properties. So it is stated in Atharv. ii. 29. 6 that the waters give strength, and in iii. 7. 5 = vi. 91. 3 that they are remedial and expel disease (cf. also the passages from the Rigveda cited below). In the *Kauśika*, water is employed most frequently, either for its own sake (so the holy water in xxxi. 21) or as a vehicle for other remedies. To the waters are especially devoted the hymns, Atharv. i. 4–6, employed as a panacea at *Kauś.* xxv. 20, and vi. 22–24, employed as cures for dropsy at *Kauś.* xxx. 11–13. Of particularly great efficacy, however, is the water dug up by ants (cf. Atharv. ii. 3, vi. 100, and Bloomfield, *Am. Jour. Phil.* vii. 482 ff.). Hence earth from an ant-hill serves as an amulet, a drink, or an external application for the cure of diarrhœa, etc. (*Kauś.* xxv. 7), and of *kṣetriya* (xxvi. 43); and as an antidote for poison (xxxi. 26, xxxii. 6). There is the possibility of the patient's receiving sufficient formic acid (cf. art. CHARMS AND AMULETS [Vedic] for method of investiture) to act as a cathartic. In all these passages, except xxxi. 26, there is associated with it a lump of ordinary earth. The separate use of the latter as an emetic in *Kauś.* xxviii. 3 (so Dārila) is doubtful, as Keśava and Sāyaṇa understand the fruit of the *madana*-tree. Noteworthy is the fact that both the clod of earth and the ant-hill seem to be looked upon as growths (cf. their inclusion in the list of auspicious plants, *Kauś.* viii. 16). Similar remedies are earth from a mole-hill, to cure constipation (*Kauś.* xxv. 11), this material being selected because the animal makes its way through dark passages, and also because one of its names, *ākhukarīṣa*, is compounded with a word for 'excrement' (cf. *Śatapatha Brāhmaṇa*, ii. 1. 1. 8); and earth from a bee-hive (xxix. 10), as an antidote to poison.

Plants are to the Vedic mind the offspring and the essence of the waters, the embodiment of their curative properties. Hence they, too, are implored to bestow remedies (cf. Atharv. vi. 96, and esp. the long hymn viii. 7 addressed to all plants, and used as a panacea at *Kauś.* xxvi. 40; cf. also the *oṣadhī-stuti* of the Rigveda cited below). The list of plants employed as remedies in the *Kauśika* is long, and comprises the following: in a number of passages (xxv. 20, xxvi. 40, xxvii. 5, 20, 33, xxix. 30, xxx. 8, 11, xxxi. 8) the prescription calls simply for 'auspicious trees,' that is, the trees enumerated in viii. 15. Of trees in this list are specifically prescribed: *palāśa*=*Butea frondosa* (xxv. 30, xxvi. 34), a tree of pre-eminent holiness because of its mythical associations (cf. art. CHARMS AND AMULETS [Vedic]); *kāmpīla*=*Crinum amaryllaceæ* (xxvii. 7, xxviii. 8); *varaṇa*=*Cratœva roxb.* (xxvi. 37; cf. same art.); *jaṅgiḍa*=*Terminalia arjuna* (xxvi. 43); *vetasa*=*Calamus rotang* (xxvii. 10). Other remedies figure in the list of auspicious plants (*Kauś.* viii. 16): *śamī*=*Prosopis spicigera* (xxviii. 9, xxxi. 1); *śamakā* (xxxi. 1); *darbha*-grass=*Poa cynosurides* (xxv. 37, xxvi. 30, xxvii. 23, xxxi. 2 [Com.]); also, after its use as sacrificial straw, *barhis* (xxv. 31); *dūrvā*-grass=millet (xxvi. 13); rice (xxix. 18; cf. also the use of porridges, below); and barley, *yava* (xxv. 17, 27, xxvi. 2, 35, 43, xxviii. 20, xxx. 17), efficacious because fancifully connected with *yavayati*, 'he separates.' Another plant not in this list, but evidently employed because of its holiness is the *soma*-plant (xxxi. 22).

Other plants owe their efficacy as remedies to their anti-demoniacal qualities (for these qualities cf. art. WITCHCRAFT [Vedic]): *iṅgiḍa*-oil (xxv. 30); *tila*, *taila*=sesamum and the oil made from it (xxvi. 1, 13, 43, xxvii. 33, xxix. 8); reed (xxvi. 27); *vīriṇa* and *uśīra*=*Andropogon muricatus* (xxv. 30, xxvi. 26, xxix. 24–26, xxxii. 13); hemp (xxv. 28, xxvii. 33); *khadira*=*Acacia catechu* (xxv. 23 f.); mustard (xxv. 23, 27, 31, xxx. 1 ff.; cf. also the *Asurīkalpa*, Atharv. Par. 35); *trapusa*=colocynth (xxv. 23; also mentioned by Keśava at xxvi. 22, where it seems to be used principally for its colouring property). The use of wood from a club (xxv. 23) belongs to the same category.

A number of other plants owe their employment to more or less fanciful etymologies: *muñja*-grass =*Saccharum munja* (xxv. 6, xxvi. 2, 33, xxxii. 3), associated with *muñchati*, 'he loosens.' Leaves of the *paraśu*-tree, 'axe-tree,' are employed at xxx. 14 to cause sores to open, and wood of the *kṛmuka*-tree at xxviii. 2 to cure wounds inflicted by poisoned arrows, because *kārmuka* means 'bow.' Growth of the hair is promoted (xxxi. 28) by the *nitatnī*-plant, 'she that takes root,' with which are associated the *jīvī* (root *jīv*, 'to live') and the *alākā* plants. The *lākṣā* of xxviii. 5 seems to be a synonym for *arundhatī* of the hymn iv. 12, felt to contain *arus*, 'wound,' and the root *dhā*, 'to set,' and hence employed to cure fractures and wounds. Bunches of grass (*stamba*) are employed (xxix. 4) to confine (root *stambh*) the effects of poison; they are also added (xxxii. 3, 14) to water with which a patient is washed or sprinkled.

In addition are employed: lotus roots (*bisa*, combined with *āla* and *ula*, xxv. 18); *haridrā*= *Curcuma longa*, as a cure for jaundice (xxvi. 18) [because of its yellow colour], as an antidote to poison (xxviii. 4, xxxii. 7 [Com.]), or as a panacea (xxxi. 5 [Com.]). It is also prescribed, according to the commentators, in the cure for leprosy of xxvi. 22. As the cure consists merely in painting out the spot, *Eclipta prostrata* or indigo may be used instead. There is mention also of *pṛśniparṇī* =*Hemionitis cordifolia roxb.* (xxvi. 36); *pippalī*, pepper (xxvi. 38); black beans (xxvii. 14); *sadam-puṣpā* (xxviii. 7); *kuṣṭha* (xxviii. 13); *alābu*= *Lagenaria vulgaris* (xxix. 13 f.); *khalatula* (xxix. 15 f.); *karīra*=*Capparis aphylla roxb.* (xxix. 20); *śigru*=*Moringa pterygosperma* (xxix. 23); *śāka*= *Tectona grandis* (xxx. 4); *vibhītaka*-nut=*Bellerica terminalia* (xxx. 9); *nikaṭā*-plant (xxx. 10); *śamī-bimba*=*Momordica monadelpha* (xxxi. 8); *śirṇa-parṇī*=*Azadirachta indica* (xxxi. 8); *priyaṅgu*= *Panicum italicum* (xxxii. 2). The commentators at xxv. 10 also mention, as instances of substances that promote micturition, camphor, *Terminalia chebula*, and *harītakī*.

The fragrant powders employed in xxvi. 29 are probably made from plants, and owe their efficacy to their fragrance, just as the use of liquorice (xxxii. 5) is due to its sweetness. On the other hand, the *pūtīka*-grass is employed (xxv. 11) in a cure for constipation, because of the offensive odour implied in its name.

Next in prominence to the plants are the products of the cow, which, as partaking of its holiness, are used either for their own efficacy, or as a suitable vehicle for other remedies: butter (*ājya* and *sarpis*, xxv. 4, 8, xxvi. 1, 8, 29–33, xxvii. 14, xxviii. 4, 13, xxix. 22 f., Com. to xxxi. 5 and xxxii. 7); curds (*dadhi*, xxvi. 13); milk (xxvi. 17, xxviii. 14, xxxi. 24, xxxii. 2); milk and butter (xxviii. 6); buttermilk (xxxi. 23). The hair of a red steer is employed (xxvi. 14), cow-dung (xxvi. 22), and cow-urine, the particular remedy of Rudra (cf. below), at xxxi. 11. The *pañchagavya* (five products of the cow), which afterwards becomes a potent panacea, is not yet concocted, though all its ingredients are in use. Its preparation and administration are described in one of the Atharvan Pariśiṣṭas, *Brahmakūrcha-vidhi*.

Food of any sort (xxviii. 12, 15, xxix. 16) may serve as a vehicle, but porridges (xxvi. 19, xxvii. 10, 31, xxviii. 3, 16, xxix. 15, Com. at xxxi. 5 and xxxii. 7), especially rice porridges (xxvi. 18, xxvii. 32, xxix. 27), are thus employed most frequently, or even separately administered. Honey (xxvi. 1, xxviii. 28, xxxi. 23) and fat (xxvi. 1) are also prescribed, and in xxxii. 1 the mother's breast serves as a vehicle for giving medicine to an infant.

A number of substances are applied, on account of their offensiveness, to sores, in the hope of inducing them to fly away: powdered shell and dog's saliva (xxx. 16); the scourings of teeth and pollen of grass (xxxi. 14 f.); rock-salt and spittle (xxxi. 17). Comparable perhaps is the administration of rotten fish in xxvii. 32. Of animals comparatively little use is made; the frog figures in a cure for fever (xxxii. 17), and yellow birds in a cure for jaundice (xxvi. 18), but in both cases the disease is to be transferred to them. The porcupine serves in xxix. 11 f. as an antidote to poison, because he is an animal not liable to trouble from snakes. For the same purpose also an unknown insect is employed as a representative of the mythical steed of Pedu (cf. Bloomfield, *SBE* xlii. 605 ff.). Also for mythical reasons are employed in xxxi. 18 ff. earth that a dog has stepped upon, and a louse from a dog (cf. *ib.* p. 500 ff.). Manufactured articles are employed chiefly as amulets (cf. below). There occur also: wood-shavings (xxv. 11); grass from a thatch (xxv. 37, xxvii. 3, xxix. 8, xxx. 13, Com. at xxxi. 2); old clothes and broom (xxviii. 2); bowstring (xxix, 9, xxxii. 8, 10); *pramanda*, tooth-wash (xxv. 11).

The efficacy of these remedies depends not entirely upon themselves, but also upon the method of their preparation and administration. In the first place, as in other magic performances, there is a quasi-religious performance (cf. art. MAGIC [Vedic]), and the remedies are regularly daubed with the leavings (*saṁpāta*) of the offering. There are other requirements besides: the offerings must

sometimes be made from *cornucopiæ* instead of a spoon (xxv. 30), or the medicine must be administered from *cornucopiæ* (xxviii. 8), or from a particular sort of cow's horn (xxxi. 6), or a red copper vessel (xxix. 19), or through a yoke (xxvii. 1), or with a pestle (xxix. 22); or must be prepared in a vessel of reed and stirred with a reed (xxvii. 10), or stirred with poisoned arrows (xxviii. 3); or the fire used must be a forest fire (xxix. 19), or made of birds' nests (xxix. 27); or built on a mat of reeds floating in water (xxix. 30). The place of the ceremony is not always a matter of indifference: one cure of dropsy (xxxii. 14) must be attempted at the confluence of two streams, other cures at the cross-roads (xxv. 30, xxx. 18), or in a ditch (xxvii. 4). The position of the patient (xxvii. 10, 25), the clothing and food of the celebrant (xxxi. 28), are also efficacious. So, too, is the time of the ceremony: thus that of xxvii. 21–25 must be repeated at sunrise, noon, and sunset. The time most frequently prescribed is *avanakṣatre* (xxvii. 29, xxviii. 5, xxx. 9 [Dārila], xxxi. 28, 'at the time when the stars fade away'). The purpose is clearly expressed in Atharv. iii. 7. 7: 'when the constellations fade away and when the dawn fades away, (then) shall he shine away from us every evil and the *kṣetriya*.' In one case (xxxi. 28), where the purpose is to secure (black) hair, the time is further defined as 'before the crows come.'

(5) *The Atharvan methods of treating diseases.*—Of practices of a real therapeutic value the *Kauśika* contains but little. The most delicate is the probing of the urethra, which seems to be prescribed (xxv. 15–16) for the relief of one suffering from retention of urine. It is instructive to observe that the discovery of this operation may be due to an attempt to carry out practically the statements of the hymn: 'I split open thy *pasas* like the dike of a lake,' and 'relaxed is the opening of thy bladder.' Originally, however, these were probably nothing but the usual statements of the conjurer that he was accomplishing what he wanted to accomplish. A similar instance (at a later period) of the evolution of a practical out of a magical proceeding may be seen in Dārila's comment on xxv. 12, where the giving of an enema is substituted for an operation, the symbolism of which should be transparent. The same hymn (Atharv. i. 3) harbours another practice, the real value of which may have helped the Atharvavedins in the cure of minor troubles. The urine is to come out with the sound 'splash,' and the ritual speaks also of the pouring out of water—a piece of symbolism to be attributed unhesitatingly to the time of the composition of the hymn. The sound of flowing water, however, does exercise a beneficial influence in such cases, especially when the trouble is of a nervous origin. A compress of sand is employed (*Kauś.* xxvi. 10) to stop the flow of blood, and the practice is indicated in the hymn itself (Atharv. i. 17. 4). In *Kauś.* xxviii. 3 an emetic is given to one wounded by a poisoned arrow. The application of leeches to sores is found in *Kauś.* xxx. 16, but accompanied by other ceremonies that one would expect to produce infection of the wound; and the same may be said of the breaking of pustules (xxxi. 10) by rubbing them against the door-post. In *Kauś.* xxxii. 24 a torch is applied to the bite of a serpent. The original intent must have been symbolic, but the result may have been some sort of cauterization.

Apart from these instances, the treatment is always magical. As usual in the Atharva, it is magic veneered with religion. The employment of a hymn is regularly accompanied with an oblation, perhaps even inserted in the elaborate framework of the New and Full Moon Sacrifice (cf. art. MAGIC [Vedic]); and it is this oblation, generally through the leavings of the offering, that gives efficacy to the ceremony. Of the hymns but little need be said, as all are accessible in translations.[1] They are prayers addressed to the gods, or to the disease, or to the remedy, with more or less explicit indication of what is wanted of them. Sometimes the author adopts a more confident tone, especially when he knows the name or lineage of the disease, or its remedy, and thus has them in his power. Then he states what he is doing, or orders the disease to depart. For, according to a well-known principle of magic, a verbal statement is an efficient symbolical imitation of an act.

The ceremonies are of greater interest. As the diseases are generally ascribed to a demon, the problem for the practitioner is the removal of this troublesome being. The methods of accomplishing this are in general either to propitiate or to exorcize the spirit, and in this we have the division into homœopathy and allopathy. In the one case, the demon is given what is most acceptable to him, as being of his own nature; in the other case, he is brought into contact with what is presumably the most repugnant to him.

Some ceremonies in which the exorcistic character is specially noticeable are: *Kauś.* xxv. 22–36, rubrication of the *chātanagaṇa* (list of expelling hymns); xxvii. 6, xxxii. 18, in which the cure is effected by the laying on of hands; xxviii. 11, in which a ring of magic powder is drawn round the house to prevent the return of the demon; xxix. 7, where the door is opened to facilitate the departure of the demon; and xxxi. 3, a curious ceremony in which the offering is made in a fire surrounded by a ditch filled with hot water, the potency of this ring having been increased by circumambulation. The apparatus seems to be a trap for the demons.

The methods by which the magical substance is brought into contact with the patient may next be noted. In cases where this constitutes the whole of the ceremony the references are in italic figures. Inhalation: wood is laid on the fire, and, according to vii. 28, the patient breathes the smoke. This is part of the ceremony for expelling demons (xxv. 23) and worms (xxvii. 17, 20, repeated at xxvii. 26, xxix. 30). Its use alone (xxv. 20 f.) as a panacea must also be simply exorcistic. Fumigation occurs at xxxi. 19 and 22. The breath of the performer is also efficacious (xxv. 9). The power in the laying on of hands has already been met with; hence it is not surprising to find that poison may be driven out (xxxii. 23) by rubbing the patient from head to foot. Rubbing is also prescribed (xxxi. 9) for sores and (xxv. 5) for wrinkles. There are many applications that must be smeared or rubbed on, as ointments (xxv. 4, xxviii. 6, 10, xxx. 5, xxxi. 9); other substances are either smeared over the whole body of the patient (xxvi. 18, 29, 36, xxviii. 13) or applied locally (xxv. 8, xxvi. 22, 34, xxix. 23, xxxi. 18, 26). All these applications seem intended to benefit the patient; but in another group of cases (cf. above) the purpose is apparently to drive sores away by applying to them the most offensive substances. Whenever any indication is given, the rubbing must be downwards, to drive the trouble into the part of the body where it can do least injury, and finally out of the feet. This rule, implied in Rigveda x. 60. 11–12, may be taken as universal; so also the precept (*Kauś.* xxviii. 13) that the rubbing must not be reversed. When this is done, its effect is destructive, and hence it is employed (xxix. 22) to kill worms.

Two other methods, *āplavana*, 'the pouring on,' and *avasechana*, 'the sprinkling on,' are distinguished also by the fact that the water in the former case contains the leavings of the offering,

[1] For such as are not included in Bloomfield's translation, cf. the Whitney-Lanman tr. of the Atharvaveda *Saṁhitā*, Harvard Oriental Series, vols. vii. and viii.

while in the latter case it is merely blessed with the hymn, unless, as in xxvii. 28, xxviii. 8, xxix. 30, there is a specific direction for the addition of the leavings. In either case the patient is wiped down (vii. 17) from head to foot, and given (vii. 26) some of the water to drink. The water may, of course, contain other substances also, and the position of the patient and the manner in which it is to be poured are also in some cases specified. Instances of the *āplavana* are xxvi. 41, xxvii. 4, 7, *34*, xxviii. 19, xxix. 26, xxxii. 3, 14; of the *avasechana*, xxv. 17, *37*, xxvi. *25*, 31, xxvii. 1, 8, 28, 29, 33, xxviii. 2, 5, *8*, xxix. 8, 9, 30, xxx. *8–10*, *13*, xxxi. 2, 28, xxxii. 4, 10, 15, 17. The two are sometimes combined (xxvi. 41, xxvii. 1, 4, and 7–8, xxxii. 3–4 and 14–15). In the last case hot water is used for the one, cold water for the other. Other methods of washing, chiefly of a more local nature, are xxv. 34, xxviii. 1, xxx. *11*, xxxi. 1, 11, 13. The leavings of the offerings are also put directly upon the patient's head (xxvi. 39, xxix. 19), or blessed substances are inserted in his nostrils (xxvi. 8, xxxii. 21). Frequently also the magic substance is given to the patient to drink (xxv. 7, 11, 18, xxvi. 1, 12–13, 14, 17, xxvii. 12, 29, xxviii. 1–4, 6, 14, 16, xxix. 8, 10, 11, 13, 18, 30, xxxi. 5, 6, 23–25, 26, xxxii. 2, 7) or to eat (xxvi. 18, xxvii. 31, xxviii. 9, 12, 15–16, xxix. 12, 15, 25, 27, 28, xxx. 3–6). In this way hot infusions (*jvāla*), prepared by plunging a burning or heated substance in water, are employed (xxvii. 29, 33, xxviii. 2, xxix. 8, xxx. 8, xxxii. 10).

The medicine may also be applied as an amulet. In this case the patient will have to drink a solution in which the amulet has been steeped for three days, so that he may be benefited more than would at first sight appear (cf. art. CHARMS AND AMULETS[Vedic], and add to the instances cited: *Kauś.* xxvi. 11, a potsherd from a ruin [?] to stop the flow of blood; xxvi. 21, hairs from the breast of a red steer, glued together and wrapped with gold wire, to cure jaundice; xxvi. 26–27, four stalks of white-blooming *Andropogon muricatus* [*vīriṇa*], or four pieces of reed, each burnt in three places, to cure 'fright'; xxviii. 7, *sadaṁpuṣpā*-plant = *Calatropis gigantea*, in case of possession; xxx. 1, mustard for diseases of the eye; xxxi. 26, piece of an ant-hill, in case of poison; but the liquorice of xxxii. 5 is administered in liquid form, according to the commentators).

The transfer of a disease to another person is a wish most vigorously expressed in Atharv. v. 22. 4 ff. and vi. 26. 3. The ritual endeavours to accomplish this in xxvii. 9–13, in the interest of a person suffering from 'thirst.' More frequently the transfer is to an animal: fever to a frog (xxxii. 17), jaundice to yellow birds (xxvi. 18), madness to birds (xxvi. 33). The selection of the cross-roads for some ceremonies is doubtless to be connected with this idea, as is also the direction (xxxi. 10) for the rubbing of sores against the door-post (cf. also Atharv. xii. 2. 19, 20).

In addition to these general practices there are a number of symbolical acts adapted to the special situation, sometimes with a great deal of ingenuity, sometimes in the most banal fashion. As it is impossible to describe all these in detail, it seems best to present some typical examples of the whole process of an Atharvan cure.

Atharv. i. 12 is a prayer to lightning conceived as the cause of fever, headache, and cough. A man suffering from these diseases is given to eat fat, honey, ghī, and sesame oil that have been blessed with this hymn. The head of the patient is then covered with a turban of *muñja*-grass. This grass is not only connected by its name with the idea of loosening, but it is also a mythical home of lightning (Agni), from which the patient is planning to be released. He then takes in his left hand (this is inauspicious) a sieve containing parched grain (a symbol of the effect of the fever), and walks along, scattering the grain while he recites the hymn. He continues to advance, carrying in his left hand the sieve and the turban, in his right hand a bow-string and an axe. He is followed by the celebrant, and preceded by the latter's assistant—a measure of precaution. When some manifestation of the disease occurs (so that the presence of the demon is assured), he lays down the sieve and the turban (the abode of the cause of the disease), and the procession returns. On the way home he lays down the bow-string (to stop pursuit by the demon who has been exorcized). Ghī is blessed with the hymn and put up the patient's nose. Finally the priest mutters the hymn, while touching the patient's head with a bamboo staff that has five joints (and seems to serve as a conductor of the magic potency).

In a case of jaundice, the practitioner desires to banish the yellow colour to yellow objects, and to obtain for the patient a healthy redness, or, as the hymn puts it, 'to envelop him in every form and strength of the red cows.' Hence he puts the hair of a red bull into water, blesses it with Atharv. i. 22, and gives it to the patient to sip. Then he pours water over the back of a red bull, and gives that to the patient to sip. An amulet, prepared from the part of a hide pierced by a peg, is tied on the patient while he is sitting on the hide of a red bull, and he is also given milk to drink. Next the patient is fed with a porridge mixed with yellow turmeric, and he is daubed with the rest of this porridge and with another porridge from which he has not eaten. He thus acquires a yellow coating that can easily be removed. Certain yellow birds are then tied by their left legs to the foot of the couch, and the patient is washed so that the water will fall upon the birds (carrying the yellow coating of porridge with it). If these cry out, the patient must address them with the hymn. The patient is then given a porridge and told to step forth. Finally he is provided with an amulet of hairs taken from the breast of the red bull.

Much simpler is a cure for fever by heating an axe while muttering Atharv. i. 25, plunging it in water, and pouring the water thus heated over the patient. Leprosy may be cured in an equally simple fashion by rubbing the spot with cow-dung until it bleeds, and then painting it by rubbing in yellow turmeric, *Eclipta prostrata*, or indigo, blessed with Atharv. i. 23 and 24. Or a ceremony may be performed to the Maruts, in which all the ingredients are black.

3. Statements relating to disease in other texts.—In the Rigveda the interest naturally centres in the relation of the greater gods to disease. Among these Rudra may claim the first mention; the twofold aspect of this god is well summarized by the author of viii. 29, a *brahmodya*, or series of theological charades. Verse 5, to which the answer is 'Rudra,' runs: 'One holds a sharp weapon in his hand, is bright, potent, and has as his remedy the *jalāṣa*.' On the one hand, he is a malevolent deity armed with a 'cow-slaying,' 'man-slaying' missile, whose ill-will, if not deprecated, will bring injury and death to man and beast (cf. i. 114. 7, 8, ii. 33. 1, 4–6, 11, 14, 15, iv. 3. 6, vi. 28. 7, x. 169. 1). These are but general statements of the association of Rudra with disease which the Atharva (vi. 90, and passages cited above) expresses in concrete form. On the other hand, as the sender of disease, he is best qualified to cure it, and hence he is styled (ii. 33. 4) 'the most eminent of physicians.' His healing powers are mentioned with great frequency, as are also the choice and numerous remedies he holds in his hands. With them he is implored to remove disease and make all sound, both man and beast. His distinctive remedy, the *jalāṣa*, is shown by the Atharvan ritual to be cow-urine, the medicinal use of which goes back to Indo-Iranian times, as *gaomaēza* is prescribed in the Avesta (cf. Bloomfield, *Am. Jour. Phil.* xii. 425–429). For these aspects of Rudra, cf. i. 43. 4, 114. 5, ii. 33. 2, 7, 12, 13, v. 42. 11, 53. 14, vi. 47. 3, vii. 35. 6, 46. 2, 3; Atharv. ii. 27. 6.

The Aśvins are also divine physicians, but, unlike Rudra, they are invariably beneficent (cf. i. 34. 6, 89. 4, 157. 6, vii. 71. 2, viii. 9. 15, 18. 8, 22. 10, x. 39. 5; Atharv. vii. 53. 1). What is most characteristic of them is that, in addition to general invocations of their healing aid, stories are frequently told of their cures of particular individuals, which are not to be explained as merely myths relating to natural phenomena. They restored Chyavāna to youth and its powers (i. 116. 10, 117. 13, 118. 6, v. 74. 5, 75. 5, vii. 68. 6, 71. 5, x. 39. 4, 59. 1), and did the same for Kali (i. 112. 15, x. 39. 8); probably also the gift of a husband to Ghoṣā (i. 117. 7, x. 39. 3, 6, 40. 5) was preceded by a similar rejuvenescence. To Ṛjrāśva they restored his eyesight (i. 116. 16, 117. 17–18); for Viśpalā they provided an iron leg (i. 116. 15, 118. 8), to replace

the one she had lost in battle; while Parāvṛj was cured by them (i. 112. 8) both of blindness and of lameness. For the story of their cure, in conjunction with Sarasvatī, of Indra, cf. below. The methods of their cures are not indicated, but rather have the air of the miraculous. It may be noted, however, that honey is most closely connected with these gods (cf. Macdonell, *Ved. Mythol.*, 1897, p. 49), and also possesses medical efficiency (cf. above, including all cases of amulets).

In still another way Varuṇa is brought into connexion with disease. Disease is the punishment of sin, and Varuṇa is the moral governor *κατ' ἐξοχήν*. The connexion is particularly clear in i. 24. 9: 'Thy remedies, O king, are a hundred, a thousand. Let thy good will be broad and deep. Drive into the distance Nirṛti. Free us from the sin committed' (cf. also vi. 74 and x. 97). It may be taken as certain that the efforts to escape the fetters of Varuṇa and the constantly recurring prayer for forgiveness of sin are not all inspired by pure feelings of contrition and remorse, but are in part at least due to the desire to escape the payment of the wages of sin. The specific thing in connexion with Varuṇa's relation to disease is the fact that he, as the lord of the waters, sends dropsy in punishment for sin, and especially falsehood. This idea, unmistakable in other texts, is probable for the Rigveda (cf. i. 24. 8, where Varuṇa is the 'speaker away of the heart-piercing' demon; and Hillebrandt, *Varuṇa und Mitra*, 1877, p. 63 ff.), though it is not so clear as to be beyond the possibility of denial (cf. Bergaigne, *Religion védique*, 1878–83, iii. 155).

The healing power of the waters is also mentioned quite frequently. Rigv. i. 23. 16–24 is devoted to their praise; they are said to contain immortality and all remedies, and are besought to bestow their remedies and carry away sin (cf. also x. 9. 5–7, and note the frequency with which the waters appear in prayers for long life). In Rigv. vi. 50. 7 they are healing, and in x. 137. 6 they are healing and dispellers of disease.

It would, however, be a mistake to infer from such passages that the concept of the cause of disease is radically different in the Rigveda from what it is in the Atharva. The association with the Rakṣas is clear in iii. 15. 1, vii. 1. 7, 8. 6, 38. 7, viii. 35. 16–18, ix. 85. 1, x. 97. 6, 98. 12, 162. 1; furthermore, in x. 85. 31—a stanza to be recited when the bridal party passes a cemetery—is to be recognized the ascription of disease to the influence of the spirits of the dead. It is for this reason that the sun-gods (i. 35. 9, 191. 8–9, x. 37. 3, 100. 8) and Agni (i. 12. 7, 189. 3) and Bṛhaspati (i. 18. 2, x. 98. 3) are dispellers of disease—they being the great demon-slayers. The prayer for food that causes no disease (*anamīvā iṣaḥ*, iii. 22. 4, 62. 14, x. 17. 8) may also be mentioned here as based on the idea of the disease-demon entering a man with his food. The goddess Apvā, a drastic embodiment of 'defecation from fear' invoked in x. 103. 12, may be classed as a disease-demon (cf. Atharv. iii. 2. 5, ix. 8. 9).

Medical charms are, of course, likely to call in the assistance of any and every god; but, apart from these, the explicit mention of healing in connexion with other deities than those mentioned is very sporadic, though doubtless it is conceived as included in a general fashion in their powers of giving long life and prosperity and of destroying demons. The Ādityas drive away disease (viii. 18. 10); Indra cures Apālā of skin disease and her father of baldness (viii. 80; for the treatment of this legend in the Brāhmaṇas, cf. Oertel, *JAOS* xviii. 26 ff.); the Maruts, as children of Rudra, have pure, salutary, and beneficent remedies (ii. 33. 13), which they are asked to bring from various places (viii. 20. 23 ff., cf. also v. 53. 14); Vāta gives remedies (i. 89. 4, x. 186. 1); for Soma, cf. i. 91. 12, iii. 62. 14, viii. 72. 17, 79. 2, ix. 97. 43, x. 25. 11; for Soma-Rudra, vi. 74; for Vāstoṣpati, vii. 54. 1, 55. 1; for the Dawns, x. 35. 6; for the All-Gods, x. 63. 12; for Yama, x. 14. 11; and the more general prayers for health among other blessings, iii. 16. 3, 59. 3, x. 18. 7, 37. 7.

The number of medical charms in the Rigveda is extremely limited. They are, however, of the same general type as the Atharvan charms, and most of them recur also in the latter collection.

Rigv. i. 50. 11–13 is a prayer to Sūrya to destroy heart-disease and dropsy, upon which Atharv. i. 22 has drawn. Rigv. x. 137 = Atharv. iv. 13 is a rather colourless panacea-hymn: the gods are to make alive again the man that has sinned; one wind shall blow him a remedy, another shall blow away his disease; the practitioner has come to the patient with weal and health, he has brought a remedy kindly and powerful, and is driving away the *yakṣma*; the gods, the Maruts, and all creatures shall protect the sick man, that he may be free from disease; the all-healing, disease-dispersing waters shall make for him a remedy; the performer touches him with his two hands, which confer immunity from disease. Rigv. x. 161 = Atharv. iii. 11 is a charm against *ajñātayakṣma*, *rājayakṣma* and *grāhi*. The performer declares his power to bring back the patient even though he has gone into the presence of Death and the lap of Nirṛti. Comparable with this is the group of hymns Rigv. x. 57–60, the purpose of which is to recall the mind wherever it may have gone. The closing verses are: 'Here the mother, here the father, here life has come This is thy refuge, come hither, O Suhandhu, enter in. As men bind a yoke with a rope that it may hold indeed; so do I hold for thee thy mind, that thou mayest live, mayest not die, mayest not be harmed. As the great mother (Earth) here supports these trees; so do I hold, etc. From Yama, son of Vivasvant, have I brought back the mind of Subandhu, that thou mayest live, etc. Down blows the wind, down burns the fire, down milks the cow, down shall go thy disease. This hand of mine is rich in blessings, this hand richer still, this hand all-healing, this rubs auspiciously.' Subandhu ('good friend') need not have been originally a proper name, but it was felt to be so at least as early as the time of the Brāhmaṇas, which spin legends about his return to life.

Rigv. x. 163 = Atharv. ii. 33 is a charm of another type: 'From thine eyes, thy nostrils, thine ears and chin, from thy brain, from thy tongue, I tear out the disease of thy head.' The practitioner then proceeds to enumerate other parts of the body, concluding, to guard against any possible omission, with the statement that he tears the disease from the whole being of the patient.

Rigv. vii. 50 is a charm against poison—chiefly that of snakes—abounding in obscure words. Mitra-Varuṇa are to give protection, Agni is to burn it away, the All-Gods are to drive it away, and the rivers are to bestow remedies for it. Rigv. i. 191 is a charm for the same purpose, but more aggressive in its efforts to secure its ends. The beings at which it is directed are styled the 'unseen,' and seem to be chiefly scorpions and small venomous vermin; but doubtless the imaginary worms (cf. above) were also in mind. They are adjured to perish, they have been made visible to all, hence harmless. Their lineage (curiously exalted; Dyaus is their father, the Earth their mother, Soma their brother, and Aditi their sister) is known, hence they must be quiet. The sun grinds and burns them. The conjurer has put their poison on the sun, their poison-bag on the house of the keeper of spirituous liquor. The sun will not die, neither will their victims. Little birds and sparks of fire drink their poison without harm: twenty-one peahens and seven unmarried sisters handle it as if it were water; (*a fortiori*) the conjurer (and his clients), who has grasped the names of all ninety-nine plants that destroy poison, shall not be harmed. Finally, the conjurer, likening himself to the mongoose, which on coming down from the mountains proclaimed the powerlessness of the scorpion's poison, splits the creature with a rock, letting its poison flow to distant lands.

The couplet Rigv. viii. 48. 4–5 seems to be a prayer to guard against any nauseating or diarrhœtic effects of drinking *soma*. Finally, in Rigv. 10. 97 we have the *oṣadhīstuti*, or praise of the curative power of plants.

Mention of particular diseases is extremely rare in the Rigveda: *yakṣma* (x. 85. 31, 97. 11–13, 137. 4, 163. 1–6), with its compounds, *ajñāta*°-, *rāja*°- (x. 161. 1); [*a-yakṣma* (ix. 49. 1) is merely disease in general]; *vandana* (?) (vii. 50. 2); jaundice and heart-disease (i. 50. 11–12); heart-disease (i. 24. 8); *grāhi* (x. 161. 1); allusion to *pṛṣṭyāmaya* is made incidentally in a comparison (i. 105. 18). Extremely obscure are the epithets *aśipada* and *aśimida*, applied to the waters and streams in vii. 50. 4; they seem to mean 'not causing the diseases *śipa* and *śimi*,' of which no other mention is made. *Śipiviṣṭa*, however, occurs as the designation of an animal rendered unfit for sacrifice by skin disease (cf. J. Schwab, *Das altind. Thieropfer*, 1886, p. xviii), and as an epithet of Viṣṇu (*Kauṣītaki Brāh.* iv. 2; *Śāṅkhāyana ŚS.* xv. 14. 4; and A. Weber, *Über die Königsweihe, den Rājasūya*, Berlin, 1893, p. 125). Various bodily defects are more frequently mentioned; defects of sight seem especially feared (cf. *andha*,

anakṣa, kāṇa, mithūdṛś); defects of hearing (*badhira, abadhira*); lameness (*asreman, śroṇa*); loss of virility (*vadhri*).

It is neither possible nor desirable to treat at this length the whole of Vedic literature; but, as the omissions are no less important than the statements, it seems best to limit the treatment to certain texts as representative of the Yajurveda, the Brāhmaṇas, and Upaniṣads. For the Yajur texts the *Vājasaneyi Saṁhitā* has been chosen.

The whole system of sacrifice is an attempt to induce the gods to bestow prosperity, in which health is an important element. It is, however, a noteworthy fact that health is by no means so conspicuous an object of prayer as is wealth. Even when it is sought (cf. xxv. 14–23 = Rigv. i. 89), it is in general terms, thus resembling the charms for long life (*āyuṣyāṇi*) rather than the medical (*bhāiṣajyāni*) charms.

For such incidental prayers compare, in addition to prayers for strength, lustre, vigour, life of a hundred years, that occur *passim*, such formulæ as: iii. 17, 'O Agni, thou art protector of bodies, protect my body. O Agni, thou art giver of life, give me life. O Agni, thou art giver of splendour, give me splendour. O Agni, what is wanting in my body, that do thou fill out for me'; ix. 21, 'By sacrifice may my life succeed, my vital breath, my sight, my hearing, my back' (fuller lists in xviii. 29, xxii. 33); xiv. 17, 'Protect my life, my *prāṇa*, my *apāna*, my *vyāna*, my sight, my hearing: enrich my speech, quicken my mind, protect my being.'

For other formulæ of the same general type, cf. vii. 27, xv. 7, xvii. 15, xviii. 2, 6, xxii. 23, xxiii. 18, xxxvi. 1, xxxix. 1, 3. Compare also such prayers for the senses as i. 20, 'Thee for sight (I take)'; and ii. 16, 'Thou art protector of sight, O Agni, protect my sight.' Numerous parallels from other texts may be found under the words *chakṣus* and *śrotra* in the Vedic Concordance. More interesting are the verses xx. 5–9, containing benedictions on various parts of the body. In xx. 26 the blessed world is described as one 'where weakness is not found,' and in xii. 105 the speaker quits 'weakness, lack of strength, and sickness.'

The incidental statements of the relation of the gods to disease are on the plane of the Rigveda, and are frequently repetitions of that text. Varuṇa in xxviii. 35 is styled a healing seer (cf. viii. 23 = Rigv. i. 24. 8, and xviii. 49, xxi. 2 = Rigv. i. 24. 11). For the healing power of the waters, cf. iv. 12, ix. 6, xviii. 35, xxxvi. 12; for Bṛhaspati, iii. 29 = Rigv. i. 18, 2; for Savitar, xxxiv. 25 = Rigv. i. 35. 9; for Agni, ii. 20, xv. 37, xvii. 15; for Aśvins, xxvii. 9, xxviii. 7, 40, xxxiv. 47. Tvaṣṭar, the divine *artifex*, is more directly connected with the repair of the body than in the Rigveda (cf. ii. 24 = viii. 14 = Atharv. vi. 53. 3 and *Vāj. Saṁ.* xxxviii. 9).

Of more interest are the collections of *mantras* for ceremonies directly connected with disease. At the *sākamedha*, the third *parvan* of the *chāturmāsya*-sacrifice, occurs a *pitṛyajña* after which are employed four verses (iii. 53–56) of one of the Subandhu-hymns (Rigv. x. 57. 3–6), to keep the spirits of those engaged in the sacrifice from following the *pitṛs* on their return to the world of Yama. Another portion of the same sacrifice is the *Traiyambakahoma* to Rudra. The formulæ are found in iii. 57–61; their purpose is to propitiate the god, and so induce him to pass to other peoples without harming the sacrificers. Of similar nature is the *Śatarudriyahoma* at the *agnichayana*. The sixteenth book of the *Vāj. Saṁ.* is composed of its *mantras*. The concept of Rudra is essentially the same as that of the Rigveda, though worked out in fuller detail.

The *Sāutrāmaṇī* is a sacrifice originally intended to expiate the sin of excessive *soma*-drinking, which leads to a drunken discharge of the sacred liquid. The heavenly prototype of this ceremony is the cure which the Aśvins and Sarasvatī wrought upon Indra when he had been beguiled into *surā*-drunkenness by the demon Namuci. For the details of this story, cf. Bloomfield, *JAOS* xv. 143–163. The formulæ employed constitute books xix.–xxi. of *Vāj. Saṁ.* Of particular interest are: xix. 10, containing the name of the disease-demon; xix. 80–95, the detailed account of Indra's cure; xix. 12, 16, xx. 3, 56 ff., 75, 80, xxi. 13, 18, 29, references to the healing power of his physicians and their remedies; xix. 55, 62 = Rigv. x. 15. 4, 6, prayers to the *pitṛs* for health. (For the ritual, cf. A. Weber, *Über die Königsweihe, den Rājasūya*, pp. 92–106, and A. Hillebrandt, *Rituallitteratur*, 1897, p. 159.)

Anatomically interesting are the lists of various parts of the body: xix. 81–93, xx. 5–9, xxv. 1–9 (parts of the horse), xxxi. 10–13, xxxix. 8–10, and the statements relative to conception and birth (xix. 76). The theory of the vital breaths now begins to become prominent; but the whole of this question must be dismissed with a reference to A. H. Ewing, 'The Hindu Conception of the Functions of Breath,' *JAOS* xxii. 249–308.

Of names of disease few occur: *yakṣma* is disease in general (cf. the coupling of *ayakṣma anamīva*, i. 1, iv. 12, xviii. 6, and the mention of the hundred *yakṣmas*, xii. 97). This disease is also mentioned in the *oṣadhīstuti* (xii. 75 ff. = Rigv. x. 97). Its last verse (xii. 97) is, however, peculiar to the version of *Vāj. Saṁ.*, and mentions *balāsa, upacit* (= Atharv. *apachit*), *arśas* (hæmorrhoids), and *pākāru* (of uncertain meaning). *Apvā* occurs in xvii. 44 = Rigv. x. 103. 12, while *Viṣūchikā* (xix. 10) is an equally vivid name ('she that makes go in all directions') for the demon to whom are ascribed the nauseating and diarrhœtic effects of debauch. Heart-disease is mentioned in viii. 23 = Rigv. i. 24. 8; diseases of the eye, *arman*, in xxx. 11; skin-disease in xxx. 20; leprosy in xxx. 17, 21; various deformities in xxx. 10, 21, 22.

Physicians are recognized as constituting a profession (xxx. 10). An amulet is used by the Divine physicians (xix. 80) for the cure of Indra. Finally, iv. 3 is a formula addressed to ointment from Mt. Trikakud: 'Thou art the eye of Vṛtra (for mythology, cf. Bloomfield, 'The Myth of the Heavenly Eye-ball,' *Am. Jour. Phil.* xvii. 399–408), thou art the giver of sight, give me sight.'

In the *Aitareya Brāhmaṇa* there is very little material bearing on the subject. Incidental allusions to various parts of the body occur, among which may be noted the distinction between the senses of taste, sight, and smell, and their organs (v. 22). The processes of procreation and birth are also frequently alluded to in the effort to produce a mystical body for the sacrificer. There is likewise a great deal of talk about the 'vital breaths'—the way in which they may be established in the sacrificer, or may be cut short. The same is true of the various senses and the power of virility; and there is the constantly recurring effort to secure vigour, splendour, sharpness of sense, and the full term of life.

All of this is too general to be of interest in the present connexion. More concrete are i. 18, where the Aśvins are said to be the physicians of the gods; v. 34, where the Brahman priest is the physician of the sacrifice. Freedom from disease is expressly sought in viii. 10 and 11; the healing power of herbs is recognized in general in iii. 40, and in particular that of collyrium for the eye in i. 3. That disease may be produced by a curse is seen in v. 1 (deformity) and vi. 33 (leprosy). Madness is alluded to in vi. 33, and in v. 29 there is mention of a girl possessed by a *gandharva*. Varuṇa's fetters, as productive of dropsy in punishment for a broken vow, figure in the story of Śunaḥśepa (vii. 15 and 16). The origin of certain deformities is explained mythically in ii. 8. The closest approach to a cure for disease is found in iii. 19, where is imparted the knowledge that will enable one to preserve his sight to old age. In i. 25 is explained the way in which the Hotar

may cause the sacrificer to suffer from *rājayakṣma*, which here seems to mean some (scrofulous) disease of the neck.

An examination of the *Bṛhadāraṇyaka* and *Chhāndogya Upaniṣads* shows that the chief interest of these texts in this connexion lies in their anatomical statements. Besides more isolated instances that occur *passim* may be noted the list of the parts of the horse (Bṛh. i. 1. 1); of the human body (ii. 4. 11); and the elaborate comparison of man with a tree (iii. 9. 28). There are also statements about the heart and its veins (Bṛh. ii. 1. 19, iv. 2. 3, 3. 20; Chhānd. viii. 6. 1 and 6); the structure of the eye (Bṛh. ii. 2. 3); the disposition of food in the body (Chhānd. vi. 5); the process of sleep and dreams (Bṛh. ii. 1. 16 ff., iv. 3. 7 ff.; Chhānd. iv. 3. 3); and the process of death (Bṛh. iii. 2. 11 ff.). All these statements are, however, connected with the theory of the 'vital breaths,' and appear to be entirely speculative.

With regard to the origin of disease may be noted the power of a curse to produce bodily ailments implied in the threat, 'thy head shall burst' (Bṛh. iii. 7. 1, 9. 26; Chhānd. i. 8. 8); the statement (Bṛh. iv. 3. 15) that the evil caused by waking a man while his spirit is abroad in dreams is hard to cure; and the mention (Bṛh. iii. 3. 1, 7. 1) of women possessed by *gandharvas*. Sickness is incidentally mentioned (Bṛh. iv. 3. 36, v. 11. 1; Chhānd. iv. 10. 3, vi. 15. 1, vii. 26. 2, viii. 4. 2, 6. 4). The itch (*pāman*) is the only disease specifically mentioned; and Raikva's scratching it off under a cart (Chhānd. iv. 1. 8) is probably a method of cure to be associated with the cases of transference cited above.

The full term of life is often promised as a reward for certain knowledge (Bṛh. i. 2. 7, ii. 1. 11 f.; Chhānd. ii. 11 ff., iv. 11 ff.); an *āyuṣya*-ceremony is also mentioned (Bṛh. vi. 4. 25). In Chhānd. iii. 16 are contained directions for the cure of any disease, by following which one may live 116 years.

A number of factors combine to prevent diseases and their treatment from figuring to a great extent in the *Śrauta* ritual. All connected with the sacrifice must be in good health: an animal victim must be free from blemishes, among which certain diseases (cf. J. Schwab, *Das altindische Thieropfer*, p. xviii) are included. If, after the selection of the horse for the Aśvamedha (*q.v.*), diseases develop in it during the year that must elapse before its sacrifice, an expiatory sacrifice is required, which varies (cf. A. Hillebrandt, *Ritual-litteratur*, p. 150) according to the disease. Bodily ailments are also sufficient to prevent a priest from being chosen to officiate at a sacrifice (cf. A. Weber, *Indische Studien*, 1868, x. 145 ff.); and it is expressly stated (*Āśvalāyana Gṛhya Sūtra* i. 23. 20) that the priest must refuse to officiate for a *yajamāna* who is suffering from a disease. Under these circumstances it is but natural that the possibility of sickness should receive scant consideration except in so far as it is subsumed under prayers for long life and the exorcism of demons. This tendency must have been helped by the popular origin of the medical charms. In spite of this origin, they passed, as did everything, under the influence of the priesthood; but in the main they were more adapted to incorporation in the simpler form of the *Gṛhya* rites, which presented the further advantage of not bringing the diseased (*i.e.* demon-possessed) person into a contact with the priests that might prove dangerous for them. Exceptional situations, of course, occur: *soma*-drunkenness is a sacrificial sin, and must be healed by a sacrifice; or, as at the *piṇḍapitṛyajña*, the lives of the participants may be exposed to special dangers against which precautions must be taken. But an examination of some of the *Śrauta* rites will show (cf. what was said of the *mantras* of the *Vājasaneyi Saṁhitā* above) that these are primarily concerned with the securing of wealth, progeny, and triumph over enemies, much more than with health, except as it is implied in prayers for protection and long life couched in the most general terms. Secondarily, however, the sacrifice may be adapted to the securing of various desires. Among these the cure of disease figures to a greater extent, though still overshadowed by other wishes.

In the ritual of the New and Full Moon sacrifice (cf. A. Hillebrandt, *Das altind. Neu- und Vollmondsopfer*, Jena, 1880) there is no allusion to the subject. In the animal sacrifice it may be noted that among the wishes that determine the choice of the tree for the *yūpa* there is none closer to our purpose (cf. Schwab, *op. cit.* p. 2) than *vīryakāma* and *chakṣuṣkāma* (cf. also the wishes that determine the length of the post in *Śatapatha Brāhmaṇa*, xi. 4. 7. 1, and *Taittirīya Saṁhitā* vi. 3. 3. 5-6). At the *mārjana* (purification) is employed (cf. p. 122) a verse which has its parallel in a remedial charm (Atharv. vi. 96. 2). The connexion between the two uses is due to the connexion between sin and disease. There is a colourless prayer for long life at the offering of *pṛṣadājya* to Vanaspati (cf. p. 147), and the prayer after the last *upayāja* (p. 155) to the waters and plants is for spirit in one's heart, a soft skin, a son, and a grandson. The prayer to Varuṇa at the hiding of the spit (p. 162) is found also in a cure for dropsy (Atharv. vii. 93. 2), and the place required is somewhat similar in both rituals. The final worship of the *yūpa* (p. 164) also contains a prayer for long life. This sacrifice, however, possesses greater interest for anatomy on account of the details incidental to the cutting up of the animal (cf. p. 126 ff.).

At the *piṇḍapitṛyajña* prayers for long life also occur (cf. W. Caland, *Altindischer Ahnencult*, Leyden, 1893, pp. 7 and 10). More interesting are the attempts to call back the spirit after its communion with the *manes* (cf. above, and Caland, pp. 11 f., 178 ff., 243, and the statements that the leavings of this offering have medicinal effect, p. 191).

Of *soma*-sacrifices, the most interesting, the *Sāutrāmaṇī*, has been treated above. The *Rājasūya* contains, among its preparatory ceremonies, a number that served originally for the cure of diseases, which A. Weber (*Über die Königsweihe, den Rājasūya*, p. 5) rightly takes as an indication of the fact that this sacrifice has been built up on the basis of simpler popular practices. Thus *Maitrāyaṇī Saṁhitā* iv. 3. 1 has a ceremony against *kṣetriya*, including a sacrifice upon an ant-hill. *Kātyāyana ŚS* xv. 1. 23 states that the *pañchavātīya* is a cure for disease, and xv. 3. 39 that the *charu* for Soma-Rudra is a cure for leprosy. Prayers for long life are found (*Kāt. ŚS* xv. 5. 22; cf. *Śat. Brāh.* v. 4. 1. 1), also at anointing of kings (Weber, p. 49), and while touching a gold piece worth 100 *rakṭikā* (*Kāt. ŚS* xv. 6. 32). The recitation of the Śunaḥśepa-legend also forms part of this ceremony (cf. Weber, p. 49 ff.), for the purpose of releasing the king from the fetters of Varuṇa. The beating of the king may originally have been exorcistic, as he is assured that the beating leads him beyond death. At the *puruṣamedha* also a portion of the ceremony is (*Śāṅkhāyana ŚS* xvi. 13. 3) or may be (*Vaitāna ŚS* xxxviii. 1) devoted to the cure of the *yajamāna*.

By certain modifications a *Śrauta* sacrifice may be employed for the attainment of a special wish. The parallelism of these *kāmyeṣṭayaḥ* with Atharvan charms has been pointed out by Caland

(*Altindisches Zauberritual*, Amsterdam, 1900, p. viii). An idea of the range of the wishes sought may be obtained from such lists as *Kauṣītaki Brāhmaṇa* iv. containing twelve modifications of the New and Full Moon Sacrifice, of which none is intended for the cure of disease; or the much longer list of *Taittirīya Saṁhitā* ii. 1. 1. 1–ii. 4. 14. 5. In this are included sacrifices for one 'long ill' (*jyogāmayāvin*) that will make him live 'even if his spirit is gone' (ii. 1. 1. 3; 2. 7; 9. 3 [release from Varuṇa's fetter]; ii. 4. 2; 10. 4; 3. 11. 1, cf. also iii. 4. 9. 3); for one 'seized by Varuṇa' or for release from Varuṇa's fetter (ii. 1. 2. 1; 2. 5. 1; 3. 12. 1; 13. 1); for one who wishes to live his full term of life (ii. 2. 3. 2); for one who fears death (ii. 3. 2. 1); or in case cattle or men are dying (ii. 2. 2. 3); for one wishing virility (ii. 3. 7. 2) or power of his senses (ii. 1. 6. 2; 2. 5. 4; 3. 7. 2); for one wishing sight (ii. 2. 4. 3; 9. 3; 3. 8. 1 [even though blind he sees]); for one in fear of impotence (ii. 3. 3. 4); for one in fear of skin-disease (ii. 1. 4. 3; 2. 10. 2); for one who vomits *soma* (ii. 3. 2. 6); for one whose 'mind is slain, who is an evil to himself' (ii. 2. 8. 3 [for insanity, cf. also iii. 4. 8. 4]); for one who has been suffering long from an unknown disease [cf. *ajñātayakṣma* above] (ii. 1. 6. 5); for one suffering from *pāpayakṣma* (ii. 3. 5, containing the mythical account of the origin of *pāpayakṣma*, *rājayakṣma*, and *jāyenya* [cf. ii. 5. 6. 4], and the statement that for this purpose the sacrifice must be offered at the new moon in order that the sacrificer may fill out with it).

In the *Gṛhya*-rites the phenomena of disease appear more frequently, though still treated in a general fashion which contrasts unfavourably with the details of the Atharva. Sickness is a sufficient excuse for sleep at sunrise or sunset (*Āśvalāyana GS* iii. 7. 1–2), and disqualifies a *yajamāna* (*ib.* i. 23. 20); bodily pain also stops the recitation of the Veda (*Śāṅkhāyana GS* iv. 7. 38). At the *upanayana*, Agni is invoked as the physician and maker of remedies (*Hiraṇyakeśin GS* i. 2. 18, cf. Atharv. v. 29. 1). At the Śrāddha also prayers for long life are employed (cf. Caland, pp. 26 and 43), and, according to *Hiraṇyakeśin* ii. 12. 9, the sacrificer, if over fifty, offers to the *pitṛs* some of his hair, with the request that they take nothing more. The reason is that he feels he is now on the down grade and desires to prolong his life as much as possible (other interpretations in Caland, p. 177). The prevention of disease and sorcery may also be attained, according to *Gobhila GS* iv. 6. 2, by the daily repetition of a formula. The Āgrayaṇa also, especially in its presentation in *Śāṅkhāyana GS* iii. 8, seems to be a rite to render the new food fit for use by driving out any demons that may be lurking in it (cf. the Āgrayaṇa Kāmyeṣṭi for an *annādyakāma* in *Kauṣītaki Brāhmaṇa* iv. 12). As a panacea *Śāṅkhāyana GS* v. 6. 1–2 prescribes an oblation of rice-grains and *gavedhukā*-grass (*Coix barbata*) with Rigv. i. 114; similarly *Āśval. GS* iii. 6. 3–4 six oblations of boiled rice with Rigv. x. 161 (cf. the directions for protection of the embryo in *Śāṅkh. GS* i. 21). Another way of securing health (*Āśval. GS* iv. 1. 1) is for an *āhitāgni* to leave the village when he is sick; the sacred fires will desire to return, and will consequently grant him health. This is clearly an adaptation of a popular practice.

Of special diseases: *Pāraskara GS* iii. 6 contains an interesting cure of headache by rubbing, while reciting a verse parallel with Rigv. x. 163. 1 = Atharv. ii. 33. 1. This verse is also employed at *Āpastambīya GS* iii. 9. 10 for the rubbing of a sick woman with lotus leaves and roots. When the pain is confined to one side of the head, a different formula is used, the wording of which suggests the ascription of the pain to worms. An elaborate cure for epilepsy, conceived as due to the attack of a dog-demon upon a child, is described (*Hiraṇyakeśin GS* ii. 2. 7. 1; *Āp. GS* vii. 18. 1; *Pāras. GS* i. 16 24). With it may be compared the exorcism of the Vināyaka in *Mānava GS* ii. 14, giving many details of the symptoms (including dreams) and of the cure. An attempt to secure a child from all diseases (*kṣetriya* is particularly mentioned) is found at the *medhājanana* (*Hir. GS* ii. 3. 10; *Āp. GS* vi. 15. 4). For snake bites, cf. *Khādira GS* iv. 4. 1 = *Gobh. GS* iv. 9. 16; the ceremony consists merely in sprinkling with water while muttering a verse. Worms are similarly treated in *Kh. GS* iv. 4. 3 = *Gobh. GS* iv. 9. 19, while the following *sūtras* provide for their treatment in cows; cf. also *Taittirīya Āraṇyaka* iv. 36. 1; *Āp. ŚS* xv. 19. 5. Other cures for cattle are *Āśval. GS* iv. 8. 40 (the cows are led through the smoke of a fire in which an oblation has been made; cf. *Hir. GS* ii. 3. 8. 10, and *Kh. GS* iv. 3. 13).

The *Rigvidhāna* deals frequently in cures for diseases, but not in a way to call for special comment (cf. i. 2. 5; 17. 8; 17. 9; 18. 4; 19. 1; 19. 3; 20. 3; 23. 7; 24. 3; 25. 5; 27. 1; 28. 4; 29. 2; 30. 4–31. 2; ii. 1. 3; 20. 3; 25. 10, 11; 26. 3; 33. 1–3; 34. 5; iii. 3. 2; 7. 6; 11. 3; 18. 5; iv. 1. 1–3; 9. 4–7; 16. 1; 19. 3–5).

The *Sāmavidhāna Brāhmaṇa* has among its *kāmyāni* a series of ceremonies of interest: when the children of one's wife die young (ii. 2. 1; the ceremony is described in art. CHARMS AND AMULETS [Vedic]); when one is seized by a demon (ii. 2. 2); for any disease (ii. 2. 3); in case of pain in a limb (ii. 3. 1, 2); for protection from snakes (ii. 3. 3).

Henry, *La Magie dans l'Inde antique*, Paris, 1904, pp. 178–205; W. Caland, *Altindisches Zauberritual: Probe einer Uebersetzung der wichtigsten Theile des Kauśika Sūtra*, Amsterdam, 1900, pp. 67–107; M. Bloomfield, 'Hymns of the Atharva-veda,' *SBE*, vol. xlii. pp. 1–48 and commentary thereto, also 'The Atharva-veda,' in *GIAP* ii. 1, B, Strassburg, 1899, pp. 58–63 (with copious references to the earlier works on the subject). Since the writing of this article, the *kāmyā iṣṭayaḥ* have received a full treatment in W. Caland, *Altindische Zauberei: Darstellung der altind. 'Wunschopfer,'* Amsterdam, 1908.

G. M. BOLLING.

DISGUST is primarily a feeling in regard to the physically repulsive, and is therefore accompanied by actual or reproduced organic sensations. In 'moral' disgust, these sensations are suggested by analogy. The emotion of repugnance, which appears in disgust, abhorrence, detestation, and horror, is a particular feeling-attitude,[1] or disposition of the self, towards an object which stands in a special relation to the nature of the individual. The object which arouses the emotion is not the hostile as such, or the merely harmful; it is the unnatural — that which involves a perversion of nature. In other words, it is at variance with that primary fitness of things which is based on the essential nature of things. This is evident in the case of the morally repulsive. The abnormal prominence of the animal nature, desires which lead to misuse of functions, desires of any kind raised to an unnatural pitch, all arouse the emotion of repugnance. The same principle is at work when merely physical objects are concerned. Objects of this kind are 'natural' in their proper place, but they may be misplaced. This is the *rationale* of all physical repugnance. The characteristic expression of this emotion in conduct is the avoidance of all relations with the repugnant object. It thus serves to protect, not so much the life of the individual, as his distinctive nature.

DISSENT.—See NONCONFORMITY.

DISTRIBUTION (of income).[1]—By the economic theory of distribution is meant the doctrine of the manner in which the products of industry are distributed among the factors producing them, viz. land, capital, labour, and enterprise.

1. **The manner in which the distribution is made.**—The products are distributed to the producing agents by one of them, viz. the employer, who takes the risk of the market, and, according to the price that he expects, guarantees their shares to the other agents as wages, interest, and rent. He gets his own share, viz. profit, as residuary legatee of the price. It is thus the price of commodities that pays all the shares. The price of a thing may be twopence or ten pounds; it pays for the whole past history of the thing as a commodity, from the landowner and the producer of the raw material in it, the capitalist or employer who took the risk of having it made, on through the course of its making and carriage, of commercial dealings with it, and shopkeeping, till it finally secures its twopence or ten pounds, and out of that pays them all. Thus a great many people have a cut even out of the twopence, and it may seem that some of them might be dispensed with; the money-lenders, perhaps, and the traders or middlemen, who have been called robbers and parasites on the 'real' producers. But the only share that any one takes is what he gets from a buyer who has need of his services; for the normal price of a commodity only pays those means of producing it which are necessary, and for which the spur of competition can find no better alternative.

The system is comparatively recent. Formerly the consumer was the sole or the chief employer of labour; there were few *entrepreneurs*. The present is called the 'capitalistic' system, not so much because capital has grown so huge and efficient, as because it is directed by an employing class. Real capital consists of all the fixed capital used in production and of the circulating capital, viz. raw materials and the real wages of labour. But nominal capital—money in the wide sense—is not merely the measure of real wealth. It has become the pivot on which the whole industrial system is swung, and the means by which capitalism is carried out; for it enables the employer to turn the forces of nature, labour, and real capital in one direction or another.

This was barely appreciated by the earlier writers on distribution; it was hardly time. In simplifying or generalizing their problems, as every science must, they supposed primitive conditions, and stated laws true enough in their way, but apt to mislead when applied to more complex conditions. The notorious example was the 'wages-fund' theory, which assumed that at any time there is a definite amount of capital in a country, and that the country must wait for the next harvest or so before addition could be made to the stock, especially to the stock of its circulating capital. That assumption is too remote from present conditions to be of use, and the problem is now simplified by making the opposite assumption. The nation is taken not as a lone island, but as part of the world, and the national income is taken as produced, distributed, exchanged, and consumed every day. Into this very fluid stream comes the employer to direct its course. His action is determined by the price that he expects, and it is distributed through him. He guarantees the other agents their shares, and takes the rest; he buys them out. If he is a contractor, he knows the price he will get, and what he can afford to pay the other agents. Or he may undertake the further risk of not knowing the price he will get; he may place an order for goods in view of a demand that he hopes to find or create. Or, *e.g.*, as a mining company, he may have to speculate at greater risk. His profit may be large, or it may be less than nothing, according to the price that he actually gets to cover his output.

The employing function is very often associated with one or more of the others in the same person, or in a company, as when a lender, or a landowner, has to take part of the business risk, or when an employer uses his own capital and land, or is his own manufacturer, manager, or workman. But the functions are distinct, and receive much the same shares on the average as when they are exercised by different persons.

It is enough merely to mention that commodities which form the real national dividend are ultimately distributed not merely to their producers, but, through their producers, as payment for all kinds of services—from professional to domestic; and that, to provide a fund for the variety of public services, all shares are more or less tapped by taxation.

2. **The shares.**—In dealing with the relative amounts that go to the four factors in production, one course is to treat rent, interest, and wages as prices, and to follow out the consideration that, like all prices, they are determined by this, that each has a marginal quantity and quality which it just pays the employer to buy. The margins are not independent of one another, since the employer may substitute machinery for labour, one kind of labour for another, a cheap site requiring much capital for a dear one requiring less. And he expects a certain margin of profit for his own enterprise, short of which he would prefer to join the ranks of the employed. But, as data for an ethical judgment of the system, it is better to regard the shares more directly.

(*a*) *The share to land or nature.*—Economic *rent* comes out of the price of a commodity in respect of the superiority of the soil and site concerned in its production. The growing demand for food and raw material, houses and factories, requires the use of inferior natural conditions; resort is had to inferior lands and sites, and more capital and labour are put into those already occupied, though the return per unit is less. Since it must pay to use the inferior conditions, it more than pays now to use the better. The surplus is rent. Hence it does not need a system of landlord and tenant in order that there should be rent. When a farm is cultivated by its owner, it earns the same economic rent as if he had let it, for its produce brings the same price.

In respect of the amount that goes as rent, it is best, and it is the practice, to begin by regarding a farm or a town-block as having a value estimated from its selling price, or from its earnings capitalized. Thus the earnings are all profit and interest on the selling price; rent is not something additional, it is contained in the profit and interest. To separate it out is to make a fresh analysis, tracing now the stock to its origin, and distinguishing the part that is not due to the owner's capital and labour. Besides 'the natural and indestructible powers of the soil' and the suitability of the site, this part includes the improvements, *e.g.* road and rail, that are due to the capital of others. Some (*e.g.* Pierson, *Princ. of Econ.*, London, 1902, vol. i. ch. 2) include as yielding rent, and not interest and profit, all advantages that are due to capital permanently sunk in the land. But theoretically it is better, and for the purpose of special taxation it is usually the intention, to distinguish the advantages of land and site that are due to nature or to the expenditure of others, and not due to the expenditure of owners present or past. For urban lands it is

[1] For Distribution of wealth, see art. WEALTH.

thought that from about 25 to 40 per cent of their annual value is rent, the higher figure being the estimate for London. Of the annual value of agricultural land in England, probably 23 per cent is pure rent (R. J. Thompson, *Journ. Roy. Stat. Soc.*, 1907, p. 610).

(*b*) *The share to capital.*—This must not only make good the capital that is consumed in producing the commodity, but pay *interest* on it as well. And it is the same with interest as with rent; capital need not be lent in order to earn interest. If the owners of real capital use it themselves, and use it equally well, it earns much the same interest as when the capital is borrowed, for its products get much the same price. A machine or other piece of real capital pays its costs out of its products; and, if it could produce them all at once, there would be no interest, for the price got for them in respect of the machine would just cover the cost of the machine. But to do its work the machine needs time. This involves other costs, *e.g.* repairs, insurance, and the risk of becoming obsolete; and these must be covered by the price of the products. But also the mere time must be paid for, and, the more time that is needed, the more the produce must pay. Interest is, therefore, a rate on the capital per unit of time; and it is paid because the time is necessary, like the power that works the machine, or like the need for repairs. One machine or process would be able to displace another equally economical in all other respects, if it made an economy merely in time. From this case of a machine and its working we may generalize regarding the interest on all capital, commercial as well as industrial, that claims a share in the national dividend; for the bulk of loanable capital is employed in the purchase and working of real capital. Interest, then, is the share of the price of commodities that goes to capital on account of the time that the capital needs to get its products and have them sold. The interest on capital that is borrowed, not for production but for consumption (*e.g.* a dwelling-house or a war-loan), does not concern us; it is not an additional claim to a share in the distribution of the dividend, but merely the exchange of one person's present claim for another's in the future that suits him better. It may be observed, however, that the rate of such interest follows the rate on productive capital, so far as it is pure interest, and not also a premium on the risk of loss, or an extortion from folly or distress.

It was a mistake to suppose that there must be a minimum rate of interest, below which the increase of capital would be checked, and the rate correct itself; for with the diffusion of wealth come prudence and the joy of possession. On the other hand, to prophesy that the rate must decline is hazardous, considering the demands for capital that may arise at any time to meet the increasing supply of it. But a normal rate over long periods it is quite possible to distinguish; and it is important to do so, in order to separate pure interest from the employer's share, from rent, and from gains and losses that are due to a rise or fall in the value of the capital itself. The distinction from the employer's share is already obvious, but to separate it from the other two we have to regard interest as a rate not on what the capital may have cost originally, but on its selling value. Then we can say that all capital, so far as it is used as capital, earns interest, and that competition keeps interest at a normal rate for different kinds of stock. This rate is that at which capital remains in the industry; rates are above and below the normal, and indicate the employer's profit and loss, when they tend to increase or diminish the supply of that kind of capital. When an owner or a valuator finds the average interest in a stock to be over or under the normal, he writes the capital value up or down to a figure at which the capital earns the normal rate for that kind of stock. Similarly with government and other stocks; it is the interest that is regarded as constant, and the owner's capital that is written up or down. The more a stock is an investment stock, the more this is apparent, and it is really the same with stocks that are more speculative. The interest on first-class securities is taken as the minimum of the normal rate. The minimum varies with the demand for such securities and their supply, and for different lengths of credit. But the average interest on loans for three months on these securities is conveniently regarded as the rate of pure interest, because all factors are eliminated but time. From 1844 to 1900 the average rate of the Bank of England was £3, 12s. per cent, and the market rate about 10s. less (Palgrave, *Bank Rate and the Money Market*, London, 1903).

(*c*) *The share to labour.*—The rest of the product goes to the living factors. The relative amount of it cannot be estimated without an adequate census of production, and, in particular, because the estimation of interest has to be made on the earning capacity of capital, and not on its cost. But the earning capacity of the living factors may be taken to be about five times that of land and capital together (Nicholson, *Strikes and Social Problems*, Lond. 1896, v. and vi.). The struggle between labour and capital does not lie here, however; a less figure need not imply any loss to labour, for the substitution of machinery for labour is to the ultimate advantage of the latter. The struggle is not of labour against rent and interest, for we have seen how these are already fixed and inevitable, but for the division of the share that goes to the living factors. Most directly it is between the share to the labour or enterprise of the employer, and the shares to the labour of all kinds that he hires.

The hired labour may be manual or mental, industrial or commercial, the labour of workman, clerk, or manager. And it is not of theoretical importance whether the *wages* are paid weekly or as salaries; for whether the employer pays before selling the product is immaterial, the essential thing being that the share is made a fixed cost, independent of the business risk. But, while it is the struggle between employer and employed that is most in evidence, the real struggle is deeper. As in all buying and selling we see competition in the higgling between buyer and seller, but behind, and entirely determining the average price, there is the more vital struggle of buyer with buyer and seller with seller, so it is in the labour market. This was wrongly expressed in the 'wages-fund' theory, which required a rise in the wages of one class of labour to be met by a fall in wages elsewhere. The theory was right in holding that the action both of the buyer and of the seller of labour is limited; but the limit is not capital but the price of the product. And it was also right in saying that the classes of labour are in mutual competition; but the force of each depends ultimately on its efficiency. This is partly obscured when the power of collective bargaining is strong in one class and weak in another, and it is to be hoped and expected that the lower grades will advance more rapidly than those requiring skill, intelligence, and managing ability; but progress and competition will continue to make the great difference. They will continue to determine the supply of labour at the different grades, and thus to make the differences in wages and salaries correspond with a difference in ability. It seems unjust that in almost any industrial group it is the most wearing and unpleasant labour that gets the smallest share of the product; but the unfairness cannot be charged to

the system of distribution, so long as efficiency is taken for the test of desert. For it is no part of the system itself that competition must be greatest at the bottom and least at the top, and that the hardest and most monotonous labour should thus have to rank as least efficient. A considerable part of the rise in the average wages of manual labour has been due to the rise in occupation.

'The constant tendency away from agriculture and the textiles, where the average earnings of all employed, either through the low relative wages of the male (as in agriculture), or the large relative employment of lower-paid women and children, are low, towards the more highly-paid engineering, mining, and building industries, has had the effect of increasing the average earnings of all employed in industrial occupations more rapidly than the earnings in the occupations taken separately. . . . The Standard of Comfort of the British wage-earner is now, on the average, not less than 50 per cent, and probably nearer 80 per cent, higher than that of his predecessor in 1850, and of this advance more than one-half has been obtained during the past quarter of a century' (G. H. Wood, *Journ. Roy. Stat. Soc.*, 1909, pp. 98, 101).

(*d*) *The share to enterprise.—Profit* is what remains of the price of the product after the employer has paid the other shares. There are all grades of enterprise, from those requiring little capital and ability to those requiring much, and ordinarily there is competition at all grades with other employing individuals or companies. The individual profit is frequently little more than the salary of a hired manager at the same grade, and, considering the number of failures, the average is possibly less.

'There is good reason to believe that the community gets its employing done for it more cheaply than it gets any other service, just because the speculation and the free life are very large elements in the real remuneration' (Smart, *The Distribution of Income*, p. 163).

The existence of the employer and his profit, which distinguishes the present system from its predecessors, has often been regarded as its defect; and Socialism (*q.v.*) is the view that this function should be undertaken by the State, and not by individuals or companies. The discussion on the question is beyond the scope of this article; but it may be repeated, on behalf of the present system, that many of the current economic evils are wrongly charged against it. The system of distribution would not be affected, for example, by any measures of taxation and expenditure that aimed at a better distribution of wealth; and the regulation of monopolies is an essential office of Government, which has given freedom from its old control only because it has found a more effectual substitute in competition. The most serious defects lie in competition itself; but the defects are not all inevitable, and they prevent the very efficiency which the system is meant to bring out. Cf. art. COMPETITION.

LITERATURE.—All the text-books in economics give a prominent place to distribution; several books are confined to the subject, the most distinctive being J. B. Clark, *The Distribution of Wealth*, London, 1900, and W. Smart, *The Distribution of Income*, Glasgow, 1899. Wages, interest, and rent have each a large literature; and the recent works on monopolies and trusts may be regarded as the special authorities on profits. In comparative statistics regarding wages, special reference may be made to the work done by Rowley and Wood, and for current comparisons there are the Reports of the Board of Trade mentioned under art. CONSUMPTION (Economic), to which has now to be added the corresponding Report on Wages and the Cost of Living in U.S.A. (1911). W. MITCHELL.

DIVINATION (Introductory and Primitive).—By 'divination' is meant the endeavour to obtain information about things future or otherwise removed from ordinary perception, by consulting informants other than human. While mostly directed to foretelling coming events, it is not confined to this, but may seek to find out, *e.g.*, what is going on at home while the inquirer is abroad. Ancient as well as modern thinkers have repeatedly denounced it and exposed its fallacy; nevertheless it is still practised all over the world by the more backward races of mankind and by uneducated members of the civilized peoples. Even under the highest religions—Buddhism, Islām, Judaism, Christianity itself—diviners, like other magicians, have continued to flourish, although their arts form no part of the prevailing rites and beliefs, and, indeed, have been often and vigorously denounced by the leaders of religion. Like other pseudo-sciences, divination rests on very ancient and wide-spread convictions, inherited from lower levels of culture; and its great stronghold is in the utter inability of the undeveloped human mind to understand and appreciate a negative argument. No doubt wilful deceit on the part of diviners has done much to retain their hold on popular belief; but for the most part they have been the dupes of their own pretensions, and, like their consultants, have remembered successful predictions and forgotten unsuccessful ones.

Divination is a pseudo-science, and has a certain order and logicality in its structure, once its erroneous premisses are granted; although it must be remembered that the logic of uncivilized and semi-civilized man—or, for that matter, of our own children—is much less stringent than ours, and less quick to detect fallacies. Indeed, the whole argument for divination may be said to be based on a glaring fallacy of 'ambiguous middle.' To explain this, it is necessary to consider what train of thought may be supposed to have given rise to the beliefs under discussion.

Perhaps the first idea which suggests itself is that divination grew out of false induction. A savage, we may imagine, noticed a bird, for instance, behaving in a peculiar way, and soon afterwards met with some mishap. He put the two happenings together, did the same in several other cases, and came to the conclusion that such-and-such a movement on the part of a hawk or parrot meant that the observer was in danger of a bad fall, or would have no luck if he went fishing. That such a train of reasoning may often have taken place we do not deny; but we are of opinion that such a process would not be likely to lead to anything more than a miscellaneous series of omens, not a system such as divination often is among quite uncivilized races. Also it would result in the most arbitrary relations between omen and subsequent event; whereas between the sign and the thing signified there very often exists, allowing for uncivilized ways of thought, a perfectly

rational connexion, sometimes amounting to causality.

It seems, then, more likely that divination should be treated as a branch of sympathetic magic, and regarded as a deduction or series of deductions from a vaguely conceived principle of something like the uniformity of Nature. The reasoning may be thus paraphrased in our definite phraseology: like causes produce like effects; therefore this occurrence, which is like that other one, will produce a like result. The fallacy lies in the ambiguity of 'like,' and the reasoner's inability to differentiate between those things whose likeness to one another is real and essential and those which bear only an accidental or fanciful resemblance to one another. Thus, 'whistling for a wind' rests on the likeness between whistling and the rush of an actual breeze; while in the realm of omens, the Melanesian belief, that, if a non-domestic animal, entering the house,[1] makes any outcry, a death will ensue, seems to rest on the resemblance of the strange creature's cry to the wailing of mourners. How real the causal connexion is often felt to be is clear from the innumerable cases in all grades of civilization of avoidance or neutralization of bad omens—taking away the cause, that is, to prevent the effect. Thus the Manipuris, if they meet with a mole on a journey—a bad omen—try to kill it (Hodson, p. 132).

But this simple process is not in itself sufficient to account for all the ramifications of the diviner's art.[2] At least two main developments must be noted. The first is the elaboration of the supposedly causal or quasi-causal connexion between omen and event into a system, often very complex and intricate, of symbolism—a system, the gaps in which, as Tylor notes, are apt to be filled by the invention of new omens, arbitrarily, or on the analogy of those already existing. The second comes with the advance of religious belief and the growing importance of deities of one sort or another. Men come to think of omens as sent by them. A good example of this is the Dayak idea that the hawk, their chief omen bird, while it sometimes comes of its own accord to foretell the future, is regularly the messenger of Balli Penyalong, the Supreme Being.[3] Finally, it must be remembered that, although the chief source of divination is probably sympathetic magic, other ideas have contributed to the long list of omens.[4]

Divination may be roughly divided into two kinds: (*a*) 'automatic' divination, in which an omen is looked for and interpreted, so to speak, in its own right, with no thought of appeal to any supernormal power, god, or spirit; and (*b*) divination proper, in the strict etymological sense of the word, which inquires of some sort of a deity, generally by means of signs conceived of as being sent by him. But of many cases it is hard to say which category they fall under. Take the well-known method of divining by the Bible and key; we doubt if the people who use this method could say definitely whether they suppose the answer to be sent by God or to come from some quasi-magical power inherent in the book itself. The same applies to many such survivals; one is in doubt whether to consider them purely magical or affected by the current religion. For the purposes of this article, we shall classify divination according to the means employed, noting roughly the distribution of each.

[1] For the ominous nature of such an occurrence in general, see below.

[2] It should be noted that, although no people apparently is without some system of divination, the ruder tribes (*e.g.* the Australian blacks) have only very rudimentary ideas of it, and seem to use it but little.

[3] Hose-McDougall, in *JAI* xxxi. 179.

[4] See esp. § 7, on 'Divination from animals.'

1. **Dreams.**—That a dream may be in some way prophetic is a view held by all races at all times, and still popular, to judge by the numerous modern dream-books.[1] The simplest form is that the dreamer sees, as actually as if he were awake, what is being done or at least contemplated. A recent book[2] gives an excellent account of the way the Lenguas of the Paraguayan Chaco regard dreams. We quote a typical case:

'A spirit appeared in the form of a horned beetle, and, flying round the sleeper several times, eventually entered his body in the vicinity of the knee. The pain of its entrance was distinctly felt. The sleeper, awakening, noticed no mark or other sign of injury. The pain, however, was still slightly felt. What explanation could there be, according to the Indian's way of thinking, except that an actual beetle had entered, possessed by a spirit?'

The explanation usually given by savages is that the dreamer's soul, or one of his souls,[3] goes away from his body and sees the things he dreams of. Hence the reluctance among many uncivilized peoples to awaken a sleeper—his soul may be shut out, or an evil spirit get in, etc.

Another idea is that the temporarily liberated spirit visits the spirit world and there secures information. This, we gather, is the Ewe belief,[4] and it is frequently met with elsewhere. Or the revelation may be given by spirits visiting the dreamer. An excellent example of this is found in the skull-divination of the Torres Straits[5] natives. A skull, preferably that of a kinsman, is placed, after sundry honorific ceremonies, beside the pillow of the consultant. In his sleep he hears it speaking to him, with a sound like teeth chattering. The modern method of putting bridescake under one's pillow would seem to be a survival of an even cruder kind of magic. Finally, a god, not a mere ancestral spirit, may choose this method of sending an oracle, and in that case the dream is generally sought for by sleeping in a holy place—the Greek ἐγκοίμησις (see DIVINATION [Greek]). An example from lower culture is the N. Amer. Indian custom—found also among the Dayaks—of going to some solitary and more or less holy or haunted spot, to learn in a dream or ecstatic vision the identity of one's guardian spirit.

But, even with the simplest and crudest ideas of dream-divination, it soon becomes clear that all dreams cannot be taken literally. To enumerate all the methods of interpretation would be an endless task; perhaps the simplest case is that in which the dreamer dreams of something which, if actually seen, would be ominous: *e.g.* in certain parts of Australia, to dream of 'old-man' kangaroos sitting about the camp presages the advent, not of kangaroos, but of danger; and the kangaroo sometimes gives omens to men awake.[6] With the increasing complication of dream-interpreting, the services of a professional diviner become necessary. He may either dream himself, like the Melanesian *tatua qoreqore*,[7] or interpret other people's dreams, like the Nāga *maiba*.[8]

Distribution: world-wide. Typical cases are: literal interpretation (Sea Dayaks);[9] symbolic dreams (Malays).[10]

2. **Presentiments** may perhaps be noticed here, although they hardly amount to actual divination. The Zulus, for instance, believe that a man look-

[1] See Aristotle, *De div. e somn.*, for an eminently clear-headed discussion of this belief.

[2] W. B. Grubb, *An Unknown People in an Unknown Land*, 1911, p. 127 ff.

[3] Men have several souls apiece, according, *e.g.*, to the Sea Dayaks.

[4] Spieth, p. 564.

[5] *Camb. Exp.* p. 361 ff.

[6] Howitt, p. 400 ff.; cf. Hodson, p. 129: 'The Tangkhuls say that a man who is attacked by a buffalo will lose any lawsuit in which he happens at that time to be involved. They also believe that, if a man dreams that he is attacked by a buffalo, he will suffer similar misfortune.'

[7] Codrington, p. 208.

[8] Hodson, p. 129.

[9] Gomes, *Seventeen Years among the Sea Dyaks*, 1911, p. 161

[10] Skeat, p. 532 ff.

ing for a thing sometimes 'feels internally a pointing' which will guide him aright; 'but if it is done by mere head-guessing . . . he generally misses the mark,' to quote a Zulu cited by Callaway.

Distribution: not specifically mentioned by most of our authorities, but may be presumed to be universal or nearly so.

From these cases, in which a man may almost be said to prophesy to himself, we turn to the large class of—

3. Divination from bodily actions. — Of the various involuntary movements and noises of which the human body is capable, perhaps sneezing is the one most universally regarded as ominous, and, in nearly all cases, as a bad omen. The reason is apparently that it is feared that the internal convulsion may disturb or drive out the soul.[1] Hence the common custom of blessing the sneezer, prevalent alike in civilized Germany (*Gesundheit!*) and among the Nandi (*Ko'-weit-in Asis*, 'God be good to you!') We cannot recall any non-classical examples of the idea that a sneeze is a sign sent to denote Divine approval of words or actions (see DIVINATION [Greek]).

A curious form of divination is the Melanesian *so ilo*. In this, the hands are rubbed above the head and a ghost (*tindalo*) invoked by a magic song. A cracking of the joints, variously significant according to the particular joint which cracks, is taken to be the spirit's answer (Codrington, 211). Other ominous signs are hiccuping, the twitching of an eyelid, and so on; but these omens are mostly trivial and not much regarded either by savages or by civilized races. The sneeze, stumbling,[2] and *so ilo* are the only really important ones we know of. Some voluntary actions are considered unlucky, and therefore avoided, by various races;[3] but this is hardly divination, nor is the idea that 'praise to the face is open disgrace'—very common among many peoples from Europeans downwards—properly germane to our subject.

Distribution: important cases given above; minor omens from bodily actions are world-wide.

All the above forms of divination depend upon a more or less normal condition; we now proceed to consider those which depend upon an abnormal state of body or mind, or both.

4. Divination by ordeal may be thus classed. Ordeals are of two kinds: either a suspected person (or the suspect and his accuser) is subjected to some process which would normally injure or endanger him; or the process is a magical one, with power to hurt the guilty, but not the innocent. Examples of the first class are the ancient European 'judgment of God' or 'wager by battle,' and the Gold Coast method of making, *e.g.*, a wife suspected of infidelity plunge her hand into boiling oil.[4] The innocent and wrongfully accused person is Divinely aided to win the combat, or protected against what would normally harm him or her. The author believes that this is the root-idea of judicial torture, at least among people so humane in general as the ancient Athenians. The idea probably was that an innocent man or a truthful witness would feel no pain.[5] Of the second class the Nandi and Masai furnish very instructive examples. Among the former,[1] the accused lays a skull at the accuser's door, saying: 'If I have done this thing, may this head eat me; if I have not done it, may it eat thee,' and one or the other dies accordingly. Among the latter,[2] the accused drinks blood, saying: 'If I have done this deed, may God kill me!' (*Ten ataasa elle-bae, naaar eng-Aï*); and, if guilty, he dies accordingly. These different methods, occurring among tribes so near to each other in territory and culture, warn us of the thinness of the party-wall between magic and religion. This *eng-Aï*, who punishes the guilty man in the latter case, is a genuine deity—a 'high god'; but in the corresponding ordeal of the neighbouring tribe, it is the inherent magical power of the skull (or the ghost), apparently, which 'eats' the false swearer. It is noteworthy that the Nandi diviners, who in other respects are exactly like their Masai confrères, are said to worship, not Asista, their 'high god,' but the ancestral spirits.[3] But the root-idea is the same in any case: guilt weakens the wrong-doer, robs him of his *mana* or of Divine favour, and so renders him an easy prey to any injury, natural or magical. This weakness extends to his agents, as in the Malay ordeal by diving, described by Skeat (p. 542 f.). In this, boys, hired by the parties to a suit, plunge simultaneously under water, with the result that the representative of the party in the wrong has to come up again at once, while the other is not inconvenienced. Such a belief as this indicates a people not without some advancement in moral ideas.

Distribution: Africa, *passim*; in Asia, *e.g.* among the Nagas; also in Melanesia and among Malays; formerly in Europe; not in Australia; traces in North America.

5. Divination by possession ('shamanizing').— Not only do spirits visit sleepers, but they often possess a diviner or priest, rousing him to a prophetic frenzy. This belief, while adopted by some higher cults, as that of Apollo (see DIVINATION [Greek]), is most characteristic of those races in whose religion the spirits of the dead are prominent. Thus, the shamans of the Tunguses in Siberia are possessed, not by Tengri Kaira Khan, or Erlik (the leading good and bad deities respectively), or by any of their emissaries, but by the ancestral spirits—the objects, one may conjecture, of an older cult. We translate a part of Radloff's vivid account:

'The individual marked out by the might of the ancestors for shamanhood feels a sudden faintness and exhaustion . . . a heavy weight presses on his breast and suddenly wrings from him violent, inarticulate screams.' (After wild paroxysms he sinks to the ground.) 'His limbs are wholly insensitive; he snatches whatever he can lay his hands on, and swallows aimlessly everything he gets hold of—hot iron, knives, needles, . . . afterwards casting up dry and uninjured what he has swallowed.'

Apparently this eccentric diet does him no harm. His only relief is to seize the shaman's drum and begin to 'shamanize': his chief danger is that he may resist the frenzy and die or go mad. Not till after this experience does he receive any instruction in his art from other shamans. He is able, by the help of the spirits, to foretell the future, besides exercising various priestly functions. There seems to be no doubt of the sincerity of some, at least, of these men, who continue to ply their art despite Governmental prohibition. 'I *must* shamanize,' said one of them to a traveller, 'both for my own sake and that of my people.'[4] What their actual state is during 'possession' we leave to physiologists to determine. The shamans of

[1] Tylor, i. 100 ff.; cf. Ellis, 203; the Ashanti believe a sneeze indicates 'something unpleasant or painful having happened to the indwelling *kra*.'

[2] *e.g.* among the Malays (Skeat, p. 553); also Græco-Roman (see special articles) and modern (see § 11, 'Survivals').

[3] Thus a Malay child is scolded if he lies on his belly—the almost universal attitude of a resting child—as this is considered unlucky; and sundry bits of table etiquette amongst the same people have a similar sanction (Skeat, p. 533 f.). Cf. the classical habit of entering a room right foot first.

[4] Ellis, p. 196 f., gives examples of both classes.

[5] Ellis, p. 201, remarks that a guilty woman will often confess rather than face the ordeal, as a beating hurts less than a badly scalded hand!

[1] Hollis, *Nandi*, p. 76. [2] Hollis, *Masai*, p. 345.

[3] So the Toda diviners are mostly possessed by foreign gods; and, in general, where a race's religion has advanced beyond the earliest stages, the diviners, like other magicians, represent the older and cruder forms.

[4] Stadling, in *CR*, 1901, p. 86 f.

Northern Asia use a drum in divining; but in some other cases the possessing spirits speak by the mouth of the wizard, as among the Tshi-speaking peoples,[1] whose priests are possessed, not by spirits, but by gods. Some similar cases will be considered in the next paragraph.

Distribution: Ural-Altaic races of N. Asia and Europe; N. America (see DIVINATION [American]); more or less modified forms common in Africa and elsewhere (*e.g.* Todas).

6. Necromancy.—Death increases rather than diminishes a man's magical powers, including his prophetic faculties. Hence we find the wide-spread practice (of which, indeed, shamanizing might be considered a variant) of consulting either the souls of the dead in general or the soul of a particular dead man, or his corpse. A very crude instance of the last comes from Central Australia. Tree-burial is largely practised among these tribes, and it is the custom to observe the direction taken by the liquid matter exuding from the corpse and flowing along the ground. If the stream flows, say, north, the slayer lives to the northward;[2] if it is short, he is close at hand; if long, he is far away. Skull-divination has already been noticed, and might be classed under necromancy. But we are chiefly concerned with necromancy proper, or the evoking and consulting of ghosts. This, as distinct from seeing a ghost casually in a dream, or meeting or hearing one unsought, which might happen to any one, is the task of a professional diviner or a priest. Thus the Zulu witch-doctor is visited by the *amatongo* (=*manes*) and their voices are heard giving answers. 'The voice,' says a native witness, quoted by Callaway, 'was like that of a very little child . . . it speaks above, among the wattles of the hut'—a clear case of ventriloquism. Among the Melanesians a *tindalo*, or ghost, comes on board a canoe, its presence being detected by a *mane kisu*, or diviner, and gives affirmative or negative signs in answer to the question, 'Shall we go to such-a-place?' The Ewe diviners summon a *tro*[3] in case of sickness, and from its answers—inaudible to profane ears—foretell the course of the disease, and so on. In most, if not all, cases, the spirits thus consulted are given offerings of various kinds to win their favour and induce them not only to foretell, but to make things turn out as the inquirer wishes (see Spieth, *l.c.*).

One curious case might be called either necromancy or ordeal. It comes from the Gold Coast, and is used when a creditor makes a claim on a dead man's estate, about which the heirs are doubtful. The claimant drinks water in which the corpse has been washed, swearing to the accuracy of his statement; if he is lying, the power (*sisa*) of the deceased will punish him.[4] This is an illustration of the difficulty of applying any rigid classification to a large and miscellaneous body of savage beliefs.

Distribution: in one form or another, world-wide. Typical instances are given above.

From men, living or dead, we pass to their surroundings, animate and inanimate. Beginning with the former, we find a large and interesting class.

7. Divination from animals.—(*a*) *Augury.*—The movements of birds or beasts are considered ominous in some degree by nearly, if not quite, all races. In some cases the reason is quite obvious. Thus the Melanesians have a bird which they call *wisi*, from one of its cries. This happens to mean 'No' in the local dialect, and the creature is thus able to answer questions—its other cries being taken to mean 'Yes.' But this is 'not seriously thought of' (Codrington, p. 221), and in the vast majority of cases the omen is symbolical, frequently needing a professional diviner to interpret it. Thus the Kenyahs of Sarawak have a method of divination worthy of Etruria, by which high-born augurs, after due ceremonies, sit in a leaf-shelter and watch a particular part of the sky for hawks, until the favour of Balli Penyalong is shown by one bird flying right, another left, and a third circling.[1] Why this should be a good omen is by no means clear; the symbolism of augury is a product of many generations, and mysterious, probably, even to the initiated. A more profitable question is, Why should animals give omens at all?—for, no doubt, the original idea is that the animals themselves gave answers, not that any god sent them.[2] Leaving the Kenyahs for a much more primitive people, we find a case which throws great light on the origin of the belief. A certain young member of the Yuin tribe had the kangaroo for his personal totem, by inheritance. Whenever this man saw an 'old-man' kangaroo coming towards him, he knew that he was being warned of danger.[3] The Kenyahs are not totemic; but the Ibans (Sea Dayaks), who are of the same family, have a sort of personal totem, the *ngarong*,[4] or 'spirit-helper,' who generally takes animal form. It is not unlikely, then, that the omen-animal or bird was originally some sort of a personal totem, or—since 'totem' is a word apt to be abused—a *manitou*, which gave warnings and advice, as friendly animals do in folk-tales of all countries. Originally only this one particular spirit-animal would give omens;[5] this would then be extended to all its species; and, finally, with the coming of more advanced religious views, they would be considered the messengers of a god, perhaps originally a theriomorphic one. We put forward this theory tentatively, however, recognizing its difficulties, such as the existence of augury among the Kenyahs, who apparently have not even the *ngarong*, and its non-existence in Torres Straits, where totemism flourishes.

It should be mentioned that men may be counted among omen-animals. We have already dealt with the omens a man may draw from his own actions; but he may also do things significant for others, though not for himself; *e.g.*, if twins are born, this, like almost all events a little out of the common, is held to be a good or a bad omen by various peoples; thus the Nāgas[6] hold that the birth of twins of opposite sex is unlucky. Again, the Masai[7] believe that if, on a journey, one meets a solitary wayfarer, the journey will be fruitless.

Finally, in augury, one cannot divide the ominous creatures simply into lucky and unlucky. The same bird or beast may give opposite omens according to the place where it is heard or seen. To take one example out of many, and again from the Masai,[8] the bird they call *tilo* (*Mesopicus spodocephalus*), if heard on the right, is good; if on the left, bad. If heard behind, on a journey, it means, 'Go on, you will be hospitably received.'

[1] Ellis, p. 191. Note that in a few cases (as the Masai [Hollis, p. 324 f.]) a frenzy is induced by an intoxicant or other drug.

[2] 'Death from natural causes' is a notion quite foreign to Australian blacks; all deaths are caused either by violence or by magic. Compare Marett, *Threshold of Religion*, 1909, p. 26.

[3] Spieth, p. 506.

[4] Ellis, p. 197 f. Note the primitiveness of this rite among a people who, according to Ellis, 'implicitly believe in the superhuman power of their gods,' and do not attempt to coerce them by any magic (194 f.).

[1] Hose-McDougall, p. 175 f.

[2] Both ideas persisted in late beliefs and speculations; see, *e.g.*, Stat. *Theb.* iii. 486–8 ('seu purior axis amotumque nefas et rarum insistere terris uera docent [alites]') for the former.

[3] Howitt, p. 400 f.

[4] *Nyarong*, in Hose-McDougall, p. 173; but this is said to be a misprint; Gomes, in *Athenæum*, 18th March 1911.

[5] The Ibans say that not all omen-birds, but only 33 of each kind, are the messengers of Singalang Burong, the hawk-god; the others do not give true omens, and are not, like the 33, immortal.

[6] Hodson, p. 134. [7] Hollis, *Masai*, p. 324. [8] *Ib.* p 323 f.

(*b*) *Haruspicy.*—Not only living, but dead, animals can give omens, though the latter are for the most part intelligible only to professional diviners. Before passing to a consideration of these cases, it is well to notice that a dying animal is sometimes consulted. The Nāgas, for instance, sometimes kill a fowl and watch its death-struggles for omens. They also have a more economical, though less reliable, method, in which the fowl is held up by the wings. 'Should the animal cross its right foot over the left, the omen is good; the opposite, bad.'[1]

Perhaps the simplest case of what might loosely be called haruspicy is that given by Gomes.[2] The Sea Dayaks, he tells us, consider it a very bad omen if they find a dead animal in their fields; the crops will poison the owner if he ventures to eat them, unless some one with strong *mana* removes the tabu by ceremonially eating a little, and thus absorbing the evil influence into his own powerful person.

But in haruspicy proper we have to deal with a not very primitive type of religion. The slaughtered animal is regularly a sacrificial victim; the *haruspex* is generally not merely a diviner, but a priest, where such a distinction exists; and the entrails therefore contain the cryptic message, to be read by enlightened eyes, of a god. The method of reading is a more or less complex symbolism; thus, to find the internal organs in an unusual position—heart on the wrong side, or the like—means generally some disastrous upheaval.

Distribution: augury and haruspicy both in Sarawak; augury alone in Malay Peninsula and Melanesia; haruspicy alone among Masai and Nandi; both found, singly or together, in more or less complicated forms, in nearly all parts of the world.

8. Divination by mechanical means.—Of mechanical means of divination there is no end. We may divide them, very roughly, into: (*a*) *coscinomancy*, or devices akin to the modern *planchette*, and probably worked by unconscious muscular action; (*b*) *sortilegium*, or devices involving some kind of a game of chance, generally of simple form.

(*a*) Skeat (p. 536 f.) reports a simple case of *coscinomancy* among the Malays, which he himself saw. A kind of pendulum is made, with appropriate rites—charm and sacrifice—by thrusting a fish-spine through a lemon, and suspending it on a cord of seven different coloured strands. Questions are then put to it; it says 'Yes' by swinging, 'No' by staying still. The same people use a divining-rod, which vibrates in the presence of a thief; the Melanesians[3] use a similar rod in cases of illness, to discover which of the recently dead is 'eating' the patient. The stick vibrates at the right name. To take another illustration from Skeat (p. 538 ff.)—a thief may be discovered, after appropriate rites, by two people holding a bowl of water between their fingers. The names of suspected persons are presented to it in writing, and at that of the guilty man it twists around and falls. In all these cases, as in *planchette* writing, if we exclude deliberate cheating, we are left with the supposition that the diviner unconsciously moves his divining-machine in the way he is expecting, or perhaps contrary to his conscious expectation and even his conscious volition.[4] But the usual, so far as we know, the universal, explanation given by the lower races is that the movements are caused by some spirit which, to borrow the jargon of modern spiritualism, 'controls' the instrument. It may well be thought, however, considering the obvious antiquity of this and kindred modes of divination, that, before any definitely animistic belief came to prevail, the implement, being by virtue of proper ceremonies made 'big medicine,' had in itself the power to answer.

(*b*) Whether or not Tylor[1] is right in seeing in *sortilegium* the origin of all games of luck, it is so wide-spread and miscellaneous that we can do no more than give a few random examples, some of which, provisionally accepting Tylor's hypothesis, we class under the main forms of games of chance. (1) *Odd and even.*—This is used among the Masai and Nandi, whose diviners shake pebbles out of a buffalo-horn, and observe whether an odd or an even number results.[2] On the Gold Coast a similar method is used, with nuts for pebbles and without the horn.[3] (2) *The teetotum.*—The coconut, being a natural teetotum, is much used in the Pacific, both in games of chance, pure and simple, and for divination. Tylor (*loc. cit.*) gives examples of both. (3) *Dice and similar implements.*—Dice, as we understand them, are but little used among savages; but the underlying principle—something which, if thrown, may fall in any one of several different ways—is common enough. The most rudimentary form is perhaps the mangrove-embryo used by women in the Torres Straits[4] to determine the sex of an unborn child. It is thrown between the legs, backwards, and no notice is taken of which side it falls on, but merely of whether it flies straight or crooked—the first presaging a boy, and the second a girl. The same people have a folk-tale, in which the hero holds up his throwing-stick, 'and it fell in the direction of Daudai. "I will go there by-and-by; I think I will kill them all," he said.'[5] (4) A number of methods of mechanical divination have not, so far as we know, resulted in actual games. The most interesting is the magic drum of the shaman, the surface of which, in Lapland, was painted with various figures. A ring or bunch of rings was placed on the skin of the drum, which was then beaten with a horn hammer, 'not so much to make a Noise, as by the Drumming to move the Ring . . . so as to pass over the Pictures and shew what they seek after.'[6] Besides particular signs given by the pictures, the ring gave a good omen if it went sunwise, bad if it went *withershins*. A simpler omen is that found among the Nāgas. 'At Mao and Marām the issue of a hunting party is prognosticated by their success in kicking small pebbles on to the top of a monolith.'[7] More curious, because harder to explain, though it probably is a simple conjuring trick, is the Zulu divination by sticks or bones. The sticks, after proper ceremonies, rise up and jump about by way of saying 'Yes,' lie still for 'No,' and, if asked 'Where is so-and-so's ailment?' strike the questioner on the corresponding part of his body. And so on. The list might be extended indefinitely, but the principle is always the same: 'chance' is the working of some non-human power, who makes a die fall a particular way, or an odd and not an even number of pebbles jump out, or a particular man draw a particular lot, just as Athene makes the arrow of Pandaros miss its mark (*Il.* iv. 127 ff.).

Distribution: in one form or another, universal.

9. Divination from Nature.—(*a*) *Astrology.*—With the elaborate pseudo-science which grew out of the belief that the position and influence of the heavenly bodies more or less mould human affairs, we have nothing to do here; it is a product of

[1] Dr. Brown, *ap.* Hodson, p. 132. [2] *Op. cit.* p. 156.
[3] See Codrington, p. 210 ff.
[4] The writer has had personal experience of quite genuine performances of this sort on the part of a *planchette*.

[1] i. 78. [2] Hollis, *Masai*, p. 324, *Nandi*, p. 49.
[3] Ellis, p. 202. [4] *Camb. Exp.* p. 196. [5] *Ib.* p. 74.
[6] Scheffer, *Hist. of Lapland*, Eng. ed. of 1751, p. 29 f.; cf. *Anthropology and the Classics*, ed. Marett, Oxford, 1909, pp. 28, 30. It is not inconceivable that the pictures on playing-cards may owe their origin to some such magic figures as these.
[7] Hodson, p. 133.

comparatively advanced civilization, and involves real knowledge of pure and applied mathematics, far beyond the capacity of most savage races. The rudiments, however, of astrology, together with star-myths of varying complexity, are early and common. Thus the Malays, along with quite a complicated foreign astrology, with calendars and lucky and unlucky days, etc.,[1] have preserved such simple bits of symbolism as that a star near the moon means an approaching marriage. Among the Maoris the moon represents a besieged *pah*, and the stars the attacking force—their relative position indicating the result of the campaign.

(*b*) Other natural phenomena, such as earthquakes, lightning, etc., are everywhere held to portend something—usually misfortune. But it seldom goes beyond 'something.' Homer's remark on lightning, which indicates Zeus to be 'fashioning either great rain unspeakable or hail or snow . . . or, somewhere, the great mouth of bitter battle' (*Il.* x. 5 ff.), is a good summing up of the vagueness of the beliefs usually connected with these phenomena. They are too rare, comparatively speaking, and also too noteworthy in themselves, for a system of divination to be built upon them. They frighten rather than forewarn.

Distribution: traces everywhere; so far as we know, except for civilized peoples, nowhere very important or noteworthy.

10. **Miscellaneous divination.**—Finally, we may note one or two methods which cannot be classed under any of the above heads, but are interesting in themselves. (*a*) *Clairvoyance.*—This is not the place to ask whether any such power really exists. It is enough for our purposes that, *e.g.*, the Malays think it does, and some of them, according to Skeat, practise it. (*b*) In the Torres Straits[2] we get a good example of a not uncommon idea, that a small mishap of any kind is the forerunner of a greater one. Thus one of the natives, who was a skilled dugong fisher, returned empty-handed one day with his harpoon broken. Shortly after, three deaths occurred, to his great comfort, as it showed that his had luck had been sent as an omen and was no fault of his own. (*c*) *Blood* is 'uncanny' and ominous. Thus a Sea Dayak,[3] finding a drop of blood on the floor-mats, will consider that a spirit has shed it, and that it is a very bad omen. (*d*) In general, any occurrence at all unusual is ominous; and a diviner, or some skilled person, is usually consulted.

11. **Survivals.**—The methods of which we have given examples belong to the lower stages of civilization. With political and religious advance one of two things happens: either some kinds of divination are taken into the State religion (Greece, Rome; see special articles) and the others become insignificant and even disreputable, like all magic; or, as in the case especially of Christianity,[4] the dominant faith declares against them all as either false or the work of evil spirits. The first beginnings of this we have already seen in a few instances. But the counter process, by which the higher religions degenerate into magic, must not be forgotten. Thus, the Jewish and Christian formula 'In the name of . . .' has been found in magical papyri (see Kenyon, *Brit. Mus. Papyri*, i. [1893] 65 f.; Heitmüller, '*Im Namen Jesu*,' 1903); a chapter of the Qur'ān is read as a charm during the Malay ritual of divination with a bowl of water, described above; Orphic and Mithraic rituals have been used for purely magical purposes; the Buddhist *Om maṇi padme hum* is often used as a charm and not a prayer. But, apart from this, popular belief dies hard; and, for example, in modern Europe we find all kinds of beliefs which are most probably relics of pre-Christian divination, little, if at all, affected by the official religion, except that they are often not definitely felt to be magico-religious. We give a few examples of both classes.

To the class of divination by mechanical means we must add, among peoples who possess sacred writings, or books for any reason esteemed to contain great wisdom (such as was attributed to the works of Vergil in the Middle Ages), a form of *sortilegium* which consists in opening such a book at random and taking an omen from the first passage met with. The prestige won for the Bible by the establishment of Christianity in Europe has resulted in the *sortes Biblicæ*, still used, we believe, among uneducated people.[1] Church festivals also have affected the popular beliefs in lucky and unlucky days, for how else can the bad reputation of Friday be explained? Astrologically it should be lucky, being the day of Venus, especially for marriages and the like; yet comparatively few people even to-day would care to be married on a Friday.

As to survivals pure and simple of ancient ideas about omens, wholly unconnected with Christian beliefs, their name is legion. The author gives a few personally known to him. A patient in a Plaistow hospital showed genuine instinct for sympathetic magic and divination by refusing to fasten on her wedding-ring when her emaciation made that desirable, because, 'if you bind up a ring you bind up poverty with it'; and the idea is common in the East End of London. Creaking furniture heralds a death in many places in Yorkshire; a bird flying into the house 'brings ill-luck with it,' in most parts of England; a stumble in going upstairs—this we cannot explain—presages a wedding. Astrology[2] and oneiromancy still flourish; Tylor mentions an instance of haruspicy in Brandenburg;[3] palmistry, known among the Malays, is common at every fair. Augury has perhaps a survival in the habit of bowing to magpies. Cf. Shakespeare's mention of them:

> 'Augurs and understood relations have
> By magot-pies
> brought forth
> The secret'st man of blood' (*Macbeth*, III. iv. 124–126).

Compare the custom of turning over the money in one's pocket on hearing the first cuckoo. So hardly does an ancient belief yield to either science or common sense.

LITERATURE.—On the subject in general, see E. B. Tylor, *Primitive Culture*[4], 1903, vol. i. For particular races the following will be found useful: H. Callaway, *Rel. Syst. of the Amazulu*, Natal, 1870; *Cambridge Anthropol. Exp. to Torres Straits*, 1901–8, vol. v.; R. H. Codrington, *The Melanesians*, Oxford, 1891; A. B. Ellis, *Tshi-speaking Peoples*, 1887; T. C. Hodson, *The Nāga Tribes of Manipur*, 1911; A. C. Hollis, *The Masai*, 1905, also *The Nandi*, 1009; C. Hose and W. McDougall, 'Men and Animals in Sarawak,' *JAI* xxxi. [1901] 173; A. W. Howitt, *Native Tribes of S.E. Australia*, 1904; W. Radloff, 'Das Schamanthum und sein Kultus,' in his *Aus Sibirien*[2], 1893, vol. ii.; W. H. R. Rivers, *The Todas*, 1906; W. W. Skeat, *Malay Magic*, 1900; Spencer-Gillen, *Native Tribes of Central Australia*, 1899, and *Northern Tribes of Central Australia*, 1904; J. Spieth, *Die Ewe-Stämme*, 1906.

H. J. ROSE.

DIVINATION (American).—Throughout the two continents of America divination and prophetic utterance were and are generally practised by the priestly class (shamans and medicine-men) of the various nations and tribes which have inhabited them. The methods of divination in use did not vary much so far as the different divisions of

1 See Skeat, p. 544 ff., for details.
2 *Camb. Exp.* p. 361. 3 Gomes, *op. cit.* p. 158.
4 Buddhism is also hostile; among the Buddhist section of the Tunguses there is no shamanism, according to Radloff The corrupt Buddhism of Tibet cannot be taken as typical.

1 Tennyson's *Enoch Arden* gives a well-known example.
2 Among us, as among the Malays, in two forms: (1) borrowed from the mediæval systems (Zadkiel, etc.); (2) popular, as in the belief, held by nearly every one except those who know anything of meteorology, that the weather depends on the moon.
3 Compare divining from a sheep's shoulder-blade, well known from the references in Drayton and other writers. See Tylor *passim*.

American nationality were concerned, nor did they display much dissimilarity from those in vogue among other barbarian peoples. In ancient or pre-Columban Mexico and Peru there was a college of augurs, corresponding in purpose to the *auspices* of ancient Rome, the alumni of which occupied themselves with observing the flight and listening to the songs of birds, from which they drew their conclusions, pretending to interpret the speech of all winged creatures. In Mexico the *calmecac*, or training-college of the priests, had a department where divination was taught in all its phases, and that the occupation was no mere sinecure will appear later. Among the less advanced communities the services of the diviner or seer were much in request, and the forecasting of the future became, sooner or later, the chief concern of the higher classes of medicine-men.

The methods adopted by the priests or shamans in the practice of divination scarcely differed with locality, but many various expedients were made use of to attain the same end. In the Peru of the Incas, besides those augurs who were supposed to interpret the songs of the feathered race, there were other castes who specialized in the various kinds of divination. Thus, some practised oracular methods in much the same way as did the priesthood in ancient Egypt and Greece. The idols became the direct mediums by which Divine wishes were disclosed or the future made clear. Necromancy was also extensively practised, the priests pretending to raise the dead, whose instructions they communicated to those who had consulted them. In the Mexico of the Aztecs, also, necromancy was in vogue, and the raising of the spirit of the Princess Papantzin, sister of the ill-fated Montezuma, who foretold the downfall of his empire and his own destruction, will be familiar to every reader of Prescott. To return to Peru, still other classes predicted by means of leaves of tobacco, or the grains or juice of coca, the shapes of grains of maize, taken at random, the appearance of animal excrement, the forms assumed by the smoke rising from burning victims, the entrails and viscera of animals, the course taken by spiders, visions seen in dreams, the flight of birds, and the direction in which fruits might fall. The professors of these several methods were distinguished by different ranks and titles, and their training was a long and arduous one, and undertaken in no mere spirit of flippancy. If their clients were deceived, it is safe to say that they themselves were as unconscious of deceit as is a modern physician who has wrongly diagnosed a case.

In considering the practice of divination and prophecy among the aboriginal peoples of America, it will be necessary to deal separately with each of the principal methods by means of which they are performed. These are (1) by observing the flight of birds; (2) by oracular and necromantic practices; (3) by means of hypnotism; (4) through the interpretation of dreams and visions, and by conditions of ecstasy produced by drugs; (5) by means of astrological practice; and (6) by the appearance of various objects.

1. **By observing the flight of birds.**—It has already been noticed that the Mexican and Peruvian priesthoods, or that class of them devoted to augury, made a practice of observing the flight of various birds and of listening to their songs. This observation of birds for the purpose of augury was common to other American tribes. The bird, with its rapid motion and incomprehensible power of flight, appeared to the savage as a being of a higher order than himself, and its song—the only hint of music with which he was familiar—as something bordering upon the supernatural, the ability to understand which he had once possessed, but had lost through the potency of some evil and unknown spell. Some great sorcerer or medicine-man alone might break this spell, and this the shamans of the tribe sought assiduously to achieve, by means of close attention to the habits of birds, their motions and flights, and especially to their song. 'The natives of Brazil regarded one bird in especial as of good augury,' says an early 18th cent. traveller, Coreal (*Voiages aux Indes occidentales*, p. 203). He does not state to what bird he alludes, but proceeds to say that its mournful chant is heard by night rather than by day. The savages say it is sent by their deceased friends to bring them news from the other world, and to encourage them against their enemies. Here, it would seem, we have an example of bird-augury combined with divination by necromancy. Coreal probably alluded to the goat-sucker bird, which, with the screaming vulture, some South American tribes—the Guayeurus of Paraguay, for example—suppose to act as messengers from the dead to their priests, between whom and the deceased persons of the tribe there is thought to be frequent communication.

A typical example of augury by bird-habit has come down to us in the account of the manner in which the Nahua of Mexico fixed upon the spot for the foundation of that city. Halting after years of travel at the Lake of Tezcuco, they observed perched on the stem of a cactus a great eagle with wings outspread, holding in its talons a writhing serpent. Their augurs interpreted this as a good omen, as it had been previously announced by an oracle; and on the spot drove the first piles upon which was afterwards built the city of Mexico-Tenochtitlan. The legend of its foundation is still commemorated in the arms of the modern Republic of Mexico, and on its coinage and postal stamps.

2. **Oracular and necromantic methods.**—We have already seen that the priesthood of Peru practised oracular methods of divination by 'making the idols speak.' Whether they accomplished this by ventriloquial arts or by the more primitive means of concealing one of their number, we do not know. But we know that the *piagés*, or priests of the Uapes tribe of Brazil, practise oracular divination by means of a contrivance known to them as the *paxiuba*. This is one of their most sacred symbols, and consists of a portion of a palm-tree about the height of a man, and some 10 cm. in diameter. By a device consisting of holes bored in the part of the tree beneath the foliage, its leaves are made to tremble by the breath of the priestly ministrant, and the sound so caused is interpreted as a message from Jurupari, their principal deity. Necromancy is also practised extensively by the Uapes Indians, a class of *piagés* being set apart for this purpose solely. Indeed, in most Indian tribes the shamans or medicine-men, or a portion of them, specialize in the art. A great similarity marks the methods of procedure of most American tribes, from the Eskimos to the Nahua. A circular lodge consisting of poles planted firmly in the ground is covered with skins or mats, a small hole only being left for the seer to make his entrance. After entering, he carefully closes the aperture, and proceeds to make his incantations. In a little while the entire lodge trembles and sways, the poles bend to breaking point, as if ten strong men were straining at them, and sounds, strange and supernatural, coming now from the depths of the earth, now from the air above, cause those who listen outside to tremble. At last the medicine-man cries out that the spirit he has invoked is present, and will reply to questions. Presents to the supernatural visitor are inserted beneath the skins, as a preliminary to consultation; and the spectators commence to interrogate the dread presence in fear and trembling. The replies received are, for sheer ambiguity, equal to the oracular answers of the pythonesses of ancient Greece. Converted Indians have repeatedly

averred that in performing this feat they were merely passive agents. But, as many of these barbarous seers excite themselves into a condition of permanent lunacy when under the influence, there is very little doubt that they are as much the victims of hallucination as are their hearers, although the taking of gifts and the occasional shrewd nature of their replies would seem to point to the possession of considerable powers of calculation.

3. **Hypnotic divination.**—Divination by hypnosis is no new art in America. Jonathan Carver, a British sea-captain who travelled among the Sioux in the latter end of the 18th cent., mentions it as in use among them; and J. E. Fletcher observed it among the Menominee about the middle of last century. In the 'Ghost Dance' of the Paviotso of Nevada (a ceremonial religious dance connected with the Messiah doctrine, which originated among that people about 1888 and spread rapidly among other tribes, through the agency of the pretended prophet, one Wovoka, a medicine-man who had lived among whites), hypnotic trances were frequently induced to enable the Indians to converse with their dead relatives, who were, it was said, to return to them, and sweep the earth clear of the whites in a great Armageddon. The movement was defeated, but survives to some extent in the 'Crow Dance' of the Cheyenne and Arapaho, in which prophecy by hypnotism is still practised.

4. **Dreams and visions.**—The business of divination by means of dreams and visions, it is hardly necessary to say, was almost completely in the hands of the priestly class in America, as is exemplified by the derivation of 'priest' in the native languages. By the Algonquians and Dakotas they were called *wakanwacipi*, 'dreamers of the gods'; in Mexico, *teopixqui* or *teotecuhtli*, 'masters *or* guardians of divine things'; in Cherokee, *atsilung kelawhi*, 'those having the Divine fire'; in Maya, *cocome*, 'the listeners,' etc. Nearly all messages supposed to be received from the supernatural came through the medium of dreams or visions, and those who possessed ability to read or interpret the dream were usually placed in a class by themselves. The medicine-men or shamans held it as an article of belief that the glimpse into futurity with which visions or dreams provided them was to be gained only by extreme privation and by purifying the vision through hunger or the use of drugs. To induce the ecstatic condition the Indians made use of many different mediums, such as want of sleep, seclusion, the pertinacious fixing of the mind upon one subject, the swallowing or inhalation of cerebral intoxicants, such as tobacco, the *maguey*, coca, the *chucuaco*, the snake-plant *ololiuhqui*, the *peyotl* (these last two in Mexico), and the *cassine yupon*, and *Iris versicolor* (among the tribes in the southern parts of the United States). According to Hawkins, the Creeks had no fewer than seven sacred plants cultivated for this purpose, among them the *Ilex vomitoria* or *Ilex cassina* of the natural order *Aquifoliaceæ*; and the 'blue flag,' *Iris versicolor*, of the order *Iridaceæ*. 'The former is a powerful diuretic and mild emetic, and grows only near the sea. The latter is an active emeto-cathartic, and is abundant on swampy grounds throughout the Southern States. From it was formed the celebrated "black drink" with which they opened their councils, and which served them in place of spirits' (Brinton, *Myths of the New World*, Philadelphia, 1905, p. 315, note).

From dreams during the puberty-fast a person's entire future was usually divined by the shamans, his spiritual affinities fixed, and his life's course mapped out (see art. CALENDAR [American], vol. iii. p. 68[b]). The elaborate ceremonies known as 'dances' were usually adumbrated to the priests through dreams, and the actual performance was made to follow carefully in detail the directions supposed to have been received in the dream or vision. Many shrines and sacred places were also supposed to have been indicated to certain persons in dreams, and their contents presented to those persons by supernatural beings whilst they were in the visionary state. The periods for the performance of rites connected with a shrine, as well as other devotional observances, often depended on an intimation received in a dream. 'Visions' were also induced by winding the skin of a freshly-killed animal round the neck until the pressure on the veins caused unconsciousness, and dreams resulted, possibly from an overflow of blood to the head. Some tribes believed that the vision came to the prophet or seer as a picture, or that acts were performed before him as in a play, whilst others held that the soul travelled through space, and was able to see from afar those places and events of which it desired to have knowledge.

Numerous instances of the truly marvellous manner in which events have been foretold by American medicine-men are on record, and it is hard to believe that they do not possess the gift of clairvoyance in some degree.

In his autobiography, Black Hawk, a celebrated Sac chief, relates that his grandfather had a strong belief that in four years' time 'he should see a white man, who would be to him as a father.' Supernaturally directed, as he said, he travelled eastward to a certain spot, and there, as he had been informed in dreams, met with a Frenchman, who concluded an alliance on behalf of his country with the Sac nation. Coincidence is certainly possible here, but it can hardly exist in the circumstances of the narrative of Jonathan Carver. While he was dwelling with the Killistenoes (*i.e.* Cree), they were threatened with a famine, and on the arrival of certain traders, who brought them food in exchange for skins and other goods, their very existence depended. The diviners of the tribe were consequently consulted by the chief, and announced that the next day, at high noon exactly, a canoe would make its appearance with news of the anxiously looked-for expedition. The entire population came down to the beach in order to witness its arrival, accompanied by the incredulous trader, and, to his intense surprise, at the very moment forecast by the shamans, a canoe rounded a distant headland, and, paddling speedily shorewards, brought the patient Killistenoes news of the expedition they expected.

John Mason Brown has put on record an equally singular instance of the prophetic gift on the part of an American medicine-man (see *Atlantic Monthly*, July 1866). He was engaged several years previously in searching for a band of Indians in the neighbourhood of the Mackenzie and Coppermine rivers; but the difficulties of the search induced the majority of his band to return, until out of ten men who had originally set out only three remained. They had all but concluded to abandon their search, when they stumbled upon a party of braves of the very tribe of which they were in search. These men had been sent out by their medicine-men to find three whites, of whose horses, accoutrements, and general appearance the shaman had given them an exhaustive account ere they set out, and this the warriors related to Brown before they saw his companions. Brown very naturally inquired closely of the medicine-man how he had been able to foretell their coming. But the latter, who appeared to be 'a frank and simple-minded man,' could only explain that 'he saw them coming, and heard them talk on their journey.'

Under the heading of 'dreams and visions' may also be noticed the practice, common in some parts of the American continent, of attempting to pry into the future through gazing fixedly at some polished object, until semi-insensibility is attained by self-hypnosis. The Indians of Central America employed for this purpose (and still make use of) small shining stones made of hard polished sandstone, which they at times consult when dubious as to the future.

A case is on record where a Cherokee kept a divining crystal wrapped up in buckskin in a cave, occasionally 'feeding' it by rubbing over it the blood of a deer; and similar instances might be multiplied. At the village of Tecpan, Guatemala, Stephens and Catherwood saw a remarkable stone which had been placed on the altar of the church there, but which had previously been used as a divining stone by the Indians of the district. Fuentes, one of the Spanish historians of Guatemala, says of it: 'To the westward of the city there is a little mount that commands it, on which stands a small round building about six feet in height, in the middle of which there is a pedestal formed of a shining substance resembling glass, but the precise quality of which has not been ascertained. Seated

around this building, the judges heard and decided the causes brought before them, and their sentences were executed on the spot. Previous to executing them, however, it was necessary to have them confirmed by the oracle, for which purpose three of the judges left their seats and proceeded to a deep ravine, where there was a place of worship containing a black, transparent stone, on the surface of which the Deity was supposed to indicate the fate of the criminal' (Stephens, *Incidents of Travel*, ii. 149). Stephens found this 'stone' to be a piece of common slate, fourteen inches by ten. For purposes of divination it would probably have been covered with water.

5. Divination by astrological practice.—Divination by astrology was, of course, resorted to only in that part of America where the knowledge of the movements of the heavenly bodies had advanced beyond the elementary stage. Among the Aztecs the planetary influences were less powerful than the arbitrary signs they had adopted for the months and days. The nature of the principal sign in each lunar cycle of thirteen days gave a colour to the whole. The figures relating to succeeding days and hours modified this, however, and it was in coalescing these opposing forces that the art of the Aztec diviner lay. No event in life, of any consequence, was permitted to pass without consulting him. On the birth of a child he was summoned in haste. He ascertained the exact time of the event with exceeding care, and then proceeded to cast the infant's horoscope, the family standing by in trembling suspense the while.

6. Divination by means of various objects or practices.—Various other methods were in vogue by means of which the native priesthood attempted to forecast the future. For this purpose fetishes and small personal idols were often consulted. The grains of cocoa in the bottom of a drained vessel were 'read,' as the remaining leaves still are in many European tea-cups. The viscera of sacrificed animals were carefully examined for signs regarding the future. The course and shape of smoke, too, was keenly watched by the shamans of many peoples.

According to Fuentes, the chronicler of Guatemala (Stephens, *op. cit.* ii. 127), the reigning king of Kiche, Kicah Tanub, when informed by the ambassador of Montezuma II. that a race of irresistible white men had conquered Mexico and were proceeding to Guatemala, sent for four diviners, whom he commanded to tell him what would be the result of this invasion. They asked for time to discover the future fate of his kingdom, and, taking their bows, discharged some arrows against a rock. They returned to inform their master that, as no impression had been made upon the rock by the arrowheads, they must prognosticate the worst, and predicted the ultimate triumph of the white man—a circumstance which shows that the class to which they belonged stood in no fear of royalty. Kicah Tanub, dissatisfied, sent for the *priests*, obviously a different class from the diviners, and requested their opinions. From the ominous circumstance of an ancient stone—which had been brought from afar by their forefathers—having been broken, they also augured the fall of the Kiche empire.

Many objects, such as small clay birds, boats, or boat-shaped vessels, etc., have been discovered in sepulchral mounds in North America, and it is conjectured that these may have been used for purposes of divination. As any object might become a fetish, it is probable that any object might become a means of augury. The method employed appears to have been so to treat the object that the probable chances for or against the happening of a certain event would be discovered—much, indeed, as some persons still toss coins to 'find out' whether an expected event will come to pass or not. Portents, too, were implicitly believed in by the American races, and this branch of augury was, we find, one of the accomplishments of Nezahualpilli, king of Tezcuco, near Mexico, whom Montezuma consulted concerning the terrible prodigies which startled his people prior to the advance of the Spaniards upon his kingdom, and which were supposed to predict the return of Quetzalcoatl, the legendary culture-hero of Anahuac, to his own again. These included earthquakes, tempests, floods, the appearances of comets and strange lights, whilst mysterious voices were heard in the air—such prodigies, indeed, as tradition usually insists upon as the precursors of the downfall of a mighty empire.

LEWIS SPENCE.

DIVINATION (Assyro-Babylonian). — The practice of divination entered very largely into the religious life of the Babylonians and Assyrians. Not only was it carried on by unofficial augurs and seers, whose services could be secured for a comparatively small fee by any one desirous of reading the future or of learning the interpretation of some portent which had been vouchsafed to him, but it also formed one of the most important departments of the national religion; and its rites were jealously guarded by a large and organized body of the priesthood. In fact, during the later periods of Assyr. and Bab. history it had become a highly complicated science. Every great temple had in course of time accumulated a store of recorded portents, with notes as to the events which had been observed to follow on them. As a result of their classification and study by the priesthood, there had been evolved an elaborate omen literature, comprising long series of tablets dealing with every class of augural phenomena. Thanks to the literary zeal of Ashurbanipal (668–626 B.C.), we possess a wealth of material for the detailed study of Bab. divination, since a considerable portion of the literary and religious texts of which he had copies made for his library at Nineveh were works on divination in its various forms. It is true that many of these have been recovered in a far from complete condition, but enough remains to indicate the important part which the prediction of future events played in both the official and the popular religion.

That the contents of these comparatively late texts may not only be regarded as representing contemporary beliefs, but may also be employed to illustrate the practice of earlier periods, has been amply demonstrated. The texts themselves in their present form are obviously the result of a gradual process of growth and accretion, and the series under which they have been arranged bear evidence of much earlier editing and redaction. Moreover, we possess a few similar texts dating from earlier periods; while the historical and votive inscriptions furnish data by means of which it is possible to trace some of the principal forms of Bab. divination back into the earlier period of Sumerian history. That the Semitic Babylonians expanded and developed the science was but natural; but there can be little doubt that they inherited many of their augural beliefs and practices from the earlier Sumerian inhabitants of Babylonia, whom they eventually conquered and absorbed. Thus already in the reign of Urukagina, king of Lagash (*c.* 2800 B.C.), we have evidence of the wide-spread practice of divination by oil. From augural texts of a later period (*c.* 2000 B.C.), we know that in this particular form of divination the procedure consisted in pouring out oil upon the surface of water, the different forms taken by the oil on striking the water indicating the course which events would take.[1] A professional diviner

[1] See *Cuneiform Texts in the Brit. Mus.* iii. pl. 2 ff., v. pl. 4 ff.; and cf. Hunger, 'Becherwahrsagung bei den Babyloniern, in *Leipzig. Semit. Stud.* i. [1903] 1.

was naturally required to carry out the accompanying ritual and to interpret correctly the message of the oil, and Urukagina records that among the reforms he inaugurated was the abolition of certain exactions and fees which had been demanded in connexion with the practice, not only by the diviner himself, but also by the grand vizier and the *patesi*.[1] In the later Sumerian period we find that Gudea, when purifying Lagash before the erection of his temple, drove out the wizards and sorcerers, in addition to kindling a fire of aromatic woods. From this record it might perhaps be inferred that at this period divination was not officially recognized, were it not that Gudea himself expressly states that before starting upon his temple-building he consulted the omens and found them favourable.[2] Moreover, the elaborate vision in which the gods revealed their wishes to him with regard to Ningirsu's temple, and the far earlier vision of Eannatum (*c.* 3000 B.C.), in which Ningirsu encouraged him for battle,[3] prove that the study of dreams and their interpretation had been elaborated by the Sumerians. It is, therefore, possible to regard the later augural texts as incorporating earlier practices; and deductions drawn from their study may legitimately be regarded as of general application, and not as confined to a single late period.

In attempting to classify the great range of phenomena which formed the subject of Bab. divination, a convenient distinction may perhaps be adopted which has been drawn between voluntary and involuntary divination.[4] Under the former the diviner deliberately sought out some means of foretelling the future; under the latter he merely interpreted the meaning of portents, signs, or phenomena which, without being sought out, forced themselves on his notice or on that of his clients.

The principal method of voluntary divination was *hepatoscopy*, or divination by the liver of a sacrificial sheep. The diviner, termed the *barû*, or 'seer,'[5] after the due performance of the accompanying rites and the slaughter of the victim, exposed the animal's liver, and by an examination of its principal parts was enabled to predict the future. The chief parts of the liver which were examined in this way were the right and left lower lobes, the upper lobe and its two appendices (the *processus pyramidalis* and the *processus papillaris*), the gall-bladder, the cystic duct, the hepatic duct, the hepatic vein, and the 'liver gate' (*porta hepatis*).[6] The system of interpretation was based mainly on an association of ideas. Thus a swollen gall-bladder was regarded as pointing to an increase of power; on the other hand, a depression in the liver gate pointed to a decrease in power; signs noted on the right side were favourable, on the left side unfavourable, etc. Moreover, the markings on the livers, due to the subsidiary veins and ducts, were carefully studied and interpreted in accordance with their resemblance to the weapons or symbols of the gods. In the tablets of liver-omens, the predictions, as is usual throughout the omen-literature, are vague enough. But these vague indications were made to apply to very definite circumstances by means of questions addressed to the god before the sacrifice. This we gather from an elaborate series of prayers, addressed to Shamash, the Sun-god, during the reigns of Esarhaddon and Ashurbanipal, which throw an interesting light on the method of procedure.[1] The prayers contain appeals to the oracle on political matters. Definite questions were asked as to the course of future events within a specified time, and the priests answered the questions according to the omens presented by the sacrificial victims. The questions were framed with great ingenuity, so that all contingencies might be covered. The prayers also prove that scrupulous care was taken in the preparation of the victim and the recital of the accompanying formulæ, while it was also essential that the diviner, no less than the victim, should be free from any ceremonial impurity. It is interesting to note that, in these prayers to the Sun-oracle, the signs found in the victim are noted but are not interpreted. The roughly-shaped tablets on which they were written were actually used in the course of the ritual: they contain the appeal to the oracle and the oracle's answer as seen in the victim's liver. The question was first written out, and the tablet was placed before the god (cf. the Greek practice at Delphi); the god's answer was afterwards added in terms of the liver. For the diviner's interpretation of this answer to the king no doubt another tablet was employed.

Many of these oracle-tablets, especially those of Esarhaddon's time, contain appeals to Shamash to reveal the outcome of the military campaigns in which he was engaged. They also furnish evidence that the Assyrian king, doubtless following Babylonian precedent, consulted the oracle on every occasion of importance, such as the dispatch of an envoy, the giving of a daughter in marriage, the sickness of a royal relative, the appointment of a high official, etc. In the case of the Sun-oracles the answers received by the king have disappeared, but it is probable that they resembled certain oracles of Ishtar of Arbela, which the goddess vouchsafed to Esarhaddon,[2] obviously in answer to such questions as those addressed to the Sun-god. Here the oracles are composed in the first person, the speaker representing the goddess; but in each case the name of the priest or priestess who pronounced the oracle on the goddess's behalf is given.[3] The answers of the oracles which have been collected and preserved are invariably encouraging, and promise success to the king in somewhat vague and general phraseology. They are clearly happy omens that have been fulfilled.

The reason why the god of the oracle should reveal the future through the liver of the victim is not at first sight obvious. But it is certain that the liver, not the heart, was regarded by peoples in a primitive state of culture as the seat of life; and there is much to be said for the theory that the sacrificial animal on being accepted by the deity, was regarded as assimilated to him.[4] The soul of the animal was thus put in accord with the soul of the god, and, by reading the one, the diviner read the other. This theory also underlay the practice of hepatoscopy among the Etruscans, Greeks, and Romans (see 'Greek' and 'Roman'

[1] See King, *Hist. of Sumer and Akkad*, London, 1910, p. 183.
[2] *Ib.* p. 266 f. [3] *Ib.* pp. 124, 266.
[4] Cf. Jastrow, *Proc. Amer. Phil. Soc.* xlvii. [1908] 143 f., 646 ff. This distinction applies most satisfactorily to the two principal forms of official divination—hepatoscopy and astrology. It is not so clear when applied to some of the minor forms of divination (see below).
[5] For a discussion of the *barû* and his functions, in contradistinction to the *ašipu* and *zammeru* priests, see especially Zimmern, *Ritualtafeln für den Wahrsager, Beschwörer und Sänger*, Leipzig, 1896–1901, p. 82 ff.
[6] See Jastrow, *ZA* xx. [1907] 118 f., *Trans. Philad. College of Physicians*, xxix. (3rd ser.) 117 ff., *Harper Memor. Vol.*, ii. (London, 1910) 231 ff., and *Die Religion Babyloniens und Assyriens*, ii. 213 ff.

[1] Cf. Knudtzon, *Assyr. Gebete an den Sonnengott*, 2 vols., Leipzig, 1893.
[2] Cf. Rawlinson, *WAI* iv. pl. 61. In addition to Shamash and Ishtar, the other gods whose names are particularly associated with royal oracles are Ashur and Nabû. In Babylonia, Marduk's claim to supremacy in this, as in other departments of the national religion, was not contested.
[3] To one oracle a note is added, giving directions for its presentation to the king with accompanying ceremonial. It was to be recited to the king after precious oil had been poured out, offerings made, and incense burnt (cf. Strong, *Beiträge zur Assyriologie*, ii. [1894] 628, 630).
[4] See Jastrow, *Rel. Bab. und Assyr.* ii. 213 ff.

sections), who doubtless derived much of their augural lore from Babylonia.

No such theory underlay other forms of voluntary divination, such as *oil-divination*,[1] or divination by *arrows*,[2] or the *flight of birds*, etc. In all such cases (including possibly the flight of birds) the oracle was deliberately invoked, but there was no question of the instrument being assimilated to the deity. Each was merely a passive witness to the Divine will, which was made plain according to a traditional code having the sanction of the oracle.

The most important form of involuntary divination concerns the portents exhibited by *the heavens*. Eclipses, storms, and unusual atmospheric conditions would naturally be regarded from the earliest periods as manifestations of Divine anger, and their correct interpretation would be of the utmost importance to a race, however primitive. To go still farther, and trace a connexion between earthly occurrences and the movements of the heavenly bodies was a much later development, and undoubtedly followed the identification of the planets and principal fixed stars with the chief gods of the pantheon. Winckler's assumption that there was thought to be a perfect correspondence between heaven and earth, and that the occurrences on earth were merely a reflexion of heavenly phenomena (see STARS [Assyr.-Bab.]), is quite untrue for the earlier historical epochs, and is true only in a restricted sense for the latest periods of Neo-Babylonian speculation. The Neo-Assyrian astrological reports indicate what a careful watch was kept at that period by the royal astrologers for any indication of the Divine will, and the calendars of favourable and unfavourable days were but one result of the study which had been devoted to the astrological branch of divination. In most of the omens connected with both hepatoscopy and astrology the predictions refer to the general rather than to the individual welfare, in which we may see an indication of their official character.

Private and unofficial divination, to the continued existence of which the private letters of the later Assyrian period bear witness, bulks far more largely in the collections of augural tablets dealing with birth-omens, the interpretation of dreams, and of incidents in daily life. Monstrosities, human and animal, were naturally treated as significant, and future events were also predicted from minute variations in human infants and the young of animals. The class of general portents which were thought to foretell public disasters is well illustrated by an Assyrian copy of a list of forty-seven portents which preceded a conquest of Babylonia.[3] The phenomena from which the portents were derived may be classified under two headings: (*a*) rare natural occurrences, and (*b*) events which appeared to break some law of Nature. Under the first heading we have the fall of beams in houses, the outbreak of fire in sacred places, the appearance of wild beasts and birds in Babylon, a great flood at Borsippa, when the waters of the Euphrates rose within the precincts of Nabû's temple Ezida, and a flight of meteors or falling stars. Under events which appeared to be contrary to some law of Nature may be set the story of a decapitated head crying out, the occurrence of human and animal monstrosities, cases of incest and unnatural matings of animals, fruitfulness of the male in the case of a dog and of a male date-palm, unnatural growths and appearances of date-palms, and the appearance of evil spirits in sacred places. Under the last heading may also be set the appearance of honey on the ground at Nippur and of salt at Babylon, though these were doubtless natural secretions of the soil. The importance attached to such portents, affecting general and not individual welfare, is attested by the fact that in the Neo-Babylonian period chronicles of such events were compiled on the same lines as the historical chronicles and were regarded as of equal value and significance.[1]

The tablets of unofficial portents prove that almost every event of common life was capable of being interpreted as a favourable or unfavourable sign. But it should be noted that many of the events referred to on the tablets are to be taken as occurrences in dreams, though this may not be explicitly stated in the portion of the text preserved. In fact, the interpretation of dreams was one of the most important duties of the professional seer or diviner both in unofficial and in official life. Reference has already been made to the existence of this branch of divination in the earlier period, and the Assyrian historical inscriptions prove that the gods continued to adopt this method of sending encouragement to the king or of making known to him their wishes. The visible appearance of Ishtar, to encourage Ashurbanipal's army in Elam,[2] may be explained as a vision in sleep, and she probably did not appear to the king himself, but to a professional seer, as is definitely stated on another occasion when she sent the king a message. Such theophanies, accompanied by direct messages, were naturally of very clear and certain interpretation; but the meaning of most dreams was quite uncertain to the dreamer, for significance attached to the most minute points in the vision, and in every case it was necessary to have recourse to a highly trained diviner.

One of the most interesting classes of unofficial omens was drawn from the appearance of the various parts of the body during sickness, for the events predicted generally concerned the chances of the sick man's recovery, and they may thus be regarded as having something in common with the scientific study of disease. Not only were the sick man's colour and his cries and groans minutely noted, but such physiological phenomena as convulsions, epileptic movements, shivering from fever, and palpitations were carefully studied and made the subject of prognostication. It may be noted that many omen-texts which were formerly regarded as connected with births are rather to be connected with this class of divination.

There is evidence that the practice of various forms of divination, like that of Bab. astrology, was adopted by the Greeks after Alexander's conquest, and so survived under modified forms into the mediæval period. The mere fact that 'Chaldæan' was used by the Greeks as a synonymous term for 'astrologer' indicates the spread of the Babylonian astrological system, but there is also evidence that other forms of divination were practised by native diviners who had wandered to the coasts of Asia Minor and the West.[3] It is thus possible that more than one form of divination which has survived to the present day may be traced to a Babylonian origin.

LITERATURE.—In *La Divination et la science des présages* (Paris, 1875) F. Lenormant published a very able summary

of the subject, considering the period at which he wrote. Much new material has been published and classified by A. Boissier in his *Documents assyriens relatifs aux présages* (Paris, 1894–99) and his *Choix de textes relatifs à la divination assyr.-babylonienne* (Geneva, 1905, etc.); see also *Cuneiform Texts in the British Museum*, pts. xx., xxvii. f. and xxx. f. The fullest discussion is that by M. Jastrow, *Die Religion Babyloniens und Assyriens*, Giessen, 1902 ff., ii. 138 ff., 203 ff. For other references see the footnotes throughout the article.

LEONARD W. KING.

DIVINATION (Buddhist).—The art of divination was widely practised in India, as in Ancient Europe, at the time of the Buddha's birth. The early accounts of the latter event relate that eight Brahmans 'most versed in the science of astrology' were called in by the prince's father 'to examine carefully all the signs prognosticating the future destiny of his son' (Bigandet, *Life of Gaudama*[2], Rangoon, 1866, i. 46). Buddha himself, as was to be expected, when he became a teacher is invariably represented in the scriptures as discouraging and condemning divination and all allied arts. Although he personally was credited with foreknowledge, this endowment, in common with that of working miracles, etc., is regarded by Buddhists as the supernatural power (*ṛdhi*) inherent in every perfected saint, or *arhat*; and he is never represented as using this prophetic power for sorcery or soothsaying purposes. His chief right-hand disciple, however, Māudgalyāyana, is reputed in the scriptures of both divisions of Buddhism to have practised divination and sorcery, by means of which he is represented as having extended the popularity of that faith. For such pandering to popular prejudice he is reproved on several occasions by the Buddha, who is recorded to have said: 'That mendicant does right to whom omens, planetary influence, dreams, and signs are things abolished; he is free from all their evils' (*Sammāparibhājanīya sutta*, 2).

Nevertheless, divination was obviously too deep-rooted in the popular life to be eradicated; it is found at the present day flourishing among professing Buddhists of all sections, and among monks as well as the laity. It is not merely that foreign aboriginal methods of divination have been accorded a measure of recognition by Buddhism in its extension as a popular religion outside India to the Mongolian races, who have been inveterately addicted to divination and shamanism from the earliest times; positive elements of Indian astrology have been introduced by the Buddhist monks, who are now the chief astrologers for soothsaying purposes, not only in Tibet and Mongolia, but in Burma, Ceylon, and Siam. The grosser forms of divination remain for the most part in the hands of the laity or of the priests and priestesses of the pre-Buddhistic cults. But even some of these have been given a veneer of Buddhism by replacing in several instances the aboriginal cabalistic words of incantation by stereotyped sentences (*mantras*) in the Indian language, culled from the Indian Buddhistic scriptures.

Divination is sought after by the majority of professing Buddhists in matters of almost everyday business, as well as in the great epochs of life—birth, marriage, and death—or in sickness. It is primarily employed for the most part to ascertain the planetary influences which are lucky or unlucky, rather than those directly supposed to be caused by the demons (cf. DEMONS AND SPIRITS [Buddhist]), though the latter are usually regarded as the chief agents for executing the evil influence of the planets. The birth-horoscope of every individual, which is jealously treasured by himself, fixes the special planetary influences which are hostile throughout life. The intensity of such influence varies according to whether the planet in question is ascending or not. Then these personal unlucky days have to be compared with the general lucky or unlucky days for that particular day and week, and these again with those for that season and the elements, according to the varying positions of the planets at the time. The results, moreover, vary with the kind of business or adventure contemplated, which introduces another set of unlucky combinations. Thus an almost endless variation in the forebodings of luck or ill-luck is made possible; and this is to be sought out beforehand, and the evil duly avoided or counteracted. In this way is usually determined which is the right day and hour on which to commence any particular work, the right direction in which to set out on a journey, etc., the issue of any special business or matter of anxiety, or the interpretation of omens and dreams.

The methods of divination practised by Buddhist peoples appear to fall broadly into three categories, namely: (*a*) lots—the simplest, and generally performed by the people themselves; (*b*) astrology, for which learned adepts are necessary, usually the higher Buddhist priests; and (*c*) oracles, usually given by a priest or priestess of the aboriginal religion, seldom by a Buddhist monk.

Astrology is the more reputable form of divination practised by orthodox Buddhist monks, and from the preparation of the horoscopes and the worship prescribed therein the monasteries derive a considerable amount of their income. Among the 'Northern' Buddhists the presiding genius of the astrologers is the Bodhisattva Mañjuśrī. The oracles and professional soothsayers are almost exclusively confined to the followers of the pre-Buddhist religion of the particular country. A few isolated temples are famed for their oracles, in which the presiding divinity or demon, or, it may be, the spirit of a departed saint, is believed to inspire the officiating priest. More frequently the seer is a hermit who has gained a reputation as a prophet; but most commonly it is one of the numerous witch-doctors who is resorted to for an augury. These are of the class generally known as *shamans*, some of whom are women. They are usually illiterate, but possess a very shrewd and ready wit. They deliver their oracular response whilst in an exalted state, into which they work themselves by frenzied gesticulations. The office usually descends in the family. One of the commonest questions they have to answer is that relating to the source of the bewitchment or enchantment (Skr. *prabhāva*, Tib. *mt'u*) which is causing sickness to some particular person.

The Burmese, who may be taken as a type of the 'Southern' division of Buddhists, are fettered in the bonds of horoscopes and witch-doctors (see art. BURMA, § 19).

Amongst 'Northern' or Mahāyāna Buddhists divination is almost universal. In Chinese Buddhism it is only a little less prevalent than in that of Tibet and Mongolia, where it reaches its culminating point. Here the Indian astrological elements are largely mixed with the Chinese, and the oracular methods are of a more frankly shamanist type.

In Tibet, all three of the above-noted classes of divination are widely current. Those monks who practise the art of astrology for divination purposes are called *tsi-pa*, or 'calculators.' Each sect has its own *tsi-pa*, who are among the most learned and respected members of the monastery. The astrological methods follow the general lines already indicated; but the Chinese system of astrology largely predominates over the Indian, as has been shown in the specimens of actual horoscopes translated in detail by the present writer (*Buddhism of Tibet*, pp. 458, etc.). The combinations of unlucky portents are complicated by the introduction of a more complex system of

elements and cyclical animal-years and trigrams. In arriving at the calculations an important part is played by the famous mystic Chinese trigram, 'the eight *kwā*' (Tib. *par-k'ha*), on which the mysterious 'Book of Changes,' *Yi-king*, with its 64 hexagrams, is built up. A notable difference between the Tibetan and Chinese methods is that, while the former use only the trigrams for divination, the latter employ exclusively the derived hexagrams for this purpose.

The method by lot is the most popular and common of all, and for its practice nearly every layman is equipped with a pocket divination manual called *mô-pe*, by which the augury may be ascertained. This booklet, which the present writer has translated in great part, divides the results into different sections intended to cover all the events for which an augury is likely to be sought. The usual headings are 'Household,' 'Favours,' 'Life,' 'Medical,' 'Enemy,' 'Visitors,' 'Business,' 'Travel,' 'Lost Property,' 'Wealth,' and 'Sickness.' The lots are of various kinds, and include the following:—(1) Barley-corn or other grain, or pebbles or coins drawn from a heap, or a clutch of the rosary-beads; the last being perhaps the most common of all modes. (2) Dice upon a board on which are drawn geomantic figures with Tibetan references or symbolic animals, or a magic square with 9 compartments called the 9 *sMe-ba* (pronounced *me-wa*), or magic squares of 15 or 20, etc., numbered compartments, of Indian character, or consecutive lotus leaves numbered or inscribed, also derived from India. (3) Twigs—one of the forms of sorcery-divination is called 'the green twig spell' (*sNgo-sNgag*). This suggests to the present writer a parallel with the ancient Greek term for 'lot,' namely κλῆρος, from κλάδος, 'twig'; and the greenness of the twig seems to imply the living presence of the tree-god. (4) Cards on which geomantic figures or allegorical animals or signs are drawn or painted, with sentences to which Tibetan characters are assigned for reference. (5) Sheets or passages of the Buddhist scriptures drawn at random after an incantation. An official instance of divination by lot is seen in the selection in this way of the Dalai Lama by the 'Ordeal of the Urn' (see art. by present writer in *JRAS*, 1910, pp. 69–86), the result of which is believed to represent a direct expression of the Divine will. Indeed, some lamas go so far as to profess to determine by dice the particular region and state in which a deceased person has been re-born.

In all these operations the recital of Buddhist mystic formulæ (*mantras*) as magical spells or incantations plays an important part.

The oracle is a living institution in Tibet, largely resorted to by all the sects, reformed and unreformed. The monks of the yellow-cap and other sects who train as sorcerers (*sNgag-pa*, pron. *ngag-pa*) do not practise oracular divination except for ascertaining the presence and identity of evil spirits supposed to be actually causing sickness or other harm, with the view of exorcizing them. The soothsaying oracle-giver is usually a follower of the aboriginal Bon religion, and, though attached to one of the great monasteries, is not considered to be a member of the brotherhood, and is allowed to marry. The leading exception is the State Oracle at Nechung near Lhasa, at present represented by a celibate monk of the yellow-cap sect, but his origin from a non-Buddhistic Mongolian source has been traced by the present writer in detail. He is given the title of 'defender of the faith' (*cho's-skyong*), and is consulted by the State on all great undertakings, and daily by the public. Among the other oracles not absorbed within the monastic order and retaining their aboriginal features, the most important is at Karmashar in Lhasa, which purports to be inspired by the devil. The dress and equipment of these priests and their frenzied bearing identify them with the Bon cult and the shamanist devil-dancers. They possess no literature, and deliver their sayings orally in cryptic oracular form. They are ordinarily resorted to for the interpretation of omens and dreams, as well as in matters of business and anxiety. Their implements include (1) an arrow (*dah-dar*), to which coloured silken rags are attached; (2) a magic mirror of metal, which reflects the future—a Taoist and Shinto feature. For their augury they may gaze into a bowl or pool of water, or observe the smoke of a sacrificial fire, or the entrails of animals sacrificed and sheep's droppings, or the lines on charred sheep's bones, such as shoulder-blades—an ancient Mongol custom. Women frequently are the recognized oracles in the country districts. In recording several of the ways in which divining was practised in Tibet, a mediæval Chinese observer wrote: 'Notwithstanding the variety of their methods of divination, and their unskilfulness in their mode of examining, they are quite frequently surprisingly accurate.' This criticism still holds good.

L. A. WADDELL.

DIVINATION (Celtic).—According to Justin (XXIV. iv. 4), the Celts were skilled beyond other peoples in the science of augury, and Pausanias is mistaken when (X. xxi. 2) he doubts the existence of the art of divination among them. The Celts practised all kinds of divination. It was by the flight of birds that the Gauls who invaded Illyricum were guided (Justin XXIV. iv. 4). It was by lot that the Hercynian forest was allocated to Sigovesus (Livy, V. xxxiv. 4). The coincidence of two names of countries was an omen that led the Gauls to found a town in Cisalpine Gaul (Livy, V. xxxiv. 9). The Gallic king Catumandus made peace with the people of Marseilles because of a dream in which Minerva appeared to him (Justin, XLIII. v. 5). In 218 B.C. the Galatæ allied with Attalus refused to go any further because they were frightened by an eclipse of the moon (Polyb. V. lxxviii. 1). Before engaging in battle, the Gauls used to consult the entrails of victims; and once, when the entrails announced a great defeat for them, they massacred their women and children in order to gain the favour of the gods (Justin, XXVI. ii. 2). According to Strabo (IV. iv. 5 [p. 198]), the sacrifices and augural practices of the Gauls were opposed to those of the Romans; the human victim, who was very often a criminal, was killed by a sword-stroke on the back, and the future was foretold from the way he fell, the nature of his convulsions, and the flow of blood, in accordance with an ancient and unbroken series of observations (cf. Diod. Sic. V. xxxi. 3). Artemidorus relates that in a certain harbour there were two crows that had their right wings tinged with white; people who were in litigation used to lay cakes on a board, each arranging his own in such a way as to avoid all confusion. The crows swooped down on the cakes, ate the one person's and scattered the other's, and the disputant whose cakes were scattered won the case (see Strabo, IV. iv. 6 [p. 198]). Vervain was used by the Gauls for drawing lots and foretelling the future (Pliny, XXV. lix. 106; cf. Servius on *Æn.* iii. 57). Hippolytus (*Philosophumena*, 25) mentions lots by pebbles and numbers among the Celts. The evil omens noticed by the Britons of the 1st cent. were of great variety: noises outside the curia; howlings in the theatre; the appearance of a buried city at

the mouth of the Thames; the Atlantic looking like a sea of blood; human forms left on the shore by the tide (Tac. *Ann.* xiv. 32).

Ornithomancy, haruspicy, and the other methods of divination were undoubtedly practised originally by the tribal chiefs. The Galatian king Deiotarus was renowned as an augur (Cic. *de Div.* i. 15 [26–27]; cf. ii. 37 [78]); he never began an undertaking without first consulting the auspices. Once, when he had started on a journey, he was turned back by the flight of an eagle; he broke off his journey, and so escaped harm. The British queen Boudicca drew a favourable omen from the course of a hare which she had concealed among her clothes and then set at liberty (Dio Cass. lxii. 6). At a very early period among the Celts there were priests whose duty was to foretell the future. Justin (XXXII. iii. 9) mentions haruspices at Toulouse who, in order to free the Tectosagi from an epidemic of pestilence, bade them throw the gold and silver they had got from the expedition of Brennus into the Lake of Toulouse. Diodorus Siculus (v. xxxi. 31) distinguishes the Druids and the bards from the soothsayers (μάντεις), who foretold the future by the flight of birds and by examining the entrails of victims; they enjoyed great authority. They are identical with the οὐάτεις (Gr. transcription of Lat. *vates*) of Strabo (IV. iv. 4 [p. 197]). They are often confused with the Druids (*q.v.*). According to Cæsar (vi. 13), the Druids interpret the will of the gods. The Druid Divitiacus used to predict the future partly by the observation of birds and partly by conjecture (Cicero, *op. cit.* i. 41 [90]). In the time of Tacitus, Gallic Druids announced that the burning of the Capitol presaged the approaching fall of the Roman Empire and the control of the world by the Transalpines (*Hist.* iv. 54). A scholium tells that it was after eating acorns that the Druids foretold the future (Usener, *Commenta Bernensia*, 1869, p. 33). Lastly, the priestesses of the Island of Sena, who were endowed with various magical powers, such as the power to rouse the sea and the waves by their songs, the power of changing into animals, and of curing otherwise incurable diseases, had knowledge of the future and foretold it to those who sailed to consult them (Mela, III. vi. 48).

There were women in Gaul in the 3rd cent. of our era who foretold the future. One of them warned the emperor Alexander Severus of his approaching end (Lampridius, *Alexander Severus*, 60). The emperor Aurelian consulted Gallic prophetesses on the future of his posterity (Vopiscus, *Aurelian*, 44). A female soothsayer who kept an inn at Tongres promised the Empire, it is said, to Diocletian (Vopiscus, *Numerianus*, 14).

Among the Irish, as known to us from the ancient pagan epics, divination was held in high esteem. It was practised by the Druids. The source of their predictions was often the observation of natural phenomena; the best known form was divination by the clouds, and the word *néladoir*, lit. 'one who studies the clouds,' was used to designate the soothsayers. But divination takes place very often with the help of various objects: a yew-rod marked with ogham characters; a wheel, which recalls the well-known symbol of a Gallo-Roman deity. The Druids also interpreted dreams and the cries of birds, especially the raven's croaking and the wren's twittering. Sometimes omens were taken from the howling of a dog, and from the form of a tree-root. In the *Togail Bruidne Dá Derga* we find a pig sacrificed in order to discover the future.

We have no direct information on divination among the ancient Britons. But the Cornish *teulet pren*, 'to throw wood,' means 'to draw lots'; the Welsh *coelbren*, 'wood of prediction,' means 'lot'; and the Irish *crann-chur*, 'to throw the wood,' means 'to consult the lot.' The etymological agreement of the three dialects proves that divination by pieces of wood, mentioned by Tacitus among the Teutons (*Germania*, x.), was practised equally by the Gauls and the Britons. See also art. CELTS, vol. iii. p. 300, § 4, and COMMUNION WITH DEITY (Celtic), vol. iii. p. 750, § 5; and art. FATE (Celtic).

DIVINATION (Christian).—**1.** Divination was regarded by early Christian writers as a branch of magic. It was a danger to religious life, it excited a morbid curiosity, it led to needless anxiety, it held the will in bondage by destroying the sense of responsibility. St. Augustine sums up its dangers:

'Quas tamen plena sunt omnia pestiferae curiositatis, cruciantis sollicitudinis, mortiferae servitutis' (*de Doctr. Chr.* ii. 24).

Christ is the door (Jn 10^{9}); 'neither knoweth any man the Father, save the Son, and he to whomsoever the Son will reveal him' (Mt 11^{27}). 'The gates of the Divine Reason are rational, and they are opened by the key of faith' (Clement Alex. *ad Gent.* 1). And St. Clement adds the warning: 'Be not curious of ungodly shrines' (*ib.* 2). Divination is a practice which rests on occult methods, methods which had their place in primitive religion, but gave way to the higher methods of Jewish and Christian sacramentalism. This distinction of method was the guiding principle in the Christian view of divination. The diviner sees; he has an insight into Divine things. The Christian 'walks by faith, not by sight' (2 Co 5^{7}); he has touch with God, but this touch is 'through the veil, that is, his flesh,' in the widest sense of the economy of the Incarnation (He 10^{20}). Divination is impatient to draw the veil aside.

Christianity, therefore, as the religion of the Incarnation, has discouraged rites and practices which set aside the limitations of the flesh, and are easily able to get beyond control. The subjective type of divination, whether in the form of psychic exaltation or prophetic ecstasy, necessitates a suspension of the intellectual energies. The 'sympathetic passivity suitable for the transmission of the Divine thought' produces a weakening or destruction of individuality, by means of 'ecstatic enthusiasm, deep sleep, sickness, or the approach of death' (Chambers's *Encycl.*, art. 'Divination,' iv. 19). Christianity, in its responsibility to strengthen human nature as a whole by keeping control over the different faculties by means of Divine grace, has kept divination and ecstasy in the background as a danger to the mind and the will. This control is emphasized by St. Paul: 'The spirits of the prophets are subject to the prophets' (1 Co 14^{32}).

The history of Christian divination is the history of the subjection of divination to the control of authority. This principle is summed up by Gratian in reference to divination by lot, one of the practices which claimed for itself Apostolic authority (Ac 1^{26}):

'Sic et sortibus nichil mali inesse monstratur, prohibetur tamen fidelibus, ne sub hac specie divinationis ad antiquos ydulolatriae cultus redirent' (*Corp. Jur. Canon.*, ed. Friedberg, 1879, pt. i.; *Decr. Grat.* p. ii. caus. xxvi. qu. ii. c. i.).

Such control was not a new thing in the exercise of religious authority. When Augustus assumed the office of Pontifex Maximus, he destroyed the magical books which were held to be of no weight, and preserved only the Sibylline books:

'quicquid fatidicorum librorum Graeci Latinique generis nullis vel parum idoneis auctoribus vulgo ferebatur, supra duo millia contracta undique cremavit; ac solos retinuit Sibyllinos' (Sueton. *Caes. Aug.* 31).

For the same reason, it is related that L. Petillius publicly burnt certain Greek books as endangering the religion of Rome:

'Graecos, quia aliqua ex parte ad solvendam religionem pertinere existimabantur, L. Petillius Praetor Urbanus ex auctoritate senatus per victimarios igne facto, in conspectu populi cremavit' (Valer. Max. I. i. 'de Religione,' 12).

And the reason assigned by Valerius Maximus applies equally to the history of Christian divination:

'Nolnerunt enim prisci viri quicquam in hac asservari civitate, quo animi hominum a deorum cultu avocarentur' (Valer. Max. *ib.*).

And St. Augustine, although he himself confesses that the turning-point in his life was the opening of the 'Codex Apostoli' at the words (Ro 13^{13}) 'non in comessationibus et ebrietatibus' (*Conf.* viii. 12), deprecates the practice:

'Hi vero qui de paginis evangelicis sortes legunt, et si optandum est ut hoc potius faciant, quam ad daemonia consulenda concurrant; tamen etiam ista mihi displicet consuetudo' (*ad inquisitiones Januarii* [*Ep.* LV. i. 20]).

2. Rabanus Maurus († 856) sums up the practice of divination in the early ages of the Church in his treatise *de Magorum Præstigiis*, collected from various passages in Augustine and Isidore of Seville, and quoted in the *Decretum* of Gratian under the name of Augustine (*Corp. Jur. Can.* pt. i. p. 1024). On the authority of Varro, divination was of four kinds: 'geomanticam, ydromanticam, aeromanticam, pyromanticam.'

Geomantia is defined as 'ars e terra vaticinandi' (Ducange, *Gloss. ad Script. med. et inf. Lat.*). It is recorded that the resistance of Padua to the arms of Eccelino de Romano in 1226 was foretold by this practice:

'quidam de carceratis sollicite perquirebant per sortes, ad quem finem vester exercitus deveniret. Et unus per puncta quaedam unius artis, quam dicunt nescio quam Geomantiam, dicere videbatur, quod Padua non poterat hiis temporibus capi' (Rolandini Patavini, *de factis in Marchia Tarvisina*, x. 11, *ap.* Muratori, *Rer. Ital. Script.*, Milan, 1726, viii. 319). The same chronicler refers to it again in the preparation made by Eccelino for his last campaign in 1259 (*ib.* xii. 2).

Hydromantia is described by Augustine, in reference to Numa, as an act of divining by water:

'ut in aqua videret imagines deorum, vel potius ludificationes daemonum, a quibus audiret quid in sacris constituere atque observare deberet' (*de Civ. Dei*, vii. 35).

This practice still survives in the water of silence and other ceremonies associated with Christmas Eve, Hallowe'en, St. Mark's Eve, and Midsummer Eve. A love-couplet quoted by Abbott from Salonica illustrates the practice:

'A lump of gold shall I drop into the well,
That the water may grow clear, and I may see my husband that is to be' (*Macedonian Folk-lore*, pp. 51–57).

Aeromantia is another practice of divination which, under the form of weather-signs, survives to-day.

Pyromantia has also its innocent adepts in the present day. Some see faces in the fire, some see strangers on the bars. So in Macedonia a flickering in the fire, a flaring in the candle-flame, betokens the coming of a guest (Abbott, p. 98).

Rabanus, again quoting Isidore of Seville (*Etym.* viii. 9), says: 'duo sunt autem genera divinationis: ars et furor.' Under 'ars' are the various methods of art magic which are practised by the diviner; under 'furor' the enthusiasm and ecstasy and frenzy which form the atmosphere most conducive to divination. The ecstatic condition may still be found, not only among the dervishes of the East, but in some professedly Christian sects in the West. Authority alone can exercise the control both in the practice of spiritual art and in the frenzy of the religious devotee.

Among the professors of divination referred to in the literature of the Church are *incantatores, arioli, aruspices, augures, astrologi, genethliaci, mathematici, horoscopi, sortilegi, salisatores* (Isid. viii. 9). The *incantator* divined by means of spells or incantations. He claimed to cure diseases, to bless or curse the crops, to influence the weather. Constantine in 321 endeavoured to control the practice by law (*Cod. Theod.* lib. ix. tit. xvi. 3). The interpretation of this law reads:

'Malefici, vel incantatores, vel immissores tempestatum, vel hii qui per invocationem daemonum mentes hominum turbant, omni genere poenae puniantur.'

In the words of Pliny (*HN* xxviii. 2), such spells were an insult to human wisdom: 'viritim sapientissimi cujusque respuit fides.' The writings of the Fathers, the canons of the Church, and the experience of our times prove how great a hold such practices have even among those who profess Christianity. It is to them that St. Paul alludes in Gal 3^1 'O foolish Galatians, who hath bewitched you?' Liddell and Scott (*s.v.* *βασκαίνω*), quoting Theocritus, write: 'The charm was broken by spitting thrice' (Theoc. vi. 39). The *tempestarii*, storm-raisers or storm-quellers, are constantly referred to in the canons, the capitularies, and *pœnitentiaria* of the Councils, the Emperors, and the Bishops (Ducange, *Gloss.*, *s.v.* 'Tempestarii'). In Ireland such charms have been grafted into the religious customs of the people (Wood-Martin, *Elder Faiths of Ireland*, ii. 104–108). A spell against whirlwinds in Macedonia is this: 'Alexander the Great liveth, aye he doth live and reign.' Abbott (ch. xiii.) gives many examples of such spells and incantations.

The *arioli* were those who circled round the idol altars, uttering prayers, and making unhallowed offerings:

'Arioli vocati, propter quod circa aras idolorum nefarias preces emittunt, et funesta sacrificia offerunt' (Isid. viii. 9).

A law of 357 condemns the practice, and rebukes the curiosity which encourages divination: 'Sileat omnibus perpetuo divinandi curiositas' (*Cod. Theod.* lib. ix. tit. xvi. 4). The object of the rites of the *arioli* was to receive some response. This practice of 'raising the devil' is referred to by Tertullian:

'qui aris inhalantes numen de nidore concipiunt, qui ructando curantur, qui aohelando praefantur' (*Apol.* 23).

There may be some survival of this rite in the *Desiul*, or 'Holy round,' a circling sunwise round a rude stone monument or a well, and in the *Tuapholl*, or 'Unholy round,' which brings a curse. This cursing round was accompanied with incantations and the casting of cursing stones on the altar (Wood-Martin, ii. 51–57). The 'peccatum ariolandi' is condemned with the 'scelus idolatriae' in an Epistle of Stephen of Tournay (*Ep.* 120, *ap.* Ducange, *Gloss.*).

The *aruspices* are referred to in the laws of Constantine in 319 (*Cod. Theod.* lib. ix. tit. xvi. 1–2). The *aruspex* divined by means of inspecting the entrails of a victim offered in sacrifice. The decree does not destroy, but only regulates their practice. The *aruspex* must not go into private houses. He must be consulted only in the temple: 'aras publicas adque delubra'; and in the open light: 'libera luce tractari.' 'Superstitioni enim suae servire cupientes, poterunt publice ritum proprium exercere.' The Empire as well as the Church recognized the importance of keeping the practice of divination under control.

This practice still survives. The use of the shoulder-blade in divination is an art in itself, known as *omoplatoscopy*. The colour, the spots, the lines are all read by the expert. The breast-bone of the fowl is used for the same purpose. This art flourishes still in Western Macedonia and Albania. In England the practice is remembered in the reading of the speal-bone. The breaking of the 'wishing-bone,' which many of us remember as a solemn diversion of our childhood, as enjoyable almost as the feasting on the fowl, is also to be traced to the same source. This use of the 'merry-thought' is derived from the ancient use of the

cock in divination (Abbott, p. 97 f. ; Wood-Martin, p. 141).

Augury was of two kinds: 'ad oculos' and 'ad aures.' The divination was from the flight or from the song of birds. It was regulated by decrees of 357 and 358 (*Cod. Theod.* lib. ix. tit. xvi. 4. 6). There are many survivals of this kind of divination:

'A whistling maid and a crowing hen
Are hateful alike to God and men.'

The crowing of a cock out of hours, the hooting of an owl, the cawing of a crow on the house-top, are all regarded as uncanny. The pigeons which frequent the mosque of Bajesid in Constantinople and the Piazza of St. Mark's at Venice are looked on as birds of good omen. The geese in the cloister of the Cathedral of Barcelona may be a survival of the geese kept in old time in the Roman temple on the same site. The series of Dove-Bishops at Ravenna and the letting loose of pigeons at certain festivals, though now associated with the gift of the Holy Ghost, have doubtless a more ancient root in the rites of divination. A certain Hillidius delivered the people of Vieille-Brionde from a Burgundian raid by the leading of a dove: 'ut aiunt, commonitione columbae alitis incitatus.' And Gregory of Tours adds:

'Quod ne quis invideat confictum de columba, et homini praestitum Christiano, cum Orosius consulem Romanum, id est Marcum Valerium, a corvo alite scribat adjutum' (*de Mir. S. Juliani*, 7; Oros. iii. 6).

The magpie in England is still greeted with the rhyme:

'One for sorrow, two for mirth,
Three for a wedding, and four for a birth.'

And the flight to right or left is a survival of the augury 'ad oculos.' The swan was sacred to the children of Llyr. The word *drean*, 'wren,' is in Cormac's *Glossary* explained as '*Draói-en*, a Druid bird, a bird that makes a prediction.' He was the 'magus avium' in Irish hagiology. The stork, the starling, and the swallow also have their place in the folklore of divination. 'A dove from heaven' protected St. Moling at his birth.

'A madman and a fox (lived with him), also a wren and a little fly that used to buzz to him when he came from matins, till the wren hopped on it and killed it; and this killing by the wren was displeasing to him, so he cursed the wren, and said: "My fly. . . . Howbeit," says Moling, "but he that marred for me the poor pet that used to be making music for me, let his dwelling be for ever in empty houses, with a wet drip therein continually. And may children and young persons be destroying him!" Howbeit then, but the wren killed the fly. Then the fox killed the wren. The dog of the steading killed the fox. A cowherd killed the madman, namely, Suibne son of Colman' (Whitley-Stokes, *The Birth and Life of St. Moling*, Paris, 1906; Wood-Martin, ii. 140-150; Abbott, pp. 106-110).

Rhŷs tells the story of a bird-warning associated with the sunken palace of Bala Lake (*Celtic Folklore*, Oxford, 1901, p. 409). The common saying, 'A little bird has whispered it in my ear,' shows the continuity of tradition as to augury. Wood-Martin (ii. 143) gives a picture of a bronze instrument with bird ornaments, found in a bog near Ballymoney, Co. Antrim, which has been thought by some to be a divining-rod. It is not earlier than the 6th century.

The *astrologi*, *genethliaci*, and *mathematici* were all adepts in divination by means of the study of the stars. The term *mathematici* was a common one in the 4th cent.: 'quos vulgus mathematicos vocat' (Jerome, *Com. in Dan.* c. ii. 2). So also in the 1st cent. (*Didache*, c. 3). St. Augustine has frequent references to them: 'Jam etiam mathematicorum fallaces divinationes, et impia deliramenta rejeceram' (*Conf.* vii. 6). The title of the *Theodosian Code*, under which the practices of divination are regulated, is: 'de Maleficis et Mathematicis.' They are specially mentioned in edicts of 357, 358, 370, or 373. A decree of Honorius and Theodosius in 409 reads:

'Mathematicos, nisi parati sint, codicibus erroris proprii sub oculis Episcoporum incendio concrematis, Catholicae Religionis cultui fidem tradere, nunquam ad errorem praeteritum redituri, non solum urbe Roma, sed etiam omnibus civitatibus pelli decernimus' (*Cod. Theod.* lib. ix. tit. xvi. 12).

The *horoscope* had an important place in the divination of the *mathematici* and *genethliaci*. Isidore of Seville writes: 'Horoscopi dicti, quod horas nativitatis hominum speculantur dissimili et diverso fato' (*Etym.* viii. 9). In the Morocco crisis of 1911, a heading in the *Standard* of July 28, 'The Kaiser's Horoscope,' shows that there are still some who attach meaning to these practices.

The *sortilegi* were those who divined by lot or by the chance opening either of the Scriptures or of Virgil:

'qui sub nomine fictae religionis per quasdam, quas sanctorum sortes vocant, divinationis scientiam profitentur, aut quarumcunque scripturarum inspectione futura promittunt' (Isid. viii. 9).

The *sortes Sanctorum* were similar to the *sortes Vergilianæ* (*ap.* Spartian. *Vit. Had.* 5). Severus is said to have read his destiny in the line:

'Tu regere imperio populos, Romane, memento.'

Sometimes the answer was obtained by opening the book at random, sometimes by pricking the text with a pin. The practice was not regulated by the *Theodosian Code*. It was forbidden in a *capitulare generale* of 789:

'De tabulis vel codicibus requirendis. Et ut nullus in psalterio vel in evangelio, vel in aliis rebus, sortiri praesumat, nec divinationes aliquas observare' (*Op. Carol. Magn.* [Migne, *PL* xcvii. 187]).

The method of the *sortes Sanctorum* is given in a *Life* of St. Hubert of Liège (*c.* 714). After a fast of three days, two books were placed on the altar—a Book of the Gospels and a Sacramentary:

'Reseratum autem Evangelium hanc primum legenti sententiam obtulit: Ne timeas, Maria; invenisti enim gratiam apud Dominum. Liber etiam Sacramentorum in sui apertione hoc primum videnti objecit: Dirige viam famuli tui' (*ib.* p. 188, note).

The election of St. Martin to the Bishopric of Tours was decided by such a use of the Psalter:

'Unus e circumstantibus, sumto psalterio, quem primum versum invenit, arripuit. Psalmus autem hic erat: Ex ore infantium et lactantium. . . .' (Sulp. Sev., *de Vita S. Martini*, ch. 9).

The open practice of this mode of divination in the Church is illustrated on the occasion of the visit of Chramnus to Dijon (*c.* 556). The clergy determined to tell his fortune from each of the three Lections of the Gallican Mass:

'Positis clerici tribus libris super altarium, id est Prophetiae, Apostoli, atque Evangeliorum, oraverunt ad Dominum, ut Chramno quid eveniret ostenderet.' The three readings are then given (Greg. Tur., *Hist. Franc.* iv. 16).

In another case, three books were placed on the tomb of St. Martin:

'id est Psalterii, Regum, Evangeliorum: et vigilans tota nocte petiit ut sibi beatus confessor quid eveniret ostenderet.' This was in 577 (*ib.* v. 14).

The practice of learning by such means the character and administration of a newly elected Bishop became in early times an established Church custom. Ducange, in his *Glossarium* (*s.v.* 'Sortes Sanctorum'), gives illustrations from the *Lives* of Anianus of Orleans, Lanfranc, and others. It was known as the *Prognosticon*.

Another form of divination was also practised, known as *sortes per brevia*. In cases of doubt, papers were drawn, and the lot thus taken. In the *Chronicle of Cambrai*, it is recorded that the Bishops of Poitiers, Autun, and Arras claimed the body of St. Leger. The lot fell to the Bishop of Poitiers:

'tribus Epistolis, horum trium nominibus subscriptis, et confuse sub palla altaris obtectis, factaque in commune oratione, Pictavensi Episcopo ex indiciis sanctum corpus deberi declaratum est' (*ib.*).

In Spain a similar kind of divination was known as *ensalmos* or *inpsalmum*. The *sortes Apostolorum* was a collection of pious sayings drawn up for this purpose. At the end are these words:

'Haec sunt Sortes Sanctorum quae nunquam falluntur, neque mentiuntur: id est, Deum roga et obtinebis quod cupis. Age Ei gratias' (Smith-Cheetham, *DCA*, art 'Sortilegy').

Charles Simeon sought for comfort in this way:

'It was not for direction I was looking, for I am no friend to such superstitious as the *Sortes Virgilianæ*, but only for support. The first text that caught my eye was Matt. xxvii. 32' (Chambers's *Encycl.*, art. 'Sortes Virgilianæ').

There is also a reference to the use of rods in the casting of lots in the *Lex Frisionum* (tit. 14. I, *ap.* Ducange, *s.v.* 'Tenus'):

'Tunc unusquisque illorum septem faciat suam sortem, id est, tenum de virga.'

This kind of rhabdomancy was condemned by the Council of Auxerre in 578:

'non licet ad sortileges vel ad auguria respicere, nec ad sortes, quas Sanctorum vocant, vel quas de ligno aut de pane faciunt aspicere.'

The *sors de pane* refers to purgation by bread. The guilt or innocence of an accused was tested by the eating of bread. It was known as *corsned*:

'Si quis altari ministrantium accusetur, et amicis destitutus sit . . . vadat ad judicium, quod Anglice dicitur Corsned, et fiat, sicut Deus velit' (*Leges Kanuti Regis*, cap. 6, *ap.* Bromptonum; Ducange, *s.v.* 'Corsned').

The *salisatores* were those who divined by leaping:

'quia dum eis membrorum quaecunque partes salierint, aliquid sibi exinde prosperum seu triste significare praedicunt' (Isid. viii. 9).

It would also refer to what is popularly known as the 'jumps,' a twitching in the body. St. Augustine refers to it: 'His adjunguntur millia inanissimarum observationum, si membrum aliquod salierit' (*de Doctr. Chr.* ii. 20). There may be a trace of this in the *Life of St. Moling*:

'The cleric said to the Spectre: "Grant me a boon" . . . Then he bound that boon on the Spectre's hand. Thereafter he leapt his three steps of pilgrimage and his three leaps of folly. The first leap that he leapt, he seemed to them no more than a crow on the top of a hill. The second leap that he leapt, they saw him not at all. . . . But the third leap that he leapt, 'tis then he alighted on the stone-wall of the church . . . then he leapt from the stone-wall, and reached the church, and sat in his place of prayer. . . . After that he looked at the boy, and thus he was, with the glow of the anger and the fire on him, and the radiance of the Godhead in his countenance' (Whitley-Stokes, p. 16 f.).

3. Primitive Christianity would seem to have been more tolerant of divination than the more developed Catholic Christianity of the West. The evidence of the books of the NT points to this difference. It is in St. Matthew's Gospel alone that the Star is recorded (2^2), and that dreams are referred to as a means of revelation. The dreams of Joseph (1^{20} $2^{12.\ 13.\ 19.\ 22}$) and the dream of Pilate's wife (27^{19}) are an echo of the early belief in this form of divination in the Jewish-Christian Church. The only instance of the Divine lot is in the cradle of Christianity at Jerusalem, in the choice of St. Matthias (Ac 1^{26}). In the extension of Christianity the Gospel triumphs over divination. Simon the Sorcerer of Samaria (Ac 8^3), Elymas the Sorcerer of Cyprus (13^6), the woman with the spirit of divination at Philippi (16^{16}), the sorcerers of Ephesus (19^{19}), stand condemned in the records of the early mission outside Judæa. Occultism gives way before Sacramentalism, although faint traces of the primitive faith are recognizable in the stories of the 'shadow of Peter' (Ac 5^{15}), the handkerchiefs from the body of Paul (19^{12}), and the trances of Peter (10^{10}) and Paul (22^{17}, 2 Co 12^2). Witchcraft under the form of *φαρμακεία* is condemned in Gal 5^{20}, Rev 9^{21} 18^{23} 21^8 22^{15}.

In the sub-Apostolic ages there are a few references to the practice of divination. The *Epistle of Barnabas* links together *μαγεία* and *φαρμακεία* (xx. 1). St. Ignatius in his *Epistle to the Ephesians* also refers to *μαγεία*, and speaks of the one Bread of the Blessed Sacrament as the *φάρμακον ἀθανασίας* (xix. 2, xx. 2). Hermas calls a *μαντεία* a heathen practice (*Mand.* xi. 4). The *Didache* forbids it: *οὐ μαγεύσεις, οὐ φαρμακεύσεις* (c. 2); and again: *τέκνον μοῦ, μὴ γίνου οἰωνοσκόπος . . . μηδὲ ἐπαοιδὸς μηδὲ μαθηματικός* (c. 3). If the 'Two Ways' is an early Jewish-Christian document, this straight teaching against augury, incantation, and astrology implies a continuance of the practice among Eastern Christians.

This is supported by the evidence of Irenæus at the end of the 2nd century. The magical arts of Marcus coloured his sacramental rites as well as his teaching (*c. Hær.* I. xiii.). The followers of Simon Magus would appear to have grafted his magic into their Christianity.

'Igitur horum mystici sacerdotes libidinose quidem vivunt, magias autem perficiunt. . . . Exorcismis et incantationibus utuntur. Amatoria quoque et agogima, et qui dicuntur paredri et oniropompi, et quaecunque sunt alia perierga apud eos studiose exercentur' (*ib.* xxiii. 4).

The followers of Carpocrates practised the same art:

'Artes enim magicas operantur et ipsi, et incantationes, philtra quoque et charitesia, et paredros, et oniropompos . . (*ib.* xxv. 3).

Dreams are here included with incantations and philtres.

Tertullian in his *de Anima* (*c.* 209–214) regards divination as a faculty of the soul:

'Dedimus enim illi . . . et divinationem rerum, et divinationem . . . Definimus animam . . . divinatricem, divinatricem' (ch. 22).

Dreams may be 'peculiare solatium naturalis oraculi' (*ib.* 46), but he points out their danger:

'Definimus enim a daemoniis plurimum incuti somnia, etsi interdum vera et gratiosa, sed, de qua industria diximus, affectantia atque captantia, quanto magis vana et frustratoria et turbida et ludibriosa et immunda' (*ib.* 47).

And of the magical arts in brief: 'Quid ergo dicemus magiam? quod omnes paene fallaciam' (*ib.* 57). This he wrote as a Montanist. As a Catholic (*c.* 197), in reply to a charge 'de sterilitate Christianorum,' he numbers among the critics of the Church 'magi, item aruspices, arioli, mathematici' (*Apol.* 43).

Clement of Alexandria refers to the practice of divination among the Germans. There were women among them who could foretell the future by looking into the whirlpools and currents and eddies of a river (*Strom.* i. 15). 'The inventors of these arts as well as of philosophy were nearly all Barbarians' (*ib.* i. 16). Origen more than once speaks of divination as a snare to the Christians of Egypt:

'Haec ergo omnia, id est, sive auguratio, sive extispicium, sive quaelibet immolatio, sive etiam sortitio, aut quicunque motus avium, vel pecudum, vel inspectio quaecunque fibrarum, ut aliquid de futuris videantur ostendere, in operatione daemonum fieri non dubito' (*in Num.*, hom. xvi. 7). He calls the 'opprobrium Aegypti' of his day 'observare auguria, requirere stellarum cursus, et eventus ex iis futurorum rimari, servare somnia caeterisque hujusmodi superstitionibus implicari. Idololatriae namque mater est Aegyptus' (*in Libr. Jes. Nave*, hom. v. 6).

The inscriptions of Eumeneia in the 3rd cent. show that the city was to a large extent Christian. But, as it was necessary to keep up the forms of the national religion, and as the 'courtesies of society and ordinary life, as well as of municipal administration, had a non-Christian form,' the 'spirit of accommodation' must have ruled in the religious life of the citizens (Ramsay, *Cities and Bishoprics of Phrygia*, vol. ii., Oxford, 1897, p. 504). The disciplinary canons of the Synod of Ancyra in 314 are an echo of this 'spirit of accommodation' of an early age. The 4th cent. tightened the reins of discipline as well as the definitions of the faith. The practice of divination was condemned by canon xxiii. (*al.* xxiv.):

'Qui divinationes expetunt, et morem gentilium subsecuntur . . . sub regula quinquennii jaceant' (*Decret.* p. ii. caus. xxvi. qu. v. 2).

The same need of discipline was recognized in the far West. The Synod of Eliberis (Granada) in Spain (between 314 and 324), in addition to many canons against idolatrous rites, has one canon forbidding women to frequent cemeteries: 'ne feminae in coemeterio pervigilent' (can. xxxv.). St. Jerome refers to the custom of resorting to cemeteries as a means of divining with the dead:

'sed sedens quoque, vel habitans in sepulchris, et in delubris idolorum dormiens; ubi stratis pellibus hostiarum incubare soliti erant, ut somniis futura cognoscerent' (*in Is.* 65[4]).

The clergy were forbidden to practise divination by the Synod of Laodicea (*c.* 343–381):

'non oportet sacris officiis deditos vel clericos magos aut incantatores existere, aut facere philacteria' (can. 30, *ap. Decret.* p. ii. caus. xxvi. qu. v. 4).

Priscillian and his followers were accused of practising astrology. And his writings give some grounds for the accusation, though he clearly states how far he thought it right to go:

'Adtendi autem lunaris ideo cursus jubetur, non ut in eo observatio religionis sit, sed quia in ea quae videntur omnis homo vincitur et germana aelementis caro . . .' (*Priscill. Op.*, ed. Schepss, 1889, p. 78. 3 ff.; cf. F. Paret, *Prisc.* 1894, p. 144).

The Church of the 4th cent. was weakened by this 'curiosity' in the matter of divination. It had difficulty in detaching itself from the practice of the magical arts. At the close of the century Nicetas of Remesiana, a prominent Bishop of the old Latin Church of the Danube, writes:

'abrenuntiat inimico et angelis ejus, id est, universae magicae curiositati . . . renuntiat et operibus ejus malis, id est, culturis et idolis, sortibus et auguriis . . .' (Niceta, ed. A. E. Burn, Cambridge, 1905, *de Symbolo*, c. 1).

The Gallican Church seems to have been troubled by this curiosity in magic. It is referred to in the canons of Agde (506), Orleans (511), and Vannes (461 or 465). In a canon of the Synod of Auxerre (578), in addition to the *auguria* and *sortes Sanctorum*, mention is made of *characteres*. These were of the nature of charms:

'Phylacteria et Characteres diabolicos nec sibi nec suis aliquando suspendant, incantatores velut ministros diaboli fugiant' (Aug. *de Temp.*, serm. 163, *ap.* Ducange, *Glossar.*).

The Church of Spain also regulated the practice of divination. It is condemned in the *capitula* of Martin of Bracara (c. 72), and in can. 30 of the Council of Toledo in 633. But it survived throughout the West, and in the Carolingian Renaissance of discipline it required stringent treatment. In the *Decretals of Gratian* is a long extract from an unpublished capitulary which illustrates its danger under the Frank Empire:

'Episcopi eorumque ministri omnibus viribus elaborare studeant, ut perniciosam et a zabulo inventam sortilegam et magicam artem ex parrochiis suis penitus eradicent' (*Decr.* p. ii. caus. xxvi. qu. v. 12).

The Church of Rome expressed the judgment of the whole Church in the Council of 721 under Gregory II.:

'Si quis ariolos, aruspices vel incantatores observaverit, aut philacteriis usus fuerit, anathema sit' (*ib.* qu. v. 1).

T. BARNS.

DIVINATION (Egyptian).—From more than one point of view it seems impossible to bring Egyptian divination under the classifications in general use in the study of mantics; we cannot make either the ordinary definitions, or the purpose, or even—to a certain extent—the means employed fit in exactly. In fact, in this study, as in so many others, the Egyptians made no attempt to formulate a theory, or even to lay down general principles. In Egypt we find nothing corresponding to the didactic treatises on mantics composed by the Chaldæans and by the Hellenic world, nothing like the prodigious variety of means of divination of the Assyrians and Greeks, including the observation of almost every phenomenon of Nature, beings, and things. The observation of the ordinary aspects of the sky is confined to the realm of astrology; its unusual aspects (meteors, shooting stars, comets, zodiacal light, eclipses) are explained in advance by mythology, and do not require an interpretation from actual divination. There is no mention of the mantics of rain, winds, clouds, or smoke, etc., in the Egyptian texts, or of the twenty kinds of hydromancy, or of divination by 'palmistry.' In connexion with living creatures there is no ritual study of the movements or appearances of animals (ornithoscopy, ichthyoscopy, etc.); nor do we meet with haruspicy,[1] extispicy, or teratoscopy. There are no evidences in the Egyptian texts or monuments of cledonomancy, libanomancy, rhabdomancy, axinomancy, clairomancy, lithoboly, belomancy, knuckle-bones, dice, divining-rods, or, indeed, of any of the means of inquiry by the production of phenomena for interpretation.

When we apply to Egypt the classifications in general use for the mantics of other peoples, we find a certain number of divinatory processes mentioned by the ancient Greek and Roman authors, about which, however, it is very important to observe: (1) that they are of rare occurrence, or are employed only in popular superstitions and not by official divination; and (2) that they were introduced into Egypt at a late date, under the influence of Asia or of the Hellenic world.

To the first class we may assign the indications drawn from the flight of birds and encounters with serpents; *e.g.* the story of Alexander's expedition to the Great Oasis. This form of divination possibly belongs to Egypt, and the inscription of Hammamat (Erman, *ZÄ* xxix. [1891] 60) may be cited in its defence, in which a gazelle shows the spot in the desert where the stone of the royal sarcophagus is to be set up. But the incident was related rather as a miracle, and there is no ground for considering it a regular method of divination. The use of the divinatory vase seems equally unknown to the priests of the official cults, and the so-called magic consultation of Nectanebo is a legend of Greek origin. The divinatory vase certainly existed in Egypt in the last centuries of its history, and the demotic texts agree on this point with the Græco-Roman evidences; but it is very probable that this practice was imported from Persia, and in any case it was never employed by the court-priests, but only by magicians.

Apart from the reference in Gn 44[5] to the divining cup of Joseph, which may be a non-Egyptian adaptation, we know from the classics (Plin. xxxiii. 46; Plutarch, *de Iside*, lxi., lxiv.; Horapollo, i. 39, etc.) that this was a part of the cult of Anubis in particular; the god was invoked by means of a vase full of liquid or a flame; and the reading of the divinatory signs or images was performed through the medium of a child, on whom they worked by incantations and the laying on of hands. And thus, says Diodorus (xvii.), 'the soul foresees future events in the phantoms she herself creates' (cf. Virey, *Religion égyp.*, Paris, 1909, p. 227, and Ermoni, *Religion égyp.*, do. 1910, p. 122). The use of the child, because of its innocence, is a common practice in all magic, and is connected with the universal belief in the inferiority of a man who has committed a sin or has had sexual connexions, in the struggle against the spirits. Lefébure connects these methods of divination of the later period with analogous practices occurring all over North Africa (*Revue Africaine*, 1905, no. 257, p. 211), and conjectures with great probability (*Sphinx*, vi. [1902] 61) that the material process consisted in creating in the child's brain phantoms and images of Anubis and others, by means of hypnotism and looking at a shining object. We know, besides, that these processes persisted down to our own days in the Arabic world.

It is possible, then, to find in Egypt in the last centuries some of the processes of divination of the Mediterranean and Chaldæo-Assyrian world. The fact of their combination with innumerable popular superstitions tended to produce in the official cults a multitude of practices which do not really belong to the history of Egyptian divination.

With the above restrictions, it appears that the contents of Egyptian divination were essentially four: (1) the interpretation of dreams (*q.v.*), sought or unsought; (2) the reading of horoscopes (see STARS); (3) divinatory calculations made from the position and influences of the stars (*q.v.*); and (4) the manifestation, directly and plainly indicated, of the will of the gods themselves. This last branch includes (*a*) the movements of the sacred animals, (*b*) the responses of the 'prophetic statues,' and (*c*) the words spoken by the gods in their temples, *i.e.* oracles properly so called.

(*a*) The first group in the last class seems to have

[1] Herodotus and some modern authorities have confused veterinary examination to ensure the purity of sacrificial victims with examination for purposes of divination.

played a very limited part. Consultations of the bull Apis are known in the classics. Pliny (viii. 71) and Amm. Marcellinus (xxii. 14) relate that the omen was good or bad according as Apis accepted or refused the food offered by the worshippers, and that the sacred animal refused the offering of Germanicus. They also tell of prosperity or adversity being foretold for the country according as the bull chose to go into one or the other of two stalls.

There is little doubt that these superstitions are truly Egyptian and very ancient. But it is very doubtful whether, at the classical period, such manifestations were employed by the priests as means of divination; it is far more probable that they were simply popular superstitions, existing throughout all Egypt wherever sacred animals were kept in the temples, and that what the Greeks and Romans tell of Apis happened also in the case of the crocodiles of Ombos, and the rams of Elephantinê or of Mendes. It may have been due to the influence of the Greeks, who were accustomed to give importance to this very type of mantics, that these customs became embodied in the priestly cult, or at least were given a greater importance as methods of divination. In fact, dreams, astrology, and, in particular, the direct consultation, in definite language, of living images of the gods, had at an early period supplied the official religion of Egypt with methods of consultation far more convenient, more explicit, and more in keeping with the fastidious genius of the race; and it is to these classes that nearly all the known examples of Egyptian divination belong.

(*b*) Among the most characteristic processes in the consultation of statues is the designation of the Ethiopian sovereigns by the statue of Amon-Rā at Napata. The ancient authors had been struck with it (see esp. the account of Diodorus, iii. 5, and a corrupted version in the satirical writings of Synesius [*Works*, French tr. by Druon, Paris, 1878, p. 244]). The famous *stela* of Jebel Barkal, on which the election of Aspalut is recorded, is the most complete account of this practice accessible in the English language. After a number of ceremonies, too long to describe here (see Maspero, *Boulaq*, pp. 69, 336, and *Guide Cairo Museum*, ed. Dec. 1910, p. 215, Room S, West Side, no. 692), the candidates for the throne were brought before the statue of the god, which had been adjured to make its choice known. They filed past the idol, which remained motionless until it 'seized' the candidate it chose. The statue thereupon declared in formal terms that this was the king. The newly-elected monarch then entered the sanctuary, and was crowned by the god himself.

Recent Egyptological discoveries show that all the traits of this curious ceremonial were borrowed by Ethiopia from the divinatory ritual of Egypt. On the tomb of Nîh Uônnaf at Gurneh (see Sethe, *ZÄ* xliii. [1906] 30 ff.) there is an account of the election of the high priest of Amon-Rā. The candidates were led before the statue of the god. They were all shown to it in turn, 'and not to a single one of them did it make the motion *hanu* [see below for the actual gesture] except, said the King, when I pronounced thy name.' Then, Nîb Uônnaf being thus chosen, the statue conferred the power upon him by four magic passes. A second text, discovered later, proves that the custom was in existence even in the time of Amenhotep III., and it is quite logical to suppose that it goes back to a much earlier period; it may perhaps be even as ancient as the worship of the god himself.

The right of consulting the god is reserved, of course, to his people, *i.e.* to the king or the chief 'prophet' (a poor modern tr. of the word *honu*, which is, more exactly, a 'man belonging to some one'). The consultation does not take place at any time, but only, according to traditional etiquette, on one of the days of the holy image's 'going out' (*khāu*='assemblies,' 'processions')—in the case of the Theban Amon, *e.g.*, at 'his great festival of Apit.' There is a recognized place where it is allowable to present the divinatory request to the god, and even to interrupt the 'going out' of the god to question him. At Thebes it is the place called the 'silver pavement.' The priest approaches the shrine containing the statue and begins by an invocation (*âsh*) in court language. He then asks the statue if it is convenient for it to listen to such and such an affair. The terms used here also are traditional: 'O God of Goodness, my Lord,' is the beginning of the question. Then the case is stated: a theft has been committed; will the god help to find the stolen property and the culprits? A funerary monument has been robbed; does the god desire the punishment of the spoilers? Sometimes even more circumlocution is used: 'Lord, may we lay before thee a serious affair?' (*e.g.* among the Banis of the Great Oasis; see below). If the statue remains motionless, the request is refused, and the matter is dropped. If it consents to listen, it acquiesces (*hanu*) 'twice with decision.'

The actual gesture of consent is difficult to determine. Nearly all authorities admit that the statue 'shook its head.' The word *hanu*, always employed, without exception, in all the texts, for this method of divination, may, indeed, mean a shake of the head, according to the usual signification of the word in ordinary language. Amon-Rā of Karnak, in the long series of examples known to us, Amon 'Pakhoniti' of Memphis (cf. Pleyte, *PSBA* x. [1892] 41, 55), Amon 'Ta-Shoni' (*ib.*), Khonsu 'Nofirhâtep' of Thebes, Amenôthes I., king of the dead (cf. Erman, *SBA W*, 1910, p. 210), and the images of the Ethiopian Amon of Napata gave responses in this way (*hanu*). The same is true of Isis of Koptos (Petrie, *Koptos*, London, 1896, pl. xix. lines 11–13). There is doubt, however, in the case of Jupiter Amon of the Great Oasis (cf. Brugsch, *Reise nach der grossen Oase*, Leipzig, 1878, pl. xxii.), and the consultation granted afterwards to Alexander, on his famous journey to this sanctuary. But there is no decisive context to prove that it was the head rather than the arms that moved, and, as we have no remains of these portable statues, scientific reserve must be maintained on this material detail. The passage in the famous *stela* of Bakhtan, in which the king asks the statue of Khonsu 'to incline its face,' is nothing more than an ordinary expression in court language, meaning 'to be in a benevolent mood, or 'to consent gladly' to something. Finally, it will be observed: (1) that several passages in the inscriptions and papyri say that the statue performs *hanu* 'towards' some one hidden in the midst of a group or a crowd; (2) that, in many other circumstances besides interrogations proper, the statue 'seizes some one, or 'holds the string' (the ritual term for founding a temple), etc. These evidences, along with others too long to give here, justify us in assuming, with equal probability, that the *hanu* may have been a movement of the arm of a jointed statue, accompanied perhaps by a sound, a whistling, or a cry, of suitable strength. We have absolutely no exact details here, though we know that, in the case of oracles proper, the god spoke; but this Divine language is itself a matter for discussion. Maspero, in all the works in which he discusses these 'prophetic statues' (see Literature), holds that they were actual jointed dolls, with strings attached to their arms and heads, and that the officiating priest pulled a string for each response and each gesture. In his earliest works (cf. *RHR* xv. [1887] 159 ff.) he even seems to admit the existence of actual machinery, worked, when required, by fire or steam. The explanation that the statue had a jointed head seems to be generally accepted. It is a very ingenious and satisfactory hypothesis—but nothing more, for no single text or representation supplies formal proof.

Divination was the exclusive privilege of the 'essential statue, just as were the possession of the fluid *sā*, and the gift of exorcism, of healing, of 'vital breaths,' etc.; and—probably for reasons of magic awe—the Egyptians *never* made a single representation to show what such a statue was. There is one portable figure of Mîn, it is true, nude and ithyphallic, carried on his shield and having his 'magic-case' with him, in a number of Theban representations of processions (Luxor, Medinet Habu, and Ramesseum). This statue suggests, at the very first glance, the idea of a string hanging from the neck to the ground—which would justify the theory of statues with movable heads. But it is doubtful whether this is a 'prophetic statue—from the very fact that they have dared to show it in bas-relief. We know, finally, that the sacred image was carried on the *bari*; and, even allowing that the *naos* was open during the consultation and that the statue was taken out of it and placed on the ground (cf. Pleyte, *PSBA* x. 43), it is difficult to see by what sort of mechanical means movements could be produced. All that we can state with certainty is that the idol indicated its wishes by a gesture, or by a gesture and a cry at the same time, and repeated twice.

After this sort of 'duty performance,' the king or the chief priest puts the question. The cases about which we know (from inscriptions, papyri, and ostraca) are of great variety (cf. Brit. Mus. Papyrus 10335; Mariette, *Catal. mon. d'Abydos*, Paris, 1881, no. 1225; Brugsch, *ZÄ* ix. [1871] 85; Erman, *SBA W*, 1910, pp. 344, 346=Cairo Ostrakon 25242; Turin Papyrus 126, ch. 3; Erman, *Ägyp. Rel.* 186; Louvre Maunier Stela; Breasted, *Anc. Records*, iv. [Chicago, 1907] 317; Naville, *Inscr. hist. de Pinodjem III.*, Paris, 1883, p. 111). A consideration of all the questions submitted shows that the majority are judicial decisions, and that

they are entirely concerned with the people and things ruled over or possessed by the god; in short, that they are cases not of interpretative divination or divination of the future, but of the divination, for the immediate present, of the god's formal decision. This remark helps us to understand how the process of the Divine response by *hanu* tended to become a settled gesture, almost a piece of legal phraseology, the divinatory element of which in the end quite evaporated (see below).

The process of questioning is controlled by rigorous fixed rules. A series of definite questions are asked, each one bringing nearer, *ne varietur*, the solution of the difficulty. To each question the statue has to reply by 'yes' (*i.e.* by performing *hanu* 'twice with decision') or 'no' (*i.e.* by remaining unmoved). In certain cases, the final decision depends entirely upon the statue's gesture. Two pieces of writing are placed before it, the one saying that an accused person is guilty, the other that he is not guilty; and the statue is required to choose. To make quite sure, this test is repeated twice. The case of the steward Thothmes is an example of this kind, in which, twice over, 'the god refused to take the writing that declared him guilty, and took that declaring him innocent' (cf. a good tr. of this typical example in Breasted, *Anc. Records*, iv. 325).

This curious passage would lead one to suppose that, even although *hanu* means a shaking of the head, the statue certainly moved or stretched out its arm to take the writing. This evidence should be laid alongside of the various texts that seem to show that at the coronation of the king the statue of Amon-Rā put the crown on the new sovereign's head, as in Ethiopia (see below).

Taken in connexion with the indication of the Ethiopian kings and the Theban chief priests by the statue, these examples of judicial decisions throw light upon the philosophy of such proceedings. It is possible—and probable—that originally the gesture of the statue was actually divinatory, inasmuch as, though an indication was looked for from it that was the result, it is true, of solicitation, its exact answer or choice could not be foretold. In the earliest times the *hanu* of the statue was as impossible to anticipate with certainty as were the miraculous movements recorded in other inscriptions—the statue making a gesture of welcome or salutation, during a procession, as it passed before a court official (cf. Petrie, *Koptos*, pl. xix. line 11 f.), or, more frequently, before the prince who was destined one day to mount 'the throne of Horus,' and of whose future position as king of Egypt no indication had ever until then been made. The original nature of the process had a tendency gradually to become an operation in which the process of investigation, procedure, and inquiry was carried through more and more by human means, and the only uncertain element—*i.e.* the opinion, or the will, of the god—was reduced to the very restricted alternative of saying 'yes' or remaining motionless. Divination proper, thus reduced to the minimum of interpretative freedom, and confined to cases equally definite and real, became, by force of circumstances, rather a registration of the god's consent taken for granted in practice, and soon even simply a formality with practically no divinatory significance in it. This was almost certainly the nature of the Divine *hanu* in the cases of the election of the Ethiopian king and the nomination of the Theban chief priest; and similarly in the ratification of judicial sentences. This all serves to explain how, in the course of history, the Divine consent by a movement of the statue came to be the regular and necessary accessary of registration for all kinds of contracts, deeds of gift, marriages, wills, and even rescripts relating to funerary lots passed before the temple authorities, in which there was no kind of 'divination' to be seen—unless, indeed, we give that name to the desire (or would-be desire) to be quite certain, for the sake of the validity of these actions, that the spirit of the god was not opposed to them (cf. (1) the process in the Turin Papyrus 126; (2) Erman, *ZÄ* xxxv. [1897] 12, for the registration of a will; (3) Maspero, *Boulaq*, p. 336, for the registration of a funerary decree; and (4) what Breasted says in *Anc. Records*, iv. 325, about a special work on this series of *legal documents*).[1]

(*c*) From the known examples, it appears that the consultation of statues usually consisted in obtaining a series of acquiescings manifested by the *hanu*. We have seen, however, that movements of 'seizing' sometimes accompanied this manifestation of the god's will. There were also other movements of an analogous kind; *e.g.*, when the image of Khonsu consented to grant its magic power to one of the statues of Khonsu in order to drive off a demon, it is said that it 'made four passes of the magic fluid'—from which we may assume actual movements, no matter how rudimentary, of the arms or of an arm. In some of the cases cited above, it is formally stated that the *hanu* was accompanied by spoken words, sentences more or less brief, but practically forming a short discourse; this is the case in the election of the kings of Napata. It is, indeed, certain, from a number of other texts, that the gods spoke—not, of course, to the common herd of mortals, but to their sons and their ministers (*i.e.* to the members of the royal family and the high priests). The gist of the wishes they manifested thus was afterwards reduced to the form of a decree (*utu*), and engraved on the walls of the temple as 'the words of the god himself'; or their wishes were embodied in one of those rhythmical prose accounts, lyrical in character, which have been rapidly enriching the *corpus* of Egyptian historical inscriptions in recent times.

These oracles are of as many varieties as the consultations of the statues examined above. Sometimes the god himself, of his own accord and unsolicited, suddenly manifested his will, making his voice heard, in the silence of the sanctuary, to the king or priest coming into his majestic presence; and he would order a mission to Lebanon for wood for his house, for stones for his temples, for perfumes and rare trees for his altars and sanctuaries (cf. Erman, *ZÄ* xxxviii. [1900] 1; and Golenischeff, *RTr* xxi. 127). Sometimes the manifestation was less unforeseen: it might be the complement of a previous warning in a dream, a formal explanation of which the god was graciously granting by request; or it might be the answer to a passionate request of the king. To the last category belongs the discourse received by Hatasu in the temple of Deir el-Baḥarī, when she came, after prayers and fasting, to seek a manifestation of the Divine will, and was ordered to send an expedition to the country of spices (cf. Naville, *Deir el Bahari*, London, 1898–1901, iii. 84). This famous example is a good specimen of the manner of proceeding. The other examples of the same type show that in no single case was the divination accompanied by ecstasy, religious frenzy, or hypnosis of the subject, and that the god never used mysterious language, or broken mangled words that were afterwards submitted to the interpretation of professional soothsayers. The statements made by the god were in clear and coherent terms. They were practical replies as to a fact, a decision to be taken, or the issue of a concrete imminent event. All the Egyptian precision and love of clearness are seen in these oracles, as we may call them. Seti I. implores the god, and is shown a place where he must make a well in the desert, while the god demands a sanctuary in exchange (cf. Breasted, *Anc. Records*, iii. 82); and orders, solicited or unsolicited, relating to the construction and repair of buildings (*e.g.* Mariette, *Karnak*, Leipzig, 1875, pl. xii. = Breasted, *Anc. Records*, ii. no. 606) appear to have held the chief place in these oracles—perhaps, indeed, just because these responses more than others were engraved on the walls of the buildings with which they were thus connected. Another kind of prediction which we find of more and more frequent occurrence is the foretelling of a prince's coming to the throne. Thothmes III. was informed by the god long in advance that he would one day be king of Egypt (Inscription of the year 23 at Wady-Halfa); and this prediction was confirmed later by the statue suddenly stopping in front of Thothmes, proclaiming

[1] On the question of illusion or fraud in the above processes, see Foucart, *Religion et art dans l'ancienne Égypte*, Paris, 1908. vol. i. ch. i. p. 37 ff.; Maspero, 'Les Statues parlantes,' in *JD*, 21st Dec. 1898.

him king, crowning him, and making him a speech (cf. Breasted, 'Coronation Inscription,' in *Anc. Records*, ii. 60, no. 140).

Such facts should be compared with those telling how the Divine statue proclaimed the king, appeared in public with him under its protection, and gave him his crown and diadems (*e.g.* Daressy, *Annales*, iii. [1903] 27 f. for Ramses II., and similar facts for the Thothmes, the Amen-hoteps of the XVIIIth dynasty, and Harmhabi). They seem to indicate that here we have, for historical Egypt, the continuation of an extremely ancient divinatory process. If we further consider the remarks of Breasted (*Anc. Records*, ii. 225) on the antiquity and persistence of the coronation ritual of Heliopolis, it is a possible assumption that the whole is a survival, made regular and ritual, of a much earlier state of things, and that, in pre-historic times, the accession of a chief was actually settled by divination, the idol (or, before it, the fetish) intervening by prophetic processes to indicate the man it desired to be its minister and to rule over men in its name. Such a view would modify our ideas on the origins of Egyptian monarchy, and should be considered along with the analogous customs to be found among numerous uncivilized races of the present day relating to the designation of kings or priests by divination.

The inscriptions of the classical period published in recent years show that the gods themselves gave direct orders by speeches, and it is beyond all doubt that consultation of the gods by the kings was of very frequent occurrence, and that divination was involved in the majority of important decisions. At grave junctures, *e.g.* when there was a conspiracy to frustrate, a treaty to arrange, or an expedition to command, the king asked help from the god, and he did not ask it in a sign or prodigy to be interpreted afterwards; he requested an answer in articulate language and exact terms. It is difficult to find a nobler tone in the ancient literature of the East than that of some of the inscriptions in which a king relates how he came to the temple to seek for Divine wisdom, stated his business before his ancestor, asked him what he ought to do, and turned away from this mysterious interview with face lit up and heart full of joy, because he had heard his god speak to him 'as a father to his son' (cf. *e.g.* Pleuriant, *RTr* xv. [1896] 178; *Inscription of Thothmes IV. at Konosso*). This fine formula recurs in several inscriptions relating to consultations of the god by the king.[1]

To these examples of oracles of the Pharaonic period we may add, as having an Egyptian character and no foreign elements, the demotic inscriptions of Nubia, relating to the oracles of Isis of Philæ and Thoth of Pi-Nubs. The records that the 'chief of the temple held a consultation of the god' connect this method of divination with the official procedures already noticed (cf. Révillout, *Revue égyptologique*, v. nos. i.–ii., and *PSBA* x. 56–58). At the oracle of Dakke, held in great veneration by the Ethiopians and the Blemmyes, the statue of the god was consulted 'at the great feast' (*bo en lo*). Texts show that a consultation of this oracle was a recognized thing when a prediction of the circumstances favourable for the celebrated yearly journey of the statue of Isis of Philæ to the Blemmyes was desired. It is also an Egyptian custom that we find at Korti, when the chief priest of the temple leaves the choice of his successor in the hands of the god (cf. *Revue égyptol.* v. no. 111, for a series of examples of all these oracles).

It is very difficult to discriminate between what is Egyptian and what is foreign in the mass of examples of divination and sanctuaries having an oracle mentioned in connexion with Egypt by Græco-Roman authors. The same restraint must be observed as for the divinatory processes discussed above in the inquiry concerning the prophetic statues. As a rule, the recently discovered information of Pharaonic age tends to confirm for the majority of cases the actual national character of the modes of divination. Thus at the oracle of Bisu in the Thebaid (Herod. i. 182; Amm. Marcellinus, xix. 12), and at that of Heliopolis (Macrobius, *Saturn.* i. 30), the means of getting the future divulged consisted in reducing the questions to writing, according to carefully arranged formulæ. Such a method is fairly similar to what took place, as we saw above, in the judgment of the steward Thothmes, and the importance of the proper wording of the formulary noted by Pliny (xxviii. 3) and Juvenal (*Sat.* vi. 390) corresponds exactly with Egyptian formalism. But these formulæ, deposited under seal in the temple, and the replies given, also sealed, with the same ceremonial, are a method of Divine correspondence which the hieroglyphic inscriptions have not yet confirmed for the classic period. We know from Zosimus that in the reign of Constantine the government seized a number of oracles which were given into the hands of the Imperial police and involved a number of Egyptians in imprisonment and exile.

The cases of divination by incubation are the most complicated. If it is certain that the sanctuary of Ptah Sotmu in Memphis was giving oracles in the Pharaonic epoch to sufferers who came to consult it (see DISEASE [Egyp.]), and that the gods had been sending dreams, for long ages and almost everywhere, to reveal remedies to the patients who came to sleep in their temples, it is no less certain that the result of the combined influence of Asia and Greece was to extend and modify the essentials of these processes of divination, just as in the cases already noticed of prophecy by interpretation of inanimate things.

The famous oracle of Juppiter Amon of the Great Oasis deserves special mention. Although manifestly in decadence in the time of Strabo (xvii. 759), its advice was still held of great value in difficult questions (Juvenal, *Sat.* vi. 554). A study of the principal Græco-Roman authors who describe the manner in which the god made his will known (Ptolem. § 8 f.; *Scriptores rerum Alex. Magni*, ed. Müller-Didot, 1846, p. 37 f.; Arrian, *Anabasis*, iii. 4. § 5; Quintus Curtius, iv. 7; Ephippos, § 3; Strabo, vii. fr. 1; Diodorus, xvii. 51; Plutarch, *Alex.* 27; and especially Callisthenes, fr. 27 and 36) shows that it was in absolute conformity with the Egyptian rule: the statue of the god, the response by gesture and, if need be, by spoken words, the consultation by the high priest, and the questioning at the 'ceremonial going out' of the god (notice the passage of Strabo [vii. fr. 1] remarking indirectly that the responses of the oracle were given in conventional signs, *διά τινων συμβόλων*). We also find indirectly, from the evidence of Ephippos (§ 3), that the divinatory statue had a human form, and was provided with shoes, a mantle, and horns. This last trait—granting that the Amon of the Oasis is certainly a copy of the Theban Amon—helps to confirm the conclusion that the prophetic statue of Thebes had a ram's head. The most famous episode in connexion with this oracle was the visit of Alexander, who was summoned by Amon as his son and lawful successor upon the throne of Egypt. Maspero (*Ann. de l'École des Hautes Études*, 1897, pp. 1–32, 'Comment Alexandre devint dieu en Egypte') shows clearly that the deification of the great conqueror was carried through completely in accordance with the forms of the Pharaohs, in spite of the mistaken statements of Greek authors, who were ill-informed as to Egyptian procedure.

The consultation of statues by signs and oracles being entrusted to the priest in charge of the ordinary priestly functions led, of necessity, to the suppressing of professional soothsayers and seers filled with religious frenzy, divinatory ecstasy, etc. There was not even a set of officials whose duty it was to interpret dreams; this function was entrusted by the Pharaoh to some of his chaplains or secretaries. Finally, we know of no regular body of individuals charged with the execution of the rules of mantics as applied to time and space (cf. art. STARS [Egyp.], for a partial exception to this). It is true, of course, that innumerable trifling cases of divination in daily life engaged the attention of all classes, from the man in the street to the king himself. But these were dealt with directly, by individual

[1] As to the very difficult question of the *material method* by which the god spoke, Garnault (*Revue scientifique*, no. 21, May 1900, p. 643 f.) suggests ventriloquism; Maspero holds that the priest spoke by Divine inspiration in the name of the god—the most satisfactory theory in many instances. But in some cases the king alone, without the intervention of the priest, appears to have received the Divine response directly in his own soul.

intelligence, by an answer obtained from a book of magic, or by explanations sought from some private person celebrated for knowledge and sagacity—this last word being understood in its narrowest sense of a high degree of skill in magical studies. This practice of private divination (which must be carefully kept distinct from official divination) seems to have been of wide occurrence in Egypt in all periods. It presents cases of an infinite variety of application, but these will be more appropriately discussed under MAGIC (Egyp.).

LITERATURE.—There is no monograph on the subject. A good number of testimonies of classical authors, almost entirely neglected in Egyptological works, are gathered together in J. G. Wilkinson, *Manners and Customs*, ed. 1878, ii. 462–464, where, however, the actual facts are not stated from Egypt itself. An isolated branch—the study of prophetic statues—is treated by G. Maspero, in a great many publications (see esp. *RHR* xv. [1889] 159, 188; *RTr* i. [1882] 152; *JD*, 21st Dec. 1898 [speaking statues]; *Guide au Musée de Boulaq*, Paris, 1883, pp. 69, 336; *Études de Myth. et d'Archéol.* iii. [1901] 155, 220; *Annuaire de l'École des Hautes Études*, 1897). A short account is given in A. Erman, *Ägypt. Religion*[2], Berlin, 1906, p. 186. The rest of the important documents and articles on the subject have been mentioned in the article.

GEORGE FOUCART.

DIVINATION (Greek).—Of the beliefs with regard to divination held by the Hellenes at the time of their arrival in Greece we have no knowledge. That they practised it is highly likely; and it is inconceivable that the inhabitants of Knossos, Tiryns, Mycenæ, and the other centres of pre-historic culture had no belief in it; but definite information is entirely wanting. The most we can say is that certain ancient oracles very possibly date from pre-Hellenic times. We begin therefore with the feudal period of Greek history (? *c.* 1200 B.C.), of whose culture we know something from Homer.

1. In Homer.—Here we find for the most part 'independent diviners' (*divins libres*, to adopt Bouché-Leclercq's convenient terminology). The oracular shrines, so famous in later ages, are scarcely mentioned at all. One instance occurs of a private consultation at Dodona,[1] and Achilles mentions the wealth of the shrine at Delphi;[2] but no important oracles are mentioned as emanating from either. Agamemnon, for example, does not appear to have consulted any one but the seer Kalchas with regard to the Trojan war. The famous portent of the serpent and the nest of swallows is interpreted by him, and Odysseus bids the discouraged army 'wait awhile and see whether Kalchas prophesieth aright or not.'[3] So far, then, as divination is official and professional, it is the individual seer (*μάντις*, *οἰωνοπόλος*) and not any sort of priestly corporation, that we have to deal with. The *μάντις* is not, as a rule, an inspired prophet, but rather a craftsman (*δημιοεργός*), classed with leeches and carpenters in a famous verse of the *Odyssey* (xvii. 384, *μάντιν, ἢ ἰητῆρα κακῶν ἢ τέκτονα δούρων*). He practises seer-craft, *μαντοσύνη*, the later *μαντικὴ* (*τέχνη*), as a doctor practises physic, and by the favour of the gods[4] he has more skill in it than ordinary men. But any one can interpret an omen on occasion, just as Patroklos, who is not a regular physician, on occasion heals the wounded Eurypylos. Of anything like possession or prophetic vision, apart from the interpretation of omens, we hear very little. The most famous instance is the 'second-sight' of Theoklymenos (*Od.* xx. 351 ff.), who suddenly sees the hall filled with the ghosts of the wooers of Penelope. The typical Homeric method of foretelling the future is by *the actions and cries of omen-birds* (*οἰωνοί*),[1] or sometimes of other animals, or by *portents* (*τέρατα*).

The former of these (*ὀρνιθομαντεία, οἰωνοσκοπία*) was always of more or less importance in Greece, although it never attained the imposing dimensions of Etruscan augury. In Homer, the omen-bird is generally an eagle, and always sent by Zeus, Apollo, or Athene.[2] Its actions are symbolical, and need no complicated augury for their interpretation. A characteristically transparent allegory is that given by the eagle in *Il.* xii. 200 ff.:

'For a bird appeared unto them as they strove to cross, even an eagle of high flight, upon the left, staying the folk; he bore a monstrous red serpent in his talons, alive still and breathing, that was not yet forgetful of strife, for it struck at the bird that held it upon the breast by the neck, writhing back. And the eagle dropped it from him to the earth, galled by the pain, and flung it down into the midst of the throng, and himself flew with a scream on the breath of the wind. And the Trojans shuddered when they saw the writhing snake lying in the midst of them, a portent of Zeus, the ægis-bearer.'

Here the eagle represents the Trojans, the snake the Greeks, and the discomfiture of the eagle indicates the result of the contest. That it is meant as an omen is shown by the species of bird—not all birds are ominous[3]—and by the unusual nature of the occurrence—it is called a portent (*τέρας*). It is seen on the left, *i.e.* the west, the quarter of darkness,[4] and so must be unlucky. A much simpler omen encourages Odysseus and Diomedes:[5]

'Unto them Pallas Athene sent a heron, on the right, near their path; they saw it not with their eyes through the mirky night, but they heard its cry. And Odysseus rejoiced at that omen (*ὄρνις*), and made prayer to Athene.'

In neither of these cases is the diviner strictly a professional. Polydamas, who interprets the first omen, is renowned as an augur, but he is present at the battle simply as a warrior, and only incidentally interprets omens and advises Hector. Odysseus is a favourite of Athene, but has nothing of the priest or wizard about him. The method of interpretation is of the simplest in these and all other cases in Homer; and Hector, who is by no means impious, is frankly contemptuous about the adverse sign.

Portents, strictly speaking,—*i.e.* ominous events of a miraculous nature,—are not very common in Homer. One has already been mentioned in passing. The omen of the serpent, interpreted by Kalchas, ends by the creature being turned into stone; but no one seems to deduce anything from this. The word *τέρας*, indeed, is used to mean any sign[3] from a god, whether miraculous or not, or any wonderful thing, like the ægis, which apparently Eris carries in *Il.* xi. 4. In any case, it is definitely from a god that the sign always comes; and this applies to the other forms of divination mentioned below. Of familiar spirits, animals which give signs of their own accord, and the like, we hear nothing in Homer.

Besides augury and portents, the most important omens are *dreams*. These are almost always definitely sent by a god, and usually speak in plain language. Generally also they are true, an exception being the 'baneful dream' sent by Zeus to deceive Agamemnon.[7] Usually the vision takes the form of a man or woman known to the sleeper

[1] *Od.* xiv. 327; cf. xix. 296. [2] *Il.* ix. 404. [3] *Il.* ii. 299 f. [4] *Il.* i. 72. Plato, following the recognized classification, divides divination into *μαντικὴ ἔνθεος* and *τῶν ἐμφρόνων ζήτησις τοῦ μέλλοντος* (*Phædrus*, 244 B–C). The former is absent from Homer, practically, and has been ascribed (wrongly, we think) to the influence of Dionysos, by Bouché-Leclercq and others.

[1] Strictly, *ὄρνις* is 'a bird, in general,' *οἰωνός*, 'an omen-bird'; but the distinction is often neglected. *οἰωνός* also means an omen given by a bird, hence an omen in general; and *ὄρνις* was used in this sense.

[2] See Ameis on *Od.* x. 274. For the association of these three deities, cf. the repeated line *αἰ γὰρ, Ζεῦ τε πάτερ καὶ Ἀθηναίη καὶ Ἄπολλον*. The eagle is 'most perfect (*i.e.* most thoroughly ominous) of winged fowl' (*Il.* viii. 247, xxiv. 315).

[3] *Od.* ii. 182. [4] *Il.* xii. 239 f. [5] *Il.* x. 274 ff.

[3] Called in general *σῆμα*. A falling star is called *τέρας* (*Il.* iv. 76). The stock *τέρας* of later times, a monstrous birth, or a birth from a mule (see, *e.g.*, Plato, *Cratylus*, 393 B), does not occur in Homer.

[7] *Il.* ii. 5 ff. Zeus is, it would appear, the normal sender of dreams (*ib.* i. 63); and we hear of no other god who, so to speak, keeps dreams ready-made. The others appear themselves in sleep, or make and send phantoms.

(in this case, Nestor). However, the clear, non-allegorical language is not invariable, and there exists a class of dream-interpreters (*ὀνειροπόλοι*), but, we may safely assume, no masters of any complicated and wide-reaching science like that taught in later days by such men as Artemidoros. Part of their craft, it would seem, consisted in telling true dreams from false ones; so we gather from the apologue of the gates of horn and of ivory, in the speech of Penelope to Odysseus (*Od.* xix. 560). According to the geography of *Od.* xi., the 'folk of dreams' (*δῆμος ὀνείρων*) occupy a position beyond Ocean and near Hades; but such ideas have at least as much poetic fancy as genuine popular belief in them. What is important for our purposes to observe is that Penelope's dream is of the kind we have elsewhere noticed[1] as the simplest form of allegorical dream—a vision of an ominous happening. Incubation (see below) is unknown in Homer. One unusual example of a dream, or vision, not divinely sent, remains to be noted. As Achilles sleeps, the spirit of his dead and unburied friend appears to him (*Il.* xxiii. 62 ff.) to beg for speedy release from his homeless condition. But everything about this scene, including the *revenant*, is unusual, and even inconsistent with normal Homeric beliefs.

The occasional appearances of deities, who speak face to face with favoured heroes (Athene with Achilles and Odysseus, Hermes with Priam, etc.), are foreign to our purpose; but we may note, in passing, the peculiar occurrence which later Greece called *φήμη*, Homer *ὁμφή* or *ὄσσα*—the rumour which, coming from no one knows where, spreads through a crowd. This the Greeks always recognized as heaven-sent. We mention it to introduce a similar idea, found both in Homer and in later writers, namely, that the Divine will may be made known by means of the casual words of a mortal (*κληδών*). Of this we have a noteworthy example in *Od.* xx. 98 ff. Odysseus, about to take vengeance on the wooers, prays for Divine encouragement; a thunder-clap answers him, and is followed by a few words from a tired maid-servant, who curses the wooers for keeping her up all night to grind corn for their feasts. Later ritual developed and systematized this method at the oracular shrine of Hermes Agoraios in Pharai.[2] The consultant whispered his question into the god's ear, then stopped his own ears, went out, and, when he got beyond the market-place, listened for chance words from passers-by. These were construed into an answer. This form of divination (*cledonomancy*) remained popular at all periods. It appears in various forms, such as the puns on names (Ἑλένα—*ἑλέναυς*, *ἕλανδρος*, *ἑλέπτολις*, in the *Agamemnon*, 686 f.), and seems to have had this great advantage, that one could either accept (*δέχεσθαι*) or disregard an omen of this kind.[3]

Allied to cledonomancy is the omen from *sneezing* (*Od.* xvii. 541 ff.)—one of the large class of omens from involuntary human actions (*παλμοί*), elaborated in later times into a complicated system. In the Homeric instance, Telemachos' violent sneeze simply indicates Divine approval of Penelope's words. This idea lingers on to-day in Greece. If a sneeze is heard after any one has spoken, the sneezer is not only given the customary 'Good health to you!', but the words *καὶ ἀληθεια λέει*, 'and he (the last speaker) tells truth,' are added.

Necromancy proper—the evoking of a ghost or ghosts—is not found in Homer. The nearest approach, besides the appearance of Patroklos' spirit, is in the visit of Odysseus to Hades (*Od.* xi.). Here the ghosts are certainly approached with regular necromantic rites, blood-offerings and the like, and the whole passage suggests something other than the normal Homeric idea of the dead as 'strengthless.' It may well be that, while the Achæan lords were not ghost-worshippers, their subjects were,[1] and that this bit of ritual has percolated up from lower levels of society. But even here the ghosts are not raised from their graves or called into the upper world; nor have they any prophetic powers, except Teiresias, who, by special grace, retains his old seer-craft or something like it. The only approach to the usual idea of a dead man's powers of divination is the foresight shown by some dying men, *e.g.* Hector.[2]

Such are the main forms of Homeric divination, to which Hesiod makes no addition, for his weather signs are simply crude meteorology, with nothing of magic about them.

2. **Historic period.**—We now pass to the historic period, which we may roughly divide into (1) the time of Greek development and political importance (8th to 4th cent. B.C.—First Olympiad to the death of Alexander), and (2) the decadence (from the 4th cent. onwards).

(1) *The period of political importance.*—In this period, besides the Homeric methods, several new forms of divination were introduced, which will be briefly discussed in their proper place; but the chief feature of it was the immense importance of the oracular shrines, and particularly of three—those of Zeus at Dodona, of Apollo at Delphi, and, later, of Zeus Ammon. The first of these is undoubtedly of great antiquity.[3] Homer[4] mentions its priestly tribe or caste, the Σελλοί 'of unwashen feet, sleepers on the ground'; and the way in which the oracles were given—by the sounds made by the sacred oak—suggests an ancient tree-worship, older than the cult of Zeus as we know it, and very possibly practised before the god was heard of. It remained respectable, though overshadowed by Delphi, until quite late times.

But the greatest of all oracles was the Delphic or Pythian. From very early times an oracle of some sort appears to have existed in this lonely and exquisitely beautiful place,[5] and, if we may trust the legends, it was held by Ge-Themis, possibly in conjunction with Poseidon. Inspiration was given by some sort of vapour rising from a cleft in the ground;[6] this is so well established by ancient evidence that we cannot doubt it, although modern researches have shown that no large chasm existed—in fact, thanks to the French excavators, any one can now see that for himself. But, whatever it was, it was enough to serve as evidence of the presence of a chthonian power, and it was held to inspire prophecies—possibly by means of dream-visions, the characteristic form of earth oracles. To this old and well-established shrine there came, at some period of which we have no definite knowledge, a Northern tribe,[7] who worshipped Apollo. Despite the non-chthonian character of this god, Delphi became Apolline henceforward. Under the management of the 'Holy Ones' (Ὅσιοι), it became the most important oracular shrine in Greece, and to some extent the official head-centre of Hellenic religion.

ΑΙ. . . . οὐκ ἀναινομαι θανεῖν.
ΧΟ. δεχομένοις λέγεις θανεῖν σε . . .

[1] For a discussion of the whole question, see Rohde, *Psyche*[4], Tübingen, 1907, vol. i. ch. i.
[2] See DIVINATION (Introductory), § 6, 'Necromancy.'
[3] See Farnell, *CGS* i. 38 ff.; Bouché-Leclercq, ii. 277 ff.
[4] *Il.* xvi. 233 ff.
[5] See Farnell, iv. 180 ff., for an excellent discussion; but in our opinion he underestimates the part played by the natural advantages of the spot. The Greeks were extraordinarily sensitive to beautiful scenery, though not given to sentimentalizing about it.
[6] Cf. Plutarch, *de Defect. Orac.* 43.
[7] Crete also had a traditional connexion with Delphi; see Hom. *Hym. Apoll.* 388; Paus. x. vi. 7; Pind. *Pyth.* v. 52. A lion's head in Knossian style has been found at Delphi.

Several methods of divination were employed at one time or another, such as the μαντικαὶ ψῆφοι, which appear to have resembled the Zulu divining-sticks; but the usual procedure was by possession (μαντικὴ ἔνθεος). The Pythia or prophetess, after a draught of water from the underground spring Kassotis,[1] seated herself upon the tripod in the inner shrine, probably over the cleft, became inspired, and prophesied. The official interpreters (προφῆται) then reported her utterances, normally in hexameters.[2] The opportunity this gave for very liberal 'recension' of the inspired and probably quite unintelligible words of the Pythia is obvious; still, all oracles were supposed to come through her direct, as is shown by the common phrase ἡ Πυθία χρᾷ. The theory was briefly this: Zeus was omniscient, and Apollo was his favourite son and his confidant. Apollo, therefore, from time to time[3] made known his father's will or foreknowledge to such mortals as chose to consult him after due purification and sacrifice, employing as his medium the Pythia, who,[4] possessed much as a shaman is possessed (*plena deo*, in Vergil's phrase), spoke not her own words but those of the god. How much of all this the 'Holy Ones' believed, we cannot say; certainly the oracle had immense influence,[5] especially in religious matters, where it was, on the whole, conservative, except for its advocacy of Dionysiac worship and of hero-cults. In political matters it usually avoided any decided position, though it was philo-Spartan in the Peloponnesian war; and a certain vagueness and ambiguity in all fore-tellings of the future saved the god from the disagreeable position of a false prophet. In one respect, however, Apollo seems really to have acted as a useful Information Bureau. Founders of colonies regularly came to him for advice, and that advice was generally good. It may be, however, that here, as in the case of codes of laws supposed to emanate from Delphi (νόμοι Πυθόχρηστοι), the god did no more than give his approval to a course already decided upon.

The influence of Delphi, and the lesser influence of other oracles of Apollo (Klaros, Branchidai, etc.), had its effect on legend, as is shown by the persistent torturing of myths about ancient seers into making the latter sons or pupils of Apollo, and inspired prophets rather than augurs. The great bulk of the oracles, and their proverbial obscurity, called into existence a class of interpreters (ἐξηγηταί) whose business it was to reveal the god's meaning to the less sharp-witted public. It was recognized that to be a good exegete one must be something of a diviner; and, later on, in the nonage of Greek culture, the collection and interpretation of oracles in the light of a degenerate philosophy occupied such men as Porphyry.

But even Apollo did not extinguish the race of *divins libres*. The craze for knowledge of the future which was very noticeable during the Peloponnesian war produced a demand for oracles which was liberally met by the circulation of the prophecies (χρησμοί) of various ancient sages, such as Musaios—among them those of Bakis, of whom Aristophanes makes such delightful sport in the *Knights* and elsewhere. At Athens, especially, prophecies sprang up like mushrooms, and such ominous lines as the famous

ἥξει Δωριακὸς πόλεμος καὶ λοιμὸς ἅμ' αὐτῷ,[1]

with its no less terrifying variant λιμός, were in every one's mouth. Soothsayers of all kinds plied a lively trade. Nikias was especially dependent upon them, but no general crossed a river or entered the enemy's country without consulting the μάντεις attached to the army.

These official diviners practised an art unknown to Homer, namely, *haruspicy*. Whereas the Homeric heroes simply sacrificed and had done with it, in later Greek rites the victim was required to give a sign (by shaking its head when the libation was poured upon it) that the god accepted it, and the entrails[2] were inspected for signs of Divine approval or disapproval, especially before a battle. Indeed, there is more than one instance (notably at Platæa) of a general delaying action for a considerable time until at last a victim's entrails gave a favourable omen. *Empyromancy* was also practised, *i.e.* the observation of the fire consuming the sacrificial flesh. If it burned low or went out, it was a bad sign, and so on. This was not restricted to altar-flames. It is hardly too much to say that everything capable of being affected by a moderate-sized fire was scrutinized for signs at one period or another.[3] But most of these curious methods and most of the countless other forms of divination, of which we have no room even to give a list, were relatively unimportant, formed no part of any State-religion, and were only here and there adopted by oracles. Haruspicy was the normal official method, and in important matters an oracle was consulted.

Dreams, however, deserve separate mention. The recognized medium of chthonian oracles,[4] they were opposed by the Apolline cult, but found a footing in the worship of medicinal heroes, especially Asklepios. The cult of heroes, indeed, grew very important at this period,[5] and Asklepios was particularly popular. His shrine at, or rather near, Epidauros—to-day one of the most interesting ruins in Greece—and many lesser shrines at Athens and elsewhere, healed the sick by means of incubation (ἐγκοίμησις, ἔγκλισις). The patient, after preliminary rites, slept in the temple, and in a dream was tended or advised—generally the latter—by Asklepios.[6] Here, of course, the medical knowledge of the priests (Ασκληπιάδαι) came into play. That it was considerable is clear, both from a number of votive offerings describing treatments which, even by modern standards, are quite scientific, and also from the rise of the Asklepiads of Kos to well-earned renown, especially in the person of their greatest member, Hippokrates. But, even apart from this, and despite the vogue of Delphi, several heroes, notably Trophonios of Lebadeia, gave oracles by dreams or visions.

Finally, as illustrating the extent to which divination at this time became a regular profession, despite the theoretical importance of individual inspiration, mention should be made of the great prophetic families—the Iamidai of Elis and the Melampodidai of Akarnania being the most famous.[7] Alongside of these families (or gilds)[8] of professional diviners, we begin to hear of that curious figure of later mythology, the Sibyl.

(2) *The decadence.*—In this period we have to notice, firstly, the weakening of the Greek genius,

[1] See Farnell, iv. 188. The prophetic virtues of water from sacred springs were widely recognized.

[2] Other metres, and even prose, were used later; see Plut. *de Pythiæ Oraculis*.

[3] The oracle could be consulted only at certain seasons (ἐπιδημίαι) and on certain days.

[4] This was a regular Apolline method, *e.g.* at his ancient cave-shrine at Hylai on the Mæander.

[5] The more so as most gods had either no oracles or none of any importance. Hence we find Apollo consulted, for example, on a question affecting the worship of Demeter at Eleusis.

[1] Thuc. ii. 54.

[2] Especially the liver (hepatoscopy). See, for one example of many, Plut. *Vita Arati*, ch. xliii. Cf. DIVINATION (Assyr.-Bab.).

[3] See Bouché-Leclercq, vol. i., for a full treatment of this and other forms of divination, such as lecanomancy.

[4] Cf. Eur. *Iph. Taur.* 1259 f.

[5] It was, as we have seen, favoured by Delphi, so long as the monopoly of prophecy was not infringed.

[6] See Aristoph. *Plutus*, for a farcical description.

[7] Bouché-Leclercq. ii. 62 ff.

[8] The patronymic termination often connotes no more than this; cf. Ὀμηρίδαι, Ἀσκληπιάδαι.

and the consequent influence of foreign cults; secondly, the part played by philosophy in regard to the belief in divination; and, finally, the degeneration of the great national cults, and the consequent downfall of the official divination—oracular and otherwise—which formed part of them.

Of the foreign ideas which came in with the backwash from Alexander's conquests, the most noteworthy was the Chaldæo-Egyptian belief in *astrology*.[1] Somewhat modified by Greek ideas, it pervaded the whole of Western thought, and became the principal form of divination. This is not the place to go into details as to the methods employed, but a few salient points may be noted. Firstly, it was almost wholly novel. The idea of taking omens from the heavenly bodies or from such phenomena as lightning and shooting stars is old enough in Greece, but no elaborate system, and no idea of anything like planetary influences, had ever existed. This was the product of the sidereal cults of the East; it is a remarkable fact that the Greeks hardly worshipped the heavenly bodies at all.[2] Astrology—this is another noticeable fact—aided the late tendency to syncretism. Thus, joined with the popularity of the Eastern sun-gods, it helped to identify Apollo with Helios; Artemis was confounded with Selene; the ram-horned (and doubtfully Hellenic) Zeus Ammon with the sign Aries, and so on. Thirdly, astrology invaded all branches of divination to such an extent, that we find haruspices, palmists, etc., using terms borrowed from it, and tracing the influence of the stars in the formation of beasts' entrails and the like.

Philosophers of the decadence and of the period immediately preceding it (that in which Plato and Aristotle lived and wrote) were, on the whole, favourable to divination. Plato, at heart a mystic, while outspokenly contemptuous of the disreputable vendors of indulgences and oracles, was by no means adverse to beliefs in the supernatural, and, in fact, seems to have held that divination was not only possible, but a reality;[3] and his late followers, the Neo-Platonists, who constructed an elaborate system of δαίμονες on the basis of the *Timæus*, found therein a full and satisfactory explanation of oracles. Epicurus, indeed, whose system denied Providence and Divine interest or interference in human affairs, was hostile to the pretensions of diviners; but the Stoics passionately championed astrology, as evidence of their doctrine of Fate.[4] The degenerate and mongrel system, which goes by the name of Neo-Pythagoreanism, was freely credulous of all marvels, divination included, and produced its own inspired prophet, Apollonios of Tyana (*q.v.*).

Under pressure of foreign cults, including finally Mithraism and Christianity, the ancient State religions of Greece became gradually weaker; and this inevitably entailed a decline in the importance of the oracles, and of official diviners. Individualism also was rampant, as is shown by the popularity of the post-Aristotelian philosophies; and this meant that divination became more and more of a private affair. While it is wholly untrue that the oracles ceased at the coming of Christ,[5] it is a fact that by about 100 A.D. they were no longer of great importance;[6] indeed, quite apart from other causes, the political insignificance of Greece meant, sooner or later, the insignificance of her great religious institutions. Finally, Christian opposition for the most part stamped out pagan divination.

There were, however, survivals. Astrology lingered on despite theological denunciations—political opposition it had already endured for centuries—and still survives. Oneiromancy, which had grown into a most complicated science, still retained a considerable hold on popular belief. Finally, the prophecies of the Sibyl or Sibyls—the number and names vary[1]—being in later times of Judæo-Christian origin, were hospitably received and ranked almost equal with the Hebrew prophets. 'The old man is Sibyl-mad,' says Aristophanes' slave of his master Demos; and in the Middle Ages her name was still held in reverence; 'Teste Danid cum Sibylla.'

LITERATURE.—A. Bouché-Leclercq, *Hist. de la divination dans l'antiq.*, vols. i.–iii., Paris, 1879–1880; L. R. Farnell, *Cults of the Greek States*, Oxford, 1896 ff., esp. vol. i. (Zeus) and vol. iv. (Apollo). The former work gives a full bibliography of earlier writings.

H. J. ROSE.

DIVINATION (Indian).—In India, divination has gone through two phases of development. Originally it seems to have been practised chiefly with the intention of obviating the evil consequences of omens and portents; in the later period, rather to ascertain the exact nature of the good or evil which those signs were supposed to indicate. Both phases presuppose the firm belief in omens and portents, which appears to be a common feature of primitive culture. In India this belief can be traced back to the Vedic Saṁhitās: birds are invoked to be auspicious, and certain birds, especially pigeons and owls, are said to be messengers of death (Nirṛti, Yama).[2] A great many details are furnished by later Vedic books, especially the *Adbhuta Brāhmaṇa*, which forms the last chapter of the *Ṣaḍviṁśa Brāhmaṇa* of the Sāmaveda, and the 13th chapter of the *Kauśika Sūtra* of the Atharvaveda.[3] The subjects treated in the 12 paragraphs of the *Adbhuta Brāhmaṇa* are, according to Weber's[4] enumeration: common incidents, diseases of men and cattle, agricultural calamities, loss of ornaments, earthquakes, phenomena in the air and the sky, miraculous happenings to altars and idols, electrical phenomena, monsters; in each case the god is named to whose province the particular incident belongs, and the *mantra*, or the ceremony for the expiation of the evil sign, is prescribed. The second treatise is similar to the first; but it differs from it in this, that in it the omens and portents are more specialized and more varied, and that the Brāhman who is to prescribe the remedy for them must belong to the Atharvaveda. The last point need not surprise us, for that Veda was largely engaged with occasional and optional practices, with charms and spells; hence the house-priest (*purohita*) of the king, who had to ward off the evil influences which menaced king and country, was required to be deeply versed in the secret lore of the Atharvaveda. Therefore all that refers to mantic and magic was naturally believed to come within the province of that Veda. The last contribution to it is the 72 *Pariśiṣṭas* (appendixes or paralipomena),[5] treatises on different subjects connected with the Atharvaveda. Some of them are of comparatively late age, since they betray an acquaintance with Greek astronomy. About a third part of this

1 Bouché-Leclercq, ii. ch. vi.; cf. art. STARS (Greek).

2 Even the sun is unimportant, as is indicated by the extreme rarity of names such as *Heliodoros* or *Heliades* before the 3rd cent. B.C. The attempts made to identify any of the leading Hellenic deities (save Zeus, who is vaguely a sky-god) with celestial phenomena are without exception unsatisfactory.

3 Socrates had certainly been of that opinion before him.

4 *E.g.* Manilius, iv. 14 f.

5 The tale is an invention of Christian apologists, who considered oracles the work of evil spirits. Archæological evidence alone is quite conclusive against it.

5 *The Pariśiṣṭas of the Atharvaveda*, ed. G. Melville Bolling and Julius von Negelein, Leipzig, 1909–10.

work deals with prognostics, especially from phenomena in the atmosphere and the heavens. Here we find divination in its later development, *i.e.* with the object of predicting future events. But the expiatory ceremonies and *mantras*, so characteristic of the preceding period, continued to be looked upon as important matter; thus the 67th *Pariśiṣṭa*, called *Adbhutaśānti*, is, on the whole, a metrical paraphrase of part of the *Adbhuta Brāhmaṇa* mentioned above.

The art of divination with which we have dealt as yet was part of the religion, especially of the Atharva priest, who was the orthodox soothsayer. There were probably already in early times soothsayers and fortune-tellers of no religious character (*naimittika*, *mauhūrtika*,[1] *sāmudrika*) who made single branches of prognostics their speciality. But the whole art of divination became independent of religion when Greek astronomy and astrology were introduced into India in the early centuries of our era. The astrologer possessed what was believed to be a real science of prediction, the accuracy of which was uncontestably proved in one branch of his science—the astronomical—and was, therefore, readily believed in in the other—the astrological one. For astronomy and astrology were in India, as indeed also in Europe till quite recently, but two branches of one science. And the Indian astrologer added to these two branches a third—the art of divination, hitherto practised by the Atharva priest. We shall call the latter natural astrology, in contradistinction to judicial astrology adopted from the Greeks. An accomplished astrologer or astronomer (*jyotiṣa*) had to know astronomy, judicial astrology (*horā*), and natural astrology.[2] Judicial astrology is subdivided into (1) nativity (*jātaka*); (2) prognostics for journeys, especially marches of princes in war (*yātrā*); and (3) horoscopy for weddings (*vivāha*). Natural astrology is treated in works which are called Saṁhitā. The best known Saṁhitā is the *Bṛhat Saṁhitā* of Varāha Mihira, written about the middle of the 6th cent. A.D., on which an extensive and very valuable commentary was composed by Bhaṭṭotpala in the 9th century.[3] The contents of the *Bṛhat Saṁhitā* may serve as a summary of the original Indian art of divination—of course, in its last stage of development. We therefore transcribe Varāha Mihira's enumeration of them (ii. 5, tr. H. Kern, *JRAS*, 1869):

'The course of the sun and of the other eight planets, and, during it, their natural and unnatural symptoms, their size, colour, and brightness of the rays, their shape, risings and settings, their roads and deviations, their retrograde and post-retrograde motions, the conjunctions of planets with asterisms, etc., as well as the respective consequeuces for the different parts of the globe; the course of Canopus, the course of the Seven Seers (Great Bear), the division of things as belonging to the domain of each planet, the same as appertaining to the domain of each asterism, the conjunction of the five planets in the figure of a triangle, etc., the planetary war, the conjunction of the five planets with the moon, the effects produced by the planets on the years presided over by them, the symptoms of pregnancy of the clouds, the conjunction of the moon with Rohiṇī, with Svāti, with Aṣāḍhā; the forebodings of instant rain, the conclusions to be drawn from the growth of flowers and plants as to the produce of trees and crops, the mock-sun, the halo, the cloudy line piercing the sun's disk at rising or setting, the wind, the meteors, the glow of the sky, the earthquake, the glowing red of twilight, the Fata Morgana, the dust rain, the typhoon, the cheapness or dearth of the products of the earth, the prognostics for the growth of corn, the banner of Indra, the rainbow, architecture, palmistry, the auspicious or ill-lucky movements of crows, the augural circle, the movements of wild beasts, of horses, the circle of winds, the good or bad signs of temples, of statues, the consecration of statues, the treatment of trees, the observation of the soil for finding veins of water, the lustration, the sight of wagtails, the allaying the influence of portents, miscellaneous matters, the anointment of a king; the signs of swords, of ornamental goldplates, of cocks, of tortoises, of cows, of goats, of horses, of elephants, of men, of women; reflections on womankind; the prognostics of hoils, of shoes, of torn garments, of chowries, of umbrella-sticks, of couches and seats, the examination of jewels, the foretokens at a lamp, the good or bad signs of tooth-sticks, etc., such as occur in common life to everyhody as well as to kings,—all these things have every moment to be considered by an astrologer with undivided attention.'

As the astrologer had thus appropriated all prognostics to himself that had belonged to the Atharva priest, he became the successful rival of the latter. This change must have set in during the 2nd or 3rd cent. A.D.; for Garga, an early predecessor of Varāha Mihira, had proclaimed:

'The king who does not honour a scholar accomplished in horoscopy and astronomy, clever in all branches and accessaries, comes to grief.' 'As the night without a light, as the sky without the sun, so is a king without an astrologer; like a blind man he erreth on the road' (*ib.* ii. 7. 9).

It is beyond the scope of the present article to enter into details about judicial astrology as taught by the Hindus; but it must be noticed that they have also adopted Muhammadan astrology, and treated it, under the name *tājika*, as distinct from the Greek astrology, or *jātaka*.

There are several branches of prognostics which seem early to have been cultivated by specialists, and in some degree to have become independent disciplines. To this category belonged the interpretation of dreams. The belief in the significance of dreams is already found in the Rigveda (viii. 47, 14 ff.); dreams indicating death are enumerated in the *Aitareya Āranyaka*, iii. 2, 4; the expiation of evil dreams is treated in *Kauśika Sūtra*, xlvi. 9 ff., and in the *Gṛhya Sūtras*. The 68th *Pariśiṣṭa* of the Atharvaveda, called *Svapnādhyāya*, deals with oneiromancy, and so do several Purāṇas in a chapter bearing the same name, and some separate works (see, further, art. DREAMS [Vedic]).[1] Interpreters of dreams, their dream-book, and its contents are frequently mentioned by the Jains.[2] Another important branch of prognostics is the interpretation of the marks of the body, including palmistry and physiognomy. It is an ancient discipline, for it is a tenet of the Buddhists that Buddha possessed the 32 lucky marks (*mahāpuruṣalakṣaṇa*) and the 80 minor marks. The art of interpreting bodily marks is called *sāmudrika*, and several works treating of it are extant; those who practise it are also called *sāmudrika*. Augury proper (*śākuna*) is, as we saw above, a very old branch of divination; it has been developed in the course of time. A very full dissertation on this subject is given by Eugen Hultzsch, *Prolegomena zu des Vasantarāja's Çākuna*, Leipzig, 1879.[3] Finally, it may be mentioned that sortilege was also practised in India; a specimen of this kind of divination is published by A. Weber, 'Über ein indisches Würfel-Orakel' (*MBAW*, 1859).

The Jains also practised the art of divination. According to them, it had eight branches (*aṭṭhaṅgamahānimitta* [*Kalpasūtra*, i. § 64]), which are specified in the commentary to the passage in question: *divya*, *utpāta*, *āntarikṣa*, *bhauma*, *aṅga*, *svara*, *lakṣaṇa*, and *vyañjana*; in another enumeration the same names are given, only that *svapna* is added, and *divya* is omitted. As far as can be judged from this division, the Jain system of prognostics must, on the whole, have been similar to that of the Hindus in general.

LITERATURE.—Besides the works quoted in the course of the article, see A. Hillebrandt, 'Rituallitteratur,' *GIAP*, Strassburg, 1897, p. 182, and the literature quoted there, p. 184 f.

HERMANN JACOBI.

[1] The *mauhūrtika* is the predecessor of the astrologer proper. Chāṇakya, who wrote about 300 B.C., mentions the *mauhūrtika* (*Kauṭilīyam*, Mysore, 1909, p. 38), while Kāmandaki, a late adherent of Kauṭilya's school, speaks of *Hora-gaṇita-tattvavid* (*The Nītisāra*, by Kāmandaki, Calcutta, 1884, iv. 33).

DIVINATION (Japanese). — **1. Definition.**—The Japanese for 'divination' is *ura* or *uranahi*. If we consult the 'Vocabulary of the most ancient Words of the Japanese Language' (*TASJ*, vol. xvi. pt. 3, p. 280), we find that, according to B. H. Chamberlain, the old word *ura* signifies: 'the back or hind part of anything, inside, the reverse; hence the heart, the mind, divination of things unseen, soothsaying.' The primitive meaning is clearly seen in present-day phrases: e.g. *te no ura* means the palm of the hand; *kimono no ura*, the inside of a coat; *ura no ie*, a back-house. From this we see that, for the Japanese, the idea of divination does not necessarily involve a prediction, but only the discovery of something hidden—present, past, or future. It may be employed not only to find out whether such and such an event will occur in the future, whether it will be lucky or the opposite, etc., but also to reveal the present will of the gods on such and such a point, and even to discover why a certain event—generally an untoward one—has occurred in the past.

2. Objects.—To get a good idea of the various objects of divination, we have only to look through the ancient Shintō documents, beginning with the *Kojiki*. Even in the very first pages of the sacred story we find divination playing a part in the life of the primitive couple: Izanagi and Izanami have produced badly-formed children; the cause is discovered by divination, viz. that in the marriage ceremony the woman had spoken first (see *Kojiki*, tr. B. H. Chamberlain, p. 22). An eclipse of the sun takes place; the gods have recourse to various magical processes in order to stop it, and among these is divination—employed, no doubt, to discover the will of the Sun-goddess (*ib.* 64). At a later period, one of the first emperors, Suinin, who had a son afflicted with dumbness, learns in a dream that his child will be able to speak if a temple is built to a certain god, who does not reveal his name; by a process of divination the sovereign discovers the identity of the god, and removes the curse (*ib.* 237 f.). Outside of these longer mythological tales, we see divination practised in innumerable other cases, especially in the *Nihongi*. It is employed to foretell the result of a military expedition (see *Nihongi*, tr. W. G. Aston, vol. i. pp. 121, 227, 237); to reveal the cause of plague, rebellion, and other public calamities (i. 152) or private misfortunes (ii. 102); to discover what person is to be entrusted with the cult of a god (i. 153, 177); what offerings must be made to the god (i. 178); whether the Emperor should make sacrifices in person or send a representative (i. 189, 190); why the Emperor's soup almost froze into ice one day (this was due to a case of incest in the court, i. 324); what place should be selected for building a tomb (i. 355) or a palace (ii. 95); what was signified by a mysterious omen (ii. 59, 306). Finally, in addition to these cases officially reported in the ancient chronicles, we find divination constantly invoked in the life of individuals in more humble circumstances—from the maiden seeking to know when she will have a husband and what will be his name, to the person who is anxious to recover a lost possession or to find the track of a thief. In the poems of the *Manyôshiu*, which give us a very true and vivid picture of ancient Japanese civilization, divination is employed fairly often in the relations between lovers and married people (see these poems in Satow, 'Ancient Japanese Rituals,' *TASJ*, vol. vii. pt. 4, p. 446 ff., and in F. V. Dickins, *Primitive and Mediæval Japanese Texts*, Oxf. 1906, Romanized texts, pp. 125, 142 f., and Translations, pp. 204, 227 f.).

Divination was a regular process in certain essential points of Shintō worship: it was by divination that the priestess of the Sun was chosen at Ise (see esp. *Nihongi*, i. 176); that more generally, the ceremonial purity of all those taking any part in religious rites was ascertained; that it was determined, at the great festival of the first-fruits (*Ohonihe*) held at the accession of the Emperors, from which provinces the sacred rice should be brought, what local persons should prepare it, etc. At court, a special divination took place annually, on the 10th of the 12th month, to find out what misfortunes were to be feared for the Emperor in the coming months, and to provide propitiatory measures accordingly.

3. General character.—Aston says (*Shinto*, 338) that, though the art may very probably have 'passed through a non-religious phase,' yet 'the cases met with in the oldest records are commonly associated, explicitly or implicitly, with an appeal for divine guidance'; and he quotes Hirata's definition of divination as 'respectfully inquiring the heart (*ura*) of the gods.' This view seems to exaggerate to a certain extent the religious side of divination at the expense of its magical aspect. In fact, in the most ancient documents, divination appears to be, above all, a mechanical process, the virtue of which resides in the ritual performances rather than in the will of the gods. A clear proof of this lies in the fact that the gods were no wiser than men in obscure affairs, and had themselves to resort to divination for light. As is shown by their name *Kami*, they are 'superior' beings; but their superiority is relative, and they are distinguished from men by a difference, not of nature, but only of degree. Therefore, they are not endowed, in the intellectual order, with the omniscience attributed by more advanced religions to their Deity. They are constantly in perplexity, and require the wisdom of a general assembly to guide them (see *Kojiki*, 63, 112, etc.).

The Counsellor-deity, Omohi-kane, who gives advice on these occasions, does not seem to be quite infallible: when the gods are deliberating on means of 'pacifying' the country which the future Emperor is to rule, Omohi-kane proposes that an ambassador—whom he himself selects—should be sent; the ambassador does not return; Omohi-kane chooses a second, who behaves in the same way as the first; he then finds a third, who is slain; and only after these three unsuccessful attempts does he finally succeed (*Kojiki*, 112 ff.). The gods in their celestial abode do not know what is happening on the earth: when they learn of the death of the third ambassador—the Pheasant—they do so only by means of the arrow that killed him flying to the plains of high heaven and falling bloody at their feet (*Kojiki*, 115). The gods, indeed, have no knowledge of the present, past, and future. Their first ambassador, Ame no ho-hi, made friends with Oho-kuni-nushi, whose submission he was sent to obtain; they do not know this fact. After three years, being uneasy at having received no news, they send Ame-waka-hiko, who straightway marries Shita-teru-hime, the daughter of Oho-kuni-nushi, and then devotes his whole energies to making the conquest for himself; they know nothing of this treason. It is not until eight years afterwards that they decide to send the Pheasant to try to get some news, and they have no more fore-knowledge of the accident of which he is to be the victim than they had of the former events (*Kojiki*, 113 f.). If their knowledge of material facts is thus limited, *a fortiori* they cannot guess what is taking place within hearts: when they curse the murderer of the Pheasant, their formula is conditional, because they do not know what his real intentions may have been (*Kojiki*, 115). It is for this reason—because they cannot penetrate what is hidden—that they have recourse to divination. In the case of the first children of Izanagi and Izanami, mentioned above, we are told that these two deities 'ascended to Heaven and inquired of their Augustnesses the Heavenly Deities,' and that then 'the Heavenly Deities found out by the great divination' an answer to their inquiry (*Kojiki*, 22); similarly, in the eclipse-myth we see 'the eight hundred myriad Deities assemble in a divine assembly' and 'perform divination.'

This procedure manifestly lowers the gods to the level of men, making one and the same fate hover over all. Primitive Shintō seems to admit, without naming it, a vague impersonal Power, like the *Moira* of Homer at the time before Zeus was the *Moiragetēs*. Later, the Japanese theologians, like the Greek poets, were very much embarrassed by this ancient idea, which flattered

neither the wisdom nor the power of their gods. Was it not strange, for example, that, on being consulted by the first couple, the greatest gods should show themselves unable to reply until they in their turn had appealed to some sort of superior intelligence? Hirata, who is always ingenious, tries to solve the question by comparing them to a prince who has entrusted a particular function to each of his servants, and who, on being asked for information on any point whatever, begs the questioner to apply to the person who is best informed on the subject; but this ulterior excuse of an apologist cannot efface the impression left on us by the texts. In a word, since gods as well as men must have recourse to divination, it is very probable that, in ancient Shintō, divination was an affair of magic far more than of religion.

4. Various forms. — (*a*) *Official divination.* — Having made this important point clear, we shall now examine the forms of this magical operation. We must distinguish between the official procedure, *i.e.* the 'Greater Divination,' and other minor proceedings. The 'Greater Divination' consisted in *omoplatoscopy*, a process which is met with not only among the Chinese and other races of the North-East of Asia, but also among certain Western peoples, like the ancient Germans, the Greeks ancient and modern, and even, down to within a recent date, the Highlanders of Scotland (the custom of 'reading the speal'). In primitive Japan, omoplatoscopy was practised by flaying the shoulder-blade of a deer over a bright fire and watching the cracks produced upon it by the heat. This was the form of divination resorted to by the gods in the circumstances already mentioned, and we find that it was under the special care of the god Koyane, the legendary ancestor of the Nakatomi, or hereditary corporation of priests representing the Emperor in his sacerdotal functions (see esp. *Kojiki*, 64, and cf. a variant in *Nihongi*, i. 82 f., which claims to give the mythical origin of the custom by telling how the god Koyane, at the command of the great god Taka-mi-musubi, 'was made to divine by means of the Greater Divination, and thus to do his service'). Similarly, when we find the Emperor commanding a divination, which is then carried out by the Palace college of diviners, it is the 'Greater Divination' that is meant, though the text simply speaks of 'divination' without further epithet. This practice underwent modification very early by the substitution, in the place of the deer's shoulder-blade, of the tortoise carapace employed by the Chinese. This innovation was undoubtedly facilitated by the fact that the tortoise already held an important place in native Japanese mythology (*Kojiki*, 160; *Nihongi*, i. 113, 182, etc.).

The first reference to it is found in the *Nihongi* (i. 152): the Emperor Sujin, in the year 91 B.C., wishing to discover the cause of various calamities which had laid waste the country, decided 'to commit the matter to the Sacred Tortoise'; but this detail is certainly an anachronism, as indeed is the whole context in which it appears, for we find the Emperor attributing national calamities to his personal faults, in accordance with Chinese theory. As a matter of fact, the substitution must have taken place about the year 553, when some Koreans, of high repute in the art of divination, came to exercise their talents at the Japanese court. The *Nihongi* story shows us, at least, that the tortoise carapace was the usual means of divination at the time of its composition, *i.e.* in the 8th cent., and the *Engishiki* (10th cent.) mentions no other process in the descriptions of the official cult.

It was only in certain provinces that the deer's shoulder-blade of the primitive mythology continued to be employed. Just as the tortoise carapace was always used, it is said, in the island of Hachijō, where there were no deer or other large quadrupeds, but where the waters abounded in tortoises, the deer's shoulder-blade remained in use, long after the introduction of the Chinese custom, in certain villages; this survival is mentioned in old writings even at the end of the 17th cent. (see Satow, *loc. cit.* 453). It can, moreover, be observed even to-day among the Ainu (see N. G. Munro, 'Some Origins and Survivals,' in *TASJ*, vol. xxxviii. pt. 3 [1911], p. 46).

(*b*) *Secondary forms.*—Of secondary and non-official forms of divination the principal was *tsuji-ura*, or 'cross-roads divination.' We find in the poems of the *Manyôshiu* that it was employed chiefly by women and lovers. The persons having recourse to this form of divination went to the cross-roads at dusk (whence the other frequent name of *yufu-ura*, 'evening divination'), planted a stick in the ground, and then took the remarks of the passers-by as an answer to what they wanted to know. In this rite, the stick represents Funado, the staff which Izanagi drove into the sand when leaving Hades, in order to check the pursuit of the infernal deities (just as the American Indians use staffs to drive off the spirits of the dead), and which was afterwards transformed into a phallic god, a powerful preserver of life, granting protection from the diseases sent by the under-world demons, and at the same time filling the rôle of patron of travellers (see Revon, *Le Shinntoïsme*, 321). Still another method of *tsuji-ura* was practised by women. They went to the nearest cross-roads, and there repeated the following poetry three times:

Funadosahe	'Of Funadosahe,
Yufuke no kami ni	The god of the evening oracle,
Mono toheba,	When we ask things,
Michi yuku hito no	Ye who go along the way,
Ura masa ni se yo!	Deliver the oracle truly!'

[The first line is explained by the fact that the road-gods, and especially Funado, were regarded as *Sahe no kami*, 'preventive gods,' against disease and demons.]

While repeating these lines, the women drew a line of demarcation on the road and sprinkled rice; for rice, with the mysterious spirit it contains (*uga no mi-tama*), was a powerful agent against evil spirits, as is also seen in the custom of sprinkling it in the hut of a pregnant woman (see *Le Shinntoïsme*, 134, 303). After this was done, each of the women, turning towards one of the roads, passed a finger along the teeth of a box-wood comb that she held in her hand, and made it sound three times; this was a means of inviting the god to speak, the word *tsuge* meaning both 'box-wood' and 'inform me.' After this, they listened for the words of the first person who came within the space marked off by the enchanted limits, and drew an answer therefrom. The *tsuji-ura*, in these more or less complete forms, seems to have enjoyed popularity for a long time: it is mentioned in the *Oh-kagami*, 'the Great Mirror, a famous pseudo-historical work of the 12th cent. (see Satow, 448); and a passage in the dramatist Chikamatsu Monzaemon (Dickins, *op. cit.*, Tr., p. 66) shows how much importance was attached, even so recently as 200 years ago, to the chance words spoken by people met on the street.

Connected with *tsuji-ura* we have *hashi-ura*, 'bridge divination,' in which the same processes were employed, but on a bridge instead of on an ordinary road. We may notice also *ashi-ura*, 'foot divination,' practised, according to a poem of the *Manyôshiu*, by a lover before the door of his house along with 'evening divination' (Satow, 447); but our information on this 'foot divination' is not sufficiently accurate, although it comes into one of the most ancient myths, viz. the dance of the god Ho-deri (*Nihongi*, i. 107; and cf. *Le Shinntoïsme*, 210). Still another variety is mentioned along with *tsuji-ura* in the *Manyôshiu* (Dickins, Tr., p. 66)—*ishi-ura*, or 'stone divination,' which consisted in foretelling the future from the apparent weight of a stone (*ishi-gami*, 'stone-deity') when lifted up. The following is a text

which, if it is not a simple imaginary divination according to the inspiration of the moment, may well contain one of the most ancient applications of this process:

'In the beginning, when the Emperor [Keikō, A.D. 71–130, according to traditional chronology] was about to attack the enemy [the *Tsuchi-gumo*, 'earth-spiders,' *i.e.* earth-cave-dwellers], he made a station on the great moor of Kashihawo. On this moor there was a stone six feet in length, three feet in breadth, and one foot five inches in thickness. The Emperor prayed, saying: "If we are to succeed in destroying the *Tsuchi-gumo*, when we kick this stone, may we make it mount up like a *kashiha* [oak] leaf." Accordingly he kicked it, upon which, like a *kashiha* leaf, it arose to the Great Void' (*Nihongi*, i. 195).

Other secondary forms of divination presented a local character. In the temple of Kasuga, to which belongs one of the chief rituals of ancient Shintō (*norito* no. 2), and in various other provincial temples, *mi-kayu-ura*, or 'divination by gruel,' was practised. The purpose of this divination was to find out what kinds of vegetables and cereals it would be best to sow for the year. It took place on the 15th of the 1st month, the date of the festival of *Sahe no kami* (see above). A pot was placed before the gods, and in it were boiled some *adzuki* beans (*Phaseolus radiatus*)—a little red bean whose colour served to suggest the idea of health, of victory over the demons of disease (people who visit Japan may see this used even to-day to colour sacred rice—the rice, *e.g.*, offered on the domestic altar at the annual Feast of Ancestors). When this gruel was cooked, 54 tubes of reed or bamboo were plunged into it, each bearing the name of one of the vegetables it was proposed to cultivate; next, the priests withdrew the tubes with chopsticks, and derived prognostics as to the good or bad crops to be borne by each particular kind of grain from the manner in which the grains of rice, mixed with the bean-gruel, went into the tubes. The peasants then sowed their seed according to these indications. An analogous, but less important, process consisted in arranging beans round the hearth very near the fire, and drawing omens from the manner in which they turned black or remained untouched (Satow, 418; Aston, 342). *Koto-ura*, or 'harp divination,' was another local form. It was employed at Ise to make sure of the purity of the priests taking part in the three great annual ceremonies, as also of the tables, vessels, and other objects employed to present offerings. The night before the ceremony, at midnight, a priest stood with a harp at one of the outer doors of the temple. Turning towards the temple, he prayed the Sun-goddess to give light on the point requiring elucidation. Then he struck the harp three times, each time uttering a loud 'Hush,' after which he asked all the gods to come down from the heavens to answer his question, pronouncing the following three-fold poetic formula:

Ahari ya!	'Ah! ah!
Asobi ha su to mausanu;	We do not merely amuse ourselves;
Asakura ni,	On to your splendid seat,
Ama tsu kami kuni tsu kami,	Gods of heaven and gods of the country,
Orimashimase!	Descend!
Ahari ya!	Ah! ah!
Asobi ha su to mausanu;	We do not merely amuse ourselves;
Asakura ni,	On to your splendid seat,
Naru Ikadzuchi mo,	Sounding Thunderbolt also,
Orimashimase!	Descend!
Ahari ya!	Ah! ah!
Asobi ha su to mausanu;	We do not merely amuse ourselves;
Asakura ni,	On to your splendid seat,
Uha tsu ohoye shita tsu ohoye,	Upper great elder brother and lower great elder brother,
Mawiri tamahe!	Deign to come!'

[We do not know who the two 'elder brothers' invoked in the second last line were.]

After this formula, the names of all the priests were called, and at each one the officiant asked: 'Is he clean or unclean?' He then struck the harp again, and, by a process which recalls certain rites of Polynesian sorcerers, tried to whistle by drawing in his breath; only if the whistle could be heard was the priest in question considered clean. The same rite was employed to settle the same question in regard to the people who had prepared the offerings, the offerings themselves, and the material utensils. Finally, the priest sounded his harp again three times, with a solemn 'Hush!' and sent the gods back to their own abode by reciting a formula of opposite meaning from the preceding one.

This curious ceremony, in which magic plays the dominant part, is not described in detail except in one work of the 12th cent.; but an 8th cent. document makes allusion to it, and Satow is right in thinking (*op. cit.* 450) that it is a pure Japanese custom.

Last in this class of local methods of divination we may mention 'cauldron divination,' which Aston quotes (p. 343) as employed to this day in a temple in the country of Bittchu. At the request of a member of their congregation, the priests recite a ritual, light a fire beneath a cauldron, and note the sound it produces: if it is like the bellowing of a bull, the omen is good.

Such are the processes, important and secondary, general and particular, of Japanese divination. A process which may serve as the transition between these indigenous systems and the Chinese methods gradually introduced is that known as *kitsune-tsukahi*, or 'fox-possessing.' A fox is buried alive, with only its head out of the ground; food is placed before it, which it cannot reach in spite of desperate efforts; when it dies, after this tantalizing torment, its spirit is supposed to pass into the food, which is then mixed with clay and formed into an image of the animal; the possessor of this fetish is regarded as endowed with marvellous divinatory power (W. Weston, *Mountaineering in the Japanese Alps*, Lond. 1896, p. 307). This cruel rite has a strange resemblance to another magical process, viz. that of the *inu-gami* ('dog-deity'), in which a dog is treated in almost the same way, its head being finally cut off, to be used afterwards in spells along with the furious spirit inhabiting it; and, if this rite of the *inu-gami* is of Shintō origin (see *Le Shinntoïsme*, 166), the same may be the case with that of the *kitsune-tsukahi*.

We have no precise information regarding *divination by birds*, which certainly existed in ancient Japan (Satow, 449)—we do not even know whether it resembled the Chinese system of bird-divination. On the other hand, there is no doubt as to the Chinese origin of such methods as *astrology*, introduced by Koreans in A.D. 675, when, as the *Nihongi* tells us (ii. 326), 'a platform was for the first time erected from which to divine by means of the stars,' and also geomancy (*Nihongi*, ii. 76, 126), cheiromancy, physiognomics, etc.

(*c*) *Isolated cases.*—After thus treating of the regular processes of divination, it is advisable to mention the individual and accidental recourse to various means of divination invented on the spur of the moment. Occurrences of this nature are very often found in the most ancient annals. To show the process to the life, it will be of interest to quote a passage from the *Nihongi*, relating to Jimmu Tennō, the legendary founder of the Japanese Empire:

'All the places occupied by the enemy [the indigenous race who had to be conquered] were strong positions, and therefore the roads were cut off and obstructed, so that there was no room for passage. The Emperor, indignant at this, made prayer on that night in person, and then fell asleep. The Heavenly Deity appeared to him in a dream, and instructed him, saying: "Take earth from within the shrine of the Heavenly Mount Kagu [a mountain in Yamato], and of it make eighty Heavenly platters [for rice]. Also make sacred jars [for

sake], and therewith sacrifice to the gods of Heaven and Earth. Moreover, pronounce a solemn imprecation. If thou doest so, the enemy will render submission of their own accord." The Emperor received with reverence the directions given in his dream, and proceeded to carry them into execution. . . . He caused Shihi-netsu-hiko [a fisherman whom he had with him as guide] to put on ragged garments and a grass rain-coat and hat, and to disguise himself as an old man. He also caused Ukeshi the Younger [a local chief who had joined his party] to cover himself with a winnowing tray, so as to assume the appearance of an old woman, and then addressed them, saying: "Do ye two proceed to the Heavenly Mount Kagu, and secretly take earth from its summit. Having done so, return hither. By means of you I shall then divine whether or not I shall be successful in founding the Empire. Do your utmost, and be watchful." Now the enemy's army filled the road, and made all passage impossible. Then Shihi-netsu-hiko prayed, and said: "If it will be possible for our Emperor to conquer this land, let the road by which we must travel become open. But if not, let the brigands surely oppose our passage." Having thus spoken, they set forth, and went straight onwards. Now the hostile band, seeing the two men, laughed loudly, and said: "What an uncouth old man and old woman!" So with one accord they left the road, and allowed the two men to pass and proceed to the mountain, where they took the clay and returned with it. Hereupon the Emperor was greatly pleased, and with this clay he made eighty platters, eighty Heavenly small jars and sacred jars, with which he went up to the upper waters of the River Nifu and sacrificed to the gods of Heaven and of Earth. Immediately, on the Asa-hara plain by the river of Uda, it became as it were like foam on the water, the result of the curse cleaving to them. Moreover, the Emperor went on to utter a vow, saying: "I will now make *ame* ['sweetness,' a sweetmeat made of millet, malted] in the eighty platters without using water. If the *ame* is formed, then shall I assuredly without effort and without recourse to the might of arms reduce the Empire to peace." So he made *ame*, which forthwith became formed of itself. Again he made a vow, saying: "I will now take the sacred jars and sink them in the River Nifu. If the fishes, whether great or small, become every one drunken and are carried down the stream, like as it were to floating *maki* [*Podocarpus*] leaves, then shall I assuredly succeed in establishing this land. But if this be not so, there will never be any result." Thereupon he sank the jars in the river. Their mouths turned downward, and after a while the fish all came to the surface, gaping and gasping as they floated down the stream. Then Shihi-netsu-hiko, seeing this, represented it to the Emperor, who was greatly rejoiced, and, plucking up a five-hundred-branched *masakaki* [*Cleyera*] tree of the upper waters of the River Nifu, he did worship therewith to all the gods. It was with this that the custom began of setting sacred jars [in the courtyard]' (*Nihongi*, i. 119–121).

In this one passage, and with a single point to elucidate, we have no fewer than four different processes of divination. The case of the famous Empress Jingō, the conqueror of Korea, is similar:

'Proceeding northwards, she arrived at the district of Matsura in the land of Hizen, and partook of food on the bank of the River Wogawa, in the village of Tamashima. Here the Empress bent a needle and made of it a hook. She took grains of rice and used them as bait. Pulling out the threads of her garment, she made of them a line. Then, mounting upon a stone in the middle of the river, and casting the hook, she prayed, saying: "We are proceeding westward, where we desire to gain possession of the Land of Treasure. If we are to succeed, let the fish of the river bite the hook." Accordingly, raising up her fishing-rod, she caught a trout.' And further on: 'The Empress returned to the Bay of Kashihi, and, loosing her hair, looked over the sea, saying: "I, having received the instructions of the Gods of Heaven and Earth, and trusting in the spirits of the imperial ancestors, floating across the deep blue sea, intend in person to chastise the West. Therefore do I now lave my head in the water of the sea. If I am to be successful, let my hair part spontaneously in two." Accordingly she entered the sea and bathed, and her hair parted of its own accord. The Empress bound it up parted into bunches [*i.e.* in manly fashion]' (*Nihongi*, i. 227, 228; cf. also 229, 237, 281).

(*d*) *Divination by lots.*—In addition to these unimportant but picturesque secondary means of divination, it remains to notice a method of very general character, but whose lack of originality renders it somewhat less interesting; this is divination by lots. We find it already mentioned in the *Nihongi* (ii. 257), which, in telling of a conspiracy formed in A.D. 658, says that the various conspiring princes 'divined the future of their treasonous conspiracy by drawing slips of paper.' Recourse was also had to sticks on which numbers were inscribed. Sometimes this method was preceded by prayers to the gods (Aston, 343); sometimes it constituted a purely magical process, as in the case of the above-mentioned conspiracy; and sometimes it was nothing more than a handy secular means of deciding something by chance, such as is constantly used by people to-day as far removed from religion as from magic; in Tōkyō, *e.g.*, at jinrikisha stands, the *kurumaya* often have at hand a bundle of cords of different lengths all tied in a knot, and use it to decide, when a passenger appears, which of them is to have the privilege of conducting him. But this form of divination, vulgar as it is, assumes a quite outstanding importance when we consider that the drawing of lots plays a dominant part in the divination founded upon the complicated Chinese diagrams of the *Yih-king*, the 'Book of Changes' (*Eki* in Japanese). This obscure book, indeed, just because of its divinatory character, was one of the first Chinese works to be introduced into Japan (in A.D. 553, according to the *Nihongi*, ii. 68; cf. 72, 306), and it became the basis of the system of divination in use at present. Takashima Kaemon, who was the most celebrated diviner in modern Japan, took this work as the foundation for his art; when he was only a student, he was put in prison for some youthful misdemeanour, and, having nothing but this ancient classic beside him, he discovered the secret of the meditations which brought success to his brilliant career. The present writer frequently had occasion to meet this diviner, to hear from his own mouth an account of his most ingenious consultations, and even to receive his lessons, and he can say that, if the principles of the system are doubtful, its individual results are often wonderful: the value of divination is in proportion to the skill of the diviner, and the lucky financier of Kanagawa, the able promoter of so many new schemes, was always a prudent man who could see far ahead. As Chamberlain says (*Things Japanese*, Lond. 1898, p. 112), Takashima, after studying the *Yih-king*, 'realized a fortune by obedience to its precepts'; but there are many Japanese, even in the highest grades of society, who also profited by his wide experience of men and things; one has only to read the *Takashima Ekidan* of Shigetake Sugiura (Tōkyō, 1893) to get a good estimate, from numerous examples, of the penetration of his mind and the wisdom of his counsel. The Japanese, moreover, even the educated classes, still hold divination in high esteem, although it is not officially recognized by modern Shintō, and have recourse to it frequently in all sorts of circumstances, from a wedding to a removal to another quarter of the town. At the University of Tōkyō, 15 or 20 years ago, the present writer had as colleague an old professor of the ancient school, who still adhered religiously to the tuft of hair of the feudal period; the last survivor of a perished race of *savants*, he was greatly esteemed by his colleagues as the only man capable of expounding the *Yih-king*. Among the people divination is correspondingly widespread; every quarter has its modest diviner working with his divining-rods and consulting his diagrams, and telling more or less skilfully how lost possessions may be found. The writer could give personal experiences in this connexion, but prefers to quote a little anecdote of Chamberlain's (*loc. cit.*), which shows both the popularity and the weak points of divination:

'A favourite dog of the present writer's was lost in November 1892, and all search, advertisement, and application to the police proved unavailing. Meanwhile, the servants and their friends privately had recourse to no less than three diviners, two of whom were priests. One of these foretold the dog's return in April, and another directed that an ancient ode containing the words, "If I hear that thou awaitest me, I will forthwith return," should be written on slips of paper and pasted upside down on the pillars of the house. It was the sight of these slips that drew our attention to the matter. The best of it is that the dog was found, and that, too, in *a* month of April, namely April 1896, after having been missing for three years and five months!'

5. **Ordeals.**—After thus analyzing the various

forms of Japanese divination, ancient and modern, we have still a special process of its application to investigate, viz. ordeals. This judicial divination is represented in ancient mythology by a well-known story giving a case of ordeal by fire.

The Heavenly prince Ninigi, having been sent by the other gods to earth to govern Japan, married Ko-no-hana-saku-ya-hime (the Princess-Blossoming-brilliantly-like-the-flowers-of-the-Trees); but she became pregnant after a single night, and the young husband was astonished; she then shut herself up in an underground hall (a *muro*, which here does duty for the *ubu-ya*, or lying-in hut, where the Japanese women used to retire for delivery), and set fire to the hall with her own hands, when on the point of delivery, in order to prove her innocence by the fire-test. 'If the child,' she said, 'with which I am pregnant be the child of an Earthly deity [*i.e.* of a god of the country], my delivery will not be fortunate. If it be the august child of the Heavenly deity [*i.e.* thy child and the descendant of the sun-goddess], it will be fortunate.' And the princess came out of the test victorious, after having brought into the world in the furnace three gods, one of whom was to be the ancestor of the first Emperor (*Kojiki*, 143 f.; cf. corresponding versions in *Nihongi*, i. 73, 85, 88).

This myth would seem to point to the existence of the fire-ordeal in the customs of the pre-historic period. In the historic period, however, it was essentially the boiling-water test that constituted judicial divination. First of all the *Nihongi* gives us an example which it assigns to A.D. 277:

A certain man, Takechi no Sukune, was slandered before the Emperor by his younger brother, Umashi-ushi no Sukune, and accused of wishing to overthrow the Emperor and seize his power. Takechi, who was at the time on a tour of inspection in the provinces, hastened to the capital to prove his innocence. 'The Emperor forthwith questioned Takechi no Sukune along with Umashi-ushi no Sukune, upon which these two men were each obstinate, and wrangled with one another, so that it was impossible to ascertain the right and the wrong. The Emperor then gave orders to ask of the Gods of Heaven and Earth the ordeal by boiling water. Hereupon Takechi no Sukune and Umashi-ushi no Sukune went out together to the bank of the Shiki river, and underwent the ordeal of boiling water. Takechi no Sukune was victorious. Taking his cross-sword, he threw down Umashi-ushi no Sukune, and was at length about to slay him, when the Emperor ordered him to let him go' [*Nihongi*, i. 257 f.).

A more important case was occasioned, in the beginning of the 5th cent., by the pretensions of high families who were attempting to increase their prestige by false genealogies. In the year 415, two Imperial decrees of Ingyō censured those powerful families who 'purposely lay claim to high family,' those bold functionaries who 'describe themselves, some as descendants of Emperors, others attributing to their race a miraculous origin, and saying that their ancestors came down from Heaven'; and the abuse reached such a pitch that the Emperor finally had recourse to the ordeal to remedy it.

'"Single Houses," he said, "have multiplied and have formed anew ten thousand surnames of doubtful authenticity. Therefore let the people of the various Houses and surnames wash themselves and practise abstinence, and let them, each one calling the gods to witness, plunge their hands in boiling water." The cauldrons of the ordeal by boiling water were therefore placed on the "Evil Door of Words" spur of the Amagashi Hill. Everybody was told to go thither, saying: "He who tells the truth will be uninjured; he who is false will assuredly suffer harm." Hereupon every one put on straps of tree-fibre, and, coming to the cauldrons, plunged their hands in the boiling water, when those who were true remained naturally uninjured, and all those who were false were harmed. Therefore those who had falsified their titles were afraid, and, slipping away beforehand, did not come forward. From this time forward the Houses and surnames were spontaneously ordered, and there was no longer any one who falsified them' (*Nihongi*, i. 316–317, and cf. *Kojiki*, 367 f.).

A gloss on this passage of the *Nihongi*, probably as ancient as the text itself, tells us that this ordeal, known to-day under the name of *yusaguri*, was then called *kugadachi*, and adds valuable evidence of other varieties of usage at this period:

'Sometimes mud was put into a cauldron and made to boil up; then the arms were bared, and the boiling mud stirred with them. Sometimes an axe was heated red-hot and placed on the palm of the hand.'

The great prevalence of the custom is clearly shown by a complaint made to the Emperor, in the year 530, by an ambassador of Imna, a small kingdom in Korea, against a whimsical judge, who, in order to simplify his task, abused the ordeal:

'Kena no Omi is fond of setting the cauldrons for the ordeal by boiling water, and saying: "Those who are in the right will not be scalded: those who are false will certainly be scalded." Owing to this, many persons have been scalded to death by plunging into the hot water!' (*Nihongi*, ii. 22).

Still other forms of ordeal are noticed by a Chinese traveller, who visited Japan in the year 600, and, in describing both the means of torture employed to force the confession of criminals and the tests for the purpose of distinguishing the guilty from the innocent, gives the following exposition:

'In the trial of cases where a great wrong has been suffered, those who will not confess have their knees squeezed with a piece of wood, or have their necks sawn with the tight string of a very powerful bow. Or stones are placed in boiling water, and the disputants are ordered to take them out. It is supposed that he who is in the wrong gets his hand scalded. Or, again, a snake is put in a jar, and they are made to take it out; it being supposed that he who is in the wrong will get his hands bitten' ('Ma-Twan-Lin's Account of Japan,' by E. H. Parker, in *TASJ*, vol. xxii. pt. 2, p. 42 f.).

This serpent-ordeal, which is also found among other peoples, *e.g.* the blacks of Africa, was certainly in existence in Japan in the primitive period. We are led to this conclusion by the tests to which Susa-no-wo subjects his future son-in-law, Oho-kuni-nushi, who is made to sleep in the hut of serpents, and then in the hut of centipedes and wasps; he would never have escaped if he had not had the help of the magic scarfs of princess Suseri; and Susa-no-wo ended by showing him high esteem, because, seeing him spit red earth mixed with *muku*-berries (*Aphananthe aspera*), he thought he was eating the centipedes themselves (*Kojiki*, 86 f.). Later on, and down to the present period, the tests of plunging the hands in boiling water and walking bare-footed over a bed of burning coals, with, however, special precautions, were employed as a means of rousing the piety of believers; but this is no longer ordeal. On the other hand, even in the 17th cent., Kaempfer observed a curious ordeal for forcing confession of a crime, which consisted in making the accused swallow, in a little water, a small piece of paper with drawings of ravens or other black birds upon it (Kaempfer, *Hist. du Japon*, Fr. ed., Paris, 1732, bk. iii. ch. 5, p. 51). Perhaps we may see here a faint recollection of the god of scare-crows, who appears in primitive mythology and was thought to know everything under the sun (see *Le Shinntoïsme*, 156).

6. **Omens and dreams.**—All that now remains to be treated is omens and dreams. These come under divination, even though in them we are not dealing, in principle, with processes involving the active initiative of man, but only with spontaneous facts, outside of man, for which he seeks an interpretation after they have occurred. Omens are often mentioned in mythology and ancient annals. Without speaking of omens that are looked for by those interested, and therefore belong to the class of divinations devised on the spot (*e.g.*, in *Kojiki*, 292, while two chiefs, on the eve of an expedition, 'hunted for an omen,' and one of them had climbed an oak, a furious wild boar uprooted the tree and devoured the man), we could give numerous examples of omens properly so called, *i.e.* independent of the human will. As a general rule, white or red animals, which were striking in virtue of their rarity and, further, harmonized with the favourite colours of a solar religion like Shintō, were regarded as of good omen (see, for white animals, *Nihongi*, i. 292, ii. 124, 174, 236, 237, 239, 252, 286, 322, 326, 352, 394, 410, 416; and, for red animals, *Nihongi*, ii. 337, 347, 351, 352, 357, 407, 409). But the Japanese also regarded as good omens, perhaps just when it suited them to interpret them as such, any parti-

cular occurrence whatever (*e.g.* an owl or a wren going into a lying-in hut [*Nihongi*, i. 277]). Earthquakes, storms, and floods were considered ill omens, foretelling war: they were the scourges calling on each other. Similarly, other extraordinary phenomena, such as the appearance of a comet (*Nihongi*, ii. 166, 167, 169, 333, 353, 364, 367), or a prolonged eclipse of the sun's light (*ib.* i. 238); strange incidents like a migration of rats from the capital (*ib.* ii. 226, 245), or the mysterious movements of a swarm of flies (*ib.* ii. 270); bad meetings, as with a blind man or a cripple, when starting on a journey (*Kojiki*, 238); disturbing incidents like a dog coming into a temple and laying down a dead hand (*Nihongi*, ii. 263); or, finally, unaccountable accidents like a leg-rest breaking with no apparent cause (*ib.* ii. 256), were all evil omens. It would be useless to attempt to study in detail all these and analogous cases, which are very numerous (see *Nihongi*, i. 227, 228, 320, ii. 59, 237, 239, 259, 266, 269, 276, 277, 293, 331, 359, etc.). Let us simply point out that this belief in omens is current to this day among the Japanese. Thus, at certain grave crises in her contemporary history, Japan has been seen more than once to turn anxiously towards the temple of the Sun-goddess, seeking for light on the future. At a critical point in the Revolution of 1867, the white horse of the temple of Ise escaped, and only returned after three days: from this it was concluded that the Imperial party would soon have the victory. During the Chino-Japanese war, the sacred horse disappeared for ten days: this foreign war, therefore, was to last three times as long as the previous civil war (rumour registered in the *Japan Mail* of 17th Sept. 1894, p. 2).

In the same way, dreams were always regarded as affording foresight, by a more or less skilful interpretation, of future events, or indications as to the future behaviour of the person interested. Take, *e.g.*, one of the oldest documents of Shintō, the *Tatsuta no Kaze no Kami no Matsuri* (ritual no. 4), which gives its proper legendary origin. For several years, some unknown gods had spoiled all the harvests, and the diviners had not been able to discover the culprits. Then the sovereign himself 'deigned to conjure them,' and they revealed themselves to him in a dream. They were 'Heaven's-august-Pillar's augustness and Country-august-Pillar's augustness,' the Wind-gods who support the firmament. They required certain offerings from him—the foundation of a temple at Tatsuta, and a liturgy—in return for which they promised 'to bless and ripen the things produced by the great august people of the region under Heaven, firstly the five sorts of grain, down to the last leaf of the herbs' (*TASJ*, vol. vii. pt. 4, p. 442 f.). We shall now take one of the most dramatic stories of the ancient chronicles:

> The Emperor Suinin is betrayed by his wife, who, at the instigation of her accomplice, the prince of Saho, attempts to assassinate him during his sleep. 'So the Heavenly Sovereign, not knowing of this conspiracy, was augustly sleeping, with the Empress' august knees as his pillow. Then the Empress tried to cut his august throat with a stiletto; but, though she lifted it thrice, she could not cut the throat for an irrepressible feeling of sadness, and she wept tears, which fell overflowing on to the Heavenly Sovereign's august face. Straightway the Heavenly Sovereign started up, and asked the Empress, saying: "I have had a strange dream: a violent shower came from the direction of Saho and suddenly wetted my face; again, a small damask-coloured snake coiled itself round my neck. Of what may such a dream be the omen?"' And the Empress, seeing that it would be useless to deny the truth, confessed her treason of which the Emperor had been warned by this dream (*Kojiki*, 231 f.; cf. *Nihongi*, i. 171).

It would be easy to multiply examples of this kind, in which the ancient documents abound (see *Kojiki*, 165, 215, 237, 295; *Nihongi*, i. 115, 153, 155, 161, 165, 281, ii. 36). These divinations given by dreams were considered so natural that they were even attributed to animals, as the following story will show:

> 'There is a popular story that a long time ago there was a man who went to Toga, and spent the night on the moor. Now there were two deer which lay down beside him. When it was on the point of cock-crow, the male deer addressed the female, saying: "This night I had a dream, in which I saw a white mist come down copiously and cover my body. What may this portend?" The female deer answered and said: "If thou goest out, thou wilt certainly be shot by men and die, and so thy body will be smeared with white salt to correspond with the whiteness of the mist." Now the man who was spending the night there wondered at this in his heart. Before it was yet dawn, there came a hunter, who shot the male deer, and killed it. Hence the proverbial saying of the men of that day: "Even the belling male deer follows the interpretation of a dream"' (*Nihongi*, i. 290).

There is still one more form of divination, which plays an important part in ancient Shintō, namely, Inspiration (*q.v.*).

LITERATURE.—Sir Ernest Satow, in *TASJ*, vol. vii. [1889] pt. 4, pp. 445–452; W. G. Aston, *Shinto*, London, 1905, pp. 337–348; M. Revon, *Le Shinntoïsme*, Paris, 1905, Index, *s.v.* 'Divination.' For the texts: B. H. Chamberlain, *Kojiki*², Tōkyō, 1906; Aston, *Nihongi*, London, 1896; Revon, *Anthologie de la littérature japonaise*, Paris, 1910. MICHEL REVON.

DIVINATION (Jewish).—**1. Introductory.**—In the present article the writer follows the same system as in art. CHARMS AND AMULETS (Jewish), in not attempting to fix chronological dates for the various forms of divination mentioned in ancient and mediæval writings. Without discussing here the wider meaning of magic in general, there is no doubt that magic is much older than any literary record, and that it has survived through ages, with comparatively few variations and modifications. The study of folk-lore has revealed the fact that to a surprising degree exact parallels with some of the most ancient forms of divination have been preserved to this very day, and a careful examination of the latest survivals throws light upon ancient practices which have hitherto remained in many cases obscure. It follows naturally that allusions in the Bible are only the oldest literary references to practices of magic and divination. The words denoting magical practices belong, no doubt, to the pre-Biblical period, when their original meaning may have already undergone some sort of change, although this is not very likely, as nothing is preserved with greater tenacity than magical terms and formulæ. It is thus futile to attempt, on the basis of Hebrew etymology, to fix in every case the precise meaning of these technical terms. It must also be pointed out that, though the practices in question are here classed as 'Jewish,' this by no means implies that they are of Jewish origin, but only that the knowledge of them has come to us through the medium of the Bible, and that they were doubtless employed by the Jews—in direct contradiction to the spirit and teaching of Judaism—especially during the older period of Jewish history.

Nothing could be more emphatic than Dt 29^{29} ('The secret things belong unto the Lord our God: but the things that are revealed belong unto us and to our children for ever, that we may do all the words of this law'), but scarcely less emphatic is the condemnation of the heathen practices of divination found throughout the Bible. As late as the 2nd cent. B.C. we find Ben Sira protesting against this dabbling in mysteries (Sir $3^{21f.}$; cf. Bab. *Ḥag.* 13*a*, and *JQR* iii. [1891] 690–8). It is a noteworthy fact that Genesis and the books grouped under the name of the 'Former Prophets' (esp. Judges, Samuel, and partly Kings) are replete with practices of divination scarcely veiled; they represent a primitive state of mind and cult in which the heathen and the Jewish elements are strangely blended; one can follow up, as it were, the transition from one to the other, but the people do not yet clearly distinguish between them. The seer

and the prophet rank no higher at the beginning than the diviner and the soothsayer, and, from the information we are able to cull from the pages of the Bible, both seem to act in the same manner, one appealing to Baal, Dagon, and other gods, the other—the prophet and the seer—appealing to the God of Israel, whilst performing almost identical ceremonies and using similar practices. Samuel, Saul, Jonathan, David, Elijah, Elisha, and others are found using divination of various forms and degrees, and by a right interpretation of their practices much is explained. No real condemnation of these practices is found in the historical books, such as appears in the other four books of the Law, and in the fiery denunciations of the 'Later Prophets.' The prophets are always conscious of the heathen origin of these practices, and in the Apocryphal literature they are traced back to the fallen angel Shemhazai (see the legend in Eth. En. 8[3] [Charles]; and cf. Gaster, *Chron. of Jerahmeel*, 1899, p. 52, ch. xxv.). But no denunciation, however strong and severe, could prevail against the desire of peering into the future and of obtaining information from whatever source or by whatever means man might learn that which is hidden from him.

2. **Biblical and post-Biblical references to divination.**—The chief passages in the Pentateuch in which the practices of divination are mentioned are Dt 18[10ff.], Lv 19[26. 31] and 20[6. 27].

(1) It will serve our purpose best to start with the *m^enaḥēsh* (RV 'enchanter'), from the root *nāḥash*, which is of frequent occurrence in the Bible and in post-Biblical literature. The word is used by Laban (Gn 30[27]); it occurs twice (Nu 23[23] 24[1]) in the history of Balaam; and in 1 K 20[33] the Aramæan servants of Benhadad watch for a good omen (RV 'observed diligently'). The history of Gideon and that of Jonathan furnish us with two more examples of this mode of divination from the 'first word' spoken by the enemy (Jg 7[11. 13], 1 S 14[7ff.]), and also that of Eliezer at the well (Gn 24[14]), which they took as telling them of their future success. We shall meet with a similar kind of divination later on. In the following passages the word *m^enaḥēsh* can also mean only prognosticator from omens, and not 'enchanter' as RV: Lv 19[26], Dt 18[10], and 2 K 21[6] (2 Ch 33[6]). It is evidently of Western Aram. origin. It cannot be connected with *nāḥāsh*, 'serpent' or 'snake.' In the opinion of the present writer, there is no trace of serpent-worship among the Jews, or any of the nations with whom they came in contact. The transformation of Moses' rod into a serpent belongs to the category of magic and not to divination or worship; the brazen serpent in the wilderness was merely symbolical and a kind of protective charm, not an object of worship.

(*a*) A specific form of divination—by means of the *cup*—is found in the history of Joseph (Gn 44[5. 15]). To judge from later parallels, the practice must have consisted in filling a cup with water or wine, and gazing intently on the surface, till the beholder saw all kinds of images. The method of divining by cups has not been entirely lost. Allusions to it are made indirectly in the Talmud, where the princes (demons) of cups (*sarê ha-kos*) and egg-cups (*sarê beṣin*) are mentioned. This system of divination is alluded to in manuscripts in the writer's possession (Cod. 443, etc.), where, in addition to these two, the princes (demons) of the cup-like palm of the hand (*sarê ha-kaf*) and the princes of the thumb-nails (*sarê ha-bohen*) are mentioned. The method of divining from the palm of the hand is also described in an anonymous compilation (*Mifaloth Elohim*, Lemberg, 1865, no. 69), where it is used for finding the thief and the stolen article. All the formulæ given for the above-mentioned modes of divination from egg-cups, etc., are identical in all essentials with the latter.

Traces of divination by the cup and by finger-nails have been preserved, though no longer understood, in the ceremonies connected with the cup of wine and the lighted candle used at the outgoing of the Sabbath at the service called *Habdalah*, or the division between Sabbath and the weekday, the beginning of the week being considered as a very propitious time. When the blessing is said over the wine-cup filled to overflowing, the man performing the ceremony at a certain moment shades the cup and looks into the wine; and, when the blessing over the light is said, it is customary to let the light of the candle fall on the finger-nails and to look at them intently. There is no doubt these are remnants of divination. Other explanations have been suggested which are wide of the mark. Closely allied with this is the following practice: *To find out whether a man will survive the year.*—Take silent water from a well on the eve of Hosha'anah Rabba, fill a clear glass vessel with it, put it in the middle of a room, then look into it; if he sees therein a face with the mouth open, he will live, but, if the mouth is closed, he will die. This must be done in the hour of the domination of the moon. Some do it on the Day of Atonement, with a vessel filled with lighting oil instead of water (*Mifaloth*, 119).

Cup-like bowls with magical inscriptions found in Babylon and elsewhere seem to have been also used for divination, and not for purely therapeutic magic, as hitherto believed. The conjurer or person who wanted to divine, or to detect a crime, or anything of the past, present, or future, looked, no doubt, into the bowl filled with water or oil and divined from it, or the suspected person drank the contents, and according to the result was found innocent or guilty. There was a similar operation in the case of the woman suspected of adultery (Nu 5[12ff.]): a cup (earthen vessel) filled with water was employed; the mysterious power by which the guilt of the woman was to be detected was also a written inscription (though blotted out in the water of bitterness), without the addition of any of the names of demons or heathen gods, as in the Babylonian bowls; and the drinking of the water showed by its consequences her guilt or her innocence. It was an ordeal (*q.v.*) through the 'divining cup.'

Instead of peering into bowls filled with shining liquid, we find it recorded in Talmudic and later times that it was customary to gaze into brass or glass mirrors for the same purpose; and a distinct formula exists for crystal-gazing, or, as it is phrased, 'seeing the princes (demons) of the crystal (*sarê hab^edôlāḥ*).' This is distinctly different from throwing metal pieces into cups and watching the movements of the water, or divination by means of molten wax or lead poured into a cup filled with water by the conjurer who attends on the patient, in order to find out, from the shape which the wax or the lead assumes, the real cause of the illness—a universal practice among the nations of the Near East, Jews and non-Jews alike. The oldest example of this is found in the Alexander legend of pseudo-Callisthenes.

(*b*) Under the general term *niḥûsh* (from the same root *nāḥash*) fall also the various forms of divination by observation of signs not produced by any direct act of the diviner; Jewish tradition is unanimous on this interpretation of the term.

(*a*) *Augury* in a somewhat limited form is the first to be considered. There is no passage in the Bible which refers directly to the flight of birds, or to their peculiar movements on certain occasions; the passage in Ec 10[20] ('A bird of the air shall carry the voice') is metaphorical. In Talmudic times the science of *haruspicy* appears to have reached the Jews from the Arabs or some other people who coined the technical expression *ṭayyar* (cf. the Arab. root *ṭair* = 'bird,' and *mantiq al-ṭair*). It is especially the raven that is mentioned as a bird of omen. The reference to ravens in the history of Elijah (1 K 17[6]) is not explicit enough to allow us to draw any definite conclusions, but, on the other hand, Noah's sending the raven out

of the ark on a kind of errand of divination (Gn 8^7) no doubt lent colour to the belief so widely spread in the significance of the mysterious movements of the raven. In Bab. *Gittin* 45*a* and the *Pesikta* 156*b*, Midr. Rabb. on Numb. sec. 19, 237*b*, and Midr. on Ec 10^{20}, divination from the flight of birds is described as the wisdom of Eastern sages. The raven by his croak warns Ilish of the danger which awaits him; one who understands the language of birds explains it to him; he takes the warning to heart, and escapes. The references in Talmudic literature are, however, not numerous enough to give us full insight into divination from birds. In the *Zohar* and in the *Tikkunim* reference is often made to the twittering of birds as foretelling future events such as the death of man, etc. In Cod. Gaster 335 numerous mediæval texts have been collected, dealing with divination from the twittering of birds, and especially from the croaking of the raven. They belong mostly to the pseud-epigraphical writings, and the Hebrew texts may be translations from the Arabic, though the original source may lie far back in ancient times. In Hebrew legends King Solomon was credited with the knowledge of the language of birds. He overheard a conversation between a swallow and its female, in which it boasted of being able to destroy the Temple with a kick of its foot, and, questioned by Solomon, said: 'Should I not boast before my wife?' (*Parables of Solomon*, ed. Constantinople, 1516). In another legend he is rebuked and humbled by an ant (*Maase Hanemalah*). A Hebrew tale older than the 12th cent. tells of a boy who was taught the language of birds, and was thereby able to solve some riddles and to foretell future events (Gaster, 'Fairy Tales from inedited Hebrew MSS,' no. iv. 'Story of the Young Man and the Ravens,' in *FL* vii. [1896] 242 ff.).

The dove is also mentioned occasionally as a bird of good omen; it is identified with the nation. Through the peculiar movement of a dove Abishai learns of the danger of David, who has fallen into the hand of the giants of Nob, not to speak of the dove sent by Noah after the raven on a similar errand, or of the dove as a symbol of the Holy Ghost in the baptism of Jesus (Gaster, *ZDMG* lxii. [1908] 232 ff. and 528 ff.).

(β) Ezk $21^{21(26)}$ 'he looked in the liver' refers to a kind of divination (*hepatoscopy*) not otherwise known among the Jews. This is not the place to discuss what this looking into the liver may mean, and whether the future was prognosticated from a special conformation of the liver or from the convulsions or spasmodic movements of the liver of the dying animal. This latter seems to be nearer the truth, for a peculiar kind of divination is still in existence which depends upon the twitching or convulsion of the separate portions of the human body. No doubt it is a direct outcome of the practice of looking into the liver or lungs of sacrificial victims for the purpose of divination, or a parallel to it. The convulsions or twitchings of the living took the place of those of the dying victim of old. A compilation similar to that which the Greeks ascribed to Melampus appears in Hebrew literature under the title *Sepher Refafoth*. It is found already in a manuscript of the 12th century (Br. Mus. Or. 2853, fol. 62*a*); Judah Hasid, Eleazar of Worms, and others mention it, and Elijah de Vidas prints it from old MSS (*Midr. Talpijot*, Lemberg, 1875, fol. 8*a-b*; see also Chwolson, *Ssabier*, St. Petersburg, 1856, ii. 266–272).

(γ) Ancient tradition also identifies *nāḥash* with *omens*. In the *Sifra* to Lv 19^{26} and in the *Sifrê* to Dt $18^{10ff.}$ it is stated that *nāḥash* means to see omens in such incidents as bread falling from one's mouth, or a staff from one's hand, or a snake crawling on the right side, or a fox on the left hand, or a fox's tail trailing across the road, or a raven croaking when a man starts on a journey. All these forebode evil to his enterprise; furthermore, those who listen to the twittering of birds or the squealing of a weasel, and those who deduce from a given star being in the ascendant that the time is propitious for an undertaking, practise divination. Star-gazing was also thus included under the term *nāḥash*, and these practices were called *darkê ha-Emorei* (the practices of the Amorites or heathen), and are condemned as idolatrous.

On account of their importance, we give here full references to all the passages on the ways of the Amorites in Rabbinical literature. These are: *Sifra*, ed. Weiss, p. 90; *Sifrê*, ed. Friedman, ch. 171 f.; Bab. *Ḥullin* 77; *Shabb.* 67*b*; Tosefta *Shabb.* vi., ed. Zuckermandel, pp. 117–119; *Sanh.* 65*a*–68; Jer. *Shabb.* vii. 2; *Yalḳuṭ, Sim.* i. fol. 169*c-d*, § 587; Maimonides, *Hilcot 'Aboda Zara*, ch. xi.; Jacob ben Asher, *Ṭur Yoreh de'ah*, ch. 179; and Karo, *Shulḥan 'Aruch*, ch. 179.

(δ) A peculiar kind of divination is the study of the shadow on the moonlit night of Hosha'anah Rabba; for, if a man loses his shadow on that night, he is sure to die in the course of the year (cf. Chamisso, *Peter Schlemihl*, tr. Bowring, London, 1878). Very likely the origin of this practice is found in the statement, 'For their shadow has departed from them' (Nu 14^9).

(2) *Me'ônēn* (RV 'who practises augury'), another kind of divination of which even tradition has not preserved a definite interpretation. One connects it with the root *'ayin*, 'eye,' and makes the *me'ônēn* to be 'one who conjures,' 'one who produces hallucinations' (*aḥizath 'enayin*); another seems to connect it with *'ānān*, 'cloud,' probably = 'one who studies the formation of the clouds'; but it is not explained for what purpose the clouds are to be studied. (*a*) It appears to the writer that the *me'ônēn* is the *weather-prophet* in the widest sense, not one who merely studied the clouds for some purpose of divination, but one who could affect the gathering of clouds, and their dispersal. That man was of the utmost importance to an agricultural people, for he could cause drought or rain, bring rich harvest, or complete failure with famine and starvation. Weather-makers figure in the literature of popular magic throughout the whole world, and it would therefore have been surprising to find so important a man missing among those ancient diviners and soothsayers. The law would never have condemned to death a man who merely looked at the clouds; he must be a man who could cause serious hardship, and perhaps lead people astray to false beliefs. Seen in this light, the various incidents in the historical books assume a new and most satisfactory complexion. Samuel at the time of the wheat harvest calls on the Lord to bring thunder and rain—a most inopportune time (1 S 12^{17}); here we have the very action of the *me'ônēn*. Then we have Elijah, who tells Ahab (1 K 17^1), 'There shall not be dew nor rain these years, but according to *my word*.' Ahab seeks him everywhere, evidently believing that it lay in the power of Elijah to make and unmake drought. It will now be easier to understand the sign of Gideon, who asked that the fleece of wool should on one night be found wet. 'If there be dew on the fleece only, and it be dry upon all the ground' (Jg 6^{37}), and *vice versa* (v.^{39}). These were the signs expected of the *me'ônēn*. Very likely the request of Joshua, that the sun and moon should stand still, and that a hail-storm should overtake the army of the enemy and destroy them (Jos $10^{12f.}$), Joshua appearing as a *me'ônēn*, and, finally, Elijah bringing down sheets of lightning in order to destroy the messengers of the king of Samaria (2 K $1^{10ff.}$), may be further echoes of a similar conception. Even the prophet Amos defines the

power of God in the sentence, 'I caused it to rain upon one city and not upon another' (Am 4^7). In the Talmud we find the story of Naḳdimon ben Gorion and the twelve wells which are filled at his prayer by the appointed day, and the sun shining again although it had apparently already set (*Ta'anit*, fol. 19*b*–20*a*, Exempla no. 85; *Nissim*, fol. 19*b*; *Maase Buch*, no. 96), and the stories of Ḥoni ha-me'agel, Raba, and others who force rain to come down (Gaster, 'Beiträge,' in Graetz, *Ztschr. für jüd. Geschichte und Wissenschaft*, 1882 [and Bucharest, 1883, ch. xi. p. 79 ff.]).

(*b*) Of more importance would be the man who could foretell the weather for the coming year. R. Akiba (*Sifrê*, § 171) explains *mᵉ'ônēn* to be the man who can foretell from the weather on the eve of the Sabbatical (seventh) Year [or rather on the eve of Shabuoth, Feast of Weeks] whether the year will be one of rain or drought, of plenty or scarcity. In the Talmud we find that from the form of the ascending cloud of smoke which rose from the altar in the Temple on the Day of New Year and subsequent few days the weather for the next year could be predicted, and that the weather of certain days was taken as prognosticating that of the next year (see Gaster, 'Jew. Weather Lore,' in jubilee number of the *Jewish Chronicle*, 1891, where the whole literature is given). The cloud of smoke was called Anan as the cloud of mist and rain. Transferred to the Kalendæ of January, this prognostication was attributed to Ezra (see Tischendorf, *Apocalypses apocr.*, Leipzig, 1866, Prolegomena, pp. xiii–xiv).

The *mᵉ'ônēn* was the master of thunder and rain, as shown by Samuel and Elijah. The latter, moreover, has experience of wind and earthquake before the appearance of God (1 K $19^{11ff.}$). Earthquake and lightning were further taken as premonitory signs of disaster. In Jewish literature, such brontologia and seismologia have been preserved under the title *Simanê ra'ashim ve-ra'amim* (Constantinople, n.d.). In Greek literature they were attributed to David (Fabricius, *Cod. Pseudep. VT*, Hamburg, 1713–33, p. 1162, and *NT*, do. 1703–19, i. 951–953; Gaster, *Lit. Pop. Rum.* 506).

(*c*) It is doubtful whether astrology and the observation of stars and planets come within the sphere of the *mᵉ'ônēn's* activity. Here we encounter the special name 'star-gazers.' The knowledge of astrology, star-gazing, divination by constellations, and forecasting from the new moon is clear from Is 47^{13}, which exhibits a distinct difference between the *mᵉ'ônēn*—the weather-prophet—and the real astrologer, whose observations were limited to the changes, conjunctions, and other positions assumed by the heavenly bodies. The phrase *ḥôbᵉrê shāmayîm*, if it means 'dividers of heavens,' *i.e.* those who divide up the heavenly circle into a number of constellations and forecast the future from them, would correspond to the *gāzᵉrîn* in Dn 2^{27} 4^7 etc. To this section belongs the horoscope and other astrological divinations dependent upon the changes of the calendar and the juxtaposition of days, and the conjunction of the stars and planets, as well as the lists of good and bad, ominous and propitious, days. This was attributed by Maimonides and Jacob ben Asher (*locc. citt.*) to the *mᵉ'ônēn*, whom they confused with the astrologer. Reference should be made in this connexion to divination from the sudden appearance of stars and comets, *e.g.* Balaam's prophecy (Nu 24^{17}), to which such Messianic importance has been attached ever since by Jews, Samaritans, and Christians. So, Josephus tells us (*BJ* VI. v. 3 [Niese, § 289]): 'There was a star resembling a sword, which stood over the city,' foretelling the impending destruction of the town. For the star in the NT (Mt 2), and the further development of the same idea in the Apocrypha, see R. Hofmann, *Leben Jesu n. d. Apokryphen*, Leipzig, 1851; Winer, *Bibl. RWB*, 1847, ii. 523 ff. A star appears at the birth of Abraham, and is interpreted as a portent of evil (*Chron. Jerahmeel*, xxxiv. 1). The appearance of many suns in the dream is found in the oracle of the 'Sybil of Tibur,' probably originally a lost Biblical apocryphon (Gaster, *JRAS*, July 1910, pt. iii. p. 609); cf. also the Song of Deborah (Jg 5^{20}): 'The stars in their courses fought against Sisera.'

(3) *Ḳôsēm, ḳesem* (RV 'diviner,' 'divination').—(*a*) Taking the various passages together where this word occurs in the Bible, and also looking at the traditional interpretation, we find, in the first place, that the *ḳôsēm* was a *professional* diviner, trained in the art of *ḳesem*, unlike the previously mentioned diviners, who practised without any special professional training, and who thereby did not obtain any official standing. The *ḳôsēm*, on the other hand, was the professional (priestly) seer, 'seeing' in a state of trance or ecstasy brought about by one means or another, in which he spoke words of divination (oracles) concerning future events. This state of trance was brought about 'by bowing down to the earth [evidently like the attitude of Elijah, 1 K 18^{42}], and crying aloud, or looking into a brass or glass mirror, or taking a stick in the hand and leaning heavily upon it, or striking therewith the ground, until he loses consciousness and talks' (*Ṭur*, *l.c.* ch. 179). In the Bible in many passages we find the *ḳôsēm* holding among the heathen the same position as the *ḥôzeh* or *rô'eh* among the Jews. But the Jewish conception of revelation is differentiated as the uncovering of the hidden by the grace and inspiration of God, from the heathen *ḳôsēm*, who is thought to have been inspired by an evil spirit whilst he himself was unconscious. That unconsciousness is brought about by action, for action characterizes this kind of divination, and action on definite lines. The *ḳôsēm* is not confined to Western Aramæan peoples; according to the Bible, the men of Moab, Midian, and, later on, the Philistines, had professional *ḳôsᵉmîm*. Balaam is the first mentioned; and it is clear, from the description given in Nu 24^4, that, after certain magical operations had been performed, such as building of altars, walking in a definite way, and using, no doubt, other means, he falls into a trance, or, as it is put there: 'And the man whose eye was closed saith: he saith, which heareth the words of God, which seeth the vision of the Almighty, falling down, and having his eyes opened [internal].' As far as can be judged, some tangible results were expected by Balak from the *ḳesem* of Balaam, such as a curse or blight, or a direct indication of the best means of overcoming the power which protected Israel. The *ḳôsᵉmîm*, together with the priests, were asked by the Philistines (1 S $6^{2.\ 9}$) to find out the cause of the plague, and they advised a divination by means of cows walking in a definite direction.

(*b*) The eldest tradition in *Sifrê* (*l.c.*) connects *ḳesem* also with *rhabdomancy*, i.e. divination by means of staff, rod, arrows, etc. In our opinion, the earliest example of this divination is Jacob's peeled rods (Gn $30^{37ff.}$), an incident which has remained very obscure in spite of all the commentators, who seem to have overlooked Gn $31^{10.\ 12}$—the vision of Jacob and the appearance of the angel. The peeling of the rods and putting them in the trough was an act of divination which was explained to him by the angel in his dream; for surely the peeling alone could not, even on the basis of physiological impressions, have had the result of producing so widely different marks as black sheep and goats, ring-straked, speckled, grisled, etc. — too complex a result to be expected from

one and the same impression. R. Moses of Coucy (1235) has preserved to us the description of an oracle or divination by means of peeled rods which were thrown into the air, and, according as the peeled or unpeeled side fell uppermost, success in marriage or the opposite was indicated (R. Joseph Karo, in his commentary to the *Ṭur*, *l.c.*). The appeal to the staff as an oracle we find in Hos 4^{12}. With some hesitation, one might also mention here the rod of Moses wherewith he was to do the signs (Ex 4^{17}), and which has been invested with miraculous powers by very numerous legends, and believed to have been a rod from Paradise (see *Chron. Jeraḥmeel*). Another rod from Paradise, used as a beam in the building of the Temple, fills an important rôle in the legend of the history of the Cross. The angel that appears to Gideon (Jg 6^{21}) also holds a staff in his hands, with which he touches the meat and the unleavened bread, and fire comes out from the rock. Elisha sends Gehazi with his staff to put it on the face of the dead child of the Shunammite, so that it may revive (2 K 4^{29}), and he tells him: 'If thou meet any man, salute him not; and if any man salute thee, answer him not again.' The spell is not to be broken, whilst the action is to be completed by the staff or divining rod. Of course, it is here a miracle to be performed through the grace of God.

From this time onwards we hear of the wand of the magician; and Rabbinical tradition demands that the *ḳôsēm* shall use, among other things, a staff or a rod (*Ṭur*, *l.c.*). Mention may be made also of the budding rod of Aaron, by which his selection was to be made manifest (Nu 17^{8}), to which numerous parallels exist. In most cases it is a withered rod or staff stuck in the earth, which unexpectedly buds and flourishes, and is thereby a sign to the penitent that his sin has been forgiven: *e.g.* the legend of Lot, who waters the rod with mouthfuls of water brought from Jordan at the bidding of Abraham; and the flourishing rod proclaims forgiveness of sin (Fabricius, *Cod. Pseud. VT* i. 428–31; Gaster, *Lit. Pop. Rum.* 284–86). Mediæval literatura knows a similar legend about a sinner appealing to R. Judah Hasid, when the rod flourished (*Maase Buch*, and Tendlau, *Sagen*, 1873, no. 62; cf. the legend of Tannhäuser); and a similar selection of Joseph by the budding rod to take Mary as his ward is told in *Protev. Jacobi*, ch. 8 (ed. Tischendorf, *Evang. Apoc.*, Leipzig, 1853, pp. 15–19), and *pseudo-Matth.* (chs. iv.–viii. pp. 60–67), not to speak of the innumerable parallels in the Legends of Saints and in popular literature.

Throwing sticks into the air and watching the way they fall is still one of the many forms of *rhabdomancy*. To this kind of divination belongs the shooting of arrows, which is tantamount to sending a pointed stick high into the air and watching the direction in which it falls. It is as such an act of divination that the shooting of arrows by Jonathan is best explained (1 S $20^{20ff.}$). The shooting of arrows for the purpose of *ḳesem* is found in the history of Joash (2 K $13^{15ff.}$). The smiting of the ground seems to have been an accompanying ceremony. The use of the arrow in *ḳesem* appears also in Ezk $21^{21\ (26)}$. The fall of arrows was to indicate the road the king of Babylon was to take, for the arrows must have been shot straight up into the air and allowed to fall by themselves. In the legends about the fall of the Temple (Bab. *Giṭṭin*, 56*a*, Exempla no. 70), Nero is said to have shot arrows from the four corners, and, as they all fell into Jerusalem, it indicated to him the impending fall of the town. It is still an element in Oriental, notably Gipsy, fairy-tales for the hero to shoot an arrow into the air and go in quest of it, and where the arrow falls things await him—good or evil.

(*c*) Akin to these forms of divination would be the *tree oracle*—the shaking of the boughs in one direction or another being taken as prognostication of some future event. This must have been the meaning of the oak of Meonen (Jg 9^{37}). David heard in the noise of the shaking boughs of the mulberry tree (2 S 5^{24}) the sound of marching. In Talmudic times we find a special art of divination mentioned under the name of *sihath dᵉḳālîm*, the language of trees. R. Yoḥanan ben Zakkai is mentioned as one who possessed this knowledge (see Bab. *Sukkah*, 28*a*). Abraham Gaon, who lived in the year 1140 of the Seleucid era (A.D. 829), could understand the speech of palms (*Aruch*, *s.v.*, Sh. ii.). Through Arabic influences, special books of divination by means of palm trees or palm leaves (ascribed to Abu Iflah of Saragossa) have been preserved in Hebrew literature, in which the origin of this science is referred back to King Solomon (Cod. Gaster, 19, 329*b*, 523). Another species of divination mentioned in the Talmud and Midrash concerns the tree as a life token. At the birth of the child a tree is planted, and from its state of flourishing or decay one can divine the state of the man himself. By seeing the withering of Job's tree planted in their garden his three friends knew of his misfortune, and came to comfort him. Such trees were sometimes cut on the day of marriage, to be used as ornaments; the premature cutting of such a tree by a Roman general brought about, according to the Talmud, the war of Betar (Bab. *Giṭṭin*, 57*a*).

(4) *Ḥôbēr* (RV 'charmer').—Not much information is found in the Bible concerning the activity denoted by this name. The tradition in *Sifrê* (*l.c.*) which explains the *ḥôbēr* as one who could gather together (*ḥāber*, 'companion') huge or small animals according to his skill—for what purpose is not stated—throws an unexpected light on many incidents in the Bible which have hitherto remained obscure, in which we recognize now the work of the *ḥôbēr*, though not under that name. If a similar view is to be taken of him as of the *mᵉʿônēn* (weather-maker) he must have been a man who could bring or avert, foretell the coming or disappearance of obnoxious animals. His inclusion in the list in Deut. would thus be thoroughly justified; for to bring wild animals into the land or to draw them away would be a curse or a blessing to the people. To this category would belong the priests who were asked for by the Cutheans from the king of Assyria, to be sent from Babylon to Samaria in order to drive away the lions which infested the land (2 K $17^{25\text{-}27}$). The priest sent was no doubt considered to be a powerful diviner or charmer, a *ḥôbēr*. Similarly Elisha, upon whose curse two she-bears appeared and destroyed the children after they mocked him, acts as a kind of *ḥôbēr* (2 K 2^{24}). So also a certain man from the sons of the prophets (1 K $20^{35ff.}$), at whose bidding a lion kills the disobedient fellow-prophet, acts as a *ḥôbēr* who has power over animals for good or evil. In 1 K 13 we see the lion turning against the prophet (charmer) whose spell was broken through disobedience, although his power is still shown by the animal's standing quietly by the corpse next to the ass without hurting the latter. Going higher up the stream of Biblical tradition, we find Samson (Jg 14^{8}) tearing to pieces a lion, in whose carcass bees afterwards swarm, contrary to the nature of bees, which never hive in dead bodies. Samson is able also single-handed to catch three hundred foxes and put firebrands between their tails (Jg 15^{4}). Here we have an exact portraiture of a *ḥôbēr* (as interpreted by the present writer), one who is able to gather animals either for good or for evil purposes. According to later tradition, the presence of a pious man or reputed saint was sufficient to drive away obnoxious animals from a place. In the Temple area itself no fly was seen, nor did a wild animal ever hurt any visitor to Jerusalem (*Pirḳê Aboth*). The sanctuary took the place of the pious man in averting the evil of wild beasts (see Gaster, 'Beiträge,' ch. iv. p. 22 f., in connexion with the legends of Virgil, St. Patrick, etc.).

How far Beelzebub would fall within this cate-

gory would be difficult to state, but the Philistines attributed the plague of mice (1 S $6^{4ff. 16}$) to the presence of the ark, and they returned golden mice as a votive offering with it. Here the ark, in inflicting the plague, acted in a similar though opposite direction to the sanctuary (ark) in Jerusalem, which prevented a plague of vermin.

It is a remarkable fact that all the acts of divination mentioned hitherto are found among the ten plagues inflicted by Moses in Egypt at the bidding of the Lord, no doubt to bring home to the Egyptians, in the manner best understood by them, that all the acts of the enchanters, augurs, charmers, weather-makers, could also be performed by a man in the name of another power against whom their own diviners and charmers could not prevail. We have—with the addition of (*a*) the rods of Moses and Aaron turned into snakes—(1) blood, (2) frogs, (3) lice, (4) various animals, (5) plague, (6) boils, (7) hail storm, (8) locusts, (9) darkness, and (10) the death of the firstborn. These correspond, with the exception of the last, to which reference will be made later on, to the arts of the *mᵉnaḥēsh* (*a*), *mᵉʿônēn* (7, 9), *ḳósēm* (1, 3, 5, 6) and *ḥóbēr* (2, 4, 8). These practices known in Egypt were strictly forbidden to be practised by the Jews, and were strongly denounced in Leviticus and Deuteronomy.

The process of elimination of deep-rooted practices and of transforming them in accordance with the spirit of Judaism, runs on parallel lines with those of the spread of Christianity and of Islām. Local practices and heathen ceremonies were adapted with slight changes to the new order of things; heathen gods became local saints, heathen practices became Christian in the Church. Similarly, the forbidden practices of the *mᵉnaḥēsh*, *ḳósēm*, *ḥóbēr*, etc., were adopted and adapted to the spirit of Judaism, and they were practised by leading men—seers, priests, judges, etc.—in the name of the Lord God of Israel. And thus the people were slowly educated, until, with the establishment of the Temple in Jerusalem and the era of the great prophets, they broke finally with the past, and drove even the remnants of ancient superstition out of the Jewish worship and Jewish practice.

(5) *ʾÔb, yiddeʿónî, dôrēsh el-hammēthîm* (RV 'familiar spirit,' 'wizard,' 'necromancer').—There still remains another kind of divination, which rests on the conception of Animism and the survival of the dead. No hint is given in the Bible whether it was a spirit of the dead or his material body which was sought after or inquired of. It is a fact that *ʾób* and *yiddeʿónî* always occur together except in the history of the woman of Endor (but even there in the same chapter Saul is mentioned as having destroyed [1 S 28^{3}] familiar spirits and wizards) and Is 29^{4}, where the voice of the *ʾób* is described as coming from the ground. We must, therefore, conclude that these two were intimately connected with each other. *ʾÔb* has the fem. pl. *ʾóbôth*, whilst *yiddeʿónî* has the masc. pl. *yiddeʿónîm* —probably an indication of differentiation of sexes, one the female and the other the male. In Is 8^{19} they are described as they 'that chirp and that mutter' (RV; better, 'conjurers who whistle and groan' [cf. Magical Papyrus Paris, where the god or the conjurer whistles and groans]), and are by the prophet connected with the dead (v.[19]). In both cases *dārash* ('to seek') and the alternative *shaʾal* ('to inquire') are used. We find then that the *ʾób* and *yiddeʿónî* were things *made*. In 2 K 21^{6} and 2 Ch 33^{6}, the Heb. וַיַּעַשׂ (RV wrongly 'dealt with') means 'and he made'; and Lv 20^{27} must not be understood in the sense that men or women have in their body a familiar spirit, but that they are the possessors of an *ʾób*—evidently a material thing. The translation of *ʾób* as 'familiar spirit' is contrary to indications in the Bible. The woman of Endor is called distinctly *baʿalath ʾób*, 'the possessor of an *ʾób*,' not 'one possessed by an *ʾób*.' She must first perform a certain ceremony, she is to use enchantment (*ḳesem*) in order to get the *ʾób* to work (1 S 28^{8} 'divine unto me'), and only afterwards she asks Saul whom he wishes her to raise from the dead.

Now, it is a very remarkable fact that the *ʾób* does not occur in Genesis, in Joshua, in Judges, in 2 Sam., in 1 Kings, or in any of the latter prophets except Isaiah. Another word, equally mysterious, is used, viz. *tᵉrāphîm* [note that the word is plural, and *ʾóbôth* and *yiddeʿónîm* occur also mostly in the plural form]. The *tᵉrāphîm* are mentioned in Gn $31^{19. 34}$, but not in the other four books of the Pentateuch; then they occur in Jg 17^{5} $18^{14ff.}$, 1 S 15^{23} $19^{13. 16}$, 2 K 23^{24}, Ezk $21^{21 (26)}$, Hos 3^{4}, Zec 10^{2}; only in one case are they mentioned together with the *ʾóbóth* and *yiddeʿónîm*—2 K 23^{24}, where they are said to have been put away by King Josiah. The *tᵉrāphîm* also were 'made,' *e.g.*, by Micah (Jg 17^{5}, where they are differentiated from 'a molten image and a graven image'), and they are also asked or inquired of (*shaʾal*), like *ʾób* and *yiddeʿónî* (Ezk $21^{21 (26)}$); in Zec 10^{2} they 'speak.' Laban is the first to mention them, and calls them his gods (Gn 31^{30}); Rachel hides them (v.[34]) in the saddle-bag (RV 'camel's furniture'). King Nebuchadnezzar consults them (Ezk $21^{21 (26)}$: cf. the Parthian woman in Jos. *Ant.* XVIII. ix. 5 [344], who conceals the images of her gods which she worships in the house). All the evidence points to a Western Aramæan origin, whilst the *ʾób* and *yiddeʿónî* point much more to Egyptian origin; Is 19^{3} connects them with Egypt. It is, therefore, perhaps not improbable that we have here two different names for practically the same object of divination, connected more or less with the dead body, or, to put it more clearly, a mummified body worshipped and used for divination. The story of Michal in 1 S $19^{13. 16}$ leaves no room for doubt that the *tᵉrāphîm* so closely resembled life-like human bodies (mummies, not wooden images) that the soldiers could believe that David was sleeping in the bed. A legend in Jer. Targ. to Gn 31^{19} relates that 'they used to slay the firstborn of a man and cut off his head, salted it, and embalmed it, and wrote incantations on a plate of gold, which they put under his tongue, and stood it up in the walls, and it spake with them; and unto such Laban bowed himself' (see also *Chapters of R. Eliezer*). Here we have the mummified head, which might be called *tᵉrāphîm* among the Western Aramæans, and *ʾób* and *yiddeʿónî* in S. Palestine, according to the sex of the mummy used for necromancy. In Bab. *Keritot*, 3*b*, we find that the necromancer burnt incense to the demon, and then questioned him. Rabbinical tradition (*Sifra*, par. 3, ch. vii.) says of the *ʾób* that he is the Pithom (Python) who causes the dead to speak through some part of his body, *shehi* (see also *Sanh.* vii. 7), and, furthermore, that necromancy was performed by means of the skulls of dead men—no doubt because the process of mummification had died out, and mummies were not easily accessible. The same holds good for the necromancy as practised by other peoples, in which the skull of the dead plays a prominent part. In this connexion the death of the firstborn of the Egyptians would appear in a new light.

The idea of a *familiar spirit* is of much later date; it was introduced at a time when belief in the existence of evil spirits became deeply rooted, and when it was supposed that it was in the power of man to conquer and subdue such spirits and force them to serve their master in any office to which he might choose to appoint them.

Solomon became a legendary master of the demons, or *shēdîm*. The Temple was built by *shēdîm* (*Gîṭṭîn*, 68*a*) at his command; and through his seal, on which the ineffable name of God was engraved, he could command the obedience of all the spirits. Here two sets of thoughts and beliefs have been blended, and Solomon's power was made to rest upon the knowledge and possession of the ineffable name of God with its tremendous

efficacy. The Apocryphal *Testament of Solomon* and the *Claviculus Solomonis* (Solomon's Key) teach how to obtain mastery over *shēdim*. We find the history of a man having a *shēd* at his disposal (Bab. *Ḥullin*, 105*b*). *Shēdîm* could not be conjured up on Sabbath or holy days (*Sheelat Sheddîm*, see Levy, *Neuhebräisches und chaldäisches Wörterbuch*, 1876, *s.v.* 'Shed,' iv. 510). Conversation with the *shēdîm* was considered a great art (*Sukkah*, 28*a*, see Zunz, *Gottesd. Vorträge*[2], 1892, p. 173). In a Jewish fairy-tale a man overhears the conversation of *shēdîm*, saves the king's daughter, and re-opens a well which had been stopped by their mischievous powers (*Exempla* no. 29, and Gaster in *FL* vii. [1896] 231). Nachmanides writes that pious Jews in Alemannia held *shēdim* in servitude, who did their bidding and carried out orders (*Responsa of R. Sal. b. Adrat*, no. 414); see also Manasseh b. Israel, *Nish. Ḥayyim*, iii. ch. 12, fol. 113*b* ff.).

Men who were reputed to hold communion with the dead were probably believed to be able to quicken the dead temporarily or permanently. The fact that Elijah (1 K 17[17ff.]) and Elisha (2 K 4[20ff.]) each revived an apparently dead child, and that the mere touch of the bones of Elijah was sufficient to call a man back to life again (2 K 13[21]), seems to point in the direction of such belief. But the subject is very obscure, and later tradition does not help us to elucidate the problem. Real necromancy does not seem to have flourished among the Jews. So little was this the case, that none of the later authorities gives any further information about *'ôb* and *dôrēsh el-hammēthîm*, and about the *yidde'ônî* they tell us only that the man put into his mouth a bone of a certain animal called *yaddu'a*, which caused him to speak—which is, of course, a mere guess, or probably a misinterpretation of the use made of the bone of the dead (men and animals) for the operation of divination (see *Ṭur*, *l.c.*).

(6) Thus far we have dealt with the various kinds of divination of a heathen origin mentioned in the Bible, and practised by Jews at an early date, only after they had been stripped of their heathen garb and adapted to the teaching of Judaism. As the Law, however, condemned certain modes of divination, other means had to be found in full accordance with the true spiritual teaching of Judaism. The whole world was the creation of one God, and from Him alone the answer must come, and to Him men must turn at critical moments of their lives. The means by which the answer is to be vouchsafed is of a threefold character: by *dreams*, or by *Urim*, or by the vision of the *prophet* (seer). To such means did Saul resort (1 S 28[6]); and only when he found himself forsaken by those lawful means did he turn to the forbidden arts and go to the woman of Endor, the mistress of an *'ôb*.

(*a*) *Dreams.*—Of dreams there are abundant examples in Genesis and in the historical books, but none of the same kind in the other books of the Pentateuch. God came to Abimelech in a dream (Gn 20[3]); Jacob dreamt of the ladder (28[12ff.]), and again in connexion with his peeled rods (31[11]); Laban also is warned in a dream against attacking Jacob (31[24]). The forecasting of future events appears in Joseph's own symbolical dreams (37[5ff.]), as well as in the dreams of the butler and the baker in Egypt (40[5]), and the dream of Pharaoh (ch. 41), interpreted by Joseph as a solution granted by God. No reference to such prophetic dreams occurs elsewhere in the Pentateuch, although we have the statement (Nu 12[6]) that God speaks to prophets in a dream. Quite different is the character of the dreamer of dreams (Dt 13[1ff.]), rather a sinister personage, as in Jer 23[25-28, 32] 27[9], where diviners, dreams, and soothsayers are mentioned together (cf. also Zec 10[2]). The dream of the Philistine is understood by Gideon as foretelling future success (Jg 7[13]). The Book of Daniel is full of dreams and prophetic visions of the future, which border on the higher sphere of prophecy, or the direct revelation of the future by God through His prophet. This lies outside the immediate scope of divination, for the human initiative is practically eliminated; the prophet now acts simply as an agent selected by God, for His purpose, to carry His message to the people. The last time that God speaks to His chosen in a dream is to Solomon at Gibeon before the building of the Temple (1 K 3[5]), and immediately on its completion (9[2]); no other example after this is mentioned in the Bible—a fact of deep significance.

Apocryphal and apocalyptical literature is, however, full of such prophetic dreams. In the *Chron. of Jerahmeel* alone no fewer than eight or nine such dreams are recorded; the dreams of Methuselah and Enoch (ch. xxiii. p. 48, intr. lxxi); the dream of Pharaoh foretelling the birth of Moses (chs. xlii.–xlviii. p. 102, intr. lxxxvii.); the dreams of Naphtali (xxxviii. 3 and 6); the dream of Kenaz (lvii. 39, 40); the dream of Mordecai; Ahasuerus' dream; and the dream of Alexander the Great (lxxxv. 4 ff.; found also in Samaritan literature [*Abulfath*]). Mention may be made also of dreams in the *Test. of the XII Patriarchs* (Charles): Levi, Jacob, Naphtali, and Joseph; the visions of Enoch in the Book of Enoch (lxxxiii.–xc. pp. 220–259 [Charles]), and the visions of Ezra in 2 Esdras. Later Jewish literature abounds in prophetic dreams sent to the people to warn them of danger, such as that in the legend of Bostanai the exilarch (*Seder 'Olam Zuṭṭa*).

The interpretation of dreams became a recognized art. Many examples are found in the Talmud of men who received payment for this function. Twenty-four interpreters are said to have practised at the same time in Jerusalem. A certain Bar Hadya is mentioned by name as one who shaped his interpretation according to the amount received.

Such interpretations are found in the Talmud (*Ber.* 56*a* ff.; *En Yaakob*, par. 110; Jer. *Ma'aser shêni* iv. 6), the *Exempla* of Rabbis (nos. 215–217), and *Maase Buch*, Amst., no. 28, fol. 7*b*. These form the basis of the Hebrew *Oneirokritika* which are ascribed to Joseph, Daniel, Hai (ed. pr. Ferrara, 1552), Saadya, etc., and published by Almuli in his *Pitron Ḥalomoth* (*Mefasher Helmin*, ed. pr. Lisbon (?) 149–; see Cod. Gaster, 383, 664, and 1087). Some of the sages ask that the answer should be given in the dream to their query, like Raba (Bab. *Menaḥot*, 67*a*) and R. Johanan (*ib.* 84*b*). He who sees an ill-omened dream fasts and recites a special prayer whilst the *kōhânîm* pronounce the priestly blessing during the service (Bab. *Ber.* 55*b*). A curious collection of 'responses from Heaven' exists in Jewish literature, dating probably from the 12th or 13th century.

(*b*) *Urim and Thummim* was another means of divining the future, explaining the past, declaring guilt and innocence, dividing land, and deciding the issues of war and peace. In accordance with the system pursued of concentrating every possible sacred or sacrificial action in the hands of very few, and thus of weaning the common people from such practices, the divination by means of the Urim and Thummim was reserved for the high priest. Only he, in his priestly robes and wearing the breast-plate called 'the breast-plate of judgment' (decision) (Ex 28[30]), could use the Urim for the purpose of obtaining an answer from God to his question. We cannot here enter fully upon the discussion as to what the Urim and Thummim may have been. These words occur altogether seven times in the whole Bible; and in two of these, Ezra and Nehemiah, as a remembrance of old (Ezr 2[63], Neh 7[65]). To the other five passages we must add two in which the practice is implicitly referred to (Jg 1[1] and 20[18], where the children of Israel went up to Bethel to inquire of the Lord, *i.e.* through the priest, who only could obtain the answer by the Urim and Thummim). The ephod consulted by David in Ḳ'eilah (1 S 23[9ff.]) was worn by the priest Abiathar. Evidently the reference is to the Urim and Thummim within the ephod, and similarly in 1 S 30[7ff.]; and probably the ephod in Hos 3[4] also means the oracle of the Urim and Thummim. In 1 S 28[6] we are told that Saul had inquired of the Lord 'by the Urim,' and only because he got no answer he went to the woman of Endor. In 1 S 14[18] Saul says to Ahijah, 'Bring hither the ark' (LXX, 'the ephod'), and in v.[41], when the guilty party is to be discovered, he says *hābāh tāmîm*, which must be read *hābāh tummîm*, i.e. Urim and Thummim; and then they cast lots, and Saul and Jonathan are first taken,

and afterwards Jonathan alone. This reminds us of the identical process in the case of Achan (Jos $7^{14ff.}$). Rabbinical writers identify the Urim and Thummim with the twelve stones of the breastplate, and explain these names as 'lighted up' and 'dark,' stating that the stones lit up or a light shone in them (according to some the letters stood out lighted up) in the case of a favourable answer, and that they remained dark at an unfavourable one. After the establishment of the sanctuary in Jerusalem by David, no further mention is made of this kind of divination by lots and by means of the Urim. That event was the turning-point in the whole history of Jewish worship and in the practice of divination.

Special mysterious powers were ascribed to the stones of the breast-plate, and from Epiphanius onwards the literature of *Lapidaria*, or 'stone books,' has grown continuously. Hebrew literature shows a variety of such *Lapidaria* (*Kohot haabanim*). A number of unedited texts have been collected by the present writer in his Cod. 377, besides other MSS (Cod. Gaster, 337, 714; de Vidas, *loc. cit.* fol. 9*a*).

After the disappearance of the Urim and Thummim another inspired oracle took its place—the *Bible oracle* (the oral recitation of Biblical verses). Infants were asked to tell a verse to a man who met them quite unexpectedly, and from the verse which the child repeated innocently the questioner drew his own conclusions, for he saw in it the oracular answer to his query. We may look upon the passages referred to above under '*Meʿnahēsh*' (Gn $24^{18ff.}$, Jg 7^{11}, 1 S 14^{8-12}, and 1 K 20^{33}) as the oldest examples of divination from the opening words of the enemy or interlocutor. This is the origin of the Bible oracle (stichomancy) by means of a written and later on a printed book. It consists in opening the book and looking at the first verse that meets the eye as a means of divination, or in putting in a pointer, and the passage where the pointer rests is taken as full of significance and prognostication. Samuel used to inquire through 'the Book' (Bab. *Ḥullin*, 95*b*; cf. the *sortes Vergilianæ*). The Bible oracle leads to that of the *Shimmusha Rabba* (or that of selected portions of the Bible) known in the 8th or 9th century. In the *Shimmush Tʿhillîm* the Book of Psalms is used as a means of divination (Cod. Gaster, 1094^e, and often printed with Book of Psalms; best ed. by W. Heidenheim).

At an indeterminate period in post-Biblical times a large number of magical ceremonies and practices of divination flowed into the stream of Jewish tradition, and it is often difficult to trace each of these elements to its proper source. All that was done was to copy and to borrow such material, and so change and mould it as to make it compatible with the special teaching of Judaism, though the line of demarcation between, *e.g.*, Jews and Muhammadans in these practices is so faint as to be often indistinguishable. Nowhere does this borrowing show itself more clearly than in the books for telling future events, or fortune-telling books (*Sifrê Goralot* [Amsterdam, 1700), *Urim Vethummin* [Dyrrenfurth, 1700], ascribed alternately to Hai-Saadya, Aben Ezra, Pokeah, 'Ibrim [Venice, 1657]; Cod. Gaster, 61, 213, 439; Aben Ezra, 35, 112, 465, 470, 471, 592, 594, 702; Saadya, 602, 679, 782, 1017, 1060, 1090). A thorough investigation of the origin and filiation of these books and their interdependence is still lacking (Steinschneider, *Die hebräischen Übersetzungen des Mittelalters*, § 533, pp. 867–71).

The hand and the face of man were also used for the purpose of divination. The *Zohar* (Exodus) already contained almost a complete treatise on physiognomics (*ḥochmath ha-parṣuf*), and the Hebrew version of the *Secretum* ascribed to Aristotle (ed. Gaster [contains in bk. xi. a treatise on physiognomy]) continued to spread and to fortify the belief in physiognomics among the Jews. Cheiromancy (*Ḥochmath ha-yād*, last ed., Warsaw, 1902) is found in many manuscripts and prints, and also in translations in the Hebrew-German (Cod. Gaster, 443, fol. 90*b* f.).

(*c*) *Rô'eh, or seer.*—The last form of divination to which Saul resorted was through the *nābî'*, the prophet, or rather the *rô'eh*, the seer, 'for he that is now called a prophet was beforetime called a seer' (1 S 9^9). He was expected to answer not only important questions affecting the safety of the king or nation, but also trivial inquiries about lost property, *e.g.* the asses of Kish (1 S $9^{20ff.}$). The seer was then acting as the Hebrew counterpart of the heathen *ḳôsēm* (like Balaam, etc.), who also claimed to 'see' and to be a 'seer' (Nu $24^{4.16}$). Samuel is consistently called the seer and not the prophet in 1 Ch 9^{22} 26^{28} 29^{29}; and other personages belonging to the period before the building of the Temple appear under the same names of *rô'eh* and *ḥôzeh*, which alternate with one another and are both distinguished from *nābî'*. The latter was, no doubt, considered as yet inferior to them; for we find the 'company of prophets' (1 S $10^{5.10.11}$), Saul turned prophet (10^{12}), and 'the sons of the prophets' (1 K 20^{35}, 2 K 2^3 etc.) all playing an inferior rôle to that of the *rô'eh*. Similarly the *nābî'* in the Pentateuch seems inferior to the *nābî'* of the time of the kings. He is more akin to a diviner. Abraham is called a *nābî'* (Gn 20^7), although he does not prophesy, but knows of Abimelech's dream. Aaron is appointed *nābî'* to Moses (Ex 7^1), certainly not as superior to him; seventy elders prophesy (Nu $11^{25f.}$), and Eldad and Medad do so in the camp, like the hands of prophets and Saul mentioned above. In Nu 12^6 God speaks to the *nābî'* in a dream. In Dt $13^{1.5}$ 18^{20} the *nābî'* is placed on the same footing as the dreamer of dreams (see above). The *nābî'* of Dt 18^{15} must therefore be taken in the same sense as the *nābî'* in all the other passages in the Pent., and loses the special significance attached to the name. It is noteworthy that Moses is called *nābî'* only after his death (Dt 34^{10}). Saul resorted to a *nābî'* for the purpose of learning what the future had in store for him (1 S 28^6), and therefore one is justified in including this *nābî'* among the diviners, like the *ḥôzeh* and *rô'eh*—the Jewish equivalent of the heathen *ḳôsēm*. But from the time of David onwards a change took place in the value attached to the name. The *nābî'* was no longer a man who could take any initiative, or answer questions put to him, but an inspired agent of God, selected by Him to send His messages to rulers and peoples.

With the prophets of the Second Temple prophecy had come to an end. Instead of it there was the *Bath Ḳôl*, i.e. the second voice, a kind of Divine echo heard within the precincts of the Temple or in answer to queries put to Heaven by the Rabbis (Bab. *Yoma*, 9*b*; *Sanh.* 11*a*; Jer. *Ber.* 3*b*).

The final stage of divination was by the use of the mysterious and ineffable Divine Name. This was a dangerous mode of divination; of the four great men who attempted to penetrate the Divine mysteries (*Ḥag.* 14*b*), only one, Aqiba, escaped unhurt. Practical *Qabbālā* is the final outcome of this mystical development, which has almost entirely driven out all the older forms of divination. From the time of the Essenes (2nd cent.) downwards magic and divination centre in the mystical names of God, angels, etc. Magical papyri abound, containing directions how to divine theft, or how to obtain a dream which would foretell the future. The most ancient book of this kind is the famous 'Sword of Moses' (ed. Gaster, London, 1896), a complete manual of such operations. Some of the formulæ and practices contained

therein have survived to the present day. Many a man in mediæval times was credited with insight into the future through the knowledge of this ineffable name.

The last stage in the development of the art of divination was reached when the place held in ancient times by the *ḳôsēm* or *mᵉnaḥēsh*, then by the *rô'eh* and *nābî'*, then by the scholar and sage, was finally taken by the *ba'al shēm*, the possessor of the ineffable wonder-working name of God. He is the exact counterpart of the *ba'alath 'ôb*, the female possessor of the *'ôb* (woman of Endor). He also could conjure the dead, foretell the future, and perform every possible miraculous deed. The legend of the *ba'al shēm* told in *Ma'ase Nissim* (see Tendlau, *Sagen*[4], no. 52, p. 25 ff.) makes him raise out of a cup Joab b. Zeruiah (King David's general). Practically the last link in this chain is the famous *ba'al shēm* (known as Besht [Ba'al Shem Ṭob]), the founder of the sect of the Ḥasidim at the beginning of the 18th cent., whose successors are the reputed wonder-working Rabbis of the Ḥasidim in Galicia and Eastern Europe.

But all these modes of divination have gradually disappeared. Only the Qabbalistic formulæ are from time to time resorted to and practised in addition to those borrowed from other nations; for in modern times, and especially in Eastern countries, the Jews follow the superstitions of the native population, and practise the same modes of divination for such lower purposes as to detect a thief, or to find out whether a woman will marry in the course of the year, whether her child will be a boy or girl, whether or not an undertaking will be successful. But there is nothing specifically Jewish about them.

LITERATURE.—As the writer of this article differs fundamentally in the interpretation of the Biblical terms on divination from all other scholars, he does not refer to any other article on this subject, or to any of the special books hitherto written on divination in the Bible. In addition to the references given in the text of the article itself, the following bibliography will serve the purpose of directing students to a vast field of hitherto scarcely explored literature. One name stands out prominently, that of M. Steinschneider, and his great work, *Die hebräischen Übersetzungen des Mittelalters*, Berlin, 1893 (notably § 539, p. 893 f.; § 541, p. 905; § 522, p. 849; § 533, pp. 867–71; § 575, p. 953 f.; and § 534, p. 871), contains the most reliable data on many of the subjects of the later period of Jewish literature, when it stood under the influence of Greek, Arabic, and mediæval Latin literature. Still even he left room for additional information. Some of it, especially MSS material, may be found in the bibliography to artt. BIRTH (Jewish) and CHARMS AND AMULETS (Jewish), in which very much matter referring to divination may be found. A few more books may be now mentioned here: M. A. Delrio, *Disquisitionum magicarum libri sex*, ed. Cologne, 1720, iii. p. 11 q. iv. s. 6, pp. 473, 478–480; Manasseh ben Israel, *Nishmath Ḥayyîm*, ed. Amsterdam, 1652, bk. iii. chs. 4–29, fol. 101 f.; M. Güdemann, *Gesch. des Erziehungswesen und der Cultur der Juden*, Vienna, 1880, vol. i. p. 201, no. 2; M. Gaster, *Literatura Popularis Rumana*, Bucharest, 1883, pp. 324, 506 f., 517, 517*a*, 531, 532*a*; K. Krumbacher, *Geschichte der byzantinischen Literatur*[2], Munich, 1897, pp. 627–631 and *passim*; H. Diels, *Beiträge zur Zuckungsliteratur*, Berlin, 1908; Jacob Racah, *Kishurim le Yaakob*, Leghorn, 1850, fol. 24*a*–25*b*.

M. GASTER.

DIVINATION (Litu-Slavic).—A synopsis of the various means employed by the Prussians and Lithuanians to divine the future is given in the art. ARYAN RELIGION, vol. ii. p. 54 f. As grounds of their predictions they had—or still have—recourse to the flight and cries of birds; appearances in the sky and other natural phenomena; sacrifices, entrails, and blood; chance meetings, the rustling of the oak, fire and smoke, dreams; various happenings and utterances at weddings; wax, lead, glass, the foam of beer, amulets, sieve-turning, plants, and innumerable other things. One of the most ancient and widely-used accessaries of divination was *blood*, both of man and beast. When the Grand-duke Keistut of Lithuania was overthrown and taken prisoner by King Ludwig of Hungary in 1351, he made a treaty with the victor, pledging himself to embrace Christianity and desist from further troubling. This treaty was ratified by a rather curious Lithuanian oath, the preliminary to which was a blood-oracle:

'Et facta est haec promissio per regem cum tali iurameoto: accepit enim bovem et in praesentia regis Ungariae et suorum fecit bovi duas venas incidi in collo, et, si sanguis ferventer exiret, bonum esse indicium futurorum; et largiter fuit sanguis effusus. Tunc rex Litowiae bovem fecit decollari et inter bovis caput et corpus progrediens iuravit, sic sibi contingi, si promissa non servaret' (*Scriptores Rer. Pruss.* iii. 420).

But human blood likewise might be used for purposes of prophecy. Thus, in 1325–26, when the Grand-duke Gedimin sent twelve hundred horsemen to the assistance of King Lokietek in his struggle with the margrave of Brandenburg,

'prepositum de Bernow, hominem corpore grossum et pinguem vinciunt, caput inter crura detorquentes, dorsum eius gladiis aperiunt, profluvium sanguinis attendunt, de exitu belli per ipsum divinare cupientes'; and it is also recorded that in the same campaign 'quibusdam guttura preciderunt et divinationes suas exercuerunt' (cf. A. v. Mierzyn'ski, 'Der Eid des Keistutis,' *Sitzungsber. d. Altertumsgesellsch. Pruss.*, no. 18, Königsberg, 1893, p. 104).

Such incidents show that as late as the 14th cent. of our era the Lithuanians, like the prophetesses of the Cimri (cf. *ERE* ii. 54[b]), were in the habit of killing their prisoners of war in order to ascertain by an inspection of their blood whether the approaching battle would result in victory or defeat.

Leaving the Baltic peoples, we proceed to speak of the Slavs, and, more particularly, of the Russians. Here, in the 16th and 17th centuries—a period from which several continuous records survive[1]—we find an almost incredible development of the belief in omens (*primětŭ*) and the practice of fortune-telling (*gadanie*). It is scarcely too much to say that among the Russians of that age the individual's course of life was entirely conditioned by premonitions. Books of magic and collections of warnings and predictions, though banned by the clergy, were passed from hand to hand. A creaking in the wall or a singing in the ears foretold a journey. An itching in the palm signified a gift of money. Itching eyes betokened weeping. The croaking of ravens or the crowing of cocks was an omen of misfortune. The cackling of ducks or geese, twitching of the eyelids, the crackling of the fire, the howl of a dog, the squeaking of mice or their nibbling of clothes, a cat appearing at the window with a captured mouse, a terrifying dream, meeting with a blind person—all these foreboded loss by fire. In a MS in the Rumjanzov Museum we read:

'When the shores heave, and the sea rages, when dry or moist winds blow, when rain-, snow-, or storm-clouds appear, when thunder rolls, the storm howls, the forest rustles, the trunks of trees grate on one another, wolves howl, or squirrels leap—then will ensue plague, or war, or scarcity of water; in summer fruits will grow nowhere, or they will disappear.'

The people believed in dreams, and framed an elaborate system of reading their significance. They saw portents in the act of sneezing, in the crawling movements of insects, in every sort of object they came across. It was thought unlucky to meet with a monk, a horse with hair worn off, or a pig. As early as the 12th cent. we find St. Theodosius censuring those who allowed such occurrences to scare them home again. Native and foreign superstitions were inextricably blended. The people had also complete written systems of prophecy, called *rafli*—a term of Arabic origin ('libellus astronomicus seu mathematicus Persarum' [Ducange]; Arab. *raml*, 'geomancy'); the *Domostroj* (cf. *ERE* iii. 465, note 1), § 23, warns against their use. Mention should also be made here of the so-called 'birth-magic' which the sorcerer, at the mother's request, performed over the newly-born child, and by means of which he ascertained or

[1] Cf. for what immediately follows, Kostomarov, 'Sketch of the Domestic Life and Customs of the Great Russians in the 16th and 17th Centuries,' in *Sovremennik*, vol. lxxxiii. (Russ.).

determined its lot in life. It is, therefore, no exaggeration to say that the Russians of that day lived from the cradle to the grave in an atmosphere of constant dread and solicitude regarding the future; and the beneficent and emancipating results of culture and enlightenment are never more profoundly felt than when contrasted with a human existence thus harrowed by omens and superstitious terrors from morning till night (cf. *ERE* ii. 55[b]).

Even at the present day, however, among the Russian peasantry, the belief in omens and predictions still prevails to an extent without parallel among any other European people. The manifold superstitions of an aged Russian peasant woman are thus set forth in Turgenev's romance, *Fathers and Sons* (ch. 20, at the end):

'She was pious and impressionable to a degree; she believed in all kinds of omens, predictions, spells, dreams; she believed in lunatics [see below], in household spirits, forest spirits, unlucky forgatherings, enchantment, popular remedies, Maundy Thursday salt [the salt sprinkled on Maundy Thursday bread ranks as a powerful specific]; she believed that the end of the world was at hand, that the buckwheat prospers if the candles are not extinguished at the evening service on Easter Sunday, and that mushrooms cease growing when they have been seen by a human eye,' etc.

In the present article we do not propose to deal further with this mass of detail, but will restrict ourselves to a somewhat fuller consideration of two particular points: (1) peasant weather-lore, which, amid a chaos of absurdity, nevertheless contains a certain measure of rationality, based upon experience and the observation of Nature; and (2) the interval between Christmas and Epiphany—a period during which, even in the Russia of to-day, all conceivable forms of augury and prophecy are still in full swing.

(1) The first of these topics, *peasant weather-lore*, has been dealt with by A. Ermolov in two volumes of his comprehensive work, *Agricultural Folk-wisdom in Proverbs, Sayings, and Weather-saws*: i. 'Der landwirtschaftliche Volkskalender,' Leipzig, 1905, and iv. 'Popular Weather-lore' (Russ.), St. Petersburg, 1905. It is shown in these works that, while all European peoples have a vast store of weather-wisdom, sometimes exhibiting remarkable affinities and parallels, yet the inhabitants of Eastern Europe surpass all others in this regard. In that region there is no animal so diminutive, no herb so insignificant, but its doings or properties may supply omens of future events, of weather that will be favourable or unfavourable to the husbandman; while, again, there is no natural phenomenon, occurring at some particular time, but may act as the harbinger of a good or a bad harvest. In Kasan, the Chuvashes (a Finnish, now Finno-Russian, tribe) are said to be looked upon as oracles.

'Strange as it may seem, they scarcely ever go astray in their predictions. By long-continued observation they have become sensitive to signs which enable them almost unerringly to forecast the weather.' 'Their memories are stored with a mass of all but infallible maxims inherited from the past.'

(2) The period between Christmas and the Feast of Epiphany is known in Russia as *svjatki* (from *svjatŭ*, 'holy'), or *koljada* (from Lat. *calendæ*), the latter term being also applied to the practice of going about from house to house at Christmas and on New Year's morning. During the Christmas week the practice of prognostication, which is applied in the main to affairs of love and marriage, and partly also to forecasting the weather and the harvest, attains its highest vogue (cf. *Russian Folk-poetry* [Russ.], Glasunov ed., St. Petersburg, 1904, p. 86; Stepanov, *Popular Festivals in Holy Russia* [Russ.], St. Petersburg, 1899, p. 149). When young men or young women wish to know something of their future partners in life, they have recourse to the *horse-oracle*. The young women, for example, take out a horse, and walk it over a beam: if it stumbles, the husband of the person consulting the oracle will be a good man; if it steps clear, he will be bad.[1] Divining the future by means of a splinter of wood is also concerned with marriage. When the splinter has been partly dipped in water, it is set fire to at the dry end; then the shorter or longer interval before the flame expires foretells respectively a happy or unhappy marriage.[2]

The period between Christmas and Epiphany was, as already indicated, a special time for weather-prophecy, as witness the following extract from Ermolov, *op. cit.* i. 518 f.:

'In Little Russia, before the supper on Christmas eve, the oldest of the household brings a bundle of hay into the cottage, spreads it upon the bench in the front corner, covers it with a clean tablecloth, and then places above this, and just beneath the bracket for the saint's image, an untbreshed sheaf of rye or wheat. During supper those present engage in reading the signe which indicate the character of the ensuing barvest. For this purpose they draw hay-stems from under the tablecloth, and from the length of these form an estimate as to the growtb of the corn. Tbey likewise pull stalks of straw out of tbe sheaf under the ikon; if the stalk bears a full ear, they may look forward to a good barvest; while, if the ear ie shrivelled, the crops will he a failure. When the supper is over, and the housewife bas cleared tbe table, tbe reading of omens is renewed, these being now found in the seeds dropped from various plants among the hay. If most of tbe seeds are black, the buckwheat will turn out well; while, if white or red seeds predominate, oats, millet, and wbeat may be expected in abundance. At the killing of the pig before the Christmas festivities, the peasants in Little Russia inspect the pancreas. If it is large, thick, and of equal breadth throughout its whole length, the winter will not be a long one, and there will be no severe frosts; but, if the gland be of irregular shape—thick at the head end and tbin at the other, or inversely—the winter will be cold at the beginning and warm towards the close, or *vice versa*. If the pancreas be thin about the middle, the peasants expect a tbaw in mid-winter.'

This custom recalls the Roman Saturnalia and haruspication; and it is also said that the Russians have a parallel to the *signa ex tripudiis*, i.e. divination by the eating and drinking of fowls (cf. the 'Roman' section of this article). It may be said without misgiving, indeed, that analogies of the Roman auguries and their underlying superstitions are nowhere found more abundantly than in the east of Europe. It should be observed, however, that the peasantry are quite well aware that during the *svjatki* they have still one foot in paganism, for, as they say, 'the beginning [of the season] also ushers in the revelries of the Evil One and the witches, who steal the moon and the stars from the sky, keep holiday, and disport with the demons.'

While, nowadays, as the foregoing bears out, the Russian people—men and women alike—are all highly proficient in *priměty* and *gadania*, these arts were formerly to a great extent in the hands of wizards and sorcerers, the various names applied to whom are enumerated and explained in the art. CHARMS AND AMULETS (Slavic), vol. iii. p. 465[a]. Besides these adepts, however, there are other two classes of persons to whom is attributed a special measure of supernatural and prophetic power, viz. women and lunatics.

The belief that the faculty of seeing into the future belongs in an eminent degree to *women* can be traced everywhere in ancient Europe, and, as existent among the Germans, finds its clearest expression in Tac. *Germ.* 8:

'Inesse quin etiam sanctum aliquid et providum putant, nec aut consilia earum aspernantur aut responsa negligunt'; cf. also *Hist.* iv. 61: 'vetere apud Germanos more, quo plerasque feminarum fatidicas et augescente superstitione arbitrantur deas' (further particulars in K. Müllenhoff, *Deutsche Altertumskunde*, Berlin, 1870–1900, iv. 208 ff.).

As regards the basis of fact which underlies the real or imaginary prophetic gift thus ascribed to women, and exalting them in the people's eyes to

[1] For the horse-oracle among the Indo-Germanic peoples, cf. *ERE* ii. 55.

[2] On this topic, cf. the present writer's remarks on the Indo-Germanic marriage in *Die Indo-Germanen*, Leipzig, 1911, p. 87 f.

the position of *Haliurunnas* (Goth. [Jordanes, *Get.* xxiv.]), 'those who know the secrets of hell, or of the under world,' we shall hardly err in tracing this element to the nervous and hysterical nature of woman, which, in moments of excitement, seems to raise her above earthly conditions. It was in the state of ecstasy likewise that the Greek *Pythia* uttered her oracles. This was also the case in the remarkable outbreak of the Russian *klik'uši* (from *klikati*, 'to shriek'), the 'possessed' or 'epileptic,' who greatly disturbed the country in the 16th cent., and had to be dealt with by the Church Council of Moscow (*stoglavny soborŭ*) in 1551. They were principally elderly unmarried women—and thus specially liable to hysteria; they ran about barefoot and unkempt; they shook, they fell, they whirled, they writhed, and amid such doings uttered their predictions of the future. Frequently—and sometimes as a result of bribery—they brought criminal charges against individuals, who were thus rendered liable to legal proceedings. The presence of these women in a city was a veritable plague, and the Church Council referred to petitioned the Czar to order the inhabitants to expel the lying prophetesses from their midst (cf. Kostomarov, *op. cit.* p. 547).

Of a somewhat similar character are the prophetic powers ascribed among the Slavs to *lunatics*. The insane fall under the same category as the Roman *monstra*, as is borne out by the Russian terms applied to them, viz. *juródivy* (from *uródŭ*, 'prodigy,' 'monster'). They filled the soul of primitive man with amazement, and even with reverential awe. Like the hysterical women just spoken of, they poured forth incoherent words and phrases, which seemed to come from another world, and to betoken a supernatural knowledge. Precisely the same process of thought manifests itself in the Greek series of words: μαίνομαι, 'I rave,' μανία, 'lunacy,' μάντις, 'soothsayer'—a development which goes to prove that at a very early period there must have existed in Greece the same sort of prophetic lunatics as are found in ancient and modern Russia. During the reign of Boris Gudunov there lived in Moscow a lunatic of this type, who was revered as a saint. Naked and with hair dishevelled he went about the streets in the coldest weather, uttering his prophecies of coming woes. In awe-inspiring accents he arraigned Boris for the murder of the young Czarevitch; but the Czar—afraid, it may be, of offending the people, or else convinced of the man's holiness of character—made no sign, and did not attempt to interfere with him in the least (cf. Giles Fletcher, *Of the Russe Common Wealth* [London, 1591], Hakluyt Soc., Lond. 1856, p. 118 f.). Even at the present day the insane fill a somewhat similar rôle in Russian village life. In a sketch called 'Village Drama,' by J. Garin (who has a masterly knowledge of the village communities), a merchant makes inquiry regarding a certain lunatic whose favourite occupation it is to pray for the dead upon their graves, and receives the following answer:

'We believe thus: he is a great servant of God. And he has taken up his abode in the bathroom at my house. I do not know why he has chosen me, for I am more wicked than others, and wholly covered with sins, as a mangy dog with fleas. So I cannot tell why it entered his mind to live with me. Still, he has fixed upon me, and now lives with me. We cannot account for him with *our* thoughts, and so we can understand only by signs (*primětŭ*)—he is, in truth, a great servant of God.'

Such are the ideas which still prevail regarding the insane among the Russian peasantry.

LITERATURE.—This has been given in the course of the article.

O. SCHRADER.

DIVINATION (Muslim). — The methods of divination in use among the Muslims are enumerated in the following order by Ibn Khaldūn (*Prolegomena*, tr. de Slane, 1862–68, i. 218): (*a*) gazing at polished surfaces or 'crystal-gazing'; (*b*) haruspicy, *i.e.* observation of the entrails of slaughtered animals; (*c*) sortilege with nuts or pebbles; (*d*) *zajr* or *'iyāfah*, augury, or observation of the motions of beasts and birds; (*e*) possession; (*f*) casual utterance; (*g*) *ḍarb al-raml*, geomancy or divination with sand; (*h*) (in Rabbinic phrase) *gematria*, or divination by letters. Under one or other of these heads all the forms of divination in use among the Muslims can be ranged; thus the discipline which corresponds with palmistry, but deals preferably with other lines than those on the hand, is clearly akin to haruspicy. Into most of them astrology enters, for the process is supposed to be influenced by the controlling planet.

Of these *augury* certainly goes back to pagan days, and it is noticeable that the word by which the Hebrew prophets describe their visions (*ḥāzōn*) comes from a root whereby in Arabic this process is described. The verses collected or invented by antiquarians in illustration of the Arabian augury indicate that it was in part etymological; the word for 'raven' comes from a root meaning 'to be a stranger,' whence the appearance of a raven indicates parting or pilgrimage; the name for the hoopoe suggests 'guidance,' whence its appearance is of good omen to the wanderer. Two ancient augural words refer to the motion of the creature from right to left and from left to right; but the usage of the terms seems to have varied with different tribes, nor were they in accord as to the favourable direction.

The following rules are given in the treatise *Mufīd al-'ulūm* of Khwārizmī:

'When mountain beasts and birds leave their places, this presages a severe winter; a plague among cattle presages a plague among human beings, but a plague among swine presages health; a plague among wild beasts presages a famine; loud croaking of frogs presages plague; snoring by a man of importance presages promotion; loud breathing in sleep presages loss of money; loud hooting by an owl in a house where there is an invalid presages his recovery; but loud croaking presages the arrival of an enemy.'

From the practice of augury it is not easy to separate divination by encounter, and indeed the Greeks are said to have applied the word 'bird' loosely to whatever came in their way. In general, meeting with anything which suggests ill-luck is unlucky; the poet Ibn al-Rūmī permitted no inmate of his house to leave it for days, because they would have to encounter a one-eyed neighbour. It is lucky to meet some one who is carrying milk; all over N. Africa it is considered good manners to permit the wayfarer to dip his finger in it (Doutté, *Magie et religion*, p. 352). In the same region it is unlucky to hear the braying of an ass (which, according to the Qur'ān, is the most disagreeable of sounds), and the hearer should pronounce an exorcism. An early European traveller records that Maghribine warriors on their way to the front regard it as a good sign to meet big game, such as lions or boars; a bad sign to meet hares or rabbits. Certain omens are drawn from the conduct of domestic animals and of children; at Ouja, when the children took to lighting bonfires in the streets in the evening, their parents knew that war was at hand. There are cases in which the symbolism is rather less intelligible. Thus in N. Africa honey is thought to be unlucky, and must not be offered to a guest on the evening of his arrival or to a bride.

Haruspicy is properly connected with sacrifice, which occupies a very subordinate place in the Islāmic system. The Zenatah who lived between Tlemsen and Tiyaret practised divination by inspection of shoulder-blades, taken from sacrificed animals; from the lines or formation the *haruspex* could tell whether the year was going to be good or bad. This 'scapulomancy' is called *'ilm al-aktāf*.

In Turkestan, 'the most common method of divining the course of future events is to place on the coals the shoulder-blade of a sheep, which has been carefully cleaned of the flesh. This is gradually calcined, and the cracks, the colour, and the small particles which fall away from it, denote good or bad luck or the various accidents which may happen on an expedition. Another kind of divination is very common: *kumalak*, by means of dried sheep-dung. The Kirghiz selects forty balls of dung, and divides them roughly into three heaps. He then takes four at a time from each heap, until only four or less remain in each. The remainder he also divides into three heaps, and again takes from each by fours. Three more heaps are thus made, so that at last there are three rows of three piles in each. What is left he divides by three, and sees whether the remainder be one, two, or three. The varying numbers and positions of the balls of dung can be explained by an experienced soothsayer to the intense satisfaction or to the disappointment of the one who consults him' (Schuyler, *Turkistan*, New York, 1876, ii. 31).

Similar omens are drawn in N. Africa from the excrements in the rectum of the victim, and the blood. Scapulomancy is mentioned by Jāḥiẓ († A.H. 255) together with palmistry and another mode of augury which is far less familiar, viz. divination by the gnawing of mice. When the Khalīf Manṣūr (A.D. 754–775) was in a village, a mat of his was gnawed by a mouse; he sent it to be mended, but the workman suggested that it ought to be examined by a diviner first; the diviner foretold the Khalīf a quiet and prosperous reign (*Zoology*, A.H. 1323, v. 93).

The use of the *polished surface* or magic mirror goes back to ancient times; according to Ibn Khaldūn, who agrees in this respect with modern crystal-gazers, the image appears not on the mirror itself, but on a kind of vapour which floats between the surface and the gazer's eye. The Khalīf Manṣūr had a mirror which told him whether a man was a friend or an enemy; according to Sir 12^{101}., the mirror rusted in the case of the enemy, and this was probably how the Agamemnon of Æschylus worked his 'mirror of friendship' (line 839). The process varies very much in different places, different materials being employed, with great varieties of symbolism. In Egypt the practice called *ḍarb al-mandal* is common, and performed with liquids, *e.g.* water or ink, or else with solid mirrors, such as sword-blades. Lane (*Modern Egyptians*, ed. 1871, i. 337–346) gives an account of some extraordinary performances of the kind which he witnessed in Cairo; the visions were seen by a boy, casually asked to gaze, in ink placed in the palm of his hand and surrounded by certain numerals; other features were a chafing-dish with live charcoal, in which spells written on paper by the diviner were burned together with frankincense and coriander-seed. In the mirror so arranged the boy saw among other persons Lord Nelson, of whom he had never heard. Lane's story provoked considerable discussion in Europe, but was defended by Sir R. Burton (*Pilgrimage*, ed. 1893, ch. xviii.), Sir Gardiner Wilkinson, and other persons familiar with the East. This process is used for discovering offenders; according to the account of it given by Doutté (p. 390), which tallies in many respects with Lane's but adds many details, the medium is supposed to command the services of ten of the *jinn*, who are first told to discharge certain domestic duties and then compelled by an oath to tell the medium anything which he wishes to know. The function of medium is limited to a nall class: boys under age, negresses, *enceinte* omen, and people with a long 'line of fortune.'

Possession, or inspiration by the *jinn*, appears to have been a principle of the pre-Islāmic divination, and the archæologists profess to name some of the early diviners. Probably possession was not regarded as their normal state, and they hypnotized themselves by some process or other. The importance of the *casual utterance* doubtless goes back to an early date in Semitic civilization; what is required is that the utterance should either be wholly unconnected with the matter on which it is made to bear, or that it should proceed from an invisible speaker. The author of *al-Fakhri* gravely narrates cases in which information was conveyed by these mysterious channels.

The two last methods—*geomancy* and '*gematria*'—are probably the most characteristically Muslim methods of divination, and the literature on both subjects is copious. In the former, some sand casually taken up is arranged in fifteen columns of from 5 to 7 grains, bearing technical names; conventional values are assigned to the combinations of these, and these conventional values give the answers to the questions addressed. A Bodleian MS contains a dictionary of those values; but it is not very lucid as to the mode whereby the column is obtained. Divination by the values attached to the letters of men's names is a highly complicated subject; Sabti (a man of Ceuta) invented a divination-table for this purpose called *Zairjah*, consisting of concentric circles, accompanied by an explanatory poem, based partly on letter-values, partly on astrology. Ibn Khaldūn inserts it in his *Prolegomena*; but his translator, de Slane, confesses his inability to follow the system. Some use, which is not very clear, is made of such groups as 222, 333, 444, etc.—a fact which indicates, what is otherwise attested, that the 'number of the Beast' is something far more complicated than the letter-values of a man's name. An obscure discipline, based on the numerical values of the letters, is called *jafr*; the Khalīf 'Alī is said to have composed two books bearing the names *Jafr* and *Jāmi'ah*, wherein, by calculations of this sort, doubtless connected with Qur'ānic texts, he foretold the whole history of the world until the Day of Judgment. These books are supposed to be in possession of the descendants of 'Alī, and, as was the case with the Sibylline books, some of their contents are occasionally divulged; the author of the *Dict. of Tech. Terms in the Mussalman Sciences* saw an extract which foretold the fate of the Egyptian sovereigns.

A classical manual of the black art is the 'Goal of the Sage' of Maslamah of Madrid († A.H. 398 = A.D. 1007–8), which it took him seven years to compose, containing matter which astonishes the reader. It there appears that both the planets and the constellations divide between them the various objects to be found in the world, and the different avocations of mankind. Thus to Mars belong the power of attraction, natural science, surgery, farriery, tooth-drawing, the Persian language, the right nostril, the gall, heat, hatred, the theology which denies the Divine attributes, silk, hareskin and dogskin, iron-work, brigandage, bitter tastes, dryness, and red stones; to the Ram belong the face, pupil, and ear, yellow and red, bitterness, deserts and robbers' caves, fuel, animals with cloven hoofs. The week-days, besides their planetary assignation, belong to certain angels: Monday to Gabriel, being cold and wet; Thursday to 'Isrāfīl, being hot and wet; Saturday to 'Azrā'īl, being cold and dry; Wednesday to Michael, as being a mixture of all four. The nature of the ink to be used in charms varies with the planets and constellations; and, according to the position of the moon, a charm when written should be disposed of in earth, air, fire, and water. Those who desire the services of the planets should bow down to them, and address to them complimentary speeches calling them by their Arabic, Indian, Greek, or Yunani names. The Greek names (called by this author *Rūmī*) are correctly given. One author, Ja'far of Baṣrah, whom this writer cites, invented a planetary division of the Qur'ān: by counting the mystic letters contained within

these divisions, he discovered how long each dynasty was to last; for each was controlled by one of the planets.

Lane (i. 328) describes some of the consulting tables or books in use in Egypt. The table of Idris consists of 100 compartments, in each of which a letter of the Arabic alphabet is written; the questioner, after reciting a text bearing on the subject of the Divine omniscience, places his finger at random on a letter; he then makes a sentence by adding every fifth letter till he comes back to the first; the sentence thus formed tells him whether to proceed or desist; it is so constructed that the proportion of negative replies to positive is four to one. Some which the writer has seen consist of Qur'ānic texts written in a mysterious alphabet; therefore only an expert can use them; the more cautious experts are ready to give general answers out of them, but decline to give replies in which any sort of exactitude is required. The use of *sortes Koranicæ*, or divining by the first text that meets the eye on opening the sacred volume, is said to go back to very early times; many copies of the Qur'ān contain directions for this method of using the book. One method mentioned by Lane consists in counting the number of times the letters which commence the Arabic words for 'good' and 'bad' occur on the page, and in deciding for or against a course by the majority. Another substitutes the rosary for the Qur'ān, and employs the three formulæ, 'God's glory,' 'Praise to God,' and 'There is no god but God,' to represent 'good,' 'indifferent,' 'bad'; two beads are then selected at random, and the formulæ recited in the above order, the beads being counted between the two selected; whichever formula goes to the last bead is regarded as answering the question.

That the *dream* should be commonly employed for ascertaining the future is natural, and there is a considerable literature on *ta'bīr*, or 'dream interpretation,' mainly founded on the work of Artemidorus. Lane mentions an Egyptian practice of praying for dreams which can be used in this way: the questioner requests to be shown something white or green, or water, if the course which he contemplates is approved; something black or red, or fire, in the other case. Certain mystical words uttered before going to sleep will produce, it is thought, veridical visions. In some places the Qur'ān serves as a sort of vocabulary for the language of dreams; a ship signifies safety, because the word 'save' is used in the Qur'ān in connexion with Noah's ark; to dream of a king entering an unusual abode is unlucky, because the visit of a king is said in the same book to be a prelude to disaster. Similar glosses can be got from traditions, current proverbs, or familiar usage of words, while, in other cases, the theory that dreams signify their contraries can be applied; *e.g.* the victor in a dream-duel will be the defeated in the real encounter. The author of the *Mufīd al-'ulūm* gives a brief glossary of the dream-language, in the main on these principles; a complete dictionary of it was composed by 'Abd al-Ghanī al-Nābulsī (printed at Cairo, 1307), including proper names; the number of meanings assigned to the symbols is unfortunately perplexing; thus, to dream of Adam may either signify a warning to repent, or presage promotion to high office, or indicate that the dreamer will be deceived by the words of an enemy, etc. There are places where veridical dreams are more likely to be obtained than elsewhere; these are sometimes caves, more often the graves of saints.

The attitude of Islāmic theology towards all these practices is, in general, tolerant, and indeed the presence in the Qur'ān of mystic letters strongly favours its magical employment, which is exceedingly natural in those countries in which Arabic is little understood, though used in both private and public worship. The belief in the *jinn*, who discharge some function in many of these operations, is also orthodox. The prophet himself appears to have attached considerable importance to omens, and, as might be expected, had prophetic dreams. Astrology was a highly respected discipline, on which even orthodox theologians might write. Further, some forms of Ṣūfīism took up with ardour the Qabbalistic study of the Qur'ān, and in these speculations the letter-values play a prominent part. On the other hand, students of philosophy found ways of introducing a theory of divination into their system. The two most famous essays on the subject are those of Mas'ūdī (ed. Barbier de Meynard, 1861–77, iii. 323–364) and Ibn Khaldūn (tr. de Slane, i. 216–237, and iii. 199 ff.). The former mentions three theories to account for divination: some suggested inspiration by *jinn*; others, the influence of the planet Mercury at the diviner's birth; yet others based the diviner's special knowledge on the purity of his soul; and this last appears to be the view held by Mas'ūdī himself. He confirms it by the facts that the genuine diviner is usually an anchorite and devotee, and that the famous pre-Islāmic diviners showed a tendency to get rid of their bodies altogether: thus the wizard Saṭīḥ had no bones save in his head.

Ibn Khaldūn's theory is that, in all cases of divination which do not depend on calculations, the soul is detached from the senses, and so comes in contact with forms to which it (the soul) serves as matter; such powers, in the case of the Ṣūfis, are an accident of their *askesis*; and, so long as the ascetic is only accidentally a diviner, his statements are more trustworthy than those of the astrologer; but, if he becomes a professional diviner, then he becomes less trustworthy, since some of the purity of his soul is affected by the diminished sincerity of his purpose. This theory can be accommodated to the supposed prophetic *powers of the mad* (which Aristotle seems to have recognized) by the supposition that, in their case, the connexion between soul and body is less stable than it is in that of the sound-minded; and it suits still better the supposed phenomenon of prophecy by persons at the point of death, or who are just going to sleep. According to Ibn Khaldūn, tyrants sometimes put men to death, with the view of learning the future from their dying utterances.

LITERATURE.—E. Doutté, *Magie et religion dans l'Afrique du nord*, Algiers, 1910; *Ghāyat al-Ḥakīm*, by Maslamah of Madrid (MS); *Shams al-Ma'rifah* of al-Būnī (MS). Cf. also the authorities cited in the article.

D. S. MARGOLIOUTH.

DIVINATION (Persian).—While the Avesta polemizes repeatedly against sorcerers and witches (*yātu*, *pairikā*; see the references collected in Bartholomae, *Altiran. Wörterb.*, Strassburg, 1904, cols. 1283–85, 863 f.), these attacks are levelled only against 'black magic'; magic operations for beneficent purposes, as for the counteracting of black magic, are quite permissible, and amulets are prescribed for certain contingencies, as well as the repetition of sacred texts for banishing powers of evil (*Yašt* xiv. 35–40, 45, 57–60; *Vend.* ix. 45 f., x. 1 f., xx. 12; cf., further, art. CHARMS AND AMULETS [Iranian]). A precisely similar state of affairs meets us in the *Šāh-nāmah* of Firdūsī (tr. Mohl, Paris, 1876–78), where, side by side with black magic—usually performed by a non-Iranian (a Turk raises a magic storm against the Iranians [iii. 26 ff.; cf. vi. 494 f.]; a Jew envenoms food by causing his glance to fall on milk in it [vi. 235 ff.]; a Turk sends false dreams [vi. 500 f.])—beneficent magic is mentioned, and evidently approved (King Minōčihr 'closed the gate of magic by his incanta-

tions' [i. 164]; a physician employs incantations to aid in childbirth [i. 277]; the use of a magic tamarisk arrow enables Rustam to slay Isfandiār [iv. 539 f., 545]). There is, therefore, more than a grain of truth in the statement of Diogenes Laertius (*Proœm.* 6), that the Magi 'did not know black magic' (*τὴν δὲ γοητικὴν μαγείαν οὐκ ἔγνωσαν*), though they 'practised the mantic art and prophecy' (*ἀσκεῖν τε καὶ μαντικὴν καὶ πρόρρησιν*).

Divination relies in great part upon omens (*q.v.*), which may depend upon the day when they are seen. Thus, on the 'Fox-day' festival in the month of Ātarō a white ram was believed to be seen on a certain mountain; if he bleated, the year would be prosperous; but, if he did not bleat, it would be sterile; and, in like fashion, the spectre of a white ox bellowed twice on the night of 16th Dīn if the year was to be fertile, and once if it was to be barren (al-Bīrūnī, *Chron. of Anc. Nations*, tr. Sachau, London, 1879, pp. 211, 213).

Omens were also drawn in later Zoroastrianism from the appearance of a snake on each of the thirty days of the month, each of the days of the week, and each of the signs of the zodiac (al-Bīrūnī, p. 218; Modi, *Persian Mār-nāmeh*, Bombay, 1893; Salemann, in *Travaux du iiième Cong. des Orientalistes*, St. Petersburg, 1879, ii. 497 f.; Gray, 'Alleged Zoroastrian Ophiomancy and its Possible Origin,' in *Hoshang Mem. Vol.*, Bombay, 1911, pp. 454–464), and also from the first appearance of the moon in each of the signs of the zodiac (Gray, 'Parsi-Persian Burj-Nāmah,' *JAOS* xxx. [1910] 336–342; Rosenberg, 'Burdz-Nāme,' in *Trans. Orient. Sect. Imp. Russ. Archæolog. Soc.* [Russ.], 1911). These omens Gray seeks to derive ultimately from Babylonia, while Rosenberg finds their source rather in India. Besides all this, certain days were lucky, and others the reverse, as in a calendar for A.U. 1099 = A.D. 1687 (ed. Beck, *Ephemerides Persarum*, Augsburg, 1696), where the lucky days are Aṛtavahišt 3, 10, Horvadaṭ 1, 6, 30, Tīr 9, Amerōdaṭ 2, 24, Šatvairō 2–3, Mitrō 4, Ātarō 1, 16, 30, Dīn 3, 30, Vohūman 7–8, Speodarmaṭ 10, 25, and the first epagomenal day; while the unlucky days are Fravarṭīn 23, Aṛtavahišt 11, 28, 30, Horvadaṭ 26, 28, Tīr 28, Amerōdaṭ 28, Šatvairō 4, Mitrō 14, Dīn 4, 29, Spendarmaṭ 9, and the third epagomenal day.

That omens were not regarded as unlawful among the Iranians is clear from the mention of their study without condemnation in the *Epistles of Mānūščihar* (I. i. 2, II. i. 3 [*SBE* xviii. 280, 326]); and in the *Šāh-nāmah* they also find a place.

Chosrū Parvīz sees a portent of his approaching downfall when a quince rolls from his hand (vii. 295 f.), and a happy omen is drawn by Bahrām Cōbīn (vi. 475). It was, however, possible to avert an omen. When Isfandiār was on the march, a camel in the van lay down and refused to move, thus delaying the entire army. This was an evil portent, and the general ordered the camel's head and feet to be cut off, 'that the misfortune might fall upon the camel' (iv. 464). On the other hand, omens might be misinterpreted, as when, just after the completion of the bridge across the Hellespont and the canal around Athos, an eclipse of the sun occurred, which the Persian astrologers explained to Xerxes as foreboding the eclipse of the Greek power, whereas the reverse was actually the outcome (Herod. vii. 19).

The regular forms of divination among the Iranians were astrology (which may here include horoscopy [see, further, the 'Persian' section in art. STARS]), oneiromancy, cylicomancy, and rhabdomancy.

1. **Astrology.**—Reserving for the art. STARS (Persian) a full discussion of that astrological and astronomical knowledge to which the Persians were indebted for no small part of their fame in the classical world, we may note here that the Pahlavi *Dīnkarṭ* (9th cent.)—a work which, though late, may be regarded as authoritative in its field—has an interesting summary of the Iranian views regarding astrology (ed. and tr. Peshotan Behramjee Sanjana, Bombay, 1874 ff., p. 590 f. [vol. ix.]):

'The star-readers understand the worth of the allotment (of destiny by the stars). How long are the chief allotting (stars) to move in bad aspects? How long are they in conjunction with the malignant owner of bad aspects? How long does the man (influenced by such stars) work in the way of wisdom? The laws relating to these and other (astrological) details the astrologers learn from writings on the earth (*i.e.* from astrology). Astrologers can foretell the good events of a man's (life) from his horoscope.'

Although astrology is not mentioned in the Avesta, there is no reason to doubt that it existed in Irān from a very early date. The first mention in any Pahlavi text thus far accessible, however, seems to be in the romance *Kārnāmak-ī Artaxšīr-ī Pāpakān* (dating probably from the middle of the 6th cent.), which relates that Ardavān (Artabanos V. [A.D. 215–224]) summoned before him the sages and astrologers and asked them:

'What do you observe regarding the seven planets and the twelve signs of the zodiac, the position and the motion of the stars, the condition of the contemporary sovereigns of different kingdoms, the condition of the peoples of the world, and regarding myself, children, and our family?' The answer from the two chief astrologers was: 'The *Nahāzīg* [Capricornus] is sunk below; the star Jupiter has returned to its culminating point and stands away from Mars and Venus, while Haptōirang [the Great Bear] and the constellation of Leo descend to the verge and give help to Jupiter; whereupon it seems clear that a new lord or king will appear, (who will) kill many potentates, and bring the world again under the sway of one sovereign. . . . It is so manifest that any one of the male servants who flies away from his king within three days [from to-day] will attain to greatness and kingship, obtain his wish, and be victorious over his king' (ed. and tr. Darab Peshotan Sanjana, Bombay, 1896, p. 10 f.). The servant in question (the hero of the romance) does flee, and the king again inquires of the astrologers, learning that the fugitive must be captured in three days, or not at all (p. 15 f.).

The richest source for examples of Iranian astrology is unquestionably the *Šāh-nāmah*, the enumeration of the principal instances in which is as follows:

Farīdūn casts the horoscope of his son Salm (i. 104); the astrologers and *mobeds* (priests) do the like for Zāl, the father of Rustam (i. 184); astrologers declare to king Mīnōčihr that his death is approaching (i. 298); they find that the children alleged to have been born of Sūdhābah were neither begotten of the king nor brought forth by her (ii. 185); they foretell misfortune to a city built by Siāvaxš (ii. 274); they choose a lucky day for the departure of the army of Kai Chosrū to Tūrān (iii. 9); they prophesy the fortunes of battle to Ṭūs (iii. 24); they are among those sought to inquire the reason of the distavour of heaven toward Irān (iv. 186); the famous Jāmāsp (the hero of the *Jāmāsp-nāmak*, ed. and tr. Modi, Bombay, 1903) foretells to Guštāsp the outcome of battle (iv. 309 ff.) and the death of Isfandiār (iv. 453 ff.); astrologers draw an ill-omened horoscope for Šaghād (iv. 567); Queen Hucīāi has a lucky day chosen by the astrologers for the commencement of her campaign against Rūm (Greece) and for the coronation of Dārāb (Darius III.) (v. 24, 33); the Aškānian Ardavān directs the astrologers to divine the future, and they foretell sorrow (v. 228); the horoscope of Bahrām Gūr is cast by the astrologers (v. 396 f.); Yazdagird, the father of Bahrām Gūr, seeks from them the day and manner of his death (v. 416); ill forebodings are given to Bahrām Gūr by the astrologers (vi. 55); defeat is prophesied for Bahrām Cōbīn in his expedition against Sāvah (vi. 474); Ai'īn Gušāsp seeks the future from an aged female astrologer, her evil tidings confirming a former astrological prognostic concerning him (vi. 561 f.); it was prophesied to Chosrū Parvīz that he would die far from his retainers by the hand of a slave, between a mountain of gold and one of silver, under a heaven of gold and on an earth of iron (vii. 286); the same king had had a horoscope cast for his son, Qubād (vii. 299 ff.); and an astrologer foresees evil for Yazdagird, the last of the Iranian kings (vii. 350).

Precisely similar methods of astrology are ascribed by Firdūsi to the Chinese (vi. 276, 463), the Arabs (v. 399), and the Greeks (vii. 89); while the Persians are represented as using not only their own astrological tables, but also those of the Hindus (v. 276) and the Greeks (v. 396). At the court of Farīdūn there was a council of sages, scholars, priests, and astrologers (i. 112). It may also be noted that the *Cahār Maqāla* of Nizāmī of Samarqand (tr. Browne, *JRAS*, 1899, ed. Mīrzā Muḥammad, London, 1910) has an entire chapter on astrologers and their art, and there are many other notices on the matter, as that the poet Anvarī made a notably unsuccessful forecast of the weather (Browne, *Lit. Hist. of Persia*, London, 1902 ff., ii. 367 f.), though here we are no longer on purely Iranian ground.

2. **Oneiromancy.**—Early in his invasion of Greece, Xerxes had three disturbing dreams, the last of which was (somewhat artificially) interpreted by his magi as portending the subjection of all the world to the Persian sway (Herod. vii. 12 ff.; see also the dream of Cyrus interpreted by Hystaspes [Herod. i. 209 f.], another dream of Cyrus recorded by Dinon [in Cicero, *de Divinat.* i. 23], and the dream of the mother of Cyrus given by Nicolaus Damascenus [frag. 66; *FHG* iii. 399]). In Pahlavi literature the *Kārnāmak-ī Artaxšīr-ī Pāpakān* (p. 3 f.), which is closely followed by the *Šāh-nāmah* (v. 218 f.), ascribes to Pāpak a vision, duly interpreted by the diviners, of the future greatness of Sāsān, the eponymous ancestor of the Sasanian dynasty; and in like manner, ac-

cording to the late *Zarātušt-nāmah* (ed. and tr. Rosenberg, St. Petersburg, 1904, p. 23 f.), Zoroaster himself had a prophetic dream, for the understanding of which the services of an 'interpreter of dreams' were necessary. But it is in the *Šāh-nāmah* that we find the richest material for a knowledge of the system of interpretation of dreams in Persia.

The evil Ḍaḥḥāk (the Azi Dahāka of the Avesta) sees in a dream his approaching downfall at the hands of Farīdūn (i. 51 ff.); Sām has two visions which cause him to find and restore to favour his son Zāl, whom he had exposed in infancy (i. 171 ff.; cf. *ERE* i. 7b); a lucky dream of Kai Qubād is interpreted by the hero Rustam (i. 363 f.); the Turanian king Afrāsiāb has a dream of evil portent (ii. 206 ff.); Siāvaxš is warned by a dream of his impending death (ii. 311), and himself appears in a vision to Pīrān, the general of Afrāsiāb, to announce the birth of Kai Chosrū (ii. 333); the archangel Srūš tells Gūdarz in a dream of the future great deeds of Kai Chosrū (ii. 380 f.); Jarīrah is told in a dream of the death of her son, Farūd (ii. 503 f.); Siāvaxš appears in a dream to Ṭūs and foretells the successful outcome of the impending battle (iii. 55); a vision of ill omen is seen by Bīzan (iii. 254 f.); the archangel Srūš in a dream warns Kai Chosrū of his approaching death (iv. 182 f.); Nūšīrvān the Just has a vision which is interpreted by the famous sage Buzurjmihr (vi. 190 ff.); Bahrām Cōpīn, on the eve of battle with Sāvah, had a dream foretelling defeat; but this was a false vision, sent by a Turk, and it was Sāvah who was routed in fact (vi. 491, 501). Firdūsi also records similar prophetic dreams by a Greek princess (iv. 239 f.) and a Hindu king (v. 88 ff.).

3. **Cylicomancy.**—Divination by cups is mentioned among the Persians both by Athenæus, on the authority of Hermippos (*Deipnosoph.* 478 A: *τὸ δὲ κόνδυ ἔστι Περσικὸν τὴν ἀρχήν· εἶδος δ' ἔχει, ὡς φησιν Ἕρμιππος, ὡς ὁ κόσμος, ἐξ οὗ τῶν θεῶν τὰ θαύματα καὶ τὰ καρπώσιμα γίνεσθαι ἐπὶ γῆς· διὸ ἐκ τούτου σπένδεσθαι*), and by the *Šāh-nāmah* (iii. 274 ff., 281 f.). The latter work refers specifically to the magic cup possessed by Kai Chosrū, whose properties are thus described (iii. 275; ed. Vullers-Landauer, Leyden, 1877 ff., p. 1100, lines 2–6):

'He took that cup in his hand and looked. In it he perceived the seven *kišvars* [regions of the world]; of the activity and character of high heaven he made evident the what, and the how, and the how much. Within the cup he perceived the reflection all at once from Pisces to Aries; what Saturn, what Mars, what Jupiter and Leo, how the sun, and how the moon, and how Venus and Mercury—the magician ruler of the world saw within it all that was to be.' By this method of divination, which is precisely that of crystal-gazing (*q.v.*), the king was enabled to discover the exact plight of the hero Bīzan and to take steps for his rescue from captivity. This magic cup was later said also to have been possessed by the earlier and wholly legendary monarch Jamšīd (the Yima of the Avesta, concerning whom see art. Blest, Abode of the [Persian]); and 'Umar Khayyām could even allegorize the legend, when he wrote (quatrain 355, ed. and tr. Whinfield, London, 1883):

> 'To find great Jamshed's world-reflecting bowl
> I compassed sea and land, and viewed the whole;
> But, when I asked the wary sage, I learned
> That bowl was my own body, and my soul!'

4. **Rhabdomancy.**—The use of rods for divining is recorded by Dinon (frag. 8 [*FHG* ii. 91]) among the Medes, and by Herodotus (iv. 67) among the Iranian Scythians, whose 'ancestral mantic' (*μαντικὴ πατρωίη*) was by means of willow rods, employed as follows:

'When they have brought great bundles of rods, they lay them on the ground and untie them, and, putting the rods one by one, they divine; and while saying this they collect the rods and again lay them together one by one. . . . They also practise divination with the bark of the linden; when one has split the linden in three parts, he unweaves and separates it (*διαπλέκων . . . καὶ διαλύων*) in his fingers.'

There is also a trace of hippomancy in Persia. According to Herodotus (iii. 84–87), after Darius and six other Persian nobles had slain the pseudo-Smerdis, they agreed that he should be king whose horse should first neigh after sunrise, when they had mounted their steeds. It is true, if we may believe Herodotus, that the choice of Darius in this manner was won by trickery, but the fact remains that the selection of a king by an animal is frequently mentioned in the East. A noteworthy parallel is the repeated account in Indian folk-tales whereby he who is chosen by an elephant (sometimes accompanied by a hawk) is made king (Knowles, *Folk-Tales of Kashmir*[2], London, 1893, pp. 17, 159, 169 f., 309; Steel and Temple, *Wide-Awake Stories*, Bombay, 1884, p. 140 f.; Day, *Folk-Tales of Bengal*, London, 1883, p. 100). And, according to Agathias (ii. 25), the Persians sought to know the future by gazing into the sacred fire—a practice which he thought might be derived from the Chaldæans or some other nation.

In conclusion, mention may be made of an interesting form of minor divination practised by the sage Buzurjmihr, as recorded in the *Šāh-nāmah* (vi. 371 ff.; see also Tha'ālibī, *Hist. des rois des Perses*, ed. and tr. Zotenberg, Paris, 1900, pp. 633–636). He had been imprisoned by Nūšīrvān the Just, to whom the Emperor of Byzantium sent a sealed casket, the contents of which were to be divined without opening it. All the *mobeds* failed, and Buzurjmihr was accordingly set at liberty and requested to use his skill. As he passed along a road, the sage met three women—one having a husband and child, the second married but childless, and the third unmarried; and he accordingly was able to inform the king that the casket contained three pearls under more than three wrappers—one of the pearls being pierced, the second half-pierced, and the third unpierced.

Literature.—The passages in the classics regarding Persian divination are indicated by Rapp, *ZDMG* xx. [1866] 76 f. The Iranian material appears to have remained unconsidered hitherto.

Louis H. Gray.

DIVINATION (Roman).—Among the inhabitants of ancient Italy we find abundant evidence of the desire to hold intercourse with the gods as a means of securing intimations of their will and disclosures regarding the future. In Italy, however, this desire assumes forms essentially different from those met with in Greece. Thus, the Italians were strangers to the idea that the Deity takes possession of the mental and spiritual faculties of a human being, making him *ἔνθεος*, and using him as the medium for the revelation of its designs; and even if—as has recently been conjectured (W. F. Otto, *ARW* xii. [1909] 548 ff.)—they had in the word *superstitio* a term signifying the state of trance, and thus corresponding to the Gr. *ἔκστασις*, yet the former carried with it from the outset a suggestion of something odd and sinister. In Italy there was no practice of inquiring into futurity by the trance or by immediate Divine enlightenment, and accordingly no trace of that species of divination which the Stoics called *ἄτεχνον καὶ ἀδίδακτον μαντικῆς γένος*, in contradistinction to the skilled interpretations of casual appearances in the external world (Plut. *de Vita et Poesi Homeri*, ii. 212; cf. Cic. *de Div.* ii. 26 f.). Among the Italian peoples, therefore, we meet neither with predictions emanating from Divinely inspired prophets and prophetesses (the word *vates* being probably borrowed from the Celt.), nor with dream oracles in which the gods vouchsafe their revelations to inquirers sleeping in temples. When Vergil (*Æn.* vii. 81 ff., imitated by Ovid, *Fasti*, iv. 649 ff.) tells us that King Latinus performed the rite of incubation, and received a dream-oracle, in a sanctuary of the god Faunus near Tibur, we shall hardly err in regarding the narrative as a product of the poet's fancy (cf. R. Heinze, *Vergils epische Technik*[2], Leipzig, 1908, p. 174, note 2), for which the descriptions of famous Greek incubation-shrines, such as that of Trophonios in Lebadeia, may have supplied the model. It is true that, when the Greek cult of the Epidaurian Asklepios migrated to Rome, it carried thither its associated practice of *ἐγκοίμησις* (cf. M. Besnier, *L'Ile Tibérine dans l'antiquité*, Paris, 1902, p. 223 ff.); yet it did not force its way into the ancient Roman or Italic cults; for, of course, the language of

Plautus, *Curc.* 266, 'namque incubare satius te fuerat Iovi,' in no sense implies that incubation was practised in the Capitoline temple, as the poet is merely in jest contrasting Juppiter as the god of oaths with Asklepios; while the testimony of Schol. *Pers.* ii. 56, 'cum Romani pestilentia laborarent, Castor et Pollux in somniis populum monuerunt quibus remediis uterentur,' is not sufficient to justify the hypothesis that incubation was practised in the temple of the Dioscuri in the forum (L. Deubner, *de Incubatione*, Leipzig, 1900, p. 79; *Neue Jahrb. f. klass. Altert.* ix. [1902] 384 ff.). The inscriptions, no doubt, furnish a large number of dedications which were made 'iussu,' 'imperio,' 'ex praecepto,' 'ex visu,' etc., to various deities, or in which the dedicator speaks of himself as 'somno monitus' (instances in Marquardt, *Röm. Staatsverwaltung*, Leipzig, 1885, iii. 100, note 7; A. De Marchi, *Il culto privato di Roma antica*, Milan, 1896, i. 285 ff.); but the majority of these inscriptions are connected with the worship of alien deities, such as Asklepios, Isis, Juppiter Dolichenus, Mithra, etc.; while, again, such dedications as *CIL* xiv. 23 (Ostia): 'Iovi optumo maximo ex viso aram aedificavit,' or v. 2472 (Ateste): 'C. Titius C. l. Pelops a Iove ex visu iussus posuit,' refer, not to incubation at all, but to ordinary dreams, which naturally attracted notice in Italy as elsewhere. L. Coelius Antipater, the historian, who revelled in stories of dreams that came true (Cic. *de Div.* i. 49, 55 f.), and who was probably the object of Sisenna's polemic *somniis credi non oportere* (*ib.* i. 99), no doubt borrowed this artifice for enlivening historical narrative from his Greek models, but he could not have resorted to the expedient unless the Italians had shared the general belief in the significance of dreams. Our contention is, however, that neither the dream nor the dream-oracle was an element in the religious practice of the Italic peoples.

Nor do we find the *gnomic oracle* on Italian soil. The reference of Ennius (*Ann.*, frag. 214, Vahlen, Leipzig, 1903) to the 'versus quos olim Fauni vatesque canebant' (cf. Varro, *de Ling. Lat.* vii. 36), and the ascription of ἔμμετροι χρησμοί to the goddess Carmenta (Plut. *Qu. Rom.* 56), are simply hypotheses designed to favour the etymology of the time (Faunus from *fari*, Carmenta from *carmen*), like the derivation of *ager Vaticanus* 'a vaticiniis' (Aul. Gell. xvi. 17. 1; cf. Paul. p. 379). The *carmina Marciana* certainly gained official recognition at the hands of the Roman authorities in 212 B.C., but, as appears from the text in which Livy (xxv. 12) renders them, they were simply Greek Sibylline sentences in a Latin redaction, and their supposed author, Cn. Marcius vates (Fest. p. 165), has as little right to be regarded as an ancient Italic soothsayer as the Publicius vates mentioned only by Cicero (*de Div.* i. 114, ii. 113). In point of fact, the oracle as met with in Italy never signifies an utterance emanating from an individual possessed and inspired by a divinity; it involves no more than the listening for and interpretation of the mysterious voices and noises to be heard in the world of Nature. It is to such manifestations likewise that the fragment of the 'Mysteria' of Varro's *Saturæ Menippeæ* (326, Buecheler) refers: 'prisca horrida silent oracla crepera in nemoribus.' The belief in the prophetic powers of certain water-nymphs, such as Carmenta and the Camenæ, may be supposed to indicate a practice of drawing cryptic revelations from the murmur of springs. In the rustling of the forest was heard the voice of the god Faunus, or his later representative Silvanus — the voice, *e.g.*, which on the stricken field at length announced the sternly contested and long doubtful victory (Dion. Hal. *Ant.* v. 16. 2 f.; Livy, ii. 7. 2; cf. Cic. *de Div.* i. 101, *de Nat. Deor.* ii. 6, iii. 15); while at Tiora Matiene, a place in the old Sabine country, the woodpecker, the sacred bird of Mars, perched upon a wooden pillar, exercised its prophetic gift (Dion. Hal. *Ant.* i. 14. 5; the 'picus Feronius' mentioned in Fest. p. 197, has, no doubt, a similar reference). There are numerous stories of supernatural voices which, echoing forth from sacred woods and temples, intimate the warnings or behests of the Divine powers (*e.g.* Livy, i. 31. 3, vi. 33. 5; Cic. *de Div.* i. 101); and the unknown divinity who in a communication of this kind had foretold the irruption of the Gauls was honoured —as Aius Locutius—with a shrine erected on the slope of the Palatine Hill above the temple of Vesta—at the very spot, in fact, where his voice had been heard (Livy, v. 32. 6, 50. 5, 52. 11; Cic. *de Div.* i. 101, ii. 69; Varro in Aul. Gell. xvi. 17. 2, etc.).

The distinctively Italic method of divining the future was carried out by means of *sortes*, i.e. small rods or plates bearing inscriptions and strung together (*serere*, whence *sors*); one of these was drawn, and the inscription upon it was read and interpreted in such a way as to provide an answer to the question put by the inquirer. The fact that in process of time the word *sors* came to mean 'fate' in general, and was even used as a designation of Fortuna, the goddess of destiny and luck (thus, according to the inscription *CIL* x. 6303 [Terracina], a 'Sortis signum memphiticum' is dedicated to Isis), clearly shows the importance of the device of sortilege in Italic divination. Cicero (*de Div.* i. 34) draws a rigorous contrast between the oracles 'quae aequatis sortibus ducuntur' and those 'quae instinctu divino adflatuque funduntur.' The procedure followed in drawing the lots is described most precisely in the accounts of the celebrated oracle at Prænestе, which maintained its reputation till the later years of the Imperial period. According to Cicero's description (*de Div.* ii. 85 f.), the *sortes*—mysteriously discovered in some remote age—were inscribed upon tablets of oak, and in this form were preserved in a chest (*arca*) made from the wood of a sacred olive tree; it was from this chest that Juppiter, who shared this particular sanctuary with Fortuna, derived his appellation of Arcanus (*CIL* xiv. 2937, 2972; cf. 2852=Buecheler, *Carm. epigr.*, Berlin, 1897, no. 249, 17). At the bidding of the goddess, a boy mixed the lots and then drew one out; the technical terms for this were *trahere*, *tollere*, and *ducere* (Serv. *Æn.* i. 508: 'trahuntur sortes'; Tibull. i. 3. 11: 'sacras pueri sortes ter sustulit'; cf. *CIL* v. 5801: 'sacro suscepto, sortib(us) sublatis'; Juven. vi. 583: 'sortes ducet'). Denarii of M. Plætorius Cestianus from Cicero's time show on the reverse a figure of the boy, with a tablet below him bearing the word *SORS* (E. Babelon, *Monnaies de la répub. rom.*, Paris, 1885, ii. 315, no. 10; also H. Dressel, *SBAW*, 1907, p. 371). To bring the gnome thus drawn into connexion with the question asked, and to interpret it accordingly, was the work of the *sortilegi* (Cic. *de Div.* i. 132, ii. 109; Lucan, ix. 581; Isid. *Orig.* viii. 9. 28; Porph. on Hor. *Sat.* i. 9. 29), of whose function we have direct evidence, not only as regards the worship of Fortuna at Prænestе (*CIL* xiv. 2989: 'sortilegus Fortunae Primigeniae'), but also in connexion with other localities (*CIL* iv. Suppl. 5182, vi. 2274, viii. 6181). When a favourable prediction was fulfilled, it was customary for the inquirer to express his gratitude by a votive offering to the goddess, as is shown by the inscription *CIL* xiv. 2862: 'Fortunae Iovis puero Primigeniae d. d. ex sorte compos factus Nothus Ruficanae L. f. Plotillae.' The oracle was open for

consultation only on certain days—in particular on one of the two annual feast-days of the goddess (according to *CIL* i.[2] p. 339: '[hoc biduo sacrifici]um maximu[m] Fortunae Prim[i]g(eniae): utro eorum die oraclum patet, ii viri vitulum i[mmolant],' the Prænestine festivals fell on the 11th and 12th of April); but exceptions were no doubt permitted in the case of distinguished inquirers, as, *e.g.*, the Emperor Domitian, who, on New Year's Day for many years in succession, obtained a *sors* of happy omen, but received a forecast of disaster in the year of his overthrow (Suet. *Domit.* 15). The Emperor Tiberius, having become sceptical of the Prænestine oracle, resolved to destroy the *sortes*, and had the sacred *arca* sealed and conveyed to Rome; here, however, it was found that the tablets were no longer in the box, and the supposed miracle induced the Emperor to abandon his harsh design (Suet. *Tiber.* 63). In the later period of the Empire the 'sortes Vergilianae' (*Hist. Aug. Hadr.* 2. 8; *Alex. Sev.* 14. 5) were resorted to at Prænestе as elsewhere, *e.g.* in the temple of Apollo at Cumæ (*Hist. Aug. Clod. Alb.* 5. 4), and on the Apennines (*ib. Claud. Got.* 10. 4–6). In this form of divination the tablets were inscribed with verses from Vergil which seemed peculiarly pregnant with meaning and capable of various interpretations; thus, *e.g.*, Alexander Severus, at the time when Elagabalus was harbouring designs upon his life, received the premonition in *Æn.* vi. 883 f.: 'si qua fata aspera rumpas, tu Marcellus eris' (*Hist. Aug. Alex. Sev.* 4. 6). Still another Italic cult of Fortuna, that, namely, located at Antium, with its two images of the goddess, was associated with an oracle, and it is recorded 'apud Antium promoveri simulacra Fortunarum ad danda responsa' (Macr. *Sat.* i. 23. 13; cf. Suet. *Calig.* 57; Martial, v. i. 3), but we do not know whether *sortes* were employed there or not. They were still in vogue, however, at Cære (Livy, xxi. 62. 5–8; cf. Sidon. Apoll. *Carm.* ix. 190), and Falerii (Livy, xxii. 1. 11; cf. Plut. *Fab.* 2), and in the cult of the river-god Clitumnus at Mevania in Umbria (Plin. *Ep.* viii. 8. 5; cf. Suet. *Calig.* 43) and of Juppiter Appenninus at the summit of the mountain pass near Iguvium ('Appenninis sortibus,' *Hist. Aug. Firm.* 3. 4; cf. *Claud. Got.* 10. 4); also in the so-called Oracle of Geryon at Fons Aponi near Patavium, where lots were cast by means of dice; it was here that Tiberius, while on the march to Illyria, was advised, *sorte tracta*, to make a throw into the fountain with golden dice, and in the event gained the maximum number of points (Suet. *Tib.* 14). According to a most felicitous conjecture of Mommsen, the seventeen bronze tablets which were discovered in the 16th cent. and then—all but three—lost again, and whose texts are given in *CIL* i. nos. 1438–1454, as also in Buecheler, *Carm. epigr.* no. 331, came originally from the shrine at Fons Aponi. They consist of little bronze plates, with a ring to hang them upon, and each is inscribed with a hexameter verse. Their language, prosody, and metre are archaic (cf. F. Ritschl, *Opusc. philol.* iv., Leipzig, 1878, 395 ff.), and would appear to be traceable to a renovation of older material made—with many misunderstandings—about Cicero's time. In purport they are banal to the last degree, and doubtless all the better adapted to supply answers to any kind of question; thus, *e.g.*, 'credis quod deicunt? non sunt ita, ne fore stultu(s),' and 'nunc (*nuncine*, Ritschl) me rogitas, nunc consulis, tempus abit iam.' The three *sortes* found in the Forum novum near Parma, and now in the museum of that city, are of a somewhat different character (*CIL* xi. 1129); on each of their four sides they bear a gnomic saying, composed, so far as we can judge from the much mutilated text, in hexameter verse of very irregular type (cf. A. Swoboda, in *Wiener Studien*, xxiv. [1902] 485 ff.).

While the practice of supplying oracles by means of *sortes* was thus indigenous to Italy, and prevalent everywhere on Italian soil, yet the Roman State religion took up a curiously disparaging attitude towards it. None of the recognized divinities of the ancient Roman régime delivered oracles, and, while Paulus (p. 368) speaks of deities called 'Tenitae, quae credebantur esse sortium deae, dictae quod tenendi haberent potestatem,' we cannot say whether he was thinking of Roman deities at all, or whether his statement has any better foundation than the obviously absurd etymology of the name. The only reference to *sortes* connected with the city of Rome is supplied by the inscription of a 'sortilegus ab Venere Erucina' (*CIL* vi. 2274)—an item of evidence emanating from a cult of Greek origin, and dating from a time when the lines of demarcation between native and foreign divination had been obliterated in private life, and when all kinds of Greek and Oriental soothsaying had found adherents in Rome. But the injunction by which the Senate, as late as 241 B.C., prohibited the consul Q. Lutatius Cerco from consulting the Prænestine *sortes* (Val. Max. *Epit.* i. 3. 2), and the scornful question of Cicero (*de Div.* ii. 87): 'quis enim magistratus aut quis vir inlustrior utitur sortibus?' are really explained by the fact that the State religion took a narrower view of the character and purpose of divination than that which prevailed in Greece, or, indeed, among other Italian tribes; note the tone of disdain in which Cicero (*ib.* i. 105, 132, ii. 70) refers to 'Soranus augur' and 'Marsus augur.' From the Roman point of view, the operations of divination were concerned, not with those things 'quae fortuitae putantur, praedictio atque praesensio' (*ib.* i. 9), but exclusively with the determination of the question whether an action just about to be performed had or had not the sanction of the gods. It is true that in Cicero's day there emerged within the Collegium of the official representatives of Roman divination—the 'interpretes Iovis optimi maximi publici augures' (*de Leg.* ii. 20)—a conflict of opinion as to the function of the augurs, viz. whether they merely expounded a system of doctrine which had been devised for reasons of State, or whether they could actually furnish a 'praesensio aut scientia veritatis futurae' (*de Div.* i. 105). Cicero, who himself became an augur in 53 B.C., and to whom Ap. Claudius Pulcher (Consul in 54 B.C.), the champion of the second of these views, had dedicated his work *de Disciplina Auguruli* (Cic. *Ep. ad Fam.* iii. 4. 1), took up a mediating position, holding, on the one hand, that the augural science of his day was nothing more than an instrument put into the hands of statesmen for political ends, while maintaining, on the other, that it had originally been a 'divinatio rerum futurarum' (*de Div.* ii. 75; *de Leg.* ii. 32 f.). Even on the latter hypothesis, however, the *disciplina auguralis* had never besought the Deity for light upon the occurrence and course of future events (*de Div.* ii. 70): 'non enim sumus ii nos augures, qui avium reliquorumve signorum observatione futura dicamus'), but had merely solicited indications of the Divine consent to intended actions, and endeavoured to recognize the warnings proceeding from the gods; and, accordingly, Cicero is quite correct in speaking of the 'rerum bene gerendarum auctoritates' as the subject-matter of the science (*de Har. Resp.* 18). Such indications of the Divine will, the interpretation of which was the function of the *disciplina auguralis*, were called *auguria* or *signa*, and were either the solicited intimations of the Divine compliance (*auguria impetrativa*), or signs—chiefly of

disapproval and foreboding—spontaneously vouchsafed by the gods (*auguria oblativa* [Serv. *Æn.* vi. 190, xii. 259]). Solicited omens—so far, at least, as concerned the magisterial consultation of the gods, yet not the priestly operations of the augurs—were originally taken solely from phenomena connected with birds, and thus the word *auspicium* (=*avispicium*) became the general term for those intimations of the Divine will which, approving or dissuading, guided human conduct, as also for the art of identifying and interpreting such intimations. Consultation of the *auspicia* was in ancient times an indispensable preliminary to all important actions both in public and in private life (Cic. *de Div.* i. 28=Val. Max. ii. 1. 1): thus, we are told that the species of hawk called *ægithus* was held to be 'prosperrimi augurii nuptialibus negotiis et pecuariae rei' (Pliny, *HN* x. 21). Latterly, however, the practice was discarded in private affairs, leaving as its sole vestige the designation 'nuptiarum auspices,' which was applied to certain witnesses in marriage contracts (Varro, in Serv. *Æn.* iv. 45, etc.). In public affairs, on the other hand, the science of the *auspicium* was practically the basis of official authority, as every public functionary had to make sure of the Divine sanction for every action within his jurisdiction. Accordingly, the prerogative of taking the auspices coincided with the official warrant for undertaking any particular action, so that the *auspicium*, as the Divine guarantee of success, was co-ordinate with the *imperium*, or secular authority, and the phrase 'auspicium imperiumque' covered the entire range of official power (cf. the expression 'ductu auspicio imperioque eius Achaia capta,' in the epitaph of L. Mummius [*CIL* vi. 331]).

As regards the mode of procedure in taking the auspices, we have numerous sources of information (*e.g.* Fest. p. 348; Serv. *Æn.* vi. 197; Cic. *de Div.* i. 71). When the consul had occasion to perform some duty which must be undertaken *auspicato*,—if, *e.g.*, he was about to enter upon office, to direct the proceedings of the comitia, to hold a meeting of the Senate, or to set out upon a campaign,—he proceeded, in the early morning of the day of action, and in company with one or more assistants ('qui in auspicio sunt consuli'), to the scene of the proposed task (in the case of an expedition, to the Capitol). Here a tent (*tabernaculum*) was pitched, open on the one side. Within the tent the consul, having first uttered a prayer, seated himself on a solid chair (*solida sella*), and then, directing his gaze towards the field of vision on the open side, awaited the advent of favourable auguries. It was, however, only a relatively small number of species of birds that were taken into account for the *augurium impetrativum* (Cic. *de Div.* ii. 76); the books of the augurs contained full lists of the *aves augurales* (Serv. *Æn.* i. 398), with precise regulations as to the circumstances in which, for any particular case, the omen was to be recognized as favourable or the reverse. With some kinds of birds the *auspicia* were determined by their flight, with others by their cries, and, accordingly, the augural birds were divided into the two classes of *alites* and *oscines* (Fest. p. 197; Serv. *Æn.* iv. 462). Many species, again, were propitious at one season of the year, and unpropitious at another (Pliny, *HN* x. 30: 'cornix . . . inauspicatissima fetus tempore, hoc est post solstitium'). The Divine assent was intimated by the appearance of certain birds on the right hand of the observer, of others on the left (Plaut. *Asin.* 259 f.: 'impetritum inauguratumst, quovis admittunt aves: picus et cornix ab laeva, corvos parra ab dextera consuadent'; cf. Cic. *de Div.* i. 85). The auguries, in fact, were subject to an elaborate system of casuistry, certain details of which are given in the extract in Pliny, *HN* x. 6–42 (cf. D. Detlefsen, in *Hermes*, xxxvi. [1901] 5 ff.). If during the period of observation one of the recognized favourable omens appeared (the technical phrase for this was 'addicunt aves'; cf. Livy, i. 36. 3, 55. 3, xxvii. 16. 15; Fest. p. 241), the phenomenon was accepted as evidence of the Divine consent; but, if such favourable omen did not present itself, or if the proceedings were interrupted by the fall of some object ('caduca auspicia,' Paul. p. 64), or by a disturbing noise, *e.g.* the squeak of a mouse (Pliny, *HN* viii. 223), or by a deprecatory portent (Paul. p. 64: 'clivia auspicia dicebant quae aliquid fieri prohibebant'), *e.g.* the appearance of *obscenæ aves* (Serv. *Æn.* iii. 241; Aul. Gell. xiii. 14. 6), such as owls or owlets, the consultation was regarded as having miscarried, and the action for which Divine sanction was sought could not be undertaken without a *repetitio auspiciorum*; this, however, could not usually take place until the following day (Livy, ix. 38. 15, 39. 1).

Even when a consultation had resulted favourably, however, it was still possible that the divinity might in some way interfere with the provisionally sanctioned undertaking by sending intimations that had not been asked for. The range of such *auguria oblativa* was very extensive. In the system of the augurs five varieties of *signa* were distinguished, viz. 'ex caelo,' 'ex avibus,' 'ex tripudiis,' 'ex quadrupedibus,' and 'ex diris' (Fest. p. 261), but this classification was by no means exhaustive. An official who was about to discharge some duty of State might find a propitious or deprecatory sign in any occurrence in Nature or in his immediate surroundings which he was willing to bring into relation with his intended action. Here lay the vast province of *omina*—events which in many cases were of an altogether indefinite character, but in which the person concerned might read a significance favourable to his design, and which he could, so to speak, press into his service by pronouncing the words 'accipio omen' (examples in Cic. *de Div.* i. 103 f.). Of the omens thus spontaneously granted, those which were unfavourable were naturally of greater account than the favourable, as the latter merely confirmed the result of the antecedent solicited auspices, while the former actually reversed the Divine consent already granted, and gave warning that the previously sanctioned course of action should not be carried out or persisted in: 'etenim dirae (*i.e.* all events of an abnormal and therefore alarming nature) sicut cetera auspicia, ut omina, ut signa, non causas adferunt cur quid eveniat, sed nuntiant eventura, nisi provideris' (*ib.* i. 29). Among such prohibitory omens, the phenomena of thunderstorms were regarded as of special importance. The lightning-flash was a solicited portent of great significance, not indeed for the divination of the magistrates, but for certain priestly ceremonies of the augurs (*auguria*), in which the latter sought to make sure of the Divine consent to specific actions by *auguria cælestia* (Paul. p. 64): with their *lituus* they divided that portion of the heavens lying within their field of vision into four regions ('antica,' 'postica,' 'dextra,' 'sinistra'), and then decided, by a special *legum dictio* (Serv. *Æn.* iii. 89), the regions in which the celestial signs were to be regarded as favourable. The best-known example of this procedure is the inauguration of priests which Livy (i. 18) describes in full detail, but Cicero (*de Leg.* ii. 20) refers to other *auguria* of a similar kind, regarding which strict secrecy was maintained (Paul. p. 16), so that the actual character of many of them, such as the *vernisera auguria* (Paul. p. 379) and the *augurium canarium* (Pliny, *HN* xviii. 14; Fest. p. 285; Philarg. on Verg. *Georg.* iv. 425), is very obscure, while the frequently

mentioned *augurium salutis* (Cic. *de Div.* i. 105; Dio Cass. xxxvii. 24 f., li. 20. 4; Suet. *Aug.* 31; Tac. *Ann.* xii. 23) is expressly spoken of as μαντείας τις τρόπος (Dio Cass. xxxvii. 24. 1), in which the divinity was asked whether it was permissible to pray for the *salus publica*. The latter ceremony is referred to in a *cippus* recently discovered in Rome, and bearing the inscription (*Notiz. d. Scavi*, 1910, p. 133): 'Auguria: maximum quo salus p(opuli) R(omani) petitur, quod actum est (here follow the names of the consuls in A.D. 3 and 7), quae acta sunt (consuls of the years 1, 2, 8, 12, and 17 A.D.).' In all these augural rites the lightning-flash, and especially the *fulmen sinistrum*, was a highly favourable *impetrativum auspicium* (Cic. *de Div.* ii. 74; such an augural ceremony is probably indicated also by the African inscription *CIL* viii. 774, bearing the representation of a lightning-flash, together with the words: 'Deo loci, ubi auspicium dignitatis tale, municipes Api-[senses]'—a dedication which dates, at all events, from the time when the lightning was regarded as a solicited sign even in magisterial divination). As a spontaneously given sign, on the other hand, lightning was assumed to be wholly unfavourable. Thus, a marriage by the solemn rite of *confarreatio* could not be proceeded with if a peal of thunder was heard (Serv. *Æn.* iv. 339), and the supreme deliberative assemblies of the Roman people were subject to the principle, 'Iove tonante fulgurante comitia populi habere nefas' (Cic. *de Div.* ii. 43; cf. *in Vatin.* 20; *Philipp.* v. 7), so that thunder or lightning led to the adjournment of the comitia as inevitably as did an epileptic seizure ('morbus comitialis' [Fest. p. 234]). It is true that in these, as in all other cases of the unsolicited sign, it rested with the presiding official to decide whether he would apply it to the matter in hand and take account of it (Pliny, *HN* xxviii. 17; Serv. *Æn.* xii. 260); such emergencies fell under the maxim of Cato the Elder, viz. 'quod ego non sensi, nullum mihi vitium facit' (Fest. p. 234)—a principle according to which the magistrates tried their best to avoid the possibility of even noticing unwelcome signs (Cic. *de Div.* ii. 77). But, as such disregard of Divine warnings might result in serious mischief to the State, the legislature put an obstacle in the way of anything like extreme neglect of unfavourable signs by enjoining that the magistrates must, without further investigation, take full account of all such *auguria oblativa* as were announced to them either by another magistrate ('obnuntiatio'), or by the augur who was officially in attendance ('nuntiatio'). This injunction came to have great influence upon the procedure of the comitia, and in the political conflicts of the day it became an effective instrument of obstruction, as a meeting which took a course unsatisfactory to any party could be adjourned simply by an announcement that a flash of lightning had been seen (cf. I. M. J. Valeton, 'De iure obnuntiandi comitiis et conciliis,' in *Mnemosyne*, N.S., xix. [1891] 75–113, 229–270).

This political perversion of a statute which was in its origin the expression of a religious sentiment is but a symptom of that general deterioration of the auspices which showed itself more and more during the later years of the Republic. The stringency of the ancient regulations was relaxed first of all in the army, and especially during war, as the conditions were then frequently most unfavourable for the ceremonious and protracted observation of the flight of birds. For a time, as would appear, the place of the traditional ceremony was taken by a special *auspicium militare*, which involved some sort of observation of spear-points ('ex acuminibus' [Cic. *de Nat. Deor.* ii. 9; Arnob. ii. 67]), but, when—during the Second Punic War—this device had at length been abandoned (Cic. *de Div.* ii. 77), every other expedient for divining the will of the gods was superseded by the observation of *signa ex tripudiis*, i.e. the manner in which fowls pecked the food strewn by the *pullarius*—the point being, not simply that they ate, but that they fed so greedily that part of what they picked up fell to the ground again (*tripudium* = *terripavium, pavire enim ferire est* [Paul. p. 244; Cic. *de Div.* ii. 72]). Such accidental dropping of food was formerly considered a favourable *signum oblativum*, and might as such be mediated not only by birds of any kind, but also by quadrupeds (Cic. *de Div.* ii. 73; Pliny, *HN* viii. 83). These *pullaria auguria* (Serv. *Æn.* vi. 198) eventually degenerated into a mere form, especially as the act of feeding could be so managed as greatly to influence the result of the *signum* (Cic. ii. 73); and a similar fate befell municipal divination, in which the observation of birds was at length abandoned in favour of observation of the sky (*de cœlo servare*); this, however, was performed, not by the official himself, but by his servant the *pullarius* ('iam de caelo servare non ipsos censes solitos, qui auspicabantur? nunc imperant pullario, ille renuntiat' [Cic. ii. 73]). On account of the comparatively rare performance of the augural ceremonies, it had been possible to solicit a lightning-flash as an indication of Divine consent, but with the manifold applications of magisterial divination such a demand could be met only by way of a gross fiction, so that Cicero is perfectly justified in saying (ii. 71): 'haec certe, quibus utimur, sive tripudio sive de caelo, simulacra sunt auspiciorum, auspicia nullo modo.'

The performance of divination during war came to be still further circumscribed by the circumstance that in the *imperium militiæ* the duty was assigned—from Sulla's time regularly, and often before—not to the real functionaries of the *auspicium*, i.e. consuls and prætors, but to the holders of prorogated authority, the proconsuls and proprætors, who had no *auspicia* of their own (Cic. *de Div.* ii. 77: 'ubi ergo avium divinatio? quae, quoniam ab iis, qui auspicia nulla habent, bella administrantur, ad urbanas res retenta videtur, a bellicis esse sublata'). But, as it still remained necessary to make sure of the Divine sanction before entering upon any decisive line of action, divination by ordinary methods was superseded in the field by *extispicium*, i.e. the inspection of entrails ('omitto nostros, qui nihil in bello sine extis agunt, nihil sine auspiciis domi' [Cic. i. 95; cf. 28]), which, however, had been previously employed as a supplementary expedient; thus, *e.g.*, according to Livy, xxvii. 16. 15, before Fabius Maximus moved his camp from Tarentum to Metapontum, he first of all inquired by means of birds, and then, not having received the required indication of Divine consent, he caused the haruspex to inspect the entrails of a victim. But it should be clearly understood that the inspection of entrails as a means of ascertaining the future was a foreign, not a Roman, method of divination. It is true that the indigenous religious practice sanctioned the inspection of the *exta* of a sacrificial animal—not, however, for purposes of divination, but only as a part of the requisite test applied to the victim in order to determine whether it was acceptable to the deity and suitable for a sacrifice. In such instances the entrails of the victim were examined in connexion with the body as a whole ('adhaerentia exta inspicere' [Paul. p. 100]), and boiled in a pot (Varro, *de Ling. Lat.* v. 98); if any abnormality was discovered, the animal was regarded as unsuitable, and the sacrifice could not be validly performed—it did not become a *litatio* ('non perlitatum est'). An abortive sacrifice of this sort might, of course, bear the character of a *signum*

oblativum, and thus be recognized as a Divine warning (as was the case, *e.g.*, in the incident related by Livy, xli. 15), and it was therefore possible to speak of *auspicia* in connexion with *extispicia* (*e.g.* Paul. p. 244: 'pestifera auspicia esse dicebant, cum cor in extis aut caput in iecinore non fuisset'); but, as already said, this Roman *extispicium*, with its scrutiny and interpretation of entrails, was never resorted to for the purpose of acquiring information as to the course of coming events.

This function, however, was the distinctive feature of the Etruscan *haruspicina*, which had found its way into Rome at the time of the Second Punic War, and in process of time gained so firm a footing that in the closing century of the Republic the *haruspex* became permanently attached to the staff of the commander-in-chief. The Etruscan *haruspicatio* (*CIL* vi. 32328, l. 78) was performed prior to all important undertakings, such as the departure of the army for war, or the beginning of a battle; and its object was, from an inspection of the entrails of a victim slaughtered expressly for the purpose (animals from which 'voluntas dei per exta exquiritur' were called *consultatoriæ hostiæ* [Serv. *Æn.* iv. 56; Macr. *Sat.* iii. 5. 1]), to deduce information regarding the issue of the proposed action—information which was not confined merely to a presage of success or non-success, but frequently extended to details, as, *e.g.*, an ambuscade of the enemy (Livy, xxvii. 15. 16), or a case of imminent death (Ammian. Marc. xxii. 1. 1). The interpretation was arrived at upon the basis of a highly complex system of doctrine, involving a most precise observation of the nature, and especially the abnormalities, of the victim's inner organs—more particularly the liver. The celebrated bronze liver of Piacenza[1] is a direct survival from the practice of the *haruspices*, and, by means of its precise division of the organ, with its various convexities and indentations, and the inscribed names of the gods associated with the several parts, gives us some idea of the procedure of the priests. Moreover, the fact that models of the livers of animals, formed of terra cotta and covered with inscriptions, have been found also in Babylon,[2] points to a relationship between Etruscan and Chaldæan haruspicy which awaits a more thorough investigation.

The Etruscan divination of the future, which, as we have seen, went far beyond the limits of the Roman practice, makes its influence felt likewise in the official treatment of prodigies, *i.e.* unnatural and alarming occurrences, such as showers of stones, earthquakes, monstrous births (see PRODIGIES AND PORTENTS [Rom.]), regarded as signs of Divine resentment. To the Roman mind such phenomena were an evidence that the normal relations between the community and the higher powers were disturbed, as also an admonition to take the necessary steps towards retrieving the *pax et venia deûm*, and those who in such emergencies wished to ascertain the measures requisite to an effective reconciliation had recourse either to the *pontifices*, as the custodians of the ancient Roman ritual, or to the representatives of foreign cults, such as the *decemviri* (later, the *xv. viri*) *sacris faciundis*, who were proficient in the *Græcus ritus*, and the Etruscan *haruspices* (Cic. *de Div.* i. 97, 98). The *haruspices*, however, did not confine themselves to a simple specification of the means of reconciliation; on the contrary, they also undertook to deduce from the character and course of the prodigy an answer to the question, 'quid portendat prodigium?' *i.e.* to discover the future events, such as civil war and conspiracy (Cic. *de Har. Resp.* 18), foreboded by the prodigy. Cicero's oration *de Haruspicium Responso* gives us a clear conception of the matter and form of such a professional finding. The sacred books of the *Etrusca disciplina* supplied full directions for the interpretation of *ostenta*, and in particular they contained a doctrine regarding the interpretation of lightning which was absolutely alien to the augural science of the Romans. According to Roman ideas, the lightning might be either an *augurium impetrativum* (as in the sacred rites of the augurs), or an *augurium oblativum* (as in the proceedings of the magistrates), and in both cases it required to be weighed as a token of Divine consent or prohibition; or, again, especially if it struck something and wrought damage, it was regarded as a *prodigium*, and in that case had to be rendered innocuous by certain acts of propitiation. The procedure of the Etruscan *haruspices*, however, was of a very different character (for their system, cf. *e.g.* Pliny, *HN* ii. 138 ff.; Seneca, *Nat. Quæst.* ii. 39 ff.). They first of all ascertained the region of the heavens whence the flash proceeded, and thereby identified the deities from whom it came; further, they defined the several kinds (*manubiæ*) of lightning-flash sent forth by particular gods, and determined the place, the time, the effect, etc.; then from all these data they elicited not only the kind of propitiation required, but also the import of the phenomenon. Nor did they rest satisfied with a simple announcement that the lightning signified the deity's consent to, or warning against, a given design ('consiliaria fulmina' [Seneca, *Nat. Quæst.* ii. 39. 1]), but they also gave quite definite predictions of future events, such as an extension of the frontier and a defeat of the enemy (Livy, xlii. 20. 1), or the approaching death and deification of the Emperor (Suet. *Aug.* 97).

It is a fact worthy of note that this mode of divination was always regarded by the Romans as outlandish and unreliable, and this explains why the *haruspices* were never admitted into the official priesthood, and why their teachings never found a place in the Roman *disciplina auguralis*; so that, when the Senate wished to have the opinion of the *haruspices* in any particular case, it summoned them from Etruria expressly for the purpose (the regular phrase for this was 'haruspices acciendos ex Etruria' [Cic. *de Har. Resp.* 25]). This proceeding, however, must be regarded in the same light as the action of the Roman State in sending ambassadors to lay certain questions before the Greek oracles, such as that at Delphi; the first deputation of this kind was sent just after the battle of Cannæ (Livy, xxii. 57. 5, xxiii. 11. 1). Livy's statements as to still earlier consultations of the Delphic oracle (i. 56. 9, v. 15 f.) are rightly regarded by H. Diels (*Sibyllinische Blätter*, Berlin, 1891, p. 49, n. 3) as without foundation in fact. The truth is that, in times of severe national trial, the Roman people habitually resorted to the vaticination of foreign cults, but they did not thereby admit such practices into their own religion. The case was different with the so-called Sibylline Oracles (*libri fatales*), which were authoritatively introduced into Rome as early as the period of the Tarquins, and had their official custodians and interpreters in the *duoviri* (later *decemviri* and *quindecimviri*) *sacris faciundis*. The Sibyllines, however, were not oracles in the proper sense, but καθαρμοί; *i.e.* the sentences specified the

particular measures—sacrifices, *lectisternia*, supplications, admission of new cults—by which impending dangers could be turned aside and the anger of the gods appeased; but actual predictions of future events lay outside their province, and were first deduced from them at a relatively late period, the earliest known instance dating from 187 B.C. (Livy, xxxviii. 45. 3).

We may thus venture to affirm that the aversion to an over-curious prying into the unborn future, as also to the practice of consulting the Deity with reference to coming events, was a characteristic feature of ancient Roman life, and that the Romans manifested this reluctance in considerably greater measure than the other peoples of Italy. For, as we have seen, they asked no more from their auguries than an assurance of Divine concurrence with their actions, and were unwilling to do anything in opposition to the Divine counsel, being for the rest content to abide the issue, and seeking no further revelation of the future. But, when we bear in mind that in times of calamity even the supreme authorities succumbed to the temptation of resorting to the practitioners of foreign divination for the occult knowledge which their own religion failed to supply, we cannot wonder that in private life all manner of mantic devices of exotic origin acquired in process of time a great and growing influence. Cato the Elder already found it necessary to insert among his directions for the conduct of an estate steward (*vilicus*) the warning: 'haruspicem augurem hariolum Chaldaeum ne quem consuluisse velit' (*de Agri Cult.* 5. 4); while Cicero gives quite a list of fortune-tellers who, finding their clientele among the middle and lower classes, made a profitable trade of forecasting the future: 'nunc illa testabor, non me sortilegos neque eos qui quaestus causa hariolentur, ne psychomantiam quidem . . . agnoscere; non habeo denique nauci Marsum augurem, non vicanos haruspices, non de circo astrologos, non Isiacos coniectores, non interpretes somniorum' (*de Div.* i. 132). These references are elucidated by evidence from the Imperial period, which shows that the people were in the habit of consulting soothsayers regarding such things as sickness (Pliny, *Ep.* ii. 20, 2 ff.), prospects of marriage (Juven. vi. 588 ff.), the whereabouts of runaway slaves, or the advisability of purchasing an estate (August. *de Civ. Dei*, x. 11). A further illustration is supplied by a collection of oracular sayings of very general application—and, as it would seem, from a Greek original—extracted from the Merobaudes palimpsest of St. Gall, and published by H. Winnefeld (*Sortes Sangallenses*, Bonn, 1887); from these sayings the inquirer probably selected his particular oracle by means of dice.

The most influential of these exponents of exotic divination were the *Chaldæi*, or, as they were subsequently styled, *mathematici* (Aul. Gell. i. 9. 6), *i.e.* the professors of Babylonian astrology, who presaged the destiny of individuals by means of the horoscope (hence they were also called *genethliaci* [*ib.* xiv. 1. 1]), and gave information regarding the future according to the movements of the heavenly bodies. These astrologers were banished from Rome and Italy for the first time in 139 B.C., in consequence of an edict of the Prætor peregrinus, Cn. Cornelius Hispalus (Val. Max. *Epit.* i. 3. 3), but in the Imperial period, by a long series of resolutions passed—often at short intervals—by the Senate, they were made liable not to expulsion only, but to the severest penalties (Tac. *Ann.* ii. 32, xii. 52, *Hist.* ii. 62; Dio Cass. lxvi. 9. 2; Ulpian, *Mos. et Rom. leg. coll.* [1768] 15. 2). These measures, however, brought about no considerable diminution of their activity (Juven. vi. 553 ff.), as their clientele included people of the highest rank, and even the Emperors themselves made use of their art. Hence Tacitus (*Hist.* i. 22) could with perfect justice speak of the *mathematici* as 'genus hominum potentibus infidum, sperantibus fallax, quod in civitate nostra et vetabitur semper et retinebitur.' In later times it was only the seeking and giving of information bearing upon the life of the Emperor and the succession to the throne—and, in the case of slaves, consultations regarding the duration of their master's life—that ranked as capital crimes (Paul. *Sent.* v. 21. 3–4; Mommsen, *Röm. Strafrecht*, Leipzig, 1899, p. 861 ff.); and, indeed, Alexander Severus actually instituted public chairs of astrology in Rome, and endowed them from the national exchequer (*Hist. Aug. Alex. Sev.* 27. 5; 44. 4). Then at length Diocletian, in A.D. 294, issued a universal interdict against the 'ars mathematica damnabilis' (*Cod. Just.* ix. 18. 2). The death-blow to divination in Rome, however, was given by the severe decree (25th Jan. A.D. 357) of the Emperor Constantius (*Cod. Theod.* ix. 16. 4 = *Cod. Just.* ix. 18. 5; cf. also *Cod. Theod.* ix. 16. 6 and 8): 'Nemo haruspicem consulat aut mathematicum, nemo hariolum, augurum et vatum prava confessio conticescat. Chaldaei ac magi et ceteri, quos maleficos ob facinorum multitudinem vulgus appellat, nec ad hanc partem aliquid moliantur. sileat omnibus perpetuo divinandi curiositas. etenim supplicium capitis feret gladio ultore prostratus, quicunque iussis obsequium denegaverit.' Nevertheless, in spite of all such repressive measures, the deep-seated craving of the human heart for light upon the future still continued to assert itself, even after the triumph of Christianity, as is shown by the zeal and vigour with which Christian evangelists like Cæsarius of Arles and Martin of Bracara made war upon the vestiges of pagan divination. The first-mentioned gives a long and detailed list of the various modes of soothsaying still in vogue in his own day (6th cent. A.D.): 'nullus ex vobis caragos vel divinos vel sortilegos requirat . . . nullus sibi praecantatores adhibeat . . . similiter et auguria observare nolite nec in itinere positi aliquas aviculas cantantes attendite nec ex illarum cantu diabolicas divinationes annuntiare praesumite' (Migne, *PL* xxxix. 2269); to these must be added the 'sortes Sanctorum' mentioned later in the records of Councils (cf. R. Boese, *Superstitiones Arelatenses e Cæsario collectæ*, Marburg, 1909, p. 42 f.), *i.e.* the practice of opening the Scriptures at random in order to find a sentence which might furnish the solution of a stubborn dilemma or give information regarding the future ('qui de paginis evangelicis sortes legunt' [August. *Ep.* lv. 37, p. 212, 3, Goldbacher]) —a device which Augustine himself had employed (*Conf.* viii. 12. 29), and which was at an earlier day applied in exactly the same way to the works of the ancient poets, especially Vergil (*ib.* iv. 3. 5). Cf. art. DIVINATION (Christian).

G. WISSOWA.

DIVINATION (Teutonic).—Tacitus (*Germ.* x.) states that the German tribes practised augury and divination by lot as much as any people. He proceeds to describe the latter, which, he says, was used in both public and private life, and which from other references appears to have been a common custom. He says that it consisted in picking up and interpreting chips of wood that were inscribed with some kind of signs (which may possibly have been runic characters), and that had been scattered haphazard:

'If the twigs prove unfavourable, the matter is left over for that day; while, even if they are favourable, the confirmation of augury is still required. For they are also familiar with the practice of consulting the notes and the flight of birds; and it is a characteristic of this people to seek warnings and omens from horses. There are kept at the public expense, in the woods and groves, white horses, free from all taint of human labour; these, yoked to a consecrated chariot, are accompanied by the priest and king or chief person of the community, who observe their manner of neighing and snorting. Nor is there greater reliance on any form of augury, both among the common people, the nobility, and even the priests; for they regard themselves as the ministers of the gods, the horses as acquainted with their will.'

We may compare a passage in the *Flateyjarbok* (saga of Olaf Trygvason, 322), where we hear of horses sacred to Frey at a sanctuary in the Throndhjem fiord. In the sagas we hear also of wolves being used in augury, but the majority of the instances are concerned with birds, usually the raven. This bird was evidently considered to possess wisdom and knowledge of events, and is specially connected with battle; should one be heard thrice screaming on the roof, it bodes death to warriors; but the appearance of ravens following a host or a single warrior will bring good luck in battle.

A striking instance of the significance of the raven occurs in the saga of Olaf Trygvason in the *Heimskringla*. Earl Hakon, after the defeat at Danevirke, made a great blood-sacrifice, and 'there came two ravens flying, which croaked loudly, and now, thought the earl, the blood-offering has been accepted by Odin, and he thought good luck would be with him any day he liked to go into battle' (tr. Laing). Here the two birds were perhaps supposed to have been Odin's own ravens, Hugin and Munin, from whom he learnt all that was going on in the world. In this connexion we may mention the raven banner of the Northmen described in Anglo-Saxon records; it was woven of plain white silk, but on it in war time there became visible a raven, which by its drooping or flapping wings portended defeat or victory.

Augury from the voices of birds is frequently found in the form of a belief that certain specially gifted persons could understand the language of birds. Procopius (*de Bell. Goth.* iv. 20) gives the story of Hermigiselus, king of the Varni, who interpreted the loud and incessant croaking of a bird as presaging his own death. In the sagas various birds act thus as soothsayers—the raven, the crow, and the nut-hatch. Thus in the poem *Fafnismal*, Sigurdr, after tasting Fafnir's blood, is able to understand the speech of certain nut-hatches which warn him of the treachery prepared by Reginn; and the *Ynglinga Saga* gives the legend of a certain king Dag who had a sparrow which he greatly valued, since, like Odin's ravens, it flew to different countries and brought him much news.

Divination appears to have been largely practised by 'wise women,' both among the early Teutonic peoples of the Continent, and in later times in the North. Strabo (bk. VII. ch. ii. [p. 294]) states that the Cimbri were accompanied to war by grey-haired prophetesses, who presaged victory in battle from the blood and entrails of slaughtered prisoners; Tacitus has several references to the prophetess Veleda, who was held in much reverence by the Bructeri, and who had predicted the success of the Germans and the destruction of the legions; and Cæsar and other writers also refer to the divinations of 'wise women' among the Teutonic armies.

In the sagas, too, we hear of the 'wise woman,' such as Thorbjorg, who, in the saga of Eirik Raudha, visits the house of Thorkel. She has a special dress, seat, and food, and further requires one of the women of the house to sing the 'warlocks,' or spell song. Then she predicts the end of the sickness and famine, and foretells the future of many of the people.

In addition to these forms, we have vague references to some sort of inquiry of the gods, accompanied by sacrifices; as, for example, in the *Eyrbyggia Saga*, where Thórolf of the Mostr makes a great sacrifice and consults Thor, 'his well-beloved friend,' as to whether he shall emigrate or make peace with the king, 'but the word showed Thórolf to Iceland.'

We hear also of divination by dreams, and of the practice of single combat, as a kind of ordeal by battle, to decide disputes, which Tacitus (*loc. cit.*) states was also used to presage the result of a war.

Goth.* iv. 20; Ammianus Marcellinus, xiv. 9, 10; Agathias, ii. 6.

C. J. GASKELL.

DIVINATION (Vedic).—The Vedic art of divination, when contrasted with the Greek art, presents striking differences. Institutions comparable with the wide-reaching influence of the Greek oracles were never developed, and, while the gift of prophecy could, like other mystic powers, be acquired and increased by religious austerities (cf. *Mahābhārata*, 3. 16,870, Calc. ed.), still the power of seeing what is hidden, especially what is hidden in the future, depended in the main not on inspiration or personal gifts, but on the knowledge of how to interpret certain *omina* and *portenta*. The chief reason for this fact must be sought in the great development of the other branches of magic (cf. MAGIC [Ved.]). A man who is in possession of the magical means to acquire any desired blessing has little reason to inquire what the future has in store. Indeed, his only motive for inquiring about the future can be to learn when danger is impending, in order that he may avert it by the timely performance of the necessary rites. It was primarily to this need that the observance of omens and portents in India was due, though further development was sure to follow, as the attempt to define an evil portent leads of itself to the observation of favourable omens.

The omens and portents recognized in the Vedic system of divination may be classified as follows: (1) ominous appearances and actions of animals, especially birds—*śākuna*; (2) phenomena at variance with the usual course of Nature—*adbhuta*; (3) physical marks—*lakṣaṇa*; (4) omens of an astrological nature; (5) omens drawn from occurrences at the sacrifice; and (6) dreams.

With regard to the omens drawn from the sacrifice, it must be noted that, while they depend in part upon things not wholly subject to the regulation of the celebrant (*e.g.* the movements and colour of the fire), in part they depend upon things that are subject to his will (*e.g.* when it is stated that Parjanya will give rain if both or one of the bulls that draw the cart is black [*Śatapatha*

Brāhmaṇa, 3. 3. 4. 11]), and so pass over by almost imperceptible transitions from divinatory observances into directions about the sacrificial technique required to obtain a desired object. This subject will be referred to in other articles (cf., *e.g.*, art. DREAMS [Vedic]), and the present article will be devoted to the ceremonies the purpose of which is the attainment of knowledge (*vijñāna*), usually of future events, which is unattainable by natural means.

1. Sources.—As was to be expected, the chief source for such ceremonies is the *Kauśika Sūtra*, which is supplemented by an interesting chapter in the *Sāmavidhāna Brāhmaṇa*, 3. 4. Sporadic instances occur in other Vedic texts, sufficient to show that such practices were not confined to these two schools, and that the reason why they are not more frequently mentioned in other texts is to be sought in the nature of the literature.

2. The ceremonies.—The most widely attested *vijñāna*-ceremony is the test of the bride, advised or enjoined by the Gṛhya Sūtras (Āśvalāyana, 1. 5. 4–5; Gobhila, 2. 1. 3–9; Āpastambīya, 3. 14–17; Mānava, 1. 7. 9–10; Kāṭhaka, 14; Bhāradvāja, 1. 11 [the last two in Caland, p. 127, n. 8]; Kauśika, 37. 7–10; cf. Winternitz, *Das altind. Hochzeitsrituell*, 1892, p. 37). It is based upon the principle of *attractio similium*, and consists in offering from four to nine clods of earth, taken from different places, to the bride, whose choice is ominous. Āśvalāyana's list is typical, and comprises clods from a field that yields two crops a year, from the stable of a cow, from a *vedi* (altar), from an undrying pool, from a gambling-place, from cross-roads, from a barren spot, and from a cemetery. They signify respectively that the bride's offspring will be rich in food, rich in cattle, rich in holy lustre, rich in everything, addicted to gambling, wandering in different directions (according to Kauśika, that she will be unfaithful), poor, and the cause of the death of her husband (according to Kauśika, that she will not live long). When there is a ninth clod (Gobhila and Kāṭhaka), it is mixed of all these substances. The ceremony is recommended when it is impossible to determine the bride's qualities from the marks on her body (*lakṣaṇāni*), but Āpastamba implies that her family have a right to object to this test. An alternative in Kauśika, 37. 11–12, is to require the bride to pour out a handful of water that has been blessed. If she does this in an easterly direction it is a good omen.

With this may be compared the practices for the purpose of seeing whether the ground selected for a house is suitable (Āpast. GS 2. 8. 1–8), though these may appear to us practical rather than magical, and the impression is strengthened by the absence of all religious elements from the ceremony. A pit is dug and refilled. If the earth more than refills it, the site is good; if it fails to fill it, the site is bad; if it fills it exactly, the site is indifferent. Or, after sunset, the pit is filled with water. If, in the morning, there is water still in it, the site is good; if the ground is dry, it is bad; and if it is moist, it is indifferent.

Another method of divination in the Kauśika, with parallels in the hieratic literature, is based upon the wide-spread belief that a man's reflexion or shadow is part of his personality. Hence, when one cannot see his reflexion, his spirit is gone (he is *gatāsu*, *itāsu*, or *gatamanas*), and he is in danger of death. The Kauśika, 15. 9–10, employs this idea as follows: Before a battle the king causes his warriors to look, two by two, into a vessel of water over which Atharva Veda, 5. 2. 6, has been recited; if any warrior does not see his reflexion he must not take part in the approaching battle. Similar applications of this idea are found in Taittirīya Saṁhitā. 6. 6. 7. 1; Maitrāyaṇī Saṁhitā, 4. 7. 2; Āśvalāyana Śrauta Sūtra, 5. 19. 5; Āpastamba ŚS. 13. 14. 3. 4; Kātyāyana ŚS. 3. 3. 6 (cf. Oldenberg, p. 526, n. 4).

Another method of divination practised before a battle is as follows: Three ropes, made of bowstrings, are laid upon heated coals, and Athar. Ved. 5. 6 is recited over them. The middle string represents death, the other strings the two armies. If the middle string passes over one of the other strings it forebodes the defeat of that army; if one of the outside strings passes over the middle string it signifies the victory of the army it represents. Further auguries as to the rank of the men who will fall are drawn from the portion of the string that curls—the top, middle, and bottom of the strings denoting men of similar standing. Reed-stalks (*iṣīkā*) may be used instead of the ropes (cf. Kauśika, 15. 15–18). The Sāmavidhāna Brāhmaṇa (3. 4. 10) attains the same purpose in the following manner: each contestant is represented by a pile of glowing smokeless coals; these are sprinkled at the same time with ghī. He will be victorious whose pile first blazes up with flames free from smoke and moving from left to right.

To learn who will live long (*jīvita-vijñāna*) the same text (3. 4. 11) proceeds in a similar way, but in this case the ghī must be made from woman's milk and churned on the same day. The favourable omen in this case is for one's pile to burn longest. For the same purpose the Kauśika, 15. 13–14, directs that three ropes of bowstrings be laid on heated coals; if they curl upwards it is a good omen.

Another augury before the setting out of a warlike expedition is to produce an inauspicious smoke by sprinkling grass with *iṅgiḍa*-oil, reciting certain hymns over it, and burning it with an uncanny fire (for these details cf. art. WITCHCRAFT [Ved.]). The expedition will conquer the region towards which the smoke goes (cf. Kauśika, 14. 30–31).

The direction in which a lost object must be sought is discovered in the following ways: A water pitcher is covered with a new cloth and placed upon a bed which is not in its usual position, and the leavings of an offering made with recitation of Athar. Ved. 2. 1 are poured over it. The faces of two girls who have not yet menstruated are covered with a cloth so that they cannot see, and they are told to remove the pitcher. The lost object is in the direction in which they carry the pitcher. Dice may be used instead of the pitcher and a plough instead of the bed (cf. Kauśika, 37. 4–6). Another method consists of throwing down and spreading out at cross-roads twenty-one pebbles blessed with Athar. Ved. 7. 9, but how they indicate the direction is not specified (cf. Kauśika, 52. 12 ff.).

Whether a woman will get a husband is ascertained by tying calves to a seven-ply rope, smeared with the leavings of an offering made with recitation of Athar. Ved. 2. 36, and bidding her loose them. If she does so in order from left to right she will marry (cf. Kauśika, 34. 17). The direction from which the wooer will come is discovered by letting loose a steer, whose head is covered with a new cloth on which have been placed the leavings of an offering made with recitation of Athar. Ved. 2. 36 (cf. Kauśika, 34. 18–19). The same information is gained, at an oblation offered at dawn to Aryaman to obtain a husband for one's sister, by observing the direction from which the crows come (cf. Kauśika, 34. 21–24).

The sex of a child is foretold by placing four fruits of the flax plant in the mother's hand, blessing them with Athar. Ved. 1. 11, and pouring water over them. If they adhere to one another the child will, for obvious reasons, be a boy. Or the priest may whisper the same hymn over the son of a

Brāhman and order him to touch the mother. If the name of the limb touched is grammatically masculine, the child will be a boy (cf. Kauśika, 33. 17–20). The conclusions drawn from the appearance of the root of a plant dug for a charm to secure easy delivery, and from the fact that the symbolical drawing apart of the *muñja*-grass is accomplished without tearing them, are to be considered as the observance of omens rather than charms of divination (Kauśika, 33. 12. 3).

The prediction of the weather was an especial object of divination, and apparently undertaken by means of the smoke of burning dung. The idea readily passed into the form that the weather prophet controlled the weather. Hence, Athar. Ved. 6. 128 says: 'When the stars made Śakadhūma (he who predicts the weather from the smoke of dung) their king, they bestowed good weather upon him. "This shall be his dominion," they said.' The hymn is employed in Kauśika, 50. 15–16, for the propitiation of Śakadhūma by one who is about to start on a journey (cf. Bloomfield, *AJPh* vii. 484 ff.). Among the Pariśiṣṭas of the Atharva Veda is also a text entitled *Sadyovṛṣṭilakṣaṇa*, and devoted to the signs of rain that will come immediately.

In addition to these, the Kauśika has a number of charms for obtaining the answer to any question. They are referred to briefly, with rubrication of the hymns required, in Kauśika 37. 1–3, but fuller details are given in the commentary of Keśava. The first is as follows. The questioner thinks either to himself or aloud of the question he wishes answered. Then he recites a hymn over a milk-porridge; while it is cooking he thinks, 'This porridge is done,' or 'This porridge is not done.' If he has guessed correctly, the answer to the original question will be according to his wish. Similarly, the answer may be made to depend upon whether a substance laid upon heated coals will curl upwards or not; whether the number of blades in a bunch of grass is odd or even; whether a flower will close on the day after a hymn has been recited over it; whether he can foretell the direction in which a reed or arrow shot straight upwards will fall, or the side towards which a yoke or *kāmpīla*-branch (*Crinum amaryllaceæ*) balanced on his head will fall; whether the quantity of milk he takes will be sufficient to fill to overflowing a vessel partly filled with water; whether the smoke from the fire moves from left to right, or *vice versa*; whether he can foretell the throw of the dice;[1] whether he can divide twenty-one pebbles into two heaps in such a way that the odd and even numbers will be in the hand that he expected.

On the same principle rest two charms of the Sāmavidhāna Brāhmaṇa, 3. 4. 9 and 6. Two heaps of unhusked grains are designated respectively as 'to be' and 'not to be,' and the person who is consulting the oracle is told to take his choice. Or the celebrant orders two pupils (*brahmachārins*) to raise two bamboo poles; if they bend (as he expects them to do), it is a sign of success. In both of these cases the necessary magic potency is imparted to the apparatus by the celebrant keeping it with him over night, and singing over it a certain *sāman*. At dawn this *sāman* is sung again, and the test takes place. In the same way, a maiden who has not yet menstruated is enabled to see the future in a mirror or spoonful of water (3. 4. 4, 5); a rod is made to forebode success by growing longer in the night (3. 4. 7); and the seeds that will thrive are distinguished by their increase of weight on the night of the full moon of the month of Āṣāḍha (3. 4. 8).

[1] For a late text containing elaborate oracles from dice, cf. Weber, 'Ueber ein indisches Würfel-Orakel,' *Indische Streifen*, i. (Berlin, 1868) 274 ff.

As an example of such practices in a *śrauta*-text may be cited Tāittirīya Saṁhitā, 3. 3. 8. 4, where directions are given to cook a cake of a certain size on the *ekāṣṭakā* (the first or last night of the year), and in the morning to attempt to set fire with it to a thicket. If the thicket burns, it will be a lucky year. The same text also (ii. 509; Hiraṇyakeśin ŚS. 22. 13–14) employs a horse as a weather prophet. But the ceremony enjoined in Gobhila GS 4. 8. 14 ff.—one goes out of the village in an easterly or northern direction, and erects at cross-roads or on a mountain a pile of the dung of wild beasts, sets it on fire, sweeps the coals away, and makes an oblation of butter with his mouth: if the butter catches fire, he will get twelve villages; if it smokes, three—is less a means of divination than a charm to effect the desired purpose, combined with an augury from the ceremony, comparable with such practices as those of Kauśika, 19. 21, 47. 29, and others.

In looking back upon these performances, certain common features may be observed: (1) A religious or quasi-religious ceremony is necessary to impart efficacy to the apparatus. (2) The general principle upon which most of them rest is the idea that, an association being established between two questions, the answer to the one will be the answer to the other, or that the person can answer both correctly who can answer one correctly. This is but a particular application of the fundamental principles of magic, that the part may be substituted for the whole, and that objects connected in any way, even though merely by an association of ideas, constitute a whole. (3) It is noteworthy that none of the *mantras* seems to have been primarily intended for the purpose for which they are here employed. (4) There is a marked tendency for the charms to pass from an inquiry about the future into a means of compelling a desired end.

In some cases the indication of success is the occurrence of what we would term a miracle, *e.g.* a growing rod, seeds increasing in weight. This idea is employed in several forms of the ordeal (*daivya*, *divya*), while in other cases the ordeal is merely a particularly intensified form of oath. Hence it is also called *śapatha*, literally 'oath' or 'self-curse.'

In reality the ordeal is but a particular form of divination, the question being the guilt or innocence of a suspected man. In view of the occurrence of this belief among other Indo-European peoples (Schrader, *Reallex. der indogerm. Altertumskunde*, *s.v.* 'Gottesurtheil'), it is surprising to find only two incidental allusions to the practice in Vedic literature. The first of these is Pañchaviṁśa Brāhmaṇa, 14. 6. 6, where the story is told of how the Ṛṣi Medhātithi taunted the Ṛṣi Vatsa with being not a Brahman, but the son of a Śūdra woman. The latter proposed that they should both pass through the fire to see which was the better Brahman. They did so, each singing the *sāman* that bears his name, and Vatsa emerged without losing a hair, for that was his wish, and the *Vātsa sāman* is a winner of wishes. The other passage is Chhāndogya Upaniṣad, 6. 16. 1–3, where the trial of a man accused of theft, by a form of the fire ordeal in which the instrument is a heated axe, is employed as a parable. Another passage, Kauśika, 52. 8, may bear upon the question. Among the practices assigned to the hymn Athar. Ved. 6. 106, which is used to prevent or heal the effects of fire, is the sūtra, *śapyamānāya prayachchhati*. Sāyaṇa, who is following Keśava, and who is followed in turn by Caland, explains that in place of the *taptamāṣa* ordeal (cf. below), the celebrant must recite the hymn over the oil or other substance employed before handing it to the person who is undergoing the ordeal. This interpretation cannot be correct, as such magical aids are especially forbidden in

the case of the *viṣa* ordeal; and, according to the *paribhāṣā* (general rule), Kauśika, 7. 7, the *sūtra* must mean that the hymn is recited over a stirred drink and porridge which are given to the *śapyamāna*. If it has anything to do with the ordeal, it must refer to a secret preparation, which would have been forbidden had it been detected. In this sense the middle, not the passive participle, should have been employed, and it is best to give to the word the general sense of 'one who is suffering from a curse.' That in later times the ceremony may have been performed especially by those about to undergo with guilty consciences the *taptamāṣa* (and *agni*?) ordeal is not improbable, and Keśava may be accepted as a witness to the fact; but there is no reason to believe that the ceremony was originally devised for such cases, or ever restricted to them.

Further evidence for the fire ordeal was formerly found in Athar. Ved. 2. 12. 1–8 (so Schlagintweit, *Die Gottesurtheile der Inder*, 1866, p. 9; Weber, *Indische Studien*, xiii. (1876) 164 ff.; Ludwig, *Der Rigveda*, iii. (1878) 445; Zimmer, *Altindisches Leben*, 1879, p. 183 f.; Kaegi, *Alter und Herkunft des germ. Gottesurtheils*, 1887. The interpretation was first doubted by Roth (cf. Grill, *Hundert Lieder des Atharva Veda*, 1888, p. 16), and the ritualistic manipulation of the hymn in the Kauśika Sūtra finally disclosed its true nature as an imprecation against an enemy for thwarting holy work (cf. Bloomfield, *AJPh* xi. 330 ff.; *SBE* xlii. 89, 294 ff.).

The earliest lawbooks, also, make but slight reference to the practice, most probably because it was not considered of great importance, and because they were consequently willing to leave the details to be decided by local customs. These have been gathered and systematized by the later treatises on law, which finally recognize nine forms of ordeal.

(1) By the scales (*dhaṭa*, *tulā*). The accused is placed in one scale of a balance and his weight in stones and sand in the other scale. He descends from the scale, and after certain ceremonies is again placed on the balance. If he is lighter, he is innocent; if heavier, guilty. Equality of weight is generally considered proof of guilt in a less degree, though the authorities differ upon this point and upon the significance of accidents to the apparatus.

(2) By fire (*agni*). The accused, whose hands are more or less protected by leaves and grains, is required to step in seven circles, while holding in his hands a piece of heated iron. If his hands are burnt it is a proof of his guilt.

(3) By water (*salila*). To prove his innocence, the accused must remain under water until a swift runner can bring back an arrow shot at the time of submersion.

(4) By poison (*viṣa*). If no ill effects are observable within a certain time after the accused has taken the poison, he is declared innocent.

(5) By holy water (*kośa*). An image of a god recognized by the accused is bathed in water, which is then given to the accused to drink. If he does so without betraying his guilt, and no misfortune happens to him within a certain time, he is innocent.

(6) By rice grains (*taṇḍula*). Grains of unhusked rice are soaked in water in which an image of a god has been bathed, and are given to the accused to chew. He is then required to spit upon a leaf. If there is no blood evident, and his gums are uninjured, he is innocent.

(7) By a heated gold-piece (*taptamāṣa*). The accused is required to take a gold-piece from a vessel of heated ghī and oil. Quivering and blisters are proofs of guilt.

(8) By a ploughshare (*phāla*). The accused, to establish his innocence, must lick a heated plough share without burning his tongue.

(9) By lot (*dharmādharma*). Representations of innocence and guilt are placed in a vessel, and the accused is required to draw one.

The form of ordeal is determined by the nature of the crime, the position of the accused, and the season of the year. There is observable, as always in Hindu law, the tendency to favour the upper castes, but there is also a tendency to moderate the conditions of the ordeal in favour of the accused, and the accuser is generally required to undergo the penalty in case the accused is acquitted. The ordeal can be applied only in the absence of human evidence, and, as was to be expected, is accompanied by religious ceremonies (for further details cf. J. Jolly, *Recht und Sitte*, 1896, p. 144 f., and esp. A. F. Stenzler, 'Die ind. Gottesurtheile,' *ZDMG* ix. 661–682).

The practices described must be much older than the texts in which they are contained. There is no warrant for declaring the essentials of any one form later than another; and the familiar nature of the Vedic allusions to the fire ordeal as something well known warrants the belief that similar, if not identical, practices were in vogue in Vedic times.

Allusions to ordeals are found in the classic literature in Rāmāyaṇa, vi. 101–103 (Gorresio), where Sītā proves her innocence by walking through fire; and in the Mṛchchhakaṭikā, 9. 43, p. 156 S., where the ordeals by fire, water, poison, and the scales are referred to.

Oldenberg, *Die Religion des Veda*, Berlin, 1894, p. 509 ff.; and the indexes to 'Hymns of the Atharva-Veda' [tr. M. Bloomfield], in *SBE* xlii., Oxford, 1897, and W. Caland, *Altindisches Zauberritual*, Amsterdam, 1900.

G. M. BOLLING.

DIVINE RIGHT.—Divine right is a right conferred by God, sanctioned or inspired by Him, and based on His ordinance and appointment. The phrase is generally used to express the theory that kings hold their authority, not from the choice or consent of their subjects, but from God Himself alone. In English history it came into specific use in the 17th century, during the disputes between the Stuarts and their people. The claim of Divine right was pre-eminently made for that dynasty; the doctrine became the badge of Tories and High Churchmen; and at the Restoration in 1660 it was the accepted royalist creed. It was seriously maintained that hereditary monarchy, as opposed to every other form of government, has the Divine approval; that no human power can justly deprive a legitimate king of his rights; that the authority of such a king is necessarily always despotic; that constitutional liberties are not rights of the people, but concessions freely made by the king and liable to be resumed at his pleasure; that treaties which he may make with his subjects merely inform them of his present intentions, and are not contracts of which the performance can be demanded.

The chief representative of the Divine right party was Sir Robert Filmer, who in his books and pamphlets laid down the doctrine that the government of a family is the true original and model of all government, that all kings and governors derive their absolute authority from the patriarchs, and that to the end of the world the king will always have the natural right of a supreme father over a multitude. This fantastic theory was fully developed in his *Patriarcha*, a posthumous work (1680), but his position was sufficiently indicated in works published during his lifetime, his 'Freeholder's Grand Inquest touching our Sovereign Lord the King and his Parliament'

(1648), his 'Anarchy of a Limited and Mixed Monarchy' (1648), his 'Observations upon Mr. Hobbes' Leviathan, Mr. Milton against Salmasius, and H. Grotius, *De jure belli et pacis*, concerning the Original of Government' (1652). It amounted to a paternal despotism: the king alone is the maker of laws, the Lords only give counsel to the king, and the Commons merely 'perform and consent to the ordinances of parliament.' It was this 'patriarchal' theory of government, doggedly adhered to by the Stuarts, that rent the fabric of the constitution in the reign of Charles I., and drove the long-suffering nation to the Revolution of 1688.

In the previous century, **Richard Hooker** (*c.* 1553–1600) had given a philosophical statement of the principles of government, making the consent of the people the prime requisite:

'Without which consent there were no reason that one man should take upon him to be lord or judge over another; because, although there be according to the opinion of some very great and judicious men a kind of natural right in the noble, wise, and virtuous, to govern them which are of servile disposition; nevertheless for manifestation of this their right, and men's more peaceful contentment on both sides, the assent of them who are to be governed seemeth necessary.

'To fathers within their private families Nature hath given a supreme power; for which cause we see throughout the world, even from the foundation thereof, all men have ever been taken as lords and lawful kings in their own houses. Howbeit over a whole grand multitude having no such dependency upon any one, and consisting of so many families as every politic society in the world doth, impossible it is that any should have complete lawful power, but by consent of men, or immediate appointment of God; because, not having the natural superiority of fathers, their power must needs be either usurped, and then unlawful; or, if lawful, then either granted or consented unto by them over whom they exercise the same, or else given extraordinarily from God, unto whom all the world is subject' (*Eccl. Polity*, i. 10; Keble's edition, i. 302 f.).

To popularize the principles of the liberty of subjects, the fiery logic of **Samuel Rutherford** did more than the massive learning of Hooker. His *Lex Rex* (1644) was intolerable to the Royalists. Not only was it burnt by the hangman in Edinburgh in 1661, and by the hands of Sharpe under the windows of its author's college in St. Andrews, but it would probably have cost him his life, as he was about to be tried for high treason when he 'got another summons before a superior Judge.'

'The king,' he contends, 'hath no masterly dominion over the people, but only fiduciary' (116). 'That the power of the king is fiduciary, that is, given to him by God in trust, Royalists do not deny; but we hold that the trust is put upon the king by the people' (124). 'The people may be without the king, but not the king without the people' (144). 'Though God immediately without any action of the people make kings, this is a weak reason, to prove they cannot unmake them' (146). 'I utterly deny that God ever ordained such an irrational creature as an absolute monarch' (216). 'Whatever the king doth as king, that he doth by a power borrowed from the Estates, who made him king. He must then be nothing but an eminent servant of the State' (233).

The democratic principle was argued for in another classical work on English constitutional law and polity—**Locke's** *Two Treatises on Government* (1690). In the 'First Treatise' he subjects the writings of Filmer to a searching analysis, going over his arguments *seriatim*, and in the 'Second Treatise' he maintains that civil rulers hold their power not absolutely but conditionally, government being a moral trust which is forfeited if the conditions are not fulfilled by the trustees. Written for the immediate purpose of vindicating the Revolution, Locke's work contains the essential principles which have regulated political progress for over two centuries, and gradually moulded the British constitution.

Carlyle, in his lecture on 'The Hero as King,' remarks that 'much sorry stuff, written some hundred years ago or more, about the "Divine right of kings"' had better be left to rot silently in the Public Libraries. At the same time he does not wish to 'let the immense rubbish go without leaving us some soul of it behind.'

'Find me the true *Könning*, King, or Able-man, and he *has* a divine right over me. That we knew in some tolerable measure how to find him, and that all men were ready to acknowledge his divine right when found: this is precisely the healing which a sick world is everywhere, in these ages, seeking after!' (*On Heroes*, People's ed. p. 183 f.). 'He that models Nations according to his own image, he is a King, though his sceptre were a walking-stick; and properly no other is' (*Frederick the Great*, People's ed., vol. i. p. 286). In this high sense Cromwell is a king by Divine right; while Pitt is 'not born a King,—alas, no, not officially so, only naturally so; has his kingdom to seek. . . . tragical it is . . . to see a Royal Man, or Born King, wading towards his throne in such an element. But, alas, the Born King . . . so seldom can arrive there at all' (*ib.* vii. 139 f.).

The older doctrine had an ephemeral revival at the time of the **Holy Alliance** (1814), which, while to all appearances an attempt, inspired by the religious idealism of the Czar Alexander I., to find in the 'sacred precepts of the Gospel' a common basis for a general league of European governments having for its object the preservation of peace, was really a brotherhood of sovereigns holding the reins of government by Divine right. The same high doctrine was dear to the first German Emperor, who intensely believed himself to be the vicegerent of the 'God of battles'; and it is held as firmly by his grandson, who habitually lays stress on the Divine right by which alone the kings of Prussia rule, sincerely holding that they are appointed and inspired to shape their people's destinies. 'Considering myself as the instrument of the Lord, without heeding the views and opinions of the day, I go my way' (Königsberg speech, 1910). The principle is logically applied in Russia, where the Emperor places the crown (as the first Napoleon did) on his own head, deriving his kingly prerogative from no man, and being answerable to no man.

The **Old Testament** has often been regarded as teaching the Divine right of kings. But it speaks with a somewhat uncertain voice. In gratitude for the monarchy, which, arising out of natural beginnings, drew together all the vital energies of Israel in devotion to one God and one king, the prophets went to all lengths in proclaiming the king's person sacrosanct and his rule Divine. The earthly monarch was sent in the place of the heavenly; he was Jahweh's anointed and His son, the mediator through whom help, salvation, and blessing came to the people. The Civil State was a miracle, a gift of God, and even the glorious kingdom of the future was inconceivable without a heaven-sent king. Time, however, brought disillusionment; a succession of weak and unrighteous kings were unfaithful to the pure religion; Hosea (13^{11}) regarded the monarchy itself as an evil; and, according to a late stratum of the historical books, Samuel from the very beginning foresaw a dangerous rivalry to the kingship of Jahweh, an autocracy substituted for a theocracy (1 S $8^{7ff.}$). It is certain that the prophets never renounced their Divine right of criticizing the policy and the character of their kings, and that long before the end came they remorselessly foretold the dissolution of the State and the abolition of the monarchy, at least until the Messiah should come to restore all things.

In the **New Testament**, Christ Himself acknowledges the rights of Cæsar (the reigning Emperor was Tiberius) within his own sphere (Mk 12^{17}), and St. Paul declares that the Powers that be (ἐξουσίαι ὑπερέχουσαι) are ordained of God, so that resistance to the Power is resistance to the ordinance of God (Ro $13^{1f.}$). The Divine-right party in the Jacobean and Caroline period regarded such utterances as strongly supporting their cause; and even Bishop Berkeley appears to have interpreted them as prescribing an unlimited obedience. 'Loyalty is a moral virtue, and "Thou shalt not resist the Supreme Power" a rule or law of nature, the least breach whereof hath the inherent stain of moral

turpitude' (*Works*, iv. 111 [quoted by Sanday-Headlam, *Romans*, Edin. 1895, p. 372]). But the early Christians, who were so loyal to Cæsar 'for conscience' sake' (Ro 13^5), were loyal to Christ for the same reason; and, when Cæsar went beyond his sphere and claimed from them Divine honours, they not only refused to bow to his authority, but branded him as 'the Beast.'

In truth, the despotic claim of Divine right must always make kings either odious or ridiculous. King James I., who was in the habit of telling his Parliament that 'they held their privileges merely during his pleasure, and that they had no more business to inquire what he might lawfully do than what the Deity might lawfully do' (Macaulay, *Hist. of Eng.*, ed. London, 1871, i. 37), was reminded by Melville that, though he was king over men, he was only 'God's silly vassal.' It was not a courtly speech, any more than Knox's memorable saying to Mary, 'Your *will*, Madam, is no reason.' But such bold utterances—the expression of the Divine and indefeasible right of private judgment—becoming household words, created an atmosphere in which the doctrine of Divine right to unlimited power ultimately died a natural death. Faint and ghostly echoes of it are still frequently heard abroad, as when Martensen (*Christian Ethics* [*Social*], Eng. tr., Edin. 1882, p. 187) advocates hereditary monarchy,

'because of its full manifestation of the fact that the king exists not by the will of the people, but by the will of God, that the king and his authority are *given* us, that he is exactly the person whom we ought to have, that subjective arguing is in this matter of as little use as it would be to complain that we have not other parents than those whom God has given us, although those parents may have undeniable imperfections, to which we need not be blind, but by which our dutifulness must not be disturbed.'

The ideal State is that in which the Divine right of every personality is recognized, and the throne thus broad-based upon the people's will. In such a State each individual can say, in a much higher sense than was meant by the Grand Monarque, 'L'état c'est moi.' It is vain to imagine that 'there's such divinity doth hedge a king' (*Hamlet*, IV. v. 123), when the king happens to be Hamlet's stepfather, lawless and murderous; but the words have a profound significance when the Divine protection of a good king is mediated by the fervent loyalty of a great nation.

'Where the king doth guide the state, and the law the king, that commonwealth is like a harp or melodious instrument, the strings whereof are tuned and handled all by one, following as laws the rules and canons of musical science' (Hooker, viii. 2, Keble's ed. iii. 440).

DIVORCE.—See MARRIAGE.

DOCETISM.—1. **Name and definition.**—Docetism (δοκητισμός) is the heresy which teaches that Christ had no real material body and human nature, but only an apparent body, a phantasm of humanity (like the angel Raphael in To 12^{19}). His acceptance of the ordinary laws that govern our life, His eating, drinking, birth, and death, are so many illusions (δοκεῖν, in the sense of 'seeming' only).

The name δοκηταί (δοκιταί) appears first in a letter of Serapion of Antioch (191–203 [reproduced by Euseb. *HE* vi. 12]), in which he forbids the reading of the apocryphal Gospel of Peter because it is corrupted by the 'successors of those who preceded Marcion, whom we call Docetes.' It appears again in Clem. Alex. *Strom.* iii. 13 (*PG* viii. 1192), vii. 17 (*ib.* ix. 553), in Hippol. *Philos.* viii. 8 (*ib.* xvi. 3347), in Theodoret († *c.* 458), *Ep.* 82 (*ib.* lxxxiii. 1264): 'Marcion, Valentine, Manes, and the other Docetes.' But the heresy existed long before the time of these writers. There are traces of it in the NT, it recurs in the Apostolic Fathers, it became part of the Gnostic system, continued in various forms among Manichæans and Monophysites, lasted into the Middle Ages, and was adopted (in part) by Muhammad.

Docetism was not so much a definite system as a tendency. There was not one organized Docetic sect; nor was the idea of a phantasmal body of Christ adopted for its own sake, for the sake of apparent reasons of philosophy, or on the ground of texts of Scripture, or other such arguments. It is rather the consequence to which other heresies led. It is found, moreover, in various forms, more or less perfect. One school had only few Docetic tendencies, another more; it was possible to hold Docetic views about our Lord's birth or conception, but not about His death, and *vice versa*. So we find it in many grades, ranging from a slight tendency to consider Christ's humanity as privileged, more spiritual than ours, less subject to humiliating conditions (in which form it might be held by orthodox Christians), to the extreme school which made all His life on earth a senseless mystification.

2. **In the NT and the Apostolic Fathers.**—Docetism is the first known Christian heresy. 'The blood of Christ was still fresh in Judæa,' says Jerome, 'when His body was said to be a phantasm' (*adv. Lucif.* 23 [*PL* xxiii. 186]). There are passages in the NT against those who deny the reality of our Lord's body. Certain texts in St. Paul which insist on Christ's birth from a woman, or on His having flesh (Gal 4^4, Ro 1^3 9^5; cf. He 2^{14}), are sometimes supposed to be directed against Docetes. In any case, there is undeniably a polemic anti-Docetic meaning in the Epistles of St. John; 1 Jn 1^{1-3} and 4^{1-3} clearly have this sense, just as 2^{22} rejects the Gnostic basis of Docetism. In 2 Jn ^{7} there is the statement that 'many deceivers are gone forth into the world, even they that confess not that Jesus Christ cometh in the flesh' (A. Wurm, *Die Irrlehrer im ersten Johannesbrief*, Freiburg, 1903, pp. 53–62).

It may seem strange that Docetism should thus be the earliest of all heresies. One would have thought that the first and second Christian generations would at any rate have had no doubt about our Lord's real manhood. The explanation is that Docetism did not develop by a perverse process from the gospel and the Christian system, but came to Christianity from without. Already, before the time of Christ, the philosophy of dualism (*q.v.*) was in possession in Greek and Jewish schools. The concept of the universe as the battle-ground between two worlds—a good world of spirit and a bad world of matter—had a large number of adherents when the Christian gospel was first preached. Dualistic philosophies, then, combining with the Christian faith, produced the long chain of heresies that we class together as Gnosticism and Manichæism. In all the problem of evil (Tertullian, *de Præscr.* 7: 'unde malum et quare') is explained by dualism; and it must be remembered that dualism is not so much a Christian heresy as a totally un-Christian, pre-Christian, philosophy. Certainly in some of the extreme Gnostic schools there is hardly any Christianity at all. Docetism is a corollary of Gnostic dualism. All these combinations of the old Persian philosophy with the new religion took from the gospel at least the name of Jesus Christ as the leading champion of the good world of spirit, if not a final emanation from God its creator and protector. It followed, then, that He could not be Himself polluted by matter. He had come down to redeem men's souls by freeing them from matter; He Himself must be pure spirit. The body is bad, made by the powers of darkness and evil; therefore the Saviour could have no body. So all the passages of the Gospels that refer to His flesh, or to His dependence on matter in birth, eating, death, must be understood as describing mere appearances. It was necessary that He should seem to

have a material body, but this was only what seemed to be.

Docetism in the first period is always the corollary of some Gnostic system. F. Chr. Baur (*Die christliche Gnosis*, p. 258) held that all Gnostics were Docetes. This is not correct. There were Gnostic schools, as that of Basilides, which solved the problem in another way, denying any essential union between Christ, the spiritual Saviour-Æon, and the man Jesus—thus foreshadowing Nestorianism. But more or less advanced Docetic ideas accompany most Gnostic systems; although we cannot say that all Gnostics were Docetes, we may safely say that all early Docetes were Gnostics. Docetism was always a consequence of that representation of matter as evil which is the common element of Gnostic schools. It was a feature of Gnosticism specially hateful to the early Fathers, because it made of the Gospel story—all the Life that is to be our example (Jn 13^{15})—a vain pretence. 'Spare the one hope of the whole world,' says Tertullian to Marcion (*de carne Christi*, 5 [*PL* ii. 760]). Although this theory was not a separate heresy, but rather a consequence of the larger issue about dualism, it could be refuted separately. Apart from the general question whether matter be an emanation from the evil principle, it was possible to defend the real humanity and so the material body of Christ; it was possible to show to any one who accepted the story of His life in the Gospels that He was a real man, subject to the normal conditions of human life. Many Fathers accordingly discuss this question separately, and refute those who deny it, without dealing with the reason of their denial. So they have left us the concept of Docetism as a special heresy, and of Docetes as a particular class of persons.

The *Epistle of Barnabas*, v. 12 ('God says that the stroke of his flesh is from them [*sc.* the Jews]'), is sometimes supposed to contain a Docetic idea ('naiver Doketismus' [Harnack, *Dogmengesch.* i. 215]), but unjustly. The text goes on to declare the reality of the Passion and Crucifixion; the words quoted mean only that this was the fulfilment of prophecy (Funk, *Patres apost.*, Tübingen, 1901, i. 53, n. 12). *Ignatius of Antioch*, in the Greek version of his Letters, repeatedly and vehemently denounces those who say that Christ 'suffered apparently' (*τὸ δοκεῖν πεπονθέναι* [*Trall.* 10]), and insists on the reality of His flesh (*Eph.* 7, 18; *Trall.* 9–10). All the first part of *Smyrn.* (1–6) is devoted to anti-Docetic polemic.[1] *Polycarp* quotes 1 Jn $4^{2f.}$, adding that whoever does not confess the witness of the Cross is of the devil, and whoever denies the Resurrection and the Judgment is the first-born of Satan. He describes these ideas as 'the folly of many people' (*Phil.* vii. 1–2). This is generally believed to be directed against Marcion and his followers. Irenæus tells the story of Polycarp meeting Marcion and calling him the first-born of Satan (*Hær.* III. iii. 4). *Justin Martyr* counts Marcionites among the other Gnostics who 'in no way worship Jesus, but only confess Him in words' (*Dial.* 35 [*PG* vi. 551]), and insists on Christ's real human nature (*ib.* 43 [568]).

3. Docetism in apocryphal scriptures.—There are traces of Docetism in several apocryphal books that circulated for a time among early Christians. We have seen that Serapion of Antioch forbade the reading of the *Gospel of Peter* because it had been corrupted by Docetes. The fragment lately discovered (in 1887 at Akhmîm in Upper Egypt, published by U. Bouriant in 1892) confirms his judgment. Verse 10 says (of Christ on the cross): 'But he remained dumb, as one who feels no pain' (Harnack, 'Evang. u. Apokal. des Petrus,' *TU* ix. 2 [1893], p. 9).

Except those of Paul, all the apocryphal *Acts* of Apostles contain more or less Docetic ideas, often together with a certain amount of Encratism (a similar corollary of hatred of matter). The *Acts of John* (early 2nd cent.; cf. Eusеb. *HE* iii. 25) exhibits the most pronounced form. At the Last Supper, St. John, leaning on Christ's breast, found it non-resisting (89 [Hennecke, *NT Apokryphen*, Tübingen, 1904, p. 451]); at the entombment, the body of Christ was at one moment apparently solid, at another it was 'immaterial and incorporeal and like nothing' (93 [*ib.* 452]). The Crucifixion was only an appearance; at the same moment Christ appeared to John on the Mount of Olives and explained this (97 [*ib.* 454]). The *Acts of Peter* (cf. Eusеb. iii. 2) has the statement, characteristic of one school of Docetism, that God sent His Son '*through* the Virgin Mary' (7 [Hennecke, 399]). The material Passion was an appearance: 'What appears is quite different from this suffering, as it was from the passion of Christ' (37 [*ib.* 421]). The *Acts of Andrew* is strongly Encratite; its Docetism appears in § 6 (Hennecke, 466), where man is said to be 'immaterial, holy, light,' etc. In the *Acts of Thomas*, Docetism is less evident, but the usual Gnostic antithesis between matter and spirit is supposed throughout; Christ is spirit (Hennecke, 480–544). Only the *Acts of Paul* (*ib.* 369–383) seems free from any trace of this heresy.

In many cases the Docetism of these apocryphal scriptures is latent rather than manifest, or it shows itself only in one or two sentences. For the rest they speak of our Lord in much the same tone as the Canonical books. This explains how they could be read in orthodox circles often without suspicion. On the other hand, they were rejected by authority (cf. Eusеb. iii. 25) because of their heretical tendency, shown chiefly in the form of Docetism.

4. The Gnostic Docetes.—The apocryphal scriptures quoted were composed in Gnostic circles; the quotations have anticipated part of what follows. With regard to Docetism the Gnostic schools fall into three classes: (1) those which were not Docetic at all, but distinguished Christ the spiritual Saviour from the normal man Jesus; (2) the milder Docetes, who admitted a body of Christ, though it was a spiritualized one (*σῶμα ψυχικόν* or *πνευματικόν*), and only passed *through* His mother, was not formed of her; (3) the extreme Docetes, who denied all reality to the body of Christ; He was born in no sense at all, and all His human life was a mere phantasm (Harnack, i. 285).

(1) *Basilides* (*q.v.*) (in Alexandria at the time of Hadrian, A.D. 117–138 [Euseb. iv. 7]) was not a Docete, but solved the Gnostic problem in the other way, by distinguishing the man Jesus from the Spirit, the *νοῦς*, who entered into Him at His baptism. Irenæus says that Basilides' account of the Crucifixion was that Simon of Cyrene was crucified by mistake, 'and Jesus Himself took the form of Simon, and stood by and laughed at them' (*Hær.* I. xxiv. 4). If Basilides really taught this [it is disputed], it shows a trace of one idea, common to most Docetes, namely, the denial of the Crucifixion.

(2) The milder school is represented by Valentinus, Apelles, Bardesanes, and Marinus. *Valentinus* (*c.* 120–160) taught that Jesus had a 'psychic' body which could not decay, was not subject to the normal laws of matter (Letter to Agathopus in Clem. Alex. *Strom.* iii. 7 [*PG* viii. 1161]): He passed through His mother as water through a pipe (*καθάπερ ὕδωρ διὰ σωλῆνος* [Iren. I. vii. 2]). He was an emanation from the thirty Æons, the visible appearance of the pre-existent Christ produced

[1] These passages are wanting in Cureton's Syriac version (Lightfoot, *The Apost. Fathers*, pt. ii. vol. i. [1889] p. 320).

through Mary by the lowest (female) Æon, Sophia, and the power of the Creator-demiurge (*ib.* I. xi. 2, 3). Later Valentinian schools developed and modified the founder's ideas in various directions. Some, keeping the idea of the non-natural body of Jesus, further distinguished between Him and Christ as two persons (*ib.* III. xiv. 1). Mark (Irenæus' contemporary of this school) distinguished two baptisms of Jesus, one the (psychic) baptism of the 'apparent Jesus' (τοῦ φαινομένου Ἰησοῦ) by John for the forgiveness of sins, the other a pneumatic baptism, to which Mk $10^{38f.}$ refers, in which He received Christ, or the Spirit, for His perfection (*ib.* I. xxi. 2). This represents exactly the combined milder Docetism and (as we should say) Nestorianism of this school. Marcion's disciple *Apelles* so far modified his master's teaching that he, too, must be classed among the milder Docetes. He admitted that Christ had a real body, formed from the stars and 'higher' substances of the world, not really born of Mary, but like the body of an angel (*sic*) (Tert. *de carne Christi*, 6 [*PL* ii. 763]; *adv. Marc.* iii. 11 [*ib.* 335]). We hear nothing of Docetism in *Bardesanes* himself (in Syria, A.D. 154–223? [Euseb. iv. 30]). Ephraim Syr. in his account (*Serm. polem. adv. hær.* 1 [*Opp. Syr.*, Rome, 1740, ii. 437–439] says nothing of Christological errors, nor does Epiphanius (*Hær.* lvi. [*PG* xli. 989–993]). But *Marinus* and others of Bardesanes' school taught the milder form of Docetism—that Christ had a 'heavenly' body, was not born of a woman, and suffered only apparently (Adamantius, *Dialog. de recta in Deum fide*, iii. [*PG* xi. 1793]).

(3) The chief defenders of extreme Docetism are Cerdo, Satornil, and Marcion. *Cerdo* (Κέρδων, a Syrian in Rome at the time of Hyginus, *c.* 136–140 [Iren. I. xxvii. 1; cf. III. iv. 3]) is known chiefly as the teacher of Marcion. He is said to have denied absolutely the reality of Christ's body and of all His apparently human actions (birth, death) on earth (Epiph. xli. [*PG* xli. 692–693]; Hippol. *Philosoph.* x. 19 [*PG* xvi. 3435–3438]). Irenæus (*ib.*) counts him a follower of Simon Magus, the supposed father of all Gnostic and Docetic theories. *Satornil* (Saturninus, a Syrian [2nd cent.]), mentioned already by Justin (*Dial.* 35 [*PG* vi. 552]), was a consistent dualist in all his system, and carried his principles to their logical consequence in absolute Docetism. Our Lord was the Saviour, opposed to the God of Israel, and came to separate the sparks of life and spirit in men from matter. His own freedom from matter is emphasized strongly.

'He said the Saviour was unborn, incorporeal, without figure (*sine figura*), without real matter, apparently seeming a man; and he said the God of the Jews was one of the angels. . . . Christ had come to destroy the Jewish God and for the salvation of those who trusted Him (Christ); these are they who have a spark of His life' (Iren. I. xxiv. 2; cf. Hippol. *Philosoph.* vii. 28 [*PG* xvi. 3322]).

The most famous of all Docetes is *Marcion.* He was a sailor from Pontus (Tert. *Præscr.* 30 [*PL* ii. 48 f.]; Euseb. v. 13), who became a Christian at Rome at the time of Elentherins (*c.* 177–190? [*Præscr.*, *ib.*]). Then he was attracted by Gnostic circles, and evolved a Gnostic system of his own which obtained a considerable following. Marcionites occur among the heretics in all the anti-Gnostic Fathers. Irenæus traces the line of Marcion's heresy through Cerdo from Simon Magus (*Hær.* I. xxvii. 1). His Docetism, as regards the beginning of Christ's life, was complete. His followers read a corrupt version of St. Luke (*Hær.* III. xii. 7; *adv. Marc.* iv. 2 [*PL* ii. 364]), in which all the account of the birth and infancy was cancelled. Suddenly Christ appeared as a grown man: 'In the fifteenth year of the reign of Tiberius He descended into the city of Galilee Capernaum from the heaven of the Creator, into which He had already descended from His own' (*adv. Marc.* iv. 7 [*PL* ii. 369]); cf. Lk 3^1 4^{31} (*adv. Marc.* i. 19 [*ib.* 267]; Iren. *Hær.* I. xxvii. 2). He was in no sense really a man, had no real body; any connexion between the Divine Spirit Christ and matter is impossible (Tert. *de carne Christi*, 3 [*PL* ii. 757]). Marcion accepted the idea of the sacrificial death of Christ. For this reason it is often said that he admitted a real passion and death. But there is reason to doubt this. It seems that, although he constantly spoke and wrote of the death of Christ as did orthodox Christians, he understood it in a merely Docetic sense. Nikephoros I. of Constantinople (806–815) quotes a sentence from a lost work of Marcion: 'Christ *seemed* to suffer and be buried' (*Antirrhetika*, 21, in Pitra, *Spicilegium Solesmense*, Paris, 1852, i. 406). Tertullian devotes *adv. Marc.* iii. 8–11 (*PL* ii. 331–336) to proving, against the heretic, that Christ did not have a 'corpus phantasticum.'

There remains *Simon Magus*, the reputed author of Docetism, as of all Gnostic theories (Iren. *Hær.* I. xxiii. 2; II. Præf.; III. Præf.). His name appears repeatedly as the inventor of this idea; but it is very doubtful how far he is not simply a type to whom all Gnostic developments are traced back.

Clement of Alexandria refers to Docetes (δοκηταί) in *Strom.* vii. 17 (*PG* ix. 553); in iii. 13 (*ib.* viii. 1192 f.) he alludes casually to a certain *Julius Cassianus* (Ἰούλιος Κασσιανός), who, he says, was the leader of the sect of Docetes and a disciple of Valentinus. But the passage tells us nothing about Julius' Docetic ideas; the fragments that Clement quotes of his works (*ib.* iii. 13 and 14 [*PG* viii. 1192–1196]) show only Encratism. Jerome (*Com. in Gal.* vi. 8 [*PL* xxvi. 460]) repeats that Cassianus was a Docete. Otherwise nothing is known of him.

The Docetes, besides their principle that the Saviour could not be defiled by a material body, quoted certain texts of Scripture in favour of their view. Marcion made much of Mt 12^{48}, as showing that Christ had no mother (*adv. Marc.* iv. 19 [*PL* ii. 404]). He also quoted Ro 8^3 (ἐν ὁμοιώματι σαρκός); so Nikephoros (in Pitra, *loc. cit.*). On the other hand, the Fathers had no lack of texts to quote against Docetism. The Epistles of St. John supplied, of course, many such. Polycarp quotes 1 Jn $4^{2f.}$ (*Phil.* vii. 1); Ignatius uses Lk 24^{39} (*Smyrn.* iii. 2). Iren. *Hær.* III. xxii. 1–3 and Tert. *de carne Christi*, 15 (*PL* ii. 779 f.), are good examples of contemporary controversy against Gnostic Docetism. It may be noted, too, that the body of Christ in the Holy Eucharist is frequently used as an argument against Docetes. Already in the time of Ignatius, Docetes 'abstain from the Eucharist and prayer (προσευχή, prayer of oblation?) because they do not confess that the Eucharist is the flesh of our Saviour Jesus Christ' (*Smyrn.* vii. 1). Irenæus (*Hær.* IV. xviii. 5, V. ii. 2–3) and Tertullian (*adv. Marc.* iv. 40) use the Eucharist as a proof of the reality of Christ's body.

5. **Docetism in the Fathers.**—Certain Fathers have been accused of Docetic ideas. We have seen that Docetism admits of many degrees. It may be a question whether an otherwise orthodox Father conceived some mild form of it with regard to certain incidents of Christ's life. The *Epistle of Barnabas* has been accused wrongly (see above, p. 833[a]), nor does there seem to be any foundation for the alleged Docetism of Origen (cf. Harnack, i. 688). The case of Clement of Alexandria is more serious. Photius accuses him of this heresy (*Biblioth.* 109 [*PG* ciii. 384]). Yet he categorically rejects it (*Strom.* vii. 17 [*PG* ix. 553], iii. 17 [viii. 1205]); he says that our Lord was really a man

(*Pæd.* iii. 1 [viii. 556]), speaks of His flesh and blood (cf. *Strom.* v. 6 [ix. 58]; *Pæd.* ii. 2 [viii. 409]; *Quis dives salv.* 37 [ix. 641]), etc. His alleged Docetism consists of an idea that the body of Christ was not subject to natural desires, nor His soul to human passions, such as joy, sorrow, etc. (*Strom.* vi. 9 [ix. 292]; *Pæd.* i. 2 [viii. 252]). And in his *Adumbr. in Joh.* i. 1 (*PG* ix. 735) he repeats, as a tradition, the story told in the *Acts of John* (see above, p. 833[b]), that at the descent from the cross, St. John, trying to touch the body of Christ, found a void there (the legend is told by Leukios Charinos, for whom see Photius, *Bibl.* 114 [*PG* ciii. 389]). Hilary is quite clear as to the reality of the body of Christ and its natural qualities (*de Trin.* x. 19 [*PL* x. 357]); but he calls it a 'heavenly' body (x. 18 [*ib.*]), and thinks that Christ's soul was not naturally subject to pain (x. 23 [*ib.* 361]). This idea, not uncommon among the Fathers, occurs as a supposed consequence of the hypostatic union, and can hardly be considered Docetism of even the mildest kind (Harnack, ii. 316 f.).

6. The Docetes in Hippolytus.—Hippolytus twice describes a sect whom he calls Docetes (*Philosoph.* viii. 8–11 [*PG* xvi. 3347–3358] and x. 16 [*ib.* 3434]). These people seem to have hardly anything of what is generally called Docetism; their use of the name is difficult to explain. Hippolytus says they call themselves Docetes (δοκηταί, *ib.* viii. 11); he explains the name (ironically) as derived from the *beam* (δοκός) in their eye (Mt 7[3]). Their system ('a much-tangled and inconsistent heresy' [*ib.* 11]) is one of the many forms of tortuous Gnostic philosophy about the origin of the universe. God is like a grain of the fig-tree, very small in size, infinite in power of development. From the seed come forth three emanations—branches, leaves, fruit; so from God three Æons, and all other things from them. Each Æon becomes perfect, that is, tenfold; so we have 30 Æons. They are male and female; they generate a middle Æon, who is the Saviour. So it goes on. One Æon, a fire-god, is the Creator-demiurge. Souls transmigrate. In a long tangle of wild nonsense the only trace of what we call Docetism is the statement that our Lord (whose life was as in the Gospels [*PG* xvi. 3355]) received at His baptism another body, the 'image and seal of the body born of the Virgin.' When His material body was crucified, His soul put on this other one, evidently a spiritual Docetic body. He lived 30 years, in each year manifesting the teaching of a different Æon. No wonder, then, that so many different heresies can appeal to His teaching! But only the Docetes, who are 'from the middle decad and the best ogdoad,' can really understand Him.[1]

7. Later Docetism.—The Manichæans, as a consequence of their dualism, took over the Docetic idea. Augustine represents Faustus as denying the birth of Christ (*c. Faust.* ii. 1 [*PL* xlii. 209]), as describing His body as not human but formed of celestial elements (v. 1 [219]; cf. xi. 1 [243]), as denying the reality of His passion and death (xiv. 2 [296]). Mani's Docetism is further complicated by a curious distinction between the *Iesus impatibilis*, who is 'living spirit,' and the *Iesus patibilis*, who is the Soul of the world (G. Flügel, *Mani, seine Lehre u. seine Schriften*, Leipzig, 1862, pp. 35, 258, 337 f.).

Later developments of Manichæism continued the Docetic idea. The Priscillianists in Spain were not Docetes, though they were Dualists (Prisc. *Can.* 17; ed. G. Schepss, *Corp. Script. eccl. Latin.* xviii. 118, Vienna, 1889). But the Cathari, Albigenses (*q.v.*; see especially vol. i. p. 281[b]), and other mediæval Manichæan sects adopted Docetism as part of their system. The Albigenses carried it so far that they taught that the Virgin Mary, St. Joseph, St. John, as well as our Lord Himself, were all angels in the appearance of men (see documents in Döllinger, *Beiträge zur Sektengesch. des Mittelalters*, Munich, 1890, ii. 34, 58, 66 f., etc.). In the year 1017 a Synod at Orleans condemned a number of heretics who denied the reality of the body of Christ (Mansi, xix. 377; Döllinger, i. 65, gives the date as 1022).

Pope Leo I. accuses the Monophysites of Docetism (*Ep.* xxvi. [*PL* liv. 745] etc.). There is something of this heresy in their system and in that of their predecessor Apollinaris, inasmuch as they taught that the body of Christ, absorbed in the Divinity, lost the natural qualities of human flesh. Julian of Halicarnassus († *c.* 518) and his followers, the Aphthartodoketai, held this view as their distinguishing theory (cf. Liberatus, *Breviarium*, 19 [*PL* lxviii. 1033 f.]). Muhammad adopted a Docetic view of the Crucifixion (*Qur'ān*, iii. 45, tr. E. H. Palmer, *SBE* vi. [1900] 53 and n. 3). Some Anabaptists were Docetes (see ANABAPTISM, vol. i. p. 410). Lastly, various modern revivals of old heresies—theosophy and such like—have adopted Docetic ideas. Mrs. Eddy introduced a kind of Docetism as part of her 'Christian Science.' Her literary adviser, Rev. J. H. Wiggin, recognized her system as 'an ignorant revival' of Gnostic and Docetic theories (G. Milmine, *Life of M. B. G. Eddy*, London, 1909, p. 337).

LITERATURE.—For Gnostic Docetism the chief sources are Irenæus, *adv. Hær.* (*PG* vii. 437–1224); Tertullian, *adv. Marcion.* (*PL* ii. 243–524), and *de carne Christi* (*ib.* 752–792); Hippolytus, *Philosophumena* (*PG* xvi. 3347–3358, 3434); Clem. Alex. *Strom.* (*PG* viii. 685–ix. 602), and *Pædagog.* (*PG* viii. 249–682). For Manichæan Docetism: Augustine's works against the Manichæans, esp. *c. Faust.* (*PL* xlii. 207–518); A. Hilgenfeld, *Ketzergesch. des Urchristenthums*, Leipzig, 1884; A. Harnack, *Lehrbuch der Dogmengesch.*, new ed., 3 vols., Tübingen, 1909–10 [Eng. tr. of 3rd ed., 7 vols., London, 1894–9]; F. Chr. Baur, *Die christliche Gnosis*, Tübingen, 1835; Hilgers, *Krit. Darstellung der Häresie*, Bonn, 1837; L. J. Tixeront, *Hist. des dogmes*, Paris, 1909, i. 196–207; G. Salmon, arts. in *DCB*; J. Arendzen, art. in *Cath. Encyclopædia*; G. R. S. Mead, *Fragments of a Faith Forgotten*, London, 1906.

ADRIAN FORTESCUE.

DOCETISM (Buddhist).—**1. Origin and nature.**—Speaking generally, the Buddhist religion has a strong tendency towards docetic ideas as to the personality of its founder. The strictly orthodox Theravādins adhered to the practical moral teaching of the Master, and limited themselves to pious obedience to the rules and traditions of the community. This is the reason why they, and they alone, resisted strongly the docetic tendency of the heterodox Mahāsaṅghikas. On the other hand, the latter, not content with the mere formulæ of the doctrine, tried in various ways to amplify the teachings of the Buddha and to pursue them to their respective consequences. The more they deified the Master and developed the idealistic sides of his doctrines, the less they came to think of his historical personality. They were more broad-minded, so to speak, and were not afraid to fly above the clouds of mythical fancies or of metaphysical speculations. On this account the men of this tendency called themselves the Mahāyānists, in contrast to the orthodox Hīnayānists (see artt. MAHĀYĀNA, HĪNAYĀNA), though the origin and date of the former are still involved in obscurity. In this way we may fairly say that the Mahāyānists were more or less docetists, as their mythic fancy or idealistic speculation laid less stress on the historical Buddha.

[1] There is so little resemblance between the ideas of Hippolytus' Docetes and ordinary Docetism that Salmon in the *DCB* treats them separately as representing different heresies (i. 865–870).

Though a sharp demarcation can hardly be drawn between these two forms of Buddhism (the Mahāsaṅghikas, for example.

stand midway between them), one of the characteristic differences is that the Hīnayānists believe in a single Buddha, whereas many Buddhas are recognized by the Mahāyānists. The former believe in Gautama or Śākyamuni as the sole Tathāgata who is to be adored in this world-period, while the latter see in him one of the Buddhas residing in various Buddha-lands and influencing believers. The *Ekottara-āgama*,[1] the Mahāsaṅghika counterpart of the Pāli *Aṅguttara*, tells of Maudgalyāyana's visit to the land of the Buddha Śikhi. This belief is extended to the ten directions, in each of which there is a Buddha-land, where a Buddha or many Buddhas reside in the state of bliss and attract their respective believers. It was inevitable, when faith was in this way extended to mythical Buddhas, that the concentration of belief in the actual Buddha should become more difficult or less necessary, and that the historical personality of the present Buddha should become more and more ephemeral and rarefied. This mythologizing and mystifying process of Buddhological speculations went on parallel or conjointly with the metaphysical identification of all the Buddhas in their essential reality. A Buddha appeared once in this world-period, and his historicity is established; but the importance and significance of his personality do not lie in his actual life, but in his connexion with the universal Buddhahood, the so-called *Dharmakāya* (see below).

Thus, docetism, or, to speak more generally, the docetic tendency in Buddhism, made its progress in two ways: one the way of mythical fancies about the Buddha's superhuman qualities, and the other that of metaphysical speculations on his personality as a Tathāgata and on its relations with the truth (*dharma*) which he revealed. So long and so far as the faith of Buddhists in the Master amounted to the reverence paid towards a sage who, having practised all the three branches of the Buddhist training, attained Buddhahood and led his followers in the same way, the Buddha remained a Tathāgata who, starting from the position of a human being, attained to his superhuman (Pāli *manussuttara*) state.[2] Whatever his merits and powers, his earthly life was believed to have been as real as that of any other human being. But, as soon as the pious thoughts of believers began to place him side by side with a mythical Chakravartin or to make him far superior to the highest deity Brahmā, whether in his lifetime or after his death, his personality became more mythical and less human. Progress along this line is seen in the myth of his pre-existence in the *Tuṣitā* heaven and also in various *Jātakas* and *Nidānas* (such as that of the king Sudassana); and the tendency reached its acme in the mythologizing biographies, like that of the *Mahāvastu* or *Lalitavistara*. Of course, these mythologizers did not all go so far as to deny the reality of the Buddha's earthly life, yet their ideas verged on docetism and had a close kinship with the decidedly docetic theories, or at least supplied the materials to docetists.

Though the development of these ideas and their mutual relations cannot now be traced historically, it seems nearly certain that the mythologizing began soon after the Master's death, and found many adherents outside of the pale of the strictly orthodox teachers. The resistance of the orthodox Theravādins to this stream of thought is clearly seen in the Theses (*Kathāvatthu*), composed in the reign of Aśoka.[3] The materials and composition of the *Mahāvastu*, above referred to, may be earlier than, or contemporary with, this orthodox defence of the historicity of the Buddha's life.

A more powerful impetus to docetic tendencies was supplied by the philosophical speculations contained even in Buddha's own teaching. The five *skandhas*, under which he classified the constituents of our bodily and mental life, had been declared to possess no final reality. He also emphasized the illusiveness of the six senses and of the desires arising from them.[4] In short, the Buddhist ideal of an Arhat or of a Buddha consisted in transcending the passions and turbulence of physical life, and in finally overcoming life and death. Though the Buddha was not a nihilist, it was not without reason that his doctrines were charged with being 'a nihilistic wisdom' (*suññāgāra-hatā paññā*). Vacuity (*suññatā*) was one of his most important tenets, and, though this final vacuity could be attained only after the cessation of the bodily life, the aim of a Buddhist sage was to realize this ideal, among others, even in this life. Thus arose the question whether the Tathāgata existed or not after his death. Though this question was not answered in the negative (or in the affirmative), and though it did not raise the question of the reality of the Master's earthly life, the solution turned inevitably in the direction of docetism, when the transient life on earth was contrasted with the profound abyss of the vacuity beyond. The vacuity of the phenomenal world was still more emphasized in the later 'non-mark' (*alakṣaṇa*) philosophy of the Mahāyāna school, and it became a decidedly docetic theory, as applied to the personality of Buddha.

Another direction taken by Buddhist philosophy had its origin in the emphasis laid on the reality of the truths (*dharma*) revealed by the Buddha. His personality and his personal life are not ignored, but he is the Master and the Tathāgata, because he taught men truths according to reality (*yathābhūtam, tathatāya*). These truths are set forth, first of all, apparently in his sermons and doctrines (*dharma*), but they are universal in their nature as truths (*dharmatā*), and the capacity or dignity of a Buddha is due to the realization of them. So it is said that all the Buddhas have attained their Buddhahood by respecting these truths and living according to them.[1] Moreover, they are stable (*dhamma-tiṭhitā*) and fixed (*dhamma-niyamatā*),[2] whether the Tathāgata arises or not in this world. Buddha's own utterance that he who sees the *dhamma* sees him, and *vice versa*,[3] brings out clearly the identification of his personality with the truths, and this may further be noted as implying a distinction between his transitory life and his life as the Tathāgata according to truth. Here we have the clue to, and the source of, the idea of the *dharmakāya*, i.e. the Buddha's personality identified with *dharma* and opposed to his physical life. Though the followers of this school, sometimes called the Dharmalakṣaṇa, do not deny the reality of a corporeal existence of the Tathāgata, they are always inclined to emphasize the metaphysical or transcendental side of the Buddha's personality, and to regard his earthly life as a mere manifestation or a condescension for the sake of common mortals. The tendency is manifested in the *Lalitavistara*,[4] and is represented chiefly by the *Suvarṇaprabhā* and the *Saddharmapuṇḍarīka*. Those who developed from this thought a systematic Trinitarian theory were Aśvaghoṣa (*q.v.*) and Vasubandhu (*q.v.*), whose followers in this respect are the majority of Buddhists in the Far East.

2. The Mahāsaṅghikas.—While the orthodox Theravādins adhered strictly to the realistic view of the person of their Master, the heterodox progressionists, or Mahāsaṅghikas, boldly proceeded to idealize the Tathāgata. This tendency had long been fostered, as we have seen, and the materials for it were ready to hand in the belief in the Buddha's pre-existences both in this world and in the *Tuṣitā* heaven. The results of the idealization,

[1] Preserved in a Chinese tr. (Nanjio, *Catal.*, Oxf. 1883, no. 543).

[2] The present writer cannot agree with Kern (*Manual*, Strassburg, 1896, p. 64) in explaining *Aṅguttara*, iv. 36, in a docetic sense. There the expression 'not man' is to be understood in the sense 'not a common man,' *i.e.* that he is in the world but undefiled by the world, as is said in *Aṅg.* iv. 36; *Saṁ.* 22, 94, etc. On this point other passages might be adduced.

[3] *Kathāvatthu*, xviii. 1.

[1] *Saṁ.* 6. 1. 1; *Aṅg.* iv. 21.

[2] See *Aṅg.* iii. 134 (Warren, *Buddhism in Translations*, p. xiv, where the translation does not bring out the full sense of the word *dhamma*), and *Saṁ.* 12. 20. The same idea is expressed in the *Saddharmapuṇḍarīka*, ch. ii. vv. 100-103 (vv. 99-102 in Kern's tr. *SBE*, vol. xxi. p. 53).

[3] *Itiv.* 92.

[4] ed. Lefmann, Halle, 1902, pp. 436-437.

according to the authority of Vasumitra,[1] manifested themselves clearly in the schism of the schools, the orthodox and the heterodox. The idealizing process led to the identifying of the actual Buddha, in the essence of his personality, with all the Buddhas of the past, and thus to the neglecting of his historical personality. It was thought and taught that all the Buddhas were beyond worldly fetters (*lokottara*) and freed from all human passions. This is not very heterodox, but the Mahāsaṅghikas further argued that the single utterances of every Tathāgata implied the revelation of all truths at once. The physical body (*rūpakāya*) of a Tathāgata, they taught, has no limit in space, his virtues and powers are infinite, and his life has an immeasurable duration. How they thought of the infinity of the physical body is unknown, but probably they identified his personality with the cosmos (*dharmadhātu*) itself, as was done by the later Mahāyānists and Tantrists (see below). Further, they taught that the Buddha neither sleeps nor dreams. He is all the time in the state of complete union with all truths, in a deep contemplation, *yoga* (here we have a trace of the Ādibuddha [*q.v.*] or Dhyānibuddha), and therefore what he preaches is expressed by no notions or names. He is omniscient, comprehending all things at once, in the thought of one single moment, because in his mind is always present the mystic store of the *prajñā* wisdom. In his thought are constantly present at the same time the wisdom of extinction (*kṣīṇa-prajñā*, i.e. the consciousness that all pains are extinguished) and the wisdom of non-growth (*anutpāda-prajñā*, i.e. in which is assured extinction in the future for ever). In these theses we see an idealizing identification of the Buddha's person with a universal Buddhahood, despite times and circumstances, the essential quality of a Buddha being his identification with the universe.

Quite naturally from these fundamental ideas is deduced the illusiveness of the corporeal life of a Buddha or of a Bodhisattva, *i.e.* of one who is preparing for Buddhahood. 'All Bodhisattvas,' the Mahāsaṅghikas say, 'enter the mother's womb, but they do not take up (the successive stages of embryonic development) *kalalama*, *arbuda*, *peśi*, and *ghana* in their own bodies.' They would be born in the various forms of transmigration, as brutes or as human beings, as told in *Jātakas*; but this happens not by necessity, but owing to their own decision and for the purposes of accumulating merit and of leading other beings to salvation. Their bodies are furnished with sense organs, which seem to be sometimes attached, sometimes unattached, to outward objects, and appear to be nourished by the bodies. Nevertheless, the Bodhisattvas do not see forms and colours by eyes, or hear sounds by ears, or smell by noses, or taste by tongues, nor have their bodies any real sense of touch; but their minds receive all impressions at once and thoroughly (this state is called the *samakṛṣaṇa* [?]). What they utter in speech or act by body is done for the sake of others, in order to enlighten them. Therefore, when all is done that is to be done (*kṛta-karaṇīya*), they shut themselves out from all outward impressions and objects. In short, they are supra-men, and their physical lives are mere appearance, in contrast with their eternally serene essence.

Thus we see that the Mahāsaṅghikas were thorough docetists, whose ideas seem to have proceeded parallel or conjointly with the mythologizing of the Buddha's life, as we see it in the *Mahāvastu* or the *Lalitavistara*.[2]

[1] See Wassilieff, *Buddhismus*, pp. 258–262. The following statements as regards a Buddha and Bodhisattvas are founded on this authority.

[2] See *Mahāvastu*, ed. Sénart, Paris, 1890, and his *Essai sur la légende de Buddha*[2], Paris, 1882. The present Sanskrit text is said to belong to the Mahāsaṅghika school, but, according to the Chinese version (Nanjio, no. 680), it used to be revered by the other schools also. We can trace the development of the legends and materials from the Pāli *Vinaya* (with which the Mahīśāsaka and the Dharmagupta traditions stand nearly on the same level) to the Sarvāstivāda *Vinaya* (Nanjio, no. 1121) and then to the present text. The accumulation of biographical materials with addition of *nidānas* and *avadānas*, and the adoration of the life incidents through mythologizing, can be exhibited by bringing these texts together in a series.

3. The Prajñā school.—Though the name *prajñā* meant originally intellectual training in general, it became gradually restricted to the exercise of contemplation transcending all discursive and rational knowledge. The content of this kind of meditation amounts to transcending self and all actual aspects of things, and ascending to the highest region of mystic union (*yoga*). In the Buddha's teaching we repeatedly find admonitions to this exercise, and it is said that his profound doctrine consisted in the teaching of vacuity (*suññatā*, Skr. *śūnyatā*).[1] Among his disciples Subhūti is praised by the Master as the foremost of those who practised this method of contemplation among forest trees, as the man of meditation abandoning every thought of visible forms.[2] It is he to whom are ascribed the occasions of the conversations on the subject, and the various texts known as the *Prajñā-pāramitā* are handed down to us bearing his name. Though the longest of the texts is said to contain 100,000 *ślokas*, the gist of the whole amounts to nothing but the vacuity of all phenomena. All possible arguments, including a number of similes and parables, etc., are used to convince man of the non-reality of what is deemed by the common mind to be reality. Thus it is quite natural that the argument should be applied to the person of Buddha, and a most decided docetism is represented by this group of texts and its followers, whom we would now call the Prajñā, or Alakṣaṇa, school.

Seeing the non-entity of everything phenomenal, and attaining to the height of mystic contemplation, one could realize in himself the depth of the *prajñā* wisdom.[3] Buddhahood is the position wherein this wisdom is fully enlightened and the highest illumination is seen face to face. Even when denying any reality, the Prajñā school could not deny the reality of this state of illumination. Not only are a hundred thousand words and phrases used to describe this condition, but it is regarded as the most real of realities and is called the mother of all the Buddhas, the source from which they derive their enlightenment. Thus the innermost qualities of Buddhahood can be sought nowhere else than in the profound abyss of the *prajñā*. The natural consequence of this thought is that the earthly life of the Buddha Śākyamuni, including its incidents and his teachings, is in reality nothing but illusion, like all other phenomena of the visible world (*loka*). As the five constituents (*skandhas*) of the visible world are mere manifestations of what is in itself beyond all these forms, so the person of Śākyamuni is a perfect manifestation of omniscience (*sarvajña-jñāna*) which consists in the full realization of vacuity. All that he did and preached during his lifetime was only a matter of pedagogic (*upāya-kauśalya*), intended to admonish men to the exercise of the method and to lead them to this ultimate truth. He showed himself to have accumulated all possible merits of the six Pāramitās and to have accomplished his attainments in behaviour (*śīla*), contemplation (*samādhi*), wisdom (*prajñā*), deliverance (*vimukti*), and the realization of the knowledge leading to it (*vimukti-jñāna-darśana*); but all these were done not for himself, but for the

[1] See above, p. 836. [2] *Aṅg.* i. 14. 2; *Udāna*, 6. 7.

[3] The following statements are founded mostly on the *Aṣṭasāhasrikā*, esp. pp. 58, 135 f., 256–276, 306–308, 512 f. (ed. Mitra, Calcutta, 1888).

sake of common men, in order to admonish (*anumodana*) them to similar attainments.

The final extinction (*parinirvāṇa*) of his physical body was, of course, not the end of a mortal, but was meant to be a visible example of ultimate absorption into the depth of vacuity. This applies to all Buddhas, past as well as future, who are infinite in number and nothing but individualized manifestations of the mother Prajñā. The name *Buddha* means the one who has realized the omniscience of the truth and identified himself with vacuity; and *Tathāgata* is a title applied to him on account of his revelation of this ultimate truth (*tathatā*) of vacuity. Common men see in him one who has attained this truth by the accomplishments of Buddhahood (i.e. *tathā-gata*), and who has appeared among men to reveal it to them (i.e. *tathā-āgata*). But, just as every phenomenon leaves no trace (*apada*) either of whence it comes or of whither it goes, so the Tathāgata in reality comes from nowhere (*na āgamana*) and goes to nowhere (*na gamana*). In this respect he is like space, and his person has essentially nothing other than the ultimate quality of all things, vacuity. The thirty-two special marks attributed to him are in reality 'non-marks' (*alakṣaṇa*), and 'non-mark' is the characteristic of any Tathāgata. He teaches men and leads them to deliverance; still they are mere illusions, and the Tathāgata convinces them of their own vacuity. If this paradoxical argument be followed out, the conclusion runs as follows:

> 'They who saw me by form, and they who heard me by sound,
> They engaged in false endeavours, will not see me.
> A Buddha is to be seen from the Law (*dharmatas*); for the Lords have the Law-body (*dharmakāya*);
> And the nature of the Law cannot be understood, nor can it be made to be understood.'[1]

4. Nāgārjuna.—We do not know where or when these Prajñā texts originated. But we have before us one of them translated into Chinese in the 2nd cent. A.D. (Nanjio, no. 5). A tradition says that the *Aṣṭasāhasrikā* was first preserved in Southern India, and was then transmitted to the West and to the North of India.[2] Whatever the authenticity of the tradition may be, we see in Nāgārjuna, who is believed to have lived in Southern India in the 2nd or 3rd cent., a conspicuous propounder of the doctrine. He was a great dialectician, and pursued the negative dialectics of the Prajñā school till he reached a complete denial of any definite thought about anything, especially in his *Madhyamika-śāstra* (Nanjio, no. 1179). In the 22nd chapter of this treatise he denies step by step every quality thinkable of the person of the Tathāgata. He has no physical body; yet, apart from physical body (which is in reality vacuity), there is no existence. He has no mind; yet, apart from mind, he is an inconceivable thing. Inconceivable and unthinkable as he is, he is not a non-existence. Being (*sat*) or non-being (*asat*) is never to be predicated of him, because both are illusions. He is neither a being nor a non-being, neither a non-being nor a non-nonbeing. In short, he has no substance (*ātma-bhāva*), just as every other being, both in his lifetime and after his death, has none. Any attribute, any thought of his substance, is to be denied, and thorough negations of relativities could lead to the deep insight into it in which is realized the contemplation of *prajñā*.

Thoroughgoing docetist as Nāgārjuna was, he did not deny the historicity of the Buddha's life, and thus was compelled to distinguish between the empirical and the transcendental standpoints in his Buddhology. This distinction is pointed out in his commentary[3] on the *Śatasāhasrikā*, the largest of the Prajñā texts. In this work he does not employ negative dialectics, but endeavours to state the common view, *i.e.* the so-called Hīnayānist standpoint, faithfully, according to its adherents, and then to elevate it to, or explain it away from, his own transcendental, *i.e.* Mahāyānist, standpoint. Thus he admits therein the actuality of the occurrences and teachings in the Buddha's lifetime. In this respect his treatise is a kind of encyclopædia of Buddhist legends and doctrines, and the author reproduces faithfully the anti-docetic arguments, as found in the *Kathāvatthu* (or elsewhere), enumerating the incidents of the Buddha's life and their respective scenes. But Nāgārjuna's arguments run finally to the conclusion that all these earthly incidents belonged to the phenomena of the Buddha's physical body (*jātakāya*, i.e. 'born in flesh'), in contrast with his real substance (*dharmakāya*, also called *ātma-bhāvakāya* and *prajñākāya*). The former view is admitted from the standpoint of the earthly principle (*loka-artha*), and the latter is the only true view according to the first principle (*parama-artha*) of Prajñā. The thirty-two marks, etc., may be attributed to a Buddha only from the former point of view, and the final truth should amount to non-marks (*alakṣaṇa*). If the *dharmakāya* should be stated positively, it fills up the infinite space in all directions, being furnished with all possible and imaginable qualities and dignities. Its activities have no limit; it preaches ceaselessly, and leads all beings to enlightenment with every means and method beyond our imaginations. The *jātakāya* may be of any number and of any kind, the Buddha Śākyamuni being one of them, and the most conspicuous to every eye in this world-period. Yet he was a mere manifestation of the true body, adapted to the needs of common men, who could be educated only by a phenomenal manifestation and by verbal teachings of the Tathāgata, appearing in a physical body like themselves. The sunlight pervades everywhere in space, but it can be seen by physical eyes only when reflected from a material body.

Thus Nāgārjuna does not wholly reject the existence of an historical Buddha, but this is a concession made to the common view, just as the physical life of a Tathāgata is a condescension for the sake of ordinary men. Yet it is undeniable that Nāgārjuna's speculations proceeded from faith in Śākyamuni's personality as a Buddha; hence he recognizes a distinct personality in Śākyamuni, as one of the innumerable Buddhas, and his descriptions of the Buddha's life and capacities are on the same lines as in the other forms of Buddhism. In short, Nāgārjuna's docetism was a necessary consequence of his philosophical standpoint; but his Buddhology is characterized by a sharp distinction between the *jātakāya* and the *dharmakāya*, in emphasizing the sole reality of the latter according to the fundamental principle of the Prajñā doctrine, and in admitting the historicity of the Buddha's life as a concession to the common view, and also as a manifestation of the Buddha's mercy and potency for the sake of the beings to be led.

5. Eternal Buddhahood.—Just as in Christianity the dogmas of *homoousia* and the Trinity stood in opposition to Docetism, so we see, in Buddhist history, similar aspects of the Buddhological speculations opposed to pronounced docetism. But most Buddhist thinkers had hardly reached a clear understanding of the demarcation between docetism and anti-docetism, and even among those Mahāyānists who, upon the whole, occupied an anti-docetic standpoint very few combated docetic tendencies so decidedly as the earlier Theravādins. The truths (*dharma*) revealed by the Buddha con-

[1] *Vajracchedhikā* (*SBE* xlix. 140–141).
[2] *Aṣṭasāhasrikā*, pp. 224–245.
[3] Nanjio, no. 1169.

tinued to hold the first place, and his person, Tathāgata, the second.

In this way a derivation of the personal Buddha from the original universality of the Truth or Buddhahood constantly taxed their ingenuity. Many thinkers tried to solve the problems in a way very similar to the Christian theories of the Logos and *kenosis*, but with this difference, that their ideas constantly verged on a docetic tendency in emphasizing the Buddhahood *a priori*, thus sacrificing more or less the actuality of the Buddha's life. Some of them laid special stress upon the eight (or four) important incidents in his life as the 'signs' (*lakṣaṇa*) of his Buddhahood; yet those signs were merged in the all-absorbing universality or monotony repeated in the career of each of the innumerable Buddhas. Even the anti-docetic Theravādins saw in Śākyamuni one of the Buddhas who appeared in the past and will appear in the future, and so his Buddhahood was made to consist in the realization of the one road (*ekayāna*) common to all Buddhas.[1] This capacity or dignity of a Buddha is expressed by means of the appellation Tathāgata. Hence the questions arise whether the various Buddhas, though individualized in personal distinctions, are one in substance, and whether the true personality of the present Buddha should be sought beyond his earthly life.

A solution of those questions was attempted in the *Suvarṇaprabhā*,[2] which took the question of the duration of the Tathāgata's life (*Tathāgata-āyuṣ-pramāṇa*) as its text. In order to answer this question raised by an inquirer, the Buddha manifests himself in heavenly brilliancy, surrounded by the Tathāgatas Akṣobhya, Ratnaketu, Amitābha, and Dundubhiśvara on four sides; the questioner utters verses in praise and admiration of the Buddha's infinite life. Further, it is explained that his appearance in this world is with a view to the education of common mortals (*sattvānam paripāchāya*), in a way adapted to their capacities. Thus what is essential in a Tathāgata is not his temporary appearance (*nirmita-kāya*), but the eternal and universal life, in full possession of the Truths, *i.e.* the *dharmakāya* (or *dharma-dhātu*), of which any particular Buddha partakes, and on account of which he becomes a Buddha.[3] 'All the Buddhas are identical in their substance (*sama-varṇa*);[4] therein lies the essence (*dharmatā*) of the Buddhas. The Revered One is not a maker, nor the Tathāgata a born one.' Thus the universal predominates over the particular, and a docetic tendency is manifest in this idealistic speculation in connexion with the mythologizing processes.

Another book, the 'Lotus of the True Law' (*Saddharma-puṇḍarika*),[5] tries to answer the same question on similar lines, and on a grander scale, but in a less docetic fashion. We might call this book 'the Johannine Gospel of Buddhism,' and the quintessence of the whole argument consists in identifying the actual Buddha with the Buddha who had no beginning. His appearance in this world as Śākyamuni was 'for the sole object, the sole aim, . . . of exhibiting to all beings the sight of the Buddha; . . . of opening the eyes to the sight of Tathāgata-knowledge.'[6] For this purpose, for the sake of all beings, the Buddha adopted the expedient (*upāya-kauśalya*) of being born among the Śākyas, and manifested himself to have attained Buddhahood under the Bodhi tree, near Gayā, and to have entered into nirvāṇa. But in reality he has neither beginning nor end. He existed from eternity, and is to live for ever.[7] Thus the second chapter of the book, which explains the cause and purpose of the Buddha's appearance, forms the centre of the introductory part; the fifteenth, which reveals the eternity of his essence, the centre of the middle, or main part; and the twentieth, the centre of the concluding part, shows the efficiency of the Buddha's teaching and authority for ever in the future. In other words, we have in the first place the actual appearance of the Buddha among men, as their father and the Lord of the world;[8] then is revealed the original (*agra*) essence of the Tathāgata, existing and acting from eternity (*chiram*); in the conclusion we have the assurance of the endurance of his personal influence as well as the mission of the Paraclete, so to speak, who is to appear in the latter days of the world. In these statements, however mythical and fantastic they may be in many passages, the text never loses sight of the Buddha's personality.[1] At all events, we have in this book a Buddhist parallel to the Christian doctrines of the Logos and *kenosis*, if it does not wholly agree with them. Without going into the philosophical ideas underlying these Buddhological speculations, we can easily see how, according as the emphasis is laid on one or other of these two aspects of the Buddhahood,—the eternal and the temporary,—one who derives his ideas from this book may be led to an anti-docetic or a docetic view of the Buddha.

After a profound and elaborate system of Buddhist scholasticism, known as the T'ien-t'ai school, was organized by Ch'-i[2] (531–597), the disputes were revived, both among his followers and among his opponents, as to which of the above two aspects was to be emphasized. The original (Chinese *pen*) and fundamental Buddhahood is the real essence, untouched by changes; and the Buddha, when viewed from his own substance, is nothing but his eternal person (the T'ien-t'ai school does not see in this a mere 'thatness,' *tathātā*, as did Nāgārjuna, but constant activities for the good of all beings). On the other hand, the derivative (Chinese *chi*, which means 'trace') Buddhahood is the trace left by the real Buddha among men, in order to educate them. Though Ch'-i himself emphasized the inseparable unity of the two aspects, the disputes never ceased about the difference between the two, and as to the superiority of one over the other. Those who emphasized the original as superior to, or more real than, the other took refuge, more or less, in Nāgārjuna's philosophy, and thus inclined towards docetism. The difference of opinion continues to this day in Japan. Among the followers of Nichiren, the most ardent expounder of the orthodox T'ien-t'ai, the problem is shifted, and concerns the importance to be attached to either the Truth (*Dharma*) revealed by, or the person of, the Buddha, but the question remains substantially the same as before.

6. The Trinitarians.—The contrast between the eternal and the temporary aspects of the Buddha's person led to the assumption of a third aspect, which, after the fashion of Gnosticism, was to be the revelation of the Buddha to himself and to the superhuman beings, the Bodhisattvas. We see in Aśvaghoṣa (*q.v.*), the Buddhist Origen, the first systematization of the Trinitarian theory.[3] The ultimate principle of his philosophy is the identity of Mind (*chitta*), which is 'thatness' or essence, in the person of the Buddha and in common men. This 'thatness' (*tathatā*) is the *dharmakāya* of the Buddha, or the *tathāgata-garbha*, i.e. the womb and source from which every being derives its existence and activities. The Buddha does not remain in tranquillity in the womb, but manifests himself in the various conditions of bliss, according to the respective merits and enlightenment of the superhuman beings. These manifestations make up the bliss-body (*saṁbhogakāya*). Further, he adapts himself to the individuation-consciousness of common mortals, and appears in this world in condescension or incarnation, *i.e.* the *nirmāṇakāya*. Men see in it a body composed of gross matter which, though in itself not different from mind, is considered by them to be something outward, and thus what they look upon as the Buddha is only something like shadow or reflexion. Aśvaghoṣa's theory of the Trinity is, in this way, based upon an idealistic philosophy similar to the Prajñā school, at the same time with a Gnostic gradation of the Buddha's manifestations to all kinds of existence, and in this respect his Buddhology verges on a docetic view, almost abolishing the distinction of persons in the Trinity through its emphasis on the identity of the substance.

Another representative of the Trinity theory is

[1] *Dīgha*, 14; *Mahānidāna* and *Saṁyutta*, 47, 18, 47.

[6] Tr. p. 40. [7] See tr. pp. xxv, 54–57, 292–297, 307–310.
[8] Especially in this part, chapters ii.–vii., we can trace many passages to the Pāli *Nikāyas* of the Theravādins.

[1] On this point the present writer differs from Kern's remarks on p. xxvi of his translation.
[2] See Nanjio's *Catalogue*, Oxford, 1883, Appendix iii. no. 12.
[3] In his work 'The Awakening of Faith' (Suzuki's Eng. tr., Chicago, 1900).

Vasubandhu, together with his brother Asaṅga. His standpoint is essentially that of Aśvaghoṣa, differing from the latter only in nomenclature and subdivision. Vasubandhu is a theosophist, or a Gnostic, in his way of thinking and in his descriptions of the various mystic attainments. Moreover, he almost loses sight of a definite incarnation, such as Śākyamuni, and believes in innumerable condescension bodies (which he calls apparitions, *nirmita*), appearing everywhere in any form, in the visions of the Bodhisattvas. These apparitions can meet and cross one another without any hindrance, and can assist one another in their educative purposes. Thus Vasubandhu, though an ardent believer in Maitreya, the future Buddha, opposes most decidedly the view that there appears only one Buddha in one world-period. The universe he sees is filled with all possible apparitions of Buddha, from gross matter, plants, and animals, up to the highest manifestations in the states of bliss.[1] Mysticism, Theosophy, Gnosticism, and Pantheism are combined in his docetic Buddhology, which at last amounts to nothing else than Cosmology and Psychology.

Lastly, a similar docetic Buddhology is represented by a chapter entitled the 'Trikāya' in the *Suvarṇaprabhā*, which is found only in I-tsing's translation, and is probably a later interpolation from the pen of a follower of Vasubandhu. This is apparently intended to be a further interpretation of the second chapter. Nevertheless, the writer makes no mention of the actual Buddha Śākyamuni, but emphasis is laid on the substantial identity of all the Buddhas, who are considered to be mere apparitions of the sole essence, the *dharmakāya*. He thinks that, if one sees in the Buddha or Buddhas this identity of substance, as well as of intention and activities, according to truth (*dharmatathātayā*), there can be no talk about life or death, sleep or dream, thirst or hunger in the Tathāgata, because his own mind is, in reality, always tranquil in profound contemplation (*yoga*).

Thus we see Trinitarianism finally reaching a decided docetism, though it started from a standpoint different from that of the Prajñā school. Aśvaghoṣa's psychological cosmology did not decidedly deny the reality of the condescension body. Nevertheless, the idea of unity in the Trinity proceeded, in Vasubandhu and his followers, to that of identity (*samatā*), verging on the negation of differences, as we have found in Nāgārjuna. These docetists, however, did not go to the extreme of the latter's doctrine, but developed the Mahāsaṅghikas' Pantheism into their own theosophy. This theosophy is again worked up in the mysticism of the Mantra system, another form of decided docetism, at which we shall now give a glance.

7. **Mantra Buddhism.**—Though we know very little about the origin and history of Mantra (Jap. Shingon) Buddhism, or Buddhist Tantrism, it shows a most abstruse form of religion, made up of extremely idealistic and materialistic elements. Its origin is ascribed to Nāgārjuna, and it has certainly his all-identifying idealism at its basis, but at the same time mystic interpretations of the material as well as ideal worlds, as found in Vasubandhu, play a great part. Numerous texts and formulæ were produced in India and were widely prevalent there in the last centuries of Buddhist history. We see them also used by the Lamas to-day side by side with their Prajñā texts. The most important text of this mysticism, the *Mahāvairochana-abhisaṃbodhi*, was brought to China by an Indian, Śubhakarasiṅha († 735), and its final systematization was carried out in Japan by Kūkai († 835).

[1] See esp. ch. xx. of his *Vijñātimātrā* (Nanjio, no. 1215).

The Buddha, according to this philosophy, is nothing but the whole universe, the *dharmadhātu*, including its six elements—earth, water, fire, air, space, and consciousness. It is his real body, the *dharmakāya*, and it may be divided into two complementary constituents, the mental and the material. The former is called the *Garbhadhātu*, corresponding with the *Tathāgatagarbha* of Aśvaghoṣa; and the latter the *Vajradhātu*, the indestructible substance. The individualized phenomena are, in this way, nothing but the Buddha's revelation to himself, and at the same time the methods of benediction (*adhiṣṭhāna*) embracing all beings. The whole is called the Buddha Mahā-Vairochana. The numberless manifestations of his body, such as Buddhas, Bodhisattvas, Vajrapāṇis, Padmapāṇis, etc., make up the whole pantheon of the religion, which is represented symbolically in the two sets of cycles or assemblages (*maṇḍala*), corresponding to the above divisions of the *Dhātu*. We shall not here enter into the details of this symbolism, for, as we might naturally expect, the historical Buddha dwindles almost to naught in this recondite system of mysticism. The name Śākyamuni is preserved in one corner of the *Garbhadhātu-maṇḍala*, but his actual personality means so little that these mystics have almost nothing to say of his life or teaching. A disciple of Śubhakarasiṅha tried, in his commentary on the text named above, to explain the eternal Buddha taught in the Lotus as identical with Mahā-Vairochana, and later on some Japanese Mantrists identified Śākyamuni with their supreme Buddha. But all these attempts were carried on to neglect of the historical signification of Śākyamuni. In short, the person of the Buddha is, with them, dispersed and diffused over the whole universe, and he is ranked on the same level as any other superhuman beings. He is elevated on one side to the all-embracing *dharmakāya*, and on the other is degraded to mere dust. This was a consequence of Buddhist materialism and idealism. It is only natural that, with the disintegration of the personal Buddha, the Buddhist religion, in this form, reached dissolution, and all kinds of abuses and superstitions were accepted and justified.

DOM.—The menial tribe of Dravidian origin, widely spread under various names in most parts of continental India. The Census returns of 1901 (*Census India*, ii. 323) show their numbers to be 977,026; and of the Ḍommara, Ḍomar, or Ḍombar, 97,456. But there must be some error in the tabulation, as none are shown in Bengal, where the Maghaiyā Ḍoms of Bihār are an important tribe. The Ḍoms seem to be of diverse origin, and the social position of their various branches is very different. They certainly belong to a large extent to one of the non-Aryan races; but in many places they may be the descendants of the mixed race of serfs or slaves of the early conquerors. As Risley remarks:

'The fact that for centuries past they have been condemned to the most menial duties, and have served as the helots of the entire Hindu community, would of itself be sufficient to break down whatever tribal spirit they may once have possessed, and to obliterate all structural traces of their true origin' (*Tribes and Castes*, i. 241).

The Ḍoms of Northern India may be divided into three territorial groups, the ethnological connexion of which can be only a matter of speculation: (1) the eastern branch of the tribe found in the Plains districts to the east of the United Provinces and in Bihār; (2) the Ḍoms of the Himālayas; (3) the Ḍom or Ḍūm Mīrāsīs of the Panjāb.

1. *The Ḍoms of the Ganges Plains.*—These are divided into numerous sub-tribes, such as the Bānsphor (*q.v.*), the Basor, and others. They differ in social position according to the business in which they are engaged, and in particular their rank depends upon whether they do or do not practise scavengering. The most interesting of these groups is that of the Maghaiyā Ḍoms, who take their name from the ancient kingdom of Magadha or South Bihār. They are found in the western districts of Bengal and to the east of the United Provinces. In their original state they are vagrants pure and simple, who do not possess even mat shelters or tents to protect them in the cold and rainy season, but cower under trees, or lurk in cattle-sheds or under the eaves of houses. They live by burglary, petty theft, and begging, and their women are prostitutes. In Gorakhpur they have two special divinities of their own—Gaṇḍak and Samaiyā. Gaṇḍak is said to have been hanged for theft a long time ago, and when he was dying he promised to help the Maghaiyās in times of trouble. He is worshipped by the whole sub-tribe, and is invoked on all important occasions; but he is pre-eminently the god of theft. A successful raid is always celebrated by a sacrifice and feast in his honour. Samaiyā is a female deity, and apparently, as is usual among the Dravidians, she is recognized in a vague way to be the consort of Gaṇḍak. She is without special history or legend, and no sharp line of distinction is drawn between her functions and those of Gaṇḍak; but she seems to be especially invoked at childbirth and in illness. Both these deities are honoured with sacrifices of young pigs, with an offering of spirits mixed with sugar and spices. The Maghaiyās employ no priests; any of their number is capable of performing the rite. The meat and other things, after dedication, are divided among the worshippers. Sometimes at childbirth, or when a child is teething, a pig is specially sacrificed to Samaiyā, or this is done in fulfilment of a vow. They have no idol, altar, or religious platform. When a sacrifice is to be made, a space is cleared in a field, and the rite is performed.

Among those branches of the tribe whose social rank is superior to that of the Maghaiyās there is some approach to Hinduism, and the Mother goddess is worshipped as Bhavānī, while they have some vague idea of an all-powerful male deity called Parameśvar, 'the great god,' who punishes the guilty, and of a hell; but what it is and how sinners are punished they know not. As Risley, writing of Bihār, remarks (*op. cit.* i. 245):

'The religion of the Ḍoms varies greatly in different parts of the country, and may be described generally as a chaotic mixture of survivals from the elemental or animistic cults characteristic of the aboriginal races, and of observances borrowed in a haphazard fashion from whatever Hindu sect happens to be dominant in a particular locality. The composite and chaotic nature of their belief is due partly to the great ignorance of the caste, but mainly to the fact that, as a rule, they have no Brāhmans, and thus are without any central authority, or standard, which would tend to mould their religious usages into conformity with a uniform standard.'

The Maghaiyās, apparently as a survival of the matriarchate in some form, employ a sister's son to act as funeral priest and to recite the spells (*mantra*) which are intended to lay the ghost of the dead.

'If a man dies of snake-bite, say the Magahiyā Ḍoms of the Gya district, we worship his spirit as a *Sāmperiyā* [snake godling] lest he should come back and give us bad dreams; we also worship the snake who bit him, lest the snake-god should serve us in like fashion. Any man, therefore, conspicuous enough by his doings in life or for the manner of his death to stand a chance of being dreamed of among a tolerably large circle is likely in course of time to take rank as a god' (*ib.* i. 247).

Hence arises the worship of Śyām Singh, the deified ancestor of the Ḍoms of Bihār, who may have been a successful robber, or of Gaṇḍak, to whom reference has already been made. The Bihār branch, again, worship Sansārī Māī, whom some identify with Kālī, but who is probably, as her name implies, the Earth Mother, known to most primitive religions.

'No image, not even the usual lump of clay, is set up to represent the goddess: a circle one span and four fingers in diameter is drawn on the ground and smeared smooth with cow-dung. Squatting in front of this the worshipper gashes his left arm with the curved Ḍom knife, and daubs five streaks of blood with his finger in the centre of the circle, praying in a low voice that a dark night may aid his designs; that his booty may be ample; and that he and his gang may escape detection,' with which Risley (*op. cit.* i. 247 f.) aptly compares the prayer to Laverna:

> 'Da mihi fallere, da justo sanctoque videri,
> Noctem peccatis et fraudibus objice nubem'
> (Horace, *Ep.* i. 16. 61 f.).

Similarly in the United Provinces the Ḍoms, whose business it is to slay ownerless dogs, have a female deity called Kūkarmarī, 'slayer of dogs,' to whom a sacrifice of a young pig and an offering of spirits are made as a propitiation for the death of the animals of which she is the guardian. The Ḍom executioner, on the same principle, as he lets the gallows fall, calls to the Emperor, the judge, and all who are concerned in the conviction and sentence of the criminal, to take the guilt of his death upon their own heads, and to save him thus from responsibility. In a still lower grade of belief are the so-called fetishistic practices of worshipping the 'jemmy' with which the Ḍom burglar makes entry into a house. They also when encamped near a village worship the local gods of the place.

This branch of the Ḍoms feels the dread of evil spirits which is found among all races in a similar stage of culture. Marī Masān, the death spirit of the cremation ground, represents the impersonated dread which attaches to such uncanny places, and it is considered necessary to appease the ghosts of the dead by an annual celebration, if they are not to appear in dreams and afflict the living.

2. *The Himālayan Ḍoms.*—These are in a much higher grade than those of Bihār and the neighbouring districts. They carry on various trades which in the Plains are each allotted to a separate caste. Their beliefs are of the same animistic type as those of the Ḍoms of Bihār. In the first place, they worship a number of deified ghosts who are specially commemorated on account of the tragic circumstances of their death. Gangānāth was a prince murdered on account of a sexual intrigue, and he and his paramour are worshipped. When any one is aggrieved by a wicked or powerful enemy, he goes for aid to Gangānāth, who invariably punishes the wrongdoer. He sometimes possesses one of his followers, and through him prescribes the offerings which must be made to propitiate him. Bholanāth is a deity of the same type, the ghost of a prince who was assassinated. He is represented by a small iron trident placed in a corner of the house, to which offerings are made when any sudden calamity attacks the inmates.

Another class of deities represents the impersonated horror of graveyard or forest. Masān lives at a burning-ground, is black in colour and hideous in appearance. He comes from the ashes of a funeral pyre and chases passers-by at night, some of whom die of fright, whilst others go mad and linger for a

while. He possesses the sick, causes disease, and can be expelled by exorcism. Khabīsh lives in remote, dark glens, sometimes imitating the bellow of a buffalo, the cry of a goatherd, or the grunt of a wild pig. He frightens and besets unwary travellers. Besides malignant ghosts of this kind they also worship Khetrpāl, 'protector of the land,' the male consort of the Earth Mother, and Kalbisht and Chūmū, kindly deified ghosts who protect the herds and flocks. More terrible is Rūniyā, who rides from village to village on immense boulders, the impersonation of the avalanche or of the rocks falling from the mountain side. He attacks only females; and, should any one attract his attentions, she invariably wastes away, haunted by her demon lover, and joins him in spirit land.

3. *The Ḍom or Ḍūm Mīrāṣīs.*—Quite different in occupation, at least from the Maghaiyā or Himālayan Ḍoms, is the Ḍom or Ḍūm Mīrāṣī of the Panjāb, who has been well described by Ibbetson (*Pānjāb Ethnography*, 289). He is a minstrel and ballad-singer, plays on the little drum, cymbals, and fiddle, and his women amuse ladies in zanānas by appearing as jesters and singers. It would not be difficult to show that these arts may have developed among the more savage Ḍoms. But the Panjāb Ḍoms are now quite distinct from the Maghaiyās and the Ḍoms of the Himālayas, and in religion they have become nominally Muhammadans, though they still retain many of the animistic beliefs of the other branches of the tribe.

DOMESTICATION.—The term applied to the control by human beings of the conditions under which animals and plants live and propagate their species. The extent of this control varies from case to case, and, although, logically, German authorities who include oysters and silkworms among domesticated animals are justified by the definition, the term as a rule is limited to such animals and such plants as are necessary for the existence or well-being of the human race—among animals, to the dog, the horse and the ass, the cow and other ruminants, the rabbit and similar rodents; to animals of great value for transport like the camel and the elephant, and to some birds; among plants, to cereals, roots, and tubers which have an agricultural value, various species of trees, and plants like flax and hemp which contain fibres of great use to man. The most primitive men do not possess either domesticated animals or domesticated plants. So far as at present is ascertained, palæolithic man in Europe possessed neither, though in a stratum intermediate between palæolithic and neolithic, at Mas d'Azil in the South of France, Edouard Piette found representations of heads of horses which in the woodcut look certainly as if they were fitted with halters (though this has been denied). Piette found also a little heap of wheat, which, except in one form, is no longer known in Europe as a wild plant. In rock-shelters of the palæolithic period many admirable drawings have been found of such animals as the reindeer, the horse, and the mammoth, and also large quantities of their bones. But it is generally believed that the bones came into the shelters clothed with flesh intended for food. Even in the 'kitchen-middens' of the coast of Denmark, which belong to the neolithic age, the only animal which can be identified as domesticated is the dog, so that we may imagine the state of civilization of that period to resemble in the main that of the native Australians at the present day. These have no cultivated plants, and the only animal which can be called in any sense domesticated is the dingo—the native dog. As even the dingo in the pairing season often deserts its master, it cannot be considered entirely domesticated. Other animals are obviously not likely to be long kept as pets among savages who lay up no stores and at certain times of the year find natural products so scarce that they are driven to devouring their own children. The primitive savage has, however, undoubted ability to make friends with dumb animals, and in South America, where the conditions of life are on the whole easier than in Australia, the huts of the natives are full of animals, mostly birds, which they have tamed. The native, however, turns them to no practical use, and when he has been presented with ordinary fowls he uses neither their eggs nor their flesh. When the American Indians were given cattle, they could not imagine any other method of treatment for them than as animals to hunt.

The domestication of animals has obviously been a process continued over a long period of time, and in the case of most animals repeated at many different places by different persons. The stages in this process are not very clear. The most important animal to man in many ways is the cow. Its flesh and milk supply food; its skin provides clothing; its sinews, bones, and horns yield primitive implements. From very early times it has also been used as a means of exchange. As an early Persian writer says in the *Bahrām Yasht* of the Avesta, developing the texts of an earlier Yasna, 'in the ox is our strength, in the ox is our need; . . . in the ox is our food, in the ox is our clothing; in the ox is tillage, that makes food grow for us' (*SBE* xxiii. 247). In other circumstances the goat is of hardly less importance, while the sheep has been much more modified by its contact with man than these; and its bones, in Northern Europe at any rate, are found later and more rarely than those of the ox and goat. The conditions in which the horse was domesticated are also obscure. But this animal became indispensable in countries where large herds of cattle more or less domesticated came into existence. Sheep and goats can be controlled by shepherds with dogs; large herds of cattle can be controlled only by the mounted cowboy, who on the great plains of both the Old World and the New has become an important political factor. The geographical conditions which brought about the domestication of the camel and the elephant were much more limited in range. In the case of the pigeon it has been shown by Darwin that all varieties have arisen, under domestication, from the 'blue rock.' The goose was early domesticated; in the *Odyssey* (xv. 161–2) an eagle carries off one of Helen's geese as she feeds them in the courtyard at Sparta. The goose, duck, and pigeon were domesticated with a view to their use as food, but the turtle-dove was often kept simply as a pet, while the game-cock (the 'Persian bird' of the Greek poets) was kept from a sporting interest. It is impossible here to discuss other birds which have become thus domesticated in different parts of the world in more modern times, *e.g.* the turkey, the guinea-fowl, the pheasant, and the ostrich.

The causes which produce domestication in animals were classified nearly half a century ago by Francis Galton (*Trans. of the Ethnol. Soc. of London*, 1868, p. 123 ff.). To his analysis, though rarely quoted in recent times, later writers have added nothing of importance. He shows that animals which become domesticated must have an

inborn liking for man, be fond of comfort, be useful to savages, be hardy, breed freely, and be gregarious. The cat, it may be argued, is not gregarious; but it is fond of comfort, and, except in rare instances, is more attached to a place than to a person. The pig, on the other hand, has many of the qualities in which the cat is lacking, but it has for various obvious reasons never been domesticated in the same way, and even the crofter of the Hebrides or of Western Ireland, who shares his habitation with the cattle, as a rule excludes the pig. Some animals are kept by man in captivity without their being in the proper sense domesticated. Till lately the wild elephant had to be tamed, because elephants did not breed in captivity. But the speculations to which this fact has given rise are in the main ill-founded. The tame elephant in conditions approaching his wild state does breed (Darwin, *Variation of Animals and Plants under Domestication*, popular ed., 1905, ii. 165).

Besides the natural causes postulated by Galton, the existence of animals both domesticated and undomesticated was probably to some extent guaranteed by religious or quasi-religious sanctions. In Persia and in Germany white horses were specially sacred (Herod. i. 189; Tac. *German.* 9, 10). In India animal life generally is sacred, but in Greece and Rome the ox which drew the plough was not to be killed. What effect totemism had upon the maintenance of particular animals and plants will be clearer when experts have decided precisely what totemism is (see Frazer, *Totemism and Exogamy*, 4 vols., London, 1910; and, for a different view, A. Lang, art. 'Totemism,' in *EBr*[11], 1911). Hahn's contention (*Die Haustiere*, 1896) that the domestication of kine began with animals kept in an enclosure by a temple for purposes of sacrifice has no real evidence in its support. The great enclosures belonging to the Persian kings, called in Avesta *pairi-daēza*, a word borrowed by Greek in the form παράδεισος, had, it is true, many animals contained within them; but their religious character is not more obvious than that of an English gentleman's park. Most Greek temples stood in an enclosure (τέμενος), but the presence of cattle except at the time of sacrifice was not encouraged there, and in the Æolic inscription published by Kretschmer in 1902 (*Jahresh. d. oester. arch. Inst. in Wien*, v. 141) it is distinctly laid down that such animals are not to be fed in the precinct: [μὴ σι]τίζην δὲ μηδὲ κτήνεα μηδὲ βοσκήματα ἐν τῷ τεμένει. That, however, there were several stages in the domestication of cattle, as Hahn contends, may be readily admitted. Some people, like the Chinese, who have domesticated cattle, look with disgust upon the use of their milk; others, who use both their flesh and their milk, have never employed them as draught animals. But Hahn probably exaggerates the length of time that it took to accustom the cow to yield her milk to a milkman or milkmaid instead of to her calf—a difficulty which is as present to a modern farmer with a cow that has been once allowed to suckle her calf as it was in early times. Probably milking began in the case of cows which had lost their calves, and to which milking was a relief, if they were already, in the Latin phrase, *mansuetæ*, 'accustomed to handling.' The careful selection through untold ages of animals which were 'good milkers' has no doubt increased the size of the cow's udder, but from the beginning the cow and the mare differ in this respect that the foal accompanies its mother from the first, while the cow in her native state when she goes to pasture leaves her calf in a brake and often does not return to it for a long time.

The domestication of plants is not exactly parallel with the domestication of animals. While savage herdsmen like the Bechuanas object strongly to the women interfering with their animals, woman is undoubtedly the first gardener and agriculturist. As Lumholtz says (*Among Cannibals*, 1889, p. 160),

> savage woman 'must do all the hard work, go out with her basket and her stick to gather fruits, dig roots, or chop larvæ out of the tree-stems. . . . The stick in question, the woman's only implement, is indispensable to her on her expeditions after food. It is made of hard tough wood four or five feet long, and has a sharp point at one end made by alternately burning it in the fire and rubbing it with a stone. Even at dances and festivals the married women carry this stick as an emblem of dignity, as the provider of the family.'

This stick survives as an agricultural implement even among civilized peoples. The next step, and a long one, is to plant seeds the produce of which will be at hand when it is wanted. But for this several conditions are necessary which do not exist among the lowest savages even now: (1) the family must be either settled in a particular place or wandering in a very circumscribed area; (2) the planter of the seeds must be able to secure by some kind of sanction that they will not be injured by other persons; and (3) the planter herself must have more foresight than the lowest savages, so as to wait for the ripening of the fruit. At present there are hardly data by which we can explain how this was accomplished, but we may guess that the dibbling of seeds began with persons who found movement from place to place difficult, *e.g.* through the encumbrance of infant children, or through lameness or other physical disability. The protection of the plants, as it seems, could be secured only by superstitious dread. A precinct must be made which it would not be safe for other persons to invade. In other words, a *tabu* protected them. How such a tabu developed into law is well seen in the case of the sacred olives (μορίαι) in ancient Attica, which were protected with a fence (σηκός), and damage to which was punished with confiscation and banishment.

> Here we are faced once more with the problem which arose in connexion with the domestication of animals. Is this protective tabu totemism? F. B. Jevons (*Introd. to History of Religion*[3], London, 1904, pp. 114 ff., 156, 210 ff.), who is followed by S. Reinach (*Cultes, mythes et religions*, i. [Paris, 1905] 86 ff.), would attribute domestication of both animals and plants entirely to totemism; van Gennep (*Tabou et totémisme à Madagascar*, Paris, 1904 [Bibliothèque de l'école des hautes-études, sciences religieuses, xvii.]) no less emphatically argues for the existence of other causes (pp. 241 ff., 307 ff., and *passim*).

From the gathering of grass seeds, as still practised, *e.g.* in Australia, among the Hottentots, and among the lowest natives of the Pacific slopes of America, there was no doubt a gradual progress (which we cannot trace) to the planting of cereals. The Hindu writer who says that barley was the first of plants is from the point of view of food-grains probably right, but wheat in its many varieties speedily became of equal, if not greater, importance. It is on the different forms of grain that domestication has had more influence than anywhere else. Hence, for wheat, at any rate, the only species for which a wild original has been found is *Triticum monococcum*, of which the origin is said to be *Triticum ægilopoides*. This is found wild from Servia through Asia Minor to Mesopotamia and Antilibanus.

LITERATURE.—Besides the works mentioned above, see artt. AGRICULTURE and ANIMALS in vol. i. A good account of the domestication of animals and plants is given by H. Schurtz, *Urgesch. der Kultur*, Leipz. 1900, p. 253 ff.; but this, like L. Reinhardt's *Kulturgesch. der Nutzpflanzen* (2 parts, vol. iv. of *Die Erde und die Kultur*, Munich, 1911), is vitiated for scientific purposes by a lack of references. See also A. de Candolle, *Origin of Cultivated Plants*, Lond. 1884; G. Buschan, *Vorgeschichtl. Botanik der Cultur- und Nutzpflanzen der alten Welt*, Breslau, 1895; E. Hahn, *Die Haustiere*, Leipz. 1896, and other works; C. Keller, *Die Abstammung der ältesten Haustiere*, Zürich, 1902, and a charming short account by the same author, *Die Stammesgesch. unserer Haustiere*, Leipz. 1909, in Teubner's series, *Aus Natur und Geisteswelt*.

P. GILES.

DONATISTS.—'Donatists' is the name given to the adherents of a schismatic Church which was formed in N. Africa at the beginning of the 4th cent., and continued, in spite of severe persecution, for more than a hundred years. Within the area which it affected, Donatism was for the greater part of the 5th cent. numerically the preponderating form of Christianity, but its influence was practically confined to the dioceses of Numidia and Mauretania. While in its origin it was largely due to personal and provincial rivalries, the schism came rapidly to involve serious problems concerning the nature and the functions of the Church, and it was crushed only by a combination of force applied by the State and the dialectical ability of Augustine.

The persecution under Diocletian had revived the question whether a priest or a bishop who had shown weakness or unfaithfulness could continue in, or be restored to, his office. The question had been answered with an unhesitating negative by Cyprian:

> 'They who have brought grievous sin upon them, that is, who by sacrificing to idols have offered sacrilegious sacrifices, cannot claim to themselves the priesthood of God, or offer any prayers in His sight for their brethren' (*Ep.* lxv. 2; cf. lxvii. 2, 3).

When, on the death of Mensurius, bishop of Carthage (A.D. 311), the deacon Cæcilian was elected as his successor, and consecrated by Felix, bishop of Aptunga, objection was at once raised to the election, on the threefold ground that Cæcilian himself was unworthy of the office; that he had been elected only by the bishops in the district of Carthage, and not by those of the whole province of Numidia; and that his consecration was invalid, having been conferred by one who was himself a *traditor*. The opposition was led and organized, in the first place, by Secundus, bishop of Tigisis and primate of Numidia, who visited Carthage attended by seventy other bishops, excommunicated Cæcilian and those who adhered to him, and consecrated in his place Majorinus, a 'reader' who belonged to the opposite party. The Church of N. Africa was rent in twain. Each side excommunicated the other. Both appealed to the Emperor Constantine, ignoring thereby Tertullian's principle, 'Quid Imperatori cum ecclesia?', and setting an evil precedent for the future. The Emperor, who, under the guidance of Hosius, bishop of Cordoba, had already shown favour to Cæcilian, yielded to the request of Majorinus, and called on Miltiades, bishop of Rome, with the assistance of the bishops of Arles, Autun, and Cologne, to investigate the dispute, and especially whether Felix was indeed a *traditor*. Their decision cleared the reputation of Felix and confirmed the consecration of Cæcilian, and also condemned Donatus of Casæ Nigræ, a leader of the opposite party, on the ground that he had re-baptized Christians and re-ordained bishops who adhered to the schism. As the principles at issue were thus brought to the surface, the Donatists were only confirmed in their resolve to separate from the Church, and Constantine remitted the whole matter to a Synod which he convoked to meet at Arles (A.D. 314). This Synod, which, though described by Augustine as 'plenarium universae ecclesiae concilium,' cannot claim to be more than a General Synod of the Latin West, condemned the Donatists on all points of their contention. The schism, nevertheless, continuing to spread, and Majorinus having been succeeded by Donatus Magnus, from whom the schismatic Church probably took its name, Constantine proceeded to civil measures, issuing a decree threatening to deprive the schismatics of their churches and to banish their bishops (A.D. 316). The policy of forcible suppression was pursued with great severity by Ursacius, the Imperial commissioner, but with little success; and in 321 Constantine instructed both Ursacius and Cæcilian to adopt a policy of moderation.

Under his successor, Constans, the history of the schism followed much the same course. Both the persecution and the resistance were more determined. It was a period of much social distress and disturbance in Africa. The Donatists, as ecclesiastical rebels, provided a rallying-point for all the discontented and seditious elements in the population. There was a breakdown of social order. Bands of dispossessed peasants and escaped slaves infested the country, committing abominable outrages and exposing themselves to death with fanatical enthusiasm. They sought to make common cause with the Donatists, and called themselves *milites Christi agonistici*, but are better known as *circumcelliones*, 'hut-haunters.' The Donatists were discredited by these excesses, and suffered in their suppression. Many of them were put to death, many others were banished, and their churches were closed or confiscated. The accession of Julian brought a temporary relaxation to them, as to other schismatics and heretics, but under Gratian and Honorius the persecution was renewed. The schism continued, however, to flourish. Donatus Magnus, who died in exile, was succeeded by Parmenianus, and he by Primianus. The situation which Augustine found at Hippo was probably characteristic of many districts: the Catholics were in a minority, and the Donatists refused to supply them with bread. Towards the end of the century the movement was seriously weakened by internal dissension. Tychonius, the celebrated grammarian, was condemned by a Donatist Synod in 390 for having acknowledged that there were saints in the Catholic Church. A further breach took place over the question of admission to the Eucharist. Moreover, the continued and vigorous polemic undertaken by Augustine began to tell. A conference between the two parties was arranged by him at Carthage in 411, and was attended by 286 Catholic and 279 Donatist bishops. It led to no satisfactory conclusion, but provided an excuse for again putting the civil law in motion. Augustine himself provided the first reasoned defence of the persecution of Christians by Christians, though he demurred to the infliction of the death penalty. Fines, imprisonment, and confiscation followed, and in 415 the Donatists were prohibited from meeting for worship. Along with the Catholics they suffered grievously in the Vandal invasion, but there were still traces of their existence as late as the 7th cent., when they are referred to by Gregory the Great.

Donatism was not a heresy; neither did it develop any heretical teaching. It was not a dispute as to the organization of the Church, or even one concerning discipline merely, which underlay the schism. Both parties held by the episcopate, as both held to the Creeds. Donatism represents an attempt—the final one for a thousand years—to resist the process of secularization by which the Church was gradually transformed from a community of holy persons into an institution of mixed character, offering to secure salvation for its members by means of grace over which it had sole control. It belongs, therefore, to the same series of movements as is represented by the Encratites (*q.v.*), Montanists (*q.v.*), followers of Hippolytus, and Novatians (*q.v.*). Insistence on a minimum of personal worthiness in the clergy at least was 'the last remnant of a much more earnest conception' of the Church. It was met by the defenders of Catholicism with a new emphasis on the objective character of the sacraments, and upon

the holiness of the Church apart from the holiness or otherwise of its members and clergy. It was in the controversy with the Donatists, therefore, that the Catholic doctrine of the Church was completely developed. To the foundation principle of Donatism ('qui fidem a perfido sumserit, non fidem percipit sed reatum') Optatus of Mileve opposes an equally fundamental position, 'sacramenta per se esse sancta, non per homines.' It was not difficult for Augustine to show how many practical difficulties were involved in the Donatist contention, chief among them the difficulty, amounting to impossibility, of knowing the true character of the officiating priest. But he went further, and, by asserting the indelible character of Orders, whereby an ordained person retains the power to celebrate a valid sacrament, whatever be his views or his conduct, and the mixed composition of the Church as containing not only 'vessels for honour' but 'vessels for dishonour,' stamped its final form on the Catholic doctrine of the Catholic Church. It is true that in doing so he had to abandon the position taken by Cyprian, and assert the validity of all baptism, even that performed by heretics, provided that it was in the name of the Trinity. It is true also that baptism in this way came to lose some of its significance and to represent only a 'marking' of the recipient, the beginning of a process which, though it might begin anywhere, could be consummated only within the Catholic Church and by the addition of 'charity' to faith. Moreover, in the theory of the Church thus developed in opposition to the Donatists, Augustine at least prepares the way for the Reformation distinction between the Church visible and the Church invisible.

DOOM, DOOM MYTHS (Teutonic).—The belief in supernatural powers who preside over the destinies of mankind is met with among all the Teutonic peoples. These powers have more especially the end of life in their control, and they are accordingly now and then identified with the spirit of death. They are believed to become incarnate in female form, now coalescing in a single being, now appearing as three sisters, or even in whole multitudes. According as they dispense good or evil fortune to men, they are distinguished as friendly or hostile. To the individual they frequently reveal his fate in dreams, and this explains why dreams hold so important a place, not only in the common life, but also in the literature, of the Teutonic race (cf. W. Henzen, *Über die Träume in der altnord. Sagalitteratur*, Leipzig, 1890).

The ancient Teutonic dialects possess several designations for the powers of destiny, and in not a few cases the terms have already acquired an abstract sense. All the tribes had the word meaning *fatum* or *eventus* which appears in O.H.G. *wurt*, A.S. *wyrð*, O.N. *urðr*, and which sometimes signifies the spirit of death or destiny, and sometimes death or destiny itself. In the old Saxon and Scandinavian dialects, again, the name found in O.S. *metod*, A.S. *meotod*, O.N. *mjotuðr*, the power which 'metes out' or 'orders,' was in current use; while among the Southern Teutons we find O.H.G. *gascaft*, O.S. *giskap*, A.S. *gescap*, 'the spirit who creates' ('shapes'), which is given in Græco-Latin glosses as the equivalent of *parca*. In works of the 15th cent. the *gachschepfen* are still referred to as powers who bestow life upon man and order its course (Vintler, *Blume der Tugend*, 1411, line 7865).

The belief in the powers of destiny has assumed an altogether peculiar form in northern Scandinavia. Here they are known for the most part by the name of *nornir*. *Norn* is a word of obscure etymology, but appears to be connected with Swed. *norna*, *nyrna*, 'to tell secretly,' 'to warn,' and Mid. Eng. *nyrnen*, 'to recite.' The fate of man is the work of the Norns (*skop norna*), and none can evade their decree. Even the destiny of the gods lies in their control. Hence they make their appearance at the birth of human beings, and support the mother in the pains of labour. People seek to win their favour by offerings. In the Faroe Islands it is still the custom for mothers to eat the 'Norn-groats' (*nornagreytur*) after a birth—a survival of the ancient oblation. The Norns then set the tokens of their goodwill upon the finger-nails of the child, and those who have white spots, the 'Norn-marks,' on their nails are children of fortune. Like the *fylgjur* (see art. DEMONS AND SPIRITS [Teutonic], vol. iv. p. 633), the Norns continue their good services to human beings throughout life. Oðin puts his protégé Sigurðr on his guard against the evil Norns, who in battle stand on either side of a man, wishing that he may receive wounds. The blows of fate are supposed to be the work of angry Norns, and defeats in war are also traced to their dictates. A person's death is likewise due to their decree. We thus see the hostile aspects of their character becoming more and more prononnced, and hence, as is stated in the *Völuspá* (8 ff.), they were believed to have sprung originally from the race of giants, and the golden age of the gods came to an end when the Norns came into being. From their leading representative, Urðr, is taken the name of the only fountain in the under world, the *Urðr* fountain; here, according to Snorri, lay their abode, and from this retreat they exercised their sway over the fruitfulness of the earth.

The Norns are often found in a group of three, or in three companies. It is possible that in this point the classical myths of the *Parcæ* may here and there have had an influence upon the sagas of the Norns. They are depicted as maidens who spin the thread of destiny for man. Their doings at the birth of Helgi, the slayer of the Hundings, are narrated as follows:

'Night lay over the house when the Fates came to forecast the hero's life. They said that he should be called the most famous of kings and the best among princes. With power they twisted the strands of fate for Borghild's son in Bralund; they spread the woof of gold and made it fast under the midst of the moon's hall. In the east and the west they hid the thrums; all the land between was to be his. Neri's sister fastened one strand in the sides of the north, and prayed that it might hold for ever' (*Helgakviða Hundingsbana*, ii. 2 ff., *Corp. poet. bor.*, 1883, ii. 131).

The story of Meleager likewise reappears among the Norn myths. The fatal three are present at the birth of Nornagest. The two elder sisters ordain fortune and renown for the child, but the younger decides that he shall live only so long as the taper by his cradle remains unconsumed. Thereupon the elder sister seizes the taper, extinguishes it, and hands it to the mother, thus conveying to mother and child the power of fixing the term of the child's life (*Nornagestssaga*, ed. Bugge, 1865, p. 77).

The names *Verðandi* and *Skuld*, sometimes given to two of the Norns, are due to a learned blunder of the 12th cent., and have no better authority than an interpolation in the *Völuspá*. The author of the passage erroneously connected the name *Urðr* with the preterite stem of the verb *verða*, 'to be,' and interpreted it as denoting the Norn of the past; he then proceeded to fabricate a *Verðandi* as the Norn of the present, and a *Skuld* as the Norn of the future, taking the former from *verða*, and the latter from *skulu*, the word used to denote the future tense. The idea that the three Norns inscribe the life of man on tablets emanates from the same writer (*Völuspá*, 20).

DOOR.—Doors, whether of dwellings or of temples, play an important part in ritual and belief over a very wide area. Often the dwelling-place of a spirit or divinity, the door has almost invariably a sacred character. The origin of the latter is perhaps best sought in the conception of the door as separating between two worlds—the outside world, where are innumerable hostile influences and powers, and the region within the limits of the house, the influences and powers of which are friendly. The door is at once the barrier against those hostile influences, and that which gives entrance to those who have a right to pass to the sacred region within. Hence those who pass through the door—the limit of the sacred region, and therefore itself sacred—must do so with care and often with certain ritual acts. Thus the sacredness of the door was probably at first independent of its connexion with a god or spirit. But that connexion, once established, could only add to its sacred character. Again, being the dividing line between hostile and friendly spheres, the doorway was supposed to be a place where evil influences clustered, or sometimes even dwelt. But more usually the household spirits dwell at the door and protect it. As these are generally connected with the hearth, it is not clear why they should also be associated with the door. But two reasons may be suggested. The door is the exterior limit of their dominion, where their influence would first be met with, and where they might reasonably be supposed to dwell. And when men dwelt in rock-shelters, caves, or half-open huts, the fire would be at or near the entrance, as it still burns in front of savage huts.[1] When, later, it was taken into the house, the connexion of ancestral ghosts with the hearth would be shared with the entrance, their former exclusive domain. In some cases also burial takes place at the doorway.

Besides being sacred as a whole, the door has special sanctity in its more important parts—threshold, side-posts, and lintel—as will be seen in the course of this article. But it is impossible, with Trumbull, to regard the sacredness of the threshold as originating in its having been the primitive altar—first of the house, then of the temple. The many rites connected with threshold or door by no means bear out this theory, though, where sacrifice is performed at the door, the threshold stone may become for the nonce a species of altar. But more probably the sacrifice is not slain on the threshold, just as the fire at the entrance would not have the threshold for a hearth, while the altar of primitive tribes is unconnected with the threshold (see ALTAR).

The sacredness of the door as the passage to a different domain is seen in many folk-tales of the Forbidden, or Tabued, Door, through which certain persons must not pass, and beyond which lie matters into which they must not penetrate. To do so is generally followed by fatal consequences (*CF* 306 ff.). Similarly the stranger must not, without due preparation, pass the family door, nor may the profane cross the temple threshold.

1. **Ritual acts at doors.**—The sacredness of the door as a means of passage from one state to another appears in numerous rites connected with the threshold.

(*a*) *The bride must step across the threshold of the husband's house with the right foot foremost*, the bridegroom in the ancient Vedic ceremonial instructing her to do so (*SBE* xxx. 193). This custom is also found in more modern times elsewhere. Or, again, an animal is sacrificed at the threshold, and the bride must step across the outpoured blood—a custom existing among the Somalis, in Syria, Armenia, and with the Copts in Egypt (*FLJ* vi. [1888]'121; Trumbull, *Threshold Covenant*, 1896, p. 26; Garnett, *Women of Turkey*, 1890, p. 239; Lane, *Modern Egyptians*, 1846, iii. 192). Or an offering is made, the materials being often presented to the bride, while she smears the door-posts with them, before crossing the threshold (see Trumbull, 29 f.). Even more wide-spread is the custom of carrying the bride across the threshold—a rite occurring among the Greeks, Romans, Chinese, Mordvins, Abyssinians, in Syria and Egypt, and found as a survival in parts of England and Scotland (Plut. *Rom. Quæst.* 29; *FL* i. [1890] 459, 487; Bruce, *Travels*, 1804, vii. 67; Burckhardt, *Arab. Proverbs*, 1875, p. 137; *NQ*, 8th ser., x. [1896] 328; Dalyell, *Darker Sup. of Scotland*, 1835, p. 291; Gregor, *Folk-lore of N.E. of Scotland*, 1881, p. 51; Van Gennep, *Les Rites de passage*, Paris, 1909, p. 186; for other refs., see Trumbull, 38 ff.). The last custom has sometimes been explained as a relic of marriage by capture, but it forms one of a group of rites by which it is sought to safeguard the sanctity of the threshold. Generally, before a stranger can be received, certain rites must be performed to remove the contagion of tabu resting on him *qua* stranger. The bride, belonging primitively to a different kin, was so far a stranger, and therefore dangerous. Hence certain precautions must be taken to render propitious the spirit or divinity of the threshold—an offering is made, or the bride is carried over the sacred spot (carrying or suspending above ground of tabued persons is a common rite), or she steps over, not on, it, but always with the right foot foremost, or she steps over the blood by which the spirit is propitiated, and through which, perhaps, she is brought into a kin or covenant relation with him. This is seen more clearly in a Panjāb rite. The bride holds the door-frame of the bridegroom's house. His mother gives her a cup of water to drink and welcomes her, and presents are given by members of the husband's family. Cotton is laid down, and she is bidden to come in. She steps on it, and is now an integral member of the family (*FL* ix. [1898] 152 f.). In some cases the bridegroom makes an offering at the threshold of the bride's house—perhaps a relic of those marriages in which the husband went to live in her home. Crooke (*FL* xiii. [1902] 238, 'The Lifting of the Bride') sees in the lifting a charm to promote fertility in some instances, in others a method of protection against evil influences. It should also be noted that in Lapland and Hungary stepping over the threshold ensures the protection of the family and of the tutelar spirit (Jones and Kropf, *Folk-Tales of the Magyars*, 1889, p. 410 f.).

(*b*) *Treading on the threshold is frequently forbidden, or is considered unlucky.* It must be stepped over, usually with the right foot first (cf. *FL* i. 459 [Tatars]; Conder, *Heth and Moab*, 1883, p. 293 [Syrians]; Lane, *Modern Egyptians*, i. 118; Morier, *Second Journ. through Persia*, 1818, p. 254 [Muham. mosques]; Trumbull, 12 [Finns and Teutons]; 1 S 5^{1-5} [ætiological myth explaining why a temple threshold is not trodden on]). This scrupulous care in stepping over the threshold of a temple, *e.g.* that of Baal and of Jahweh, is also referred to and condemned in Zeph 1^{9}. It is obvious that the act had the force of a religious rite. Similarly, novices, on initiation into a secret society among the Bella Coolas, had to leap over the threshold of the dancing house (Frazer, *Totemism and Exogamy*, 1910, iii. 512). Hence it is also unlucky to stumble on the threshold, especially when going on a journey or on business, etc. (Highlands, Germany, Transylvania, Malaysia, Syria, etc.; see Grimm, *Teut. Myth.* 1815; *FL* i. 156, xviii. [1907] 59). Pythagoras refers to this belief, and says that 'he who strikes his foot against the threshold should turn back' (*Frag. Phil. Græc.*, ed. Mullach, 1868, i. 510). It is also dangerous to sneeze at the threshold, to sit, or to linger at it; or

[1] Cf. *ERE* ii. 356 for instances among the Hereros.

for women to suckle their children there (Hindus, Slavs, Syrians, etc. [Crooke, *PR* i. 241; Trumbull, 11–12; *FL* xv. [1904] 208—negroes of Jamaica believe that 'duppies' will take those who sit at thresholds; *FL* xviii. 59]).

(*c*) The sacredness of the door, and especially of the threshold, demands also that *acts of reverence be paid there.* The threshold is to be crossed with the right foot first. Or a charm or prayer or sacred formula should be said ('Bismillah' [Arabs], Palgrave, *Arabia*, 1865, i. 51; a formula of blessing when the door is first opened in the morning [Hebrides], *FL* x. [1899] 261). Or prostration and touching the threshold with the forehead, kissing it or the door, taking off the shoes, crossing oneself on entering, are practised ([Muhammadans] Trumbull, 11, 123; Morier, 254; *Frag. Phil. Græc.* i. 510; Ralston, *Songs of the Russian People*, 1872, p. 137; Layard, *Nineveh*, 1849, i. 69).

(*d*) The sacredness of the door[1] makes it *a place to deposit objects which are to be preserved in safety.* In Iceland the caul, in which the child's guardian spirit or a part of its soul resides, was buried under the threshold, possibly with a view to re-birth in the event of the child dying. The spirit would pass into the mother as she crossed the threshold (Grimm, *Teut. Myth.* 874). Among the Baganda, at the monthly ceremony connected with the king's placenta, to ensure his life and health, it is deposited in the doorway for a night and a day (Roscoe, *JAI* xxxii. [1902] 63, 76).

(*e*) The door is a usual *place at which to offer sacrifices*, either to propitiate the household spirit or god, and so to unite the 'house' with him, or to repel evil influences, or to remove the contagion of uncleanness from all in the house.

In Zindero two human victims were sacrificed, one at the threshold, which was smeared with the blood, before a new king entered the royal hut (Bruce, *Travels*, ii. 514). In W. Africa, in time of smallpox or expected trouble, gateways are sprinkled with sacrificial blood (Kingsley, *Travels in W. Afr.*, 1897, p. 451; Nassau, *Fetichism in W. Afr.*, 1904, p. 93). The Dayaks sprinkle the doorway with the blood of a pig sacrificed as an expiation for unchastity, and also with sacrificial blood at seed-time (St. John, *Life in the Forests of the Far East*, 1862, i. 64, 157). Among the Aztecs it was also usual to smear the temple doors with the blood, the sacrifice being offered on an altar near the door (Réville, *Native Rel. of Mexico*, 1884, pp. 179, 183). A similar custom may be seen in Herodotus' account (ii. 48) of the sacrifice of a swine to Osiris, at the door of each house. The carcass was given to the swineherd, so that the main part of the rite was the blood-shedding. In Bab. rituals a lamb was sacrificed at the gate of a house, and its blood smeared on lintel and doorposts, and on the huge images guarding the entrance (Zimmern, *Beiträge z. Kenntnis der bab. Rel.*, Leipzig, 1901, p. 127; cf. Layard, ii. 202). In Muslim houses it is usual to dip the hand in the blood of sacrifices offered on special occasions, and to mark the surface near the door in order to repel the *jinn* (*FL* xviii. [1907] 66). For other examples, Abyssinian, Hindu, see *ERE* i. 56b, iii. 445a. The same rite of smearing the doorway with blood occurs as a survival in European folk-custom, *e.g.* in Greece at Easter, and in Ireland on St. Martin's eve, to keep out evil spirits during the year (*FL* i. 275; Mason, *Stat. Account*, 1814–9, iii. 75). It can hardly be doubted that the Hebrew Passover rite goes back to a sacrifice by which the household divinity dwelling at the doorway was propitiated and his protective power secured against the evil powers (the 'destroyer'). The blood was smeared on doorposts and lintel, and was perhaps first poured on the threshold (Ex 12^{22} 'bason' [? 'threshold']).

The custom of slaying a sacrificial victim at the door to welcome a guest, or before the entrance of a stranger, or even on the return of the master of a house from a journey, which is so wide-spread, especially in Africa, Syria, and the East (see *FL* xviii. 66; Trumbull, 1 ff.), had probably the primitive intention of neutralizing the contagion of evil which a new-comer brings with him, and also of making the household gods propitious to him. From this it may have passed into a species of covenant rite—by the blood shed the new-comer or guest was made one with the household or its god. In other cases salt is sprinkled on the threshold, or bread and salt are offered to the guest (cf. Trumbull, 3 ff., where the importance of the covenant aspect is perhaps over-emphasized).

[1] The Celto-Iberian custom of dancing at the doors at the time of full moon may be noted (Strabo, iii. 4. 16).

Other offerings occur at the door. In ancient Vedic law the householder had to place an offering on the threshold, at the same time reciting a *mantra* (*SBE* ii. 107, 203). At seed-time in N.W. India a cup-shaped cake of cow-dung filled with corn, and water poured over it, is placed on the threshold (*FLR* v. [1882] 34). The first bundle of corn is placed near the threshold, and between it and the threshold a libation is poured forth, forming an offering of first-fruits to the household god (*ib.*; Trumbull, 16). In the north of Scotland, part of the first load of sea-'waar' used for manure was placed on New Year's day at each door of the farm to bring good fortune (Gregor, in *FLJ* ii. [1884] 331). In Babylonia, libations of oil, honey, and wine were poured over the thresholds of temples, and honey and wine over bolts (Jastrow, *Rel. Bab.*, 1898, p. 664 f.).

(*f*) The frequent use of sacrifices at or near doors of temples is seen from the fact that in many temples *an altar stands beside the door or entrance.* Among the Hebrews the altar of burnt-offering stood at the entrance of the tabernacle of the tent of meeting (Ex 40^6). Offerings were brought to the door of the tent of meeting and slain, and the blood sprinkled on the altar (Lv $1^{3.5}$ 3^2 $4^{4.7}$ etc., cf. $17^{2ff.}$). Similarly, in the temple the altar of burnt-offering stood before the entrance to the Holy Place, like the large altar of the outer court of Bab. temples. The greater Greek and Roman altars frequently stood before the entrance to the *ναός* or *cella*. Trumbull notes other instances from Assyria and Asia Minor, Mexico, Polynesia, etc. (115, 121, 144, 150; cf. Ellis, *Pol. Researches*, 1832–6, iv. 89). In Dahomey little mounds of earth are often found at doorways, and on them offerings are laid (Schneider, *Rel. der afrik. Naturvölker*, Münster, 1891, p. 115); and in Greece altars were often placed at gateways or doors. The sanctity of the door or threshold is also emphasized in the OT. At the door of the tent of meeting took place the consecration of Aaron and his sons (Ex $29^{4ff.}$). In Ezekiel's ideal temple the 'Prince' is to worship at the threshold of the gate of the inner court (46^2). When Moses spoke to Jahweh, the pillar of cloud descended and stood over the door of entrance to the tent of meeting; and in Ezekiel's temple the glory of Jahweh mounts up from the cherub and stands over the threshold of the house (Ex $33^{8ff.}$, Dt 31^{15}, Ezk 9^3 10^4). The thresholds of the tent of meeting had their guardians (1 Ch 9^{22}), and later those of the temple (2 K 22^4 23^4, 2 Ch 23^4, Jer 35^4; cf. Ps 84^{10}). The office of doorkeeper (*θυρωροί*, *πυλωροί*) soon came into existence in the Christian Church (Cornelius, *ap.* Eus. *HE* vi. 43; Bingham, *Antiq.*, 1829, i. 293, cf. 257).

The ancient custom of baptistery and font being outside the church (Eus. *HE* x. 4; Cyril, *Catech. Myst.* i. 2), preceded by the custom of baptizing in any place where there was water (Tert. *de Bapt.* 4; Justin, *Apol.* i. 61), is connected with the general idea that none but the initiated can enter the sanctuary, and also with the ritual of purification before sacrificing, entering a temple, etc., for which special vessels stood near the entrance—the *περιῤῥαντήρια*, or fonts, at the entrance of the Greek *ναός*, the jars for ablutions which stood beside the altars of Bab. temples, the Bab. *apsu*, and the lavers and brazen sea of Solomon's temple (Jastrow, 652–3; Sayce, *Rel. of Anc. Egypt and Bab.*, 1902, p. 458; 2 Ch 4^{2-7}).

2. Guardian spirits and divinities of doors.—The sacredness of the door was connected with its spirit or Divine guardianship. In many cases we find deliberate methods resorted to in order to secure a spirit guardian, in the first instance, of the door of a house, and later, of the gate of a city. One of these is *burial.* House burial is of very wide occurrence, and is probably primitive. It usually takes place under the floor, but there are occasional instances of its occurrence under the threshold

(Ralston, 326 [Slavs]; Jastrow, 599 [Bab.]; *ERE* iii. 34[a] [Burma]). Burial at gates is also found in Greece—Ætolus was buried in a tomb in the gate leading to Olympia, and, from his grave over the Scæan gate at Troy, Laomedon was believed to guard the city. Neoptolemus was also buried under the threshold of the temple at Delphi (Pausanias, ed. Frazer, v. 4. 4 and notes). The ashes of Belinus, a British god, were said to have been preserved at the gate on the Thames (= Billingsgate [Geoff. Mon. iii. 1])—a myth founded on gate-burial and Divine guardianship of the gate. In other cases, sacrifice was resorted to. At the building of a hut or house a human victim is often placed under the roof-post, the four corners, the threshold, or the foundation, whatever that may be, or the walls; and the same is true of the building of a gate. There is no proof, however, that (as Trumbull supposes [*op. cit.* 21]) the threshold stone was originally the foundation stone. The victims may be intended to propitiate the earth-spirits whose domain is disturbed by the digging, but they are also expected to act as guardians of the house, door, or gate. In old Canaanite houses new-born children were sacrificed and buried under floor, corners, or threshold—a custom later commuted to burial of a lamp or bowls in these places (*PEFSt*, 1903, pp. 10 f., 36 ff.). The passages in Jos 6^{26}, 1 K 16^{34} have an undoubted reference to this custom. In Phœnicia, men were buried beneath gates to make the town secure (Movers, *Die Phönizier*, Berlin, 1840, ii. 46). Instances of sacrifices at the building of a city gate are cited from the farther East (Alabaster, *The Wheel of the Law*, 1871, p. 212 [Siam]; Tylor, *Prim. Cult.*[4], 1903, i. 106; *ERE* iii. 27[a] [Tenasserim, Mandalay]), and in Senegambia it was formerly the custom to bury alive a boy and girl before the chief door of the town, in order to make it impregnable (Waitz, *Anthrop.*, Leipzig, 1860, ii. 197). The coins placed under the door in China and Syria at the building of a house are probably surrogates for such sacrifices, like the Canaanite lamps. In Syria a cock is sacrificed, and its blood poured over the lintel and steps of a new house (Doolittle, *Social Life of the Chinese*, 1866, ii. 75; *FL* xviii. [1907] 59).

On foundation-sacrifices in general, see Sartori, *ZE* xxx. [1898] 1 ff.; Liebrecht, *Zur Volkskunde*, Heilbronn, 1879, p. 284 ff.; Gomme, *Folk-Lore Relics*, 1883, p. 24).

In all such cases it is evident that the spirit of the door is connected with the household spirit, and that both are ultimately ghosts of the dead, though the sacrifice or burial took place there because the door or threshold was already considered an important part of the house. Souls were supposed to dwell under the threshold in ancient India (Oldenberg, *Rel. des Veda*, Berlin, 1894, p. 553). Among the Slavs the *domovoj*, or house-spirit, associated with the hearth, is propitiated at certain times by offerings buried beneath the threshold (Trumbull, 19). Similarly the household *penates* of the Mordvins receive offerings at the door, which is their seat (*FL* i. 422 ff.). In Germany a spirit sits between door and doorpost; hence the door must not be banged, and other precautions must be taken lest he leave and take the luck with him (Grimm, 1820; *FL* xiii. [1902] 238 ff.). In Irish and Scots belief the household fairies reside at the threshold (Crooke, *PR* i. 241). In Samoa the tutelary spirit is also associated with the doorway, and is angry when water is spilt on the threshold (Turner, *Samoa*, 1884, p. 37).

In many regions the door or gate is put under the protection of special divinities, or is called by the name of a god. The Ainus have a god of doorposts, and to him, as to the gods of other parts of the hut, worship is paid at its construction, and offerings of *inao* are made at other times (*FLJ* vi. [1888] 40; Batchelor, *Ainu and their Folk-lore*, 1901, p. 129). The Japanese have gods of doors and gates who guard against 'unfriendly things from below and above,' and are in some cases personifications of the gates, since these were conceived as living things exercising protective powers. Small prints of the *Ni-ô*, guardians of holy places, are set on the doors for protection (Revon, *RHR* li. [1905] 389 f.; Aston, *Shinto*, 1905, pp. 168, 283). In China the usual gods of the doors are Shen-Shu and Ju-Lu, though other divinities or guardians occur. They guard the house and other buildings; and images of them, larger or smaller, or pictures of them, or simply their names, are found at the door, with a shrine on the left hand (de Groot, *Les Fêtes annuellement célébrées à Emoui*, tr. Chavannes, Paris, 1886, p. 597 ff.; Williams, *The Middle Kingdom*, New York, 1848, i. 731). In India, Vāttuma is the threshold god, dwelling there, to whom offerings are made when the doorway is set up. Or, as among the Malers of Chotā Nāgpur, Dwāra Gusāīn is lord of the house door, and is propitiated with rites and offerings, in time of calamity, at the doorway. Images and pictures of gods are also placed round doors (Trumbull, 95; Crooke, *PR*[2] i. 104). In Egypt each building had its protecting deity, as doorway inscriptions prove, while sphinxes guarded the entrances of tombs and protected them from the attacks of the spirits of the desert. An inscription runs: 'I protect thy sepulchral chamber, I keep away the stranger, I overthrow the foes with their weapons.' In other cases a royal statue, wearing the magic *uræus* diadem, guards the tomb (*ZÄ*, 1880, p. 50; Wilkinson, i. 362 f.; Maspero, *Études de myth.*, Paris, 1893, i. 79). The gates of Thebes were each dedicated to a planet, and connected with planetary worship (Nonnus, *Dionys.* v. 64). In Babylonia and Assyria gates of cities, palaces, etc., were often dedicated to gods or named after them, and each part of a house doorway was associated with the great divinities to whom appeal was made (Maspero, *Life in Anc. Eg. and Assyr.* 1891, p. 220: Jastrow, 237). But, besides this, human-headed winged bulls, lions, and other monstrous forms stood at the entrances of temples and palaces to guard them against the approach of the demons, the brood of Tiamāt, with their composite forms (Maspero, 198 f.; Jastrow, 263; Sayce, 119). In Guatemala, Chahalka was the god of houses, and his protection was assured by sprinkling the doors with sacrificial blood. The great doorways of Central American temples were also guarded by human male and female or animal figures (Trumbull, 98, 146). In Rome, Janus was the primitive *numen* of the doorway of the house and the city-gate, preventing the passage of all evil things into the house, and so one of the Penates. He was god of the *jani*, gates in the form of arches on the roads, etc., the most ancient of which was that of the Forum, originally a temple in the form of a gateway. But Janus, as god of doors and gates, was rather god of the entry and departure through the gate or door. This is seen by the fact that each part of the door had its *numen*—Limentinus, of the threshold; Forculus, of the leaves of the door; Cardea, of the hinges (Wissowa, *Rel. u. Kult. der Römer*, Munich, 1902, p. 91 ff.; Toutain, *Études de myth.*, Paris, 1909, p. 197 ff.; Tert. *de Corona*, 13). In Greece, Apollo Aguieus or Thyræus and the Antelii were concerned with entrances and doors. Images of Hecate stood at doors, to prevent the entrance of evil spirits and ghosts, and she was also invoked before the threshold for protection against them. At doors and gates stood also the *ἑρμαί*, protective images or symbols of Hermes (*CGS* ii. 509, 516; Brunck, *Analecta*, 1772–76, iii. 197; Tert. *de Cor.* 13). See *ERE* iii.

155, for Cambodian spirit-guardians of the door. The belief in Divine guardians of the doorway among the Hebrews is suggested by Ex 21[6], where the bondman who does not wish to go free is brought to the *Elôhîm*, to the door or doorpost, where his ear is pierced with an awl (cf. *ERE* i. 445[b]).

The presence of the household spirit or god makes the doorway sacred. This receives illustration in other directions in which sacred persons confer sacredness on the door. In Polynesia, when the king or queen entered a temple, the door was shut up as being sacred (Turner, *Polynesia*, 1861, p. 328). In India, any one ill of smallpox, being possessed by the smallpox deity, makes the house sacred, and the door is tabu to certain persons, or must only be crossed with a due ritual (Crooke, *PR* i. 135; cf. *ERE* iii. 312[b]). In the South Sea Islands, the first-born being sacred, no one can pass through the door by which he enters his father's house (Gill, *Life in S. Isles*, 1876, p. 46). Cf. also Ezk 44[2] (the door by which Jahweh enters the temple is to be shut, and none but the 'Prince' can enter it).

The gates and doors of temples are always peculiarly sacred, since the temple is the abode of a god. The outer courts of Buddhist temples in China and Japan have single or double roofed gateways, *mon*, coloured a dull red, with figures on either side. In front are the 'heavenly dogs,' and under the gateway in some instances is the figure of Buddha, and the *Ni-ô*, or two kings, hideous and gigantic figures guarding the gate. Other hideous forms of the thunder and wind gods are set on niches in the gates. Petitions are made to the *Ni-ô*, written on paper pellets, which are chewed and flung against them. Before the inner sanctuary is reached many other gates must first be passed (Curzon, *Problems of the Far East*, 1894, p. 109; Bird, *Unbeaten Tracks in Japan*, 1893, pp. 21 f., 59).

Not only is the temple door sacred, and therefore highly decorated with carving or precious metals, but an isolated gateway or entrance arch is often found in front of it. This is a duplicate of the door, serving the same purpose, but acting as a preliminary entrance to the sacred precincts and a barrier against evil influences. It may be derived originally from the barriers or porticoes hung with charms which are often stretched across roads and entrances to villages to prevent the intrusion of all malicious things, *e.g.* in Africa (Kingsley, 450–1; van Gennep, 22). Such isolated doorways are placed in front of other buildings than temples, or they occur in other isolated situations, for particular purposes, *e.g.* monumental memorials. The *tori-wi* of Japan is found in front of all Shinto and many Buddhist temples and shrines. It consists of two uprights and two or more cross-beams painted red, the upper projecting and curving upwards at both ends. Though now regarded as a bird perch, *i.e.* for the birds sacred to the gods, its original purpose is unmistakable (Aston, 231–2; Chamberlain, *Things Japanese*, 1890, p. 356; Bird, 148). In Korea the isolated gateway, *hong-sal-mun*, is a symbol of majesty and government, and is erected in front of palaces, government buildings, temples, and monasteries under royal patronage. The primitive purpose of the *hong-sal-mun* as a doorway is seen in the *geo-man*, an archway outside the western gate of the capital on the road to Peking, where the king goes to meet the Imperial envoys (Curzon, 142). In China these arches, *pailoo*, are of a commemorative nature. Similarly, the triumphal arch of the Romans suggests its primitive purpose as the gate through which the triumphant soldier returned from a hostile country into his own district. The *propylon*, or towered gateway, of Egyptian temples, with its flanking towers, obelisks, or statues, and tall masts, all led up to by an avenue of sphinxes, forms another example of such gateways. In Babylonia, before the gateway of the great court of the temple, stood two detached pillars, like the Egyptian gate obelisks. They correspond to the pillars Jachin and Boaz in front of Solomon's temple (1 K 7[21]), and were doubtless the originals of these. Such pillars were commonly placed before Semitic temples, *e.g.* at Paphos and Hierapolis (Lucian, *de Dea Syria*, 16; W. R. Smith[2], 457, 483).

Sayce regards the Bab. pillars as representing Nin-gis-zida ('Lord of the upright post') and Tammuz, warders of the gate of heaven, just as the flanking towers of the Egyptian gate were said to represent Isis and Nephthys. In his opinion, Jachin is a translation of Nin-gis-zida, and Boaz perhaps a corrupt reminiscence of Tammuz (Sayce, *op. cit.* 350, 459–60; Jastrow, 624 f.).

3. **Amulets at doorways.**—Images of divinities and monstrous figures at doors and gates are intended to repel evil influences and powers, and to guarantee the protection of the doorway gods. The process is largely a magical one. As the demoniac figures keep off demons, so also the Medusa head, represented on door-knockers, has the same effect, or repels the evil eye. Such door-knockers or handles were used in ancient Italy, and are still common in modern Italy for the same purpose, while the female face on English door-knockers is derivative from these (*FL* xiv. [1903] 217). The same purpose was served by the small images of protective divinities, often with invocations printed on them, buried under the threshold of Assyrian houses, palaces, or temples, or placed at the doors to keep the house from the entrance and malice of fiends or enemies (Jastrow, 269). But, since amulets of all kinds are placed on the roofs, gables, windows, and walls of houses to ward off evil influences, they are naturally also fixed on doorways through which their entrance might so easily be effected. The custom is found from the lowest up to the highest levels of civilization. It is also very ancient. This is proved by the fact that, on the entrances of Neolithic cave-dwellings in Palestine, cup-markings which undoubtedly were religious symbols or served a magical purpose are found (see *ERE* iii. 178[a]). In various parts of Africa, charms are hung on the doors to prevent evil spirits from entering; and in civilized Greece, doors and gates of all kinds were similarly protected (Kingsley, 450; Mackay, *Mackay of Uganda*, 1890, p. 112; *ERE* iii. 438[b]). The door amulets used among all peoples are of various kinds, and only the principal varieties need be alluded to here.

(*a*) *Sacred plants, flowers, or branches* are commonly used, especially on particular occasions when evil forces are most to be dreaded, *e.g.* at a birth.

In Bab. incantations against demons, various plants are mentioned as having been hung on the lintel (Thompson, *Devils and Evil Spirits of Bab.*, 1903–4, i. 137). In India, at a birth, leaves and flowers along with a sickle, edge outwards, are placed outside the door to bar the demons (Billington, *Woman in India*, 1895, p. 2). The Greek and Roman practice of crowning the door with sacred garlands on various occasions (Tert. *de Corona*, 10) had more than a festal purpose. In Attica, at the birth of a boy, an olive-wreath was hung on the door (Hesychius, *s.v.* στέφανον ἐκφέρειν). In Rome, doorpost and threshold were touched thrice with an arbutus branch, and water was sprinkled at the entrance, at a birth, to keep off witches. Branches and wreaths were also hung up at the Palilia (Ovid, *Fasti*, iv. 721 ff., vi. 155). In modern Greece, a piece of wild onion is placed over the lintel to keep off the evil eye, or garlands of flowers and garlic are hung up on May-day for the same purpose (*FL* x. [1899] 181, 260). In China, at a birth, pummelo-leaves and slips of a fragrant thorn are suspended over the door to keep off evil spirits (*FLJ* v. [1887] 222). In Japan, on New Year's day and on other occasions, branches, etc., are fixed up as averters, or a rope of rice straw with fern and holly leaves is hung up (Aston, 191, 312 f.). The Ainus place *inao* in doorways as charms against evil (Batchelor, 91). In Ireland, on May-eve, the threshold is strewn with marsh marigolds to keep out fairies and to bring luck (*FL* xv. [1904] 457). For similar practices in European folk-custom, see Frazer, *GB*[2] iii. 334; Grimm, *Teut. Myth.* iii. 1200, 1209, 1211; and for additional instances, see *ERE* iii. 354[a], 394[b]; Lane, *Mod. Egyptians*, 1846, ii. 77. In the W. Highlands, pearl-wort placed on the lintel keeps out ghosts (Campbell, *Witchcraft and Second Sight*, 1902, pp. 103, 172).

(*b*) *Salt* is sometimes strewn on the threshold, on account of its apotropæic properties, as in Syria (*FL* xviii. [1907] 70). In Aberdeenshire it was placed

with fire on the threshold of a byre, before a cow after calving left the byre (*FLJ* ii. [1884] 330). *Pebbles and grains* are sprinkled on the doorstep to keep out ghosts, who must count them and cannot get beyond three (*FL* xv. 214). *Iron* is also a powerful charm at doors as in other places, especially at birth, when an iron weapon or utensil is placed at the door (India [Campbell, *Spirit Basis of Belief and Custom*, Bombay, 1885, p. 387], and very commonly in European folk-custom at birth, after a funeral to keep the ghost out [*JAI* xv. 69], and on other occasions). Both because it is made of iron and also because of other reasons connected either with the former sacred nature of the horse or with its supposed resemblance to the form of the female sex organs, *the horse-shoe* is a very common door charm in most countries. Usually the charm is effective only when the ends are placed upwards. It keeps out fairies, witches, ghosts, and other evil powers, and keeps in or brings luck; and for this purpose it is found on house-, byre-, or stable-doors, doors of mosques, temples, or even Christian churches (see R. M. Lawrence, *Magic of the Horse-shoe*, Boston, 1899; Farrer, *Primitive Manners and Customs*, 1879, p. 293; Crooke, *PR* ii. 15 [India]; *ERE* iii. 451[b] [Japan]; *FL* xi. [1900] 108, *FLR* iv. [1881] 189 [England]; *FLR* iv. 102, *FL* xvi. [1905] 70 [Jamaica]; Campbell, 12, 13, 15 [Hebrides]; *FLJ* ii. 43 [Turcomans]; *Gentleman's Magazine*, 1867, p. 307 ff.). This charm is also very common on houses in the West Highlands.

(*c*) *A hand with the fingers extended* is represented on or above doors. Sometimes it is formed by dipping the hand in the blood of an animal slain at the door, and then making an impression of it on the door. Or the hand is painted—usually in vermilion—or carved. The custom is very common in the East among both Jews and Muhammadans (*FL* vi. 174, xv. 189, xviii. 66; Luncz, *Jerushalayim*, Vienna, 1892, i. 19; Conder, *Heth and Moab*, 1883, p. 275 f.). It is found in India, Japan, ancient Assyria, in Babylon and in Carthage (see *ERE* iii. 411[a], 446[a]; Trumbull, 75, 78, 323). The hand thus serves the purpose of the open hand in folk-belief, as a powerful charm against the evil eye, and it also distracts and repels evil spirits (see Elworthy, *Evil Eye*, 1895, p. 233 ff.). Used to make an impression of blood, its purpose as the sign of a covenant between the contracting parties, human and Divine (so Trumbull, 66 ff.), if it exists at all, is secondary, as, wherever the hand is used, it is believed to be apotropæic, like the blood sprinkled on the doorposts. It is then, in fact, a double charm, both hand and blood having repellent powers. Analogous to the use of blood in this way is the touching of the doorposts with menstrual blood or urine, to dissolve spells of witchcraft or to keep off fairies, ghosts, or the evil eye (Pliny, *HN* xxviii. 24; Campbell, *Superstitions of the Highlands and Islands of Scotland*, Glasgow, 1900, p. 36 *Witchcraft*, 11, 137).

(*d*) *Sacred symbols* are affixed to doors as a powerful means of protection, like the Divine images at doors and gates. In Christian lands no symbol is more effective than the cross marked on the door or simply signed upon it or some particular part of it, or signed on oneself when entering or going out. It keeps off ghosts, witches, and all powers of evil (*FL* x. [1899] 178, 260, xvi. [1905] 50, 70; Grimm, iv. 1781; Trumbull, 18; cf. Tert. *de Cor.* 3). The *swastika* symbol is commonly marked on doors in the East for the same purpose (Hindus, Buddhists, etc. [Crooke, *PR* i. 12, 160; *ERE* iii. 412]). Perhaps the figures of cherubim carved on the doors of Solomon's temple served the same end (1 K 6[32. 35]), as well as figures of the Paschal lamb, and other symbols on ancient synagogue lintels in Palestine (Trumbull, 70). For a door charm composed of dust from Muhammad's tomb, see Lane, ii. 76. Over the doors of Egyptian temples was placed the winged disk of the sun, to drive off demons from the building (Erman, *Life in Ancient Egypt*, 1894, p. 272).

(*e*) *Sacred formulæ* written on doors have also a powerful apotropæic virtue, and are of very wide occurrence.

In Babylonia, tablets with sentences from the sacred texts were hung up to protect against demons (Jastrow, 269). In ancient Egypt, names and sentences of a lucky or favourable import were written over the doors or on the doorposts to secure a good dwelling (Wilkinson, i. 346, 361). In modern Egypt, and among all Muhammadans elsewhere, invocations to God, descriptions of His might, or passages from the Qur'ān, are inscribed on doors (Lane, i. 26, ii. 74; Porter, *Travels*, 1821-2, i. 440). The Greeks placed inscriptions and wishes for 'good luck' over their doorways. Similar usages are found in Iodia and China (Crooke, *PR* i. 160; Williams, *Middle Kingdom*, i. 731), while the Buddhist prayer poles and flags outside doors are analogous to door inscriptions. These usages show that the command to write the words of laws on 'the door posts of thy house, and upon thy gates' (Dt 6[9] 11[20]) was intended to take the place of some analogous heathen custom, though by the Hebrew the words must have been regarded as efficacious against evil powers. If the household gods had been associated with doors, this dedication of the door to Jahweh showed that He was intended to take their place. Later Jews still fix the *mĕzūzā* to doorposts in the form of an amulet with sacred words and Name. This is touched with a finger of the right hand and kissed on going out, while a sacred formula is repeated. For the use of sacred writings or pictures affixed to doors among Christians see *ERE* iii. 425[b], 428[a]. Texts carved on the lintel are commonly found on old houses, and this custom is undoubtedly derived from the older practice.

The wide-spread use of these door charms shows that the attack of ghosts, evil spirits, witches, or fairies was chiefly dreaded at the door, through which they sought to enter and do harm to those in the house. Hence at the Compitalia the Romans hung up effigies of all in the household, hoping that the ghosts coming to the door would be satisfied with these and not enter to take the living. But a closed door is not sufficient to keep out ghosts and demons, as in Babylonia they slip through bolts, doorposts, and sockets (Jastrow, 265); hence the value of charms to prevent this. But in some cases the evil powers actually dwell at the door or in its vicinity.

In Germany they are banished to between the door and doorpost (Grimm, iv. 1815). In Jerusalem the powers of evil are supposed to infest the threshold, doors, and entrances (*FL* xviii. [1907] 58). Among the Birhors of Bengal the spirits lurk at the door (Crooke, *PR* ii. 56), and in Burma different evil spirits reside at doors and gates (*ERE* iii. 25[a]). These beliefs perhaps explain the curse of Allatu to Uddushu-namir, 'the threshold be thy dwelling,' suggesting that in Babylonia it was the abode of dangerous spirits who would torment him.

But even against such door-dwelling spirits charms were efficacious, since they could keep them in check.

4. **Magic rites at doors.**—Many magical rites are performed at the door, either (1) to transfer evil to those who enter or pass out; or (2) to secure the assistance of the spirits, good or bad, dwelling or lurking there; or (3) simply because the doorway is a sacred place.

For examples of (1), see *FL* xv. [1904] 69; Crooke, *PR* i. 164; Lane, ii. 46; Grimm, 1095 f.; of (2), Jastrow, 268; of (3), Trumbull, 18, 20; Theocritus, *Idyl.* ii. 63; *FL* xii. [1901] 299; Campbell, *Witchcraft*, 287.

Other magical rites take place there, to keep off and get rid of ghosts and evil spirits. Of this class was the Roman birth-rite, in which three men struck the thresholds with an axe and a pestle, and swept them with a broom. The iron axe and the pestle tipped with iron had apotropæic virtues; the action of the broom was perhaps symbolic, though all three, being connected with vegetation and agricultural usages, may have had magical virtues, and are charms against spirits and witches. In this case they were supposed to keep out the god Silvanus, and they later supplied names to the three protecting spirits—Intercidona, Pilumnus, and Deverra (Aug. *de Civ. Dei*, vi. 9). Among the Letts, at the feast of souls, the ghosts were got

rid of by taking the staff which served as a poker, cutting it in two with an axe on the threshold, and bidding them go (Frazer, *Adonis*[2], 1907, p. 312). See also § 1.

5. Gate as seat of judgment.—On account of the sacred nature of the gate, the seat of a spirit or god, it is often a place of judgment, especially in the East. Kings, chiefs, and judges hear complaints, try causes, and decree judgments at the gates of the palace, house, or city. Examples of this are found in ancient Babylonia, Persepolis, Egypt, and among the Hebrews (Trumbull, 60 f.; Dn 2^{49}, Ex 32^{26}, Dt 16^{18} 21^{19}, Ru $4^{1f.}$, 2 S 15^{2} 19^{8}, Pr 24^{7}; cf. Am 5^{15}, Zec 8^{16}). Probably connected with this custom of administering justice at the gate is that of a person fasting at the door of another against whom he has a claim or proffers a request. In cases where this is refused the claimant starves to death at the door ([Celts] *Anc. Laws of Ireland*, Dublin, 1869–70; Joyce, *Soc. Hist. of Anc. Ireland*, 1903, i. 204 f.; [India] Crooke, *PR* i. 191–2).

6. The door and death-rites.—In many regions it is not customary to carry a dead body, especially that of a suicide or criminal, through the door of a house, and various expedients are resorted to in order to avoid this.

Thus the body is taken through the window of the house, or through a special opening made in roof or wall. This is a widespread custom, found, *e.g.*, in W. and S. Africa, Siam, Indonesia, India, China, Tibet, among the Ostiaks and Eskimo, in Fiji, with the ancient Norse, and as a folk survival in Europe (Scotland, Germany). See Liebrecht, *Zur Volkskunde*, Heilbronn, 1879, p. 373; Frazer, *JAI* xv. 70; Tylor, ii. 26 f.; Westermarck, *MI* ii. 537; Ramseyer and Kuhne, *Four Years in Ashantee*, 1875, p. 50; Dubois, *Hindu Manners*, Oxford, 1897, ii. 27; Williams, *Fiji*, 1860, i. 197; Gregor, *Folklore of the N.E. of Scotland*, 1881, p. 206; Wuttke, *Der deut. Volksaberglaube*, Berlin, 1900, § 756; Lippert, *Die Seelencult*, Berlin, 1881, p. 11). Or the body is passed through an opening made under the threshold (Hyltén-Cavallius, *Wärend och Wird.*, Stockholm, 1863–8, i. 473 [Sweden]; Birlinger, *Volkstümliches aus Schwaben*, i. [1861–62] 321 [Swabia]; Grimm, *Deutsche Rechtsalt.*[4], Leipzig, 1899, p. 726 [Germany]; Ralston, *Russ. Folk-tales*, 1873, p. 318 [Slavs]).

The usual reason assigned for these practices is that they are used to confuse the ghost, and prevent its finding its way back into the house (Liebrecht, 414; Frazer, *JAI* xv. [1886] 69 f.). The special aperture is afterwards closed up, or the window is kept shut after the burial (it is often opened to allow egress to the soul when a person is dying, and again closed to prevent the soul's return); or often both windows and doors are closed when a funeral is passing, lest the soul should enter the house (Liebrecht, 372 f.; *FLJ* i. 218, vi. 243; Wuttke, § 250). Or, again, when the body is taken through a hole in the roof, this may be an archaic survival of a time when entrance and egress were obtained through the roof of the hut, as among the Eskimo and Aleuts (Liebrecht, 372, 426). Hence, in some cases, one supposed dead must not, when he returns, enter by the door, but by the roof (Plut. *Quæst. Rom.*, no. 5; Brugsch, *Aus dem Orient*, Berlin, 1864, ii. 110 [Persians]). Here the thought of death is enough to suggest its contagion, and entrance must not be first made by the sacred door. But, whatever be the origin of the customs referred to, they are certainly connected with the sacredness of the door, which must not be polluted by the passage of the dead body. If it were merely the return of the ghost which was feared, that could be prevented by door charms (§ 3), and it should be remembered that ghosts at the yearly festivals of the dead are invited to enter by the door and then pass out by it. That it is the pollution of death which is feared for the sacred doorway may be established by other rites of mourning and by analogous tabus.

Thus the Banjara of Khandesh move the hut, and make a new entrance after a funeral, as the door has been polluted by the passage of the corpse (Crooke, *PR* ii. 56). Propitiatory rites are in some cases performed at the door when a corpse has been carried out by it (the threshold is sprinkled with salt [Japan: Griffis, *Mikado's Empire*, New York, 1876, pp. 467, 479], or with wine [Greece: *FLJ* i. 218]). Among the Kwakiutl Indians, mourners must not use the house door, as they are unclean; a separate door is cut for them (Westermarck, *MI* ii. 537); and in China a messenger who brings news of a death should not pass the threshold (de Groot, *Rel. System of China*, 1894, ii. 1. 644). In various regions a special door or gate in house or city wall is used for the passage of a corpse and for no other purpose (Burma [Sangermano, *Burm. Empire*, 1833, p. 143], Korea [Landor, *Corea*, 1895, p. 118], Italy, Holland [Trumbull, 24, 325]; cf. the 'sacred gate' at Athens, used for funerals [Theophr. *Char.* 14]).

Analogous cases are those in which women at puberty, or during menstruation and pregnancy (tabu states), must not leave the hut by the usual door without special rites; or, again, the flesh of animals slain in hunting is carried in by a special opening (*ERE* ii. 643[a]; Westermarck, ii. 537; Frazer, ii. 415). Perhaps connected with the danger of female pollution is the superstition that a male, not a female, should be the 'first-foot' *i.e.* the first person to cross the threshold at New Year; but he must not come empty-handed (*FLJ* iii. 282, vii. 53; Campbell, *Witchcraft*, 229).

7. Doors and gates of the Other-world.—The eschatological beliefs of many peoples show that they consider heaven and the under world to be regions and abodes with doors or gates, bars and bolts, and guardians. The doors of heaven shut out those who have no right to enter there; the doors of the under world enclose those who would fain leave it.

In Bab. writings, reference is made to gates of heaven, especially that of Anu, guarded by Tammuz and Gish-zida. In the account of creation, the great gates attached to both sides of the heavens by Marduk are mentioned. They are secured by bolts, and guarded by scorpion men. Through them the sun passes at morning and evening. The under world, Arallu, has also gates and bolts, seven or fourteen in number, and a warder stands at the outer gate. They are graphically described in the Descent of Ištar (Jastrow, 301, 435, 523, 549, 569; Sayce, 79). The Egyptian Other-world was plentifully supplied with gates. Duat or Hades, through which the boat of Rā travelled by night, had twelve divisions and as many fortified pylons with closed doors and serpent guardians, or gates with other keepers. The gates opened at the repetition of magic formulæ, and thus entry was freely obtained. Each gate had its own name. The heaven of Osiris was also entered by a gate in the mountain of the West, and this domain in the fields of Aalu had numerous gates, with porters, warders, and heralds. But all these opened to those who knew the true formulæ and names of gates and guardians (Maspero, *Études*, Paris, 1893, i. 377, 381, ii. 27 ff., 165 ff.; Budge, *Gods of the Egyptians*, 1903, i. 170; *Book of the Dead*, ch. 147 ff.). The classical Hades and Tartarus had also their gates, those of Tartarus being of iron with a bronze threshold. Cerberus guarded the gate of Hades, a hydra with 50 gaping mouths that of Tartarus (*Il.* viii. 15; Virgil, *Æn.* vi. 576). The Scandinavian Valhalla had 540 gates, and Hel had also its portals (Grimm, *Teut. Myth.* 818). In Mandæan mythology, the seven lower worlds of the dark powers have doors which can be made secure by magic spells and talismans (Brandt, *Mand. Schriften*, Göttingen, 1893, p. 147 ff.). The Hebrew Sheol had gates and bars (Job 17^{16} 38^{17}, Ps 107^{18}, Is 38^{10}, cf. Mt 16^{18}). It had divisions, and in later belief these (of hell) were 7 in number, with as many doors (Pr 7^{27}; Gfrörer, *Das Jahrhundert des Heils*, Stuttgart, 1838, ii. 45–6). The 'gate of heaven' is already spoken of in Gn 28^{17} (cf. Ps 78^{23}), and the seven heavens of later Jewish theology had gates. Serpent-like guardians of the gates of hell are referred to in the *Book of the Secrets of Enoch* 42^{1}. The entrance to Eden was guarded by cherubim (Gn 3^{24}, cf. *Enoch* 42^{3}), and the two gates of the heavenly paradise were of rubies and guarded by myriad angels (Gfrörer, ii. 44). These ideas are found in early Christian theology. Hades has gates of brass, bars of iron, bolts, keys (Rev 1^{18}), and warders; but they are burst open by Christ as He descends there (*Gospel of*

Nicodemus, § 5, and many other writers referring to the descent; cf. Rev 1^{18}). Paradise is often described as a city with walls and gates guarded by angels (e.g. *Passio Perpetuæ*, § 11). The analogy is that of the heavenly Jerusalem with its twelve gates and angel guardians (Rev 21^{12}). In those documents which uphold the old idea of several heavens, each has its gate or door (*Apoc. of Paul*, § 19 ff.; *Test. of Abraham*, § 11), while Ps $24^{7ff.}$ was frequently applied either to Christ's bursting the gates of Hades or to His ascension through the heavens, *e.g.* by Hippolytus, who speaks of Christ passing through the heavenly gates (Hippol. in Theod. *Dial.* 1; *Comm. on Prov.* [Mai, *Bibl. nova Patrum*, Rome, 1854, ii. 72]; cf. also Rev 4^{1} 'a door was opened in heaven'). Those Gnostic groups which taught the existence of seven or more heaven-spheres ruled by the Demiurge and Archons, assigned to these heavens doors guarded carefully. This is found, *e.g.*, among various Ophite groups and the followers of Bardesanes. The gates were themselves dangerous in some cases—'a fiery gateway'—and the Archons or door-keepers would have kept them closed against souls ascending to the Pleroma. But the Gnosis, initiation into sacraments and mysteries, possession of the names of the Archons and of the true magic formulæ, or of symbols and amulets, caused the doors to be opened (see Hippol. v. 8. 9, 26; Wright, *Apoc. Acts*, 1871, ii. 26; Origen, *c. Cels.* vi. 31; *Pistis Sophia*, bk. i. § 20 f.). These ideas of the magical opening of the gates are derived from Egyptian beliefs, and also, perhaps, from Mithraic teachings of the ascent of the soul through the planetary heavens with their gates (Origen, vi. 22). Mystico-magical cults having affinity to Mithraism knew also of the fiery gates of the upper spheres, which opened at the utterance of the names of the gods (Wessely, 'Griech. Zauberpapyrus,' *Denk. d. Kais. Ak. d. Wiss. zu Wien*, xxxvi. [1888] 56 ff.).

8. The door being regarded as a means of passage from one state to another, it was easy to apply the word in a metaphorical sense. Christ speaks of Himself as the 'door.' 'By me if any man enter in, he shall be saved' (Jn 10^{9}, cf. Eph 2^{18}). This idea is repeated in Christian theology. Ignatius calls Christ 'the door of the Father by which Abraham, Isaac, and Jacob, and all the prophets enter in, as well as the apostles and the Church' (*ad Philad.* ix.). In *Hermas* the gate of the tower is the Son of God (*Sim.* ix. 12); and in the *Clementine Recognitions* (ii. 22) the gate through which men enter the city, the kingdom of the Father, is 'the true Prophet.' The same ideas were current in Gnosticism. The heavenly Christ is the true gate, through which the Gnostic ascends to the Pleroma (Hippol. v. 8, 9). In the hymn used by the Priscillianists, but which was Gnostic in origin, Christ says: 'Janua sum tibi, quicunque me pulsas' (Aug. *Ep.* cexxxvii. § 8). Among the Bābīs the name *Bāb*, assumed by the first preacher of this new religion in 1844, means 'gate,' and was formerly the title given to those intermediaries through whom, as through a gate, communication was made by the Imām to his followers (see art. BĀB, BĀBĪS).

J. A. MACCULLOCH.

DOSĀDH, DUSĀDH.—A menial tribe in Northern India, of Dravidian origin, which at the Census of 1901 numbered 1,258,125, of whom the vast majority are found in Bengal and the United Provinces.

1. **Religion in Bengal.**—In Bengal they profess to be orthodox Hindus, and it is true that in some districts they employ in their religious rites Brāhmans of a degraded class, while some belong to the Srīnārāyani sect, or follow the doctrines (*panth*) of Kabīr, Tulsī Dās, Gorakhnāth, or Nānak (for which see BENGAL). These beliefs, however, seem to be of comparatively recent origin, and the basis of their religion is Animism.

(*a*) *Worship of Rāhu.*—Their tribal deity is Rāhu, 'the seizer,' who seems to have been adopted from the pre-Aryan races, and to have been transformed by the Hindus into a Daitya or Titan, who is supposed to cause eclipses by swallowing the sun and moon. The Dosādhs, in order to avert disease and in fulfilment of vows, offer to him annual sacrifices and the fruits of the earth through a tribesman who is known as Bhakat or Chatiyā.

'On special occasions a stranger form of worship is resorted to, parallels to which may be found in the rustic cult of the Roman villagers and the votaries of the Phœnician deities. A ladder, made with sides of green bamboos and rungs of sword-blades, is raised in the midst of a pile of burning mango wood through which the Bhakat walks barefooted and ascends the ladder without injury. Swine of all ages, a ram, wheaten flour, and rice-milk are offered up; after which the worshippers partake of a feast and drink enormous quantities of ardent spirits' (Risley, i. 255).

In another form of this rite, the man who has vowed to offer a fire sacrifice to Rāhu must build within the day a thatched hut, in which the Bhakat or priest, himself a Dosādh, must spend the night, sleeping on the sacred *kuśa* grass with which the floor is strewed. In front of the hut a bamboo platform is erected, and beyond that a trench is dug, which on the feast day is filled with mango wood soaked in butter, while two earthen vessels of milk are placed close to the platform. The Bhakat bathes and dons a new cloth dyed with turmeric. He mutters a number of mystic formulæ (*mantra*), and worships Rāhu on both sides of the trench. The fire is then kindled, and the Bhakat solemnly walks three times round it in the course of the sun, keeping his right hand always towards it. The end of the third round brings him to the east end of the trench, where he takes by the hand a Brāhman retained for this purpose with a fee of two new wrappers, and calls on him to lead the way through the fire. The Brāhman walks along the trench from east to west followed by the Bhakat. Both are supposed to tread with their bare feet on the fire and to escape unharmed. Risley supposes that this is the result of optical illusion, because by the time they start the flames have subsided and the trench is so narrow that an active man may walk along it resting his feet on either edge, without touching the smouldering ashes at the bottom. Meanwhile the milk has been boiled, and it appears that in some cases the Bhakat pours the boiling liquid over his body, being, it is said, uninjured.

'By passing through the fire the Bhakat is believed to have been inspired with the spirit of Rāhu, who has become incarnated in him. Filled with the divine or demoniac afflatus, and also, it may be surmised, excited by drink and *gānjā* [hemp], he mounts the bamboo platform, chants mystic hymns, and distributes to the crowd *tulsī* [basil] leaves, which heal diseases otherwise incurable, and flowers which have the virtue of causing barren women to conceive. The proceedings end with a feast, and religious excitement soon passes into drunken revelry lasting long into the night' (Risley, i. 255 f.).

The ritual is a good illustration of Dravidian shamanism. Accounts of fire-walking among the S. Indian Dravidians will be found in Thurston (*Ethnographic Notes in S. India*, Madras, 1906, p. 471 ff.). Frazer (*Adonis, Attis, Osiris*^{2}, London, 1907, pp. 88, 136 f.) regards it as a commutation of an original human sacrifice by means of fire.

(*b*) *Worship of deified robbers.*—The Bengal Dosādhs worship a host of deified heroes, in honour of whom huts are erected in various parts of the country. Many of these are the ghosts of bandit chiefs, such as Goraiyā, Sālhes, Chūhar, or Choar Mal, and others. In none of these shrines are there any idols, and the officiating priests are

always drawn from the Dosādh tribe, who minister to the Śūdra or menial castes which frequent them. The offerings usually are appropriated by the priest or by the head of the Dosādh household performing the worship; but, where this worship has adopted some of the principles of Islām, the fowls sacrificed to the Saint Mīran and the Pāñch Pīr (see PĀÑCHPĪRIYA) are given to local Muhammadans.

2. Religion in the United Provinces.—Here also the cult of Rāhu prevails, and it is carried out in a manner much resembling that of Bengal. In one form of the rite the priest climbs the rungs of sword-blades with his naked feet, pours some milk on the ground in honour of Rāhu, sacrifices a cock tied to the summit of the ladder, or, descending, slays a young pig with repeated blows of a spear. Some spirits are poured on the ground, and the meat and the remainder of the offerings are consumed there and then by the worshippers (Crooke, *Pop. Rel.*[2], 1896, i. 18 ff., *Tribes and Castes of the North-Western Provinces and Oudh*, ii. 355, where one of the songs in honour of Rāhu will be found).

They also worship Chhath or Chhathī, the impersonated sixth day after birth, when, owing to lack of sanitary precautions at childbirth, the child is likely to be attacked by infantile lockjaw. On the day before the feast the worshippers purify themselves with fasting, and go singing to the river side. Here they strip and walk into the water, remaining facing the east till the sun rises, when they stand with folded hands and bow in reverence, making offerings of cakes and other kinds of food, which are consumed by the worshipper and his friends. Their other tribal deities are Bandī, a female, and Manukh Deva, the deified ghost of some tribal worthy, who are propitiated by the sacrifice of a pig or fowl and an oblation of spirits. Seven cups of milk and seven pairs of cakes are also offered round the earthen mound which is the common abiding place of the tribal gods. They observe most of the Hindu holidays, particularly those like the Holī spring fire feast, and the Kajarī of the autumn season, which are the occasion of coarse orgies accompanied by drinking and sensuality.

W. CROOKE.

DOUBLES.—The beliefs to which the term 'double' refers may be traced back to two psychological sources. In the first place, they may result from elementary speculation on the category of duplication; in the second place, the phenomena on which the notion of the divisibility or duality of personality is based are such that a potentially duplicate existence was inevitably ascribed to every concrete object of thought. The two sources constantly mingle. The main characteristic of the former is that a double or counterpart arises by multiplication; of the latter, that it arises by division. A secondary characteristic is that in the latter the counterpart tends to be of a different substance, though of the same accidents—the so-called 'spiritual double.' Again, the connected categories of duality, substitution, representation, impersonation, and so forth, combine with such results of the category of duplication as identity, original and copy, idea and reality, to complicate the general conception of doubleness in prescientific speculation; and the whole combination binds together a number of customs, some of which are apparently widely dissimilar in origin, though all, psychologically speaking, are based on the mathematical ideas of multiplication and division. We shall refer to these subsidiary forms of the notion only for the purpose of illustrating what is sociologically the main connotation of the term, namely, the double in the sense of *Doppelgänger*, second self, visible or invisible counterpart, spiritual or material double.

1. Duplication in general.—It is not surprising that in early thought two became a sacred number, when we consider the mystery so often connected with duplication. Conversely, in the creation of certain abnormal mythical beings, the mind frequently unifies a natural duality, as in the one eye of the Cyclopes, and the combination of horse and rider in the Centaurs, and, most notably, in androgynous ancestors and deities. Duplicity in nature is still enough of an abnormality to warrant its inclusion in the list of magical or sacred centres of mystery.

Thus, in Samoa all double things were sacred. Among the native deities were two household gods, represented as 'Siamese Twins,' Taema and Titi. They appear to have been regarded as a sort of gods of doubleness.[1] Similar ideas were connected in Roman religion with the deity Janus, and in Greek with the Dioscuri. The images of many Mexican idols had double faces, back and front, like the Roman *Janus bifrons*.

'The reason,' E. J. Payne observes, 'why the features were duplicated is obvious. The figure was carried in the midst of a large crowd; the duplicate at the back was for the benefit of those who followed. Probably it was considered to be an evil omen if the idol turned its face away from its worshippers; this the duplicate obviated. . . . This duplication of the features, a characteristic of the very oldest gods, appears to be indicated when the numeral *ome* (=two) is prefixed to the title of the deity. Thus the two ancestors and preservers of the race were called Ometecuhtli and Omecihuatl (=two-chief, two-woman).'[2]

A close connexion is constantly maintained between diet and conception or the nature of the offspring. A frequent belief is that if a woman eats anything double—a double cherry or a double banana, for example—her child will be double.[3]

Twins themselves are a striking example of the mystery attached to double objects. See, further, art. TWINS.

Various miscellaneous applications of the double idea may be grouped together here. The law of equivalence, as illustrated by the *lex talionis*, is often superseded by the enforcement of a double penalty. Among the Bedawîn the family of a slain man may slay two of the murderer's family. In this case the feud continues. If they slay but one, it is ended.[4] The Hebrews condemned a thief taken *flagrante delicto* to restore double.[5] Hence the moral principle of receiving double as a form of pardon.

'The Lord gave Job twice as much as he had before.' 'For your shame ye shall have double . . . in their land they shall possess double: everlasting joy shall be unto them.' 'She hath received of the Lord's hand double for all her sins.' 'Even to-day do I declare that I will render double unto thee.'[6] Similarly in moral retribution: 'Render unto her even as she rendered, and double unto her the double according to her works: in the cup which she mingled, mingle unto her double.'[7]

A double share may be either an honour or a security. 'Elisha said, I pray thee, let a double portion of thy spirit be upon me.'[8] The idea of corroboration and finality belongs to repetition.

'The dream of Pharaoh,' Joseph says, 'is one: what God is about to do he hath declared unto Pharaoh. The seven good kine are seven years; and the seven good ears are seven years; the dream is one. . . . For that the dream was doubled unto Pharaoh twice, it is because the thing is established by God, and God will shortly bring it to pass.'[9]

A similar principle is reached from a different origin in such beliefs as that an echo is a confirmation.

Miracles and magic acts of duplication and multiplication have a psychological interest in connexion with the development of the metaphysical theory of creation and the mechanical or biological theory of evolution (see below). Such bits of folklore as the notion that turning one's money when one sees the new moon causes it to increase have a significance in both respects. The influence of the waxing moon has been well illustrated.[1] As the moon grows, the money will grow. No doubt, the act of turning the money is also a piece of imitative magic. Turning an object shows its reverse side, its double face, and is equivalent to a duplication of it. On a similar elementary fallacy perhaps depends the actual point of miracles of multiplication (which in the Christian examples lies in the handling or the breaking of the food). It may consist, that is, in an application of a vague theory of *homœomeria* (see below, p. 857[b]), according to which each particle of a substance or thing is a miniature duplicate of the whole. Breaking bread would thus produce a multitude of microscopic loaves; their manipulation in the hands is sufficient to institute growth by apposition (analogous in principle to the production of separate pieces of money by turning them), especially if the hands are instinct with *mana*. The case of natural objects is identical, for to the pre-scientific mind there is no essential difference between the artificial growth of a manufactured article and the natural growth of an organism.

There is a fairly large class of customs in which the chief performer—as a rule a sacred person or a person engaged for the time being in a sacred function—is attended, or represented, or impersonated, by one or more persons who are his duplicates in appearance or action. The principle may be either sympathy or the impulse of imitation—'Never alone did the king sigh, but with a general groan' (Shakespeare, *Hamlet*, III. iii. 23)—or delegation for reasons of safety or convenience.

In European folk-custom, particularly in Germany, it is frequently the rule for bride or bridegroom to be attended by one or more persons dressed in the same attire. At Egyptian weddings the bridegroom walks between two friends dressed precisely as he is.[2] In Abyssinia a bride is accompanied by her sister; both are dressed alike, and their horses are also caparisoned alike.[3]

In such cases, and in others which follow, the motives originally prompting the custom were no doubt mixed. Sympathy and fellow-feeling may be combined with the idea of safety in duplication or in numbers generally. Duplication is a form of concealment and security. It is commonly employed for the protection of a palladium, as the sacred *ancile* by the ancient Romans, who kept it among a set of duplicates, on the same principle as a valuable jewel is protected by a worthless copy. It is possible that customs like the following of the Kaffirs have a similar underlying meaning.

A Kaffir king employed 'a sort of valets,' who wore his cast-off clothes. When he was sick, they were wounded in order that a portion of their blood might be introduced into his system. They were killed at his death.[4] The motive is explicit in the Abyssinian custom. The king has four officers, called *lika mankua*, 'who have to clothe themselves exactly like the king,' so that the enemy may not be able to distinguish him. 'It is an honourable and dangerous post,' and was once filled by an Englishman, Mr. Bell.[5] On the Gold Coast an important person bought a slave of his or her own sex, termed *crabbah* or *ocrah*. This slave was looked upon 'as the soul or spirit, *alter ego*, of the master or mistress.'[1]

Thus service, substitution, disguise, and 'other-selfhood' shade into each other.

Many cases of mock kings may be resolved into duplication by way of disguise or impersonation. In Siam and Cambodia the king's temporary representative impersonates him in function, performing his magical duties.[2] The 'king' of the Babylonian festival *Sacaea* was dressed in the king's robes.[3] In the evolution of the monarchy a frequent stage is the division of the office into temporal and sacred. But such duplication of the king may arise in various ways. When actual substitution is practised in sacrifice, the vicarious sufferer tends to become a spiritual double or unreal phantom. A case in point is the belief found in early Christian speculation that a phantom of Jesus was crucified in place of Jesus Himself. Impersonation is frequently found in funeral customs. Thus, among the Eskimo the first child born after a death bears the dead man's name, and has to represent him at festivals. To these 'namesakes' of the dead, offerings of food and drink and clothes are made. They eat and drink and wear the clothes 'on behalf of the ghosts.'[4] A case which may be compared with the Kaffir and Abyssinian royal customs is from Fiji.

A certain clan has the duty of supplying the king with a special sort of attendants, who nurse him when he is ill and bury him when he dies. In particular, they conceal his death; in one locality the head attendant 'personates the dead chief, and issues his orders from within the mosquito curtain of native cloth, in the faint querulous tones of a sick man.'[5]

The art of the actor is essentially representation. He is a duplicate of the character, its 'person.' Similarly, his understudy or substitute is, both in English and French terminology, a 'double.' Lastly, the ideas of friendship approximate the friend to the status of the material duplicate. 'Fellow' is a word used in this connexion with a distinct reference to its meaning of a replica. A similar play of thought is seen in the word 'pair.' A friend is, in the commonplaces of literature, a second self, an *alter ego*. Duplication by division is applied here also; the pair being the unit, one or other of them is the 'half'; just as on the other principle he is the 'double.'

The impersonation of a man by a 'spiritual' being cannot always be distinguished from the appearance of a man's ghost or wraith. But there are clear cases—chiefly in connexion with the supernatural impregnation of a wife—where a man's double is a 'spiritual' impostor.

In the Dutch East Indies it is commonly believed that male and female evil spirits, *nita*, can assume the form and personality of lovers and friends. A man or woman keeping an assignation in the forest is liable to be duped in this way. A person who has intercourse with a *nita* dies in a few days. The *nita* is supposed to take away the soul. In some islands an ancestral spirit, named *Boitai*, is the bogey of women working in the forest. He assumes the form and appearance of their husbands. The occurrence is proved later when the victim suffers from hæmorrhage. The practice is followed even by human magic-workers. The Babar Islanders believe that a male *suwanggi* is able to take the shape of a young woman's husband and cause her to conceive.[6]

When the double, either visible or invisible, does not impersonate, but attends as a helper or enemy, it is not clear whether this can be traced back to beliefs about the soul. Primitive psychology succeeded thoroughly in dividing human personality into two more or less identical duplicates, and there are many cases where the derivation of the guardian angel from the separable soul is explicit. Of course, when developed, the two notions easily pass into one another, and the soul itself is con-

stantly regarded as a protecting spirit. The illustration of this belongs to another inquiry, but a typical case may be cited, where the guardian is actually the double. In Upper Egypt it is believed that with every child there is born a *jinn* companion, which acts as a guardian angel, but sometimes evilly entreats its possessor. It is termed *karina*, and is exactly like the person it attends.[1]

In some cases a spiritual entity passing into another form leaves behind it, automatically, a double of itself. It is as if a man, when leaving a place, automatically left a duplicate in his stead. The example which follows comprises this naive instinct for having one's cake as well as eating it, together with other ideas. In Central Australia, 'when a spirit individual goes into a woman' (who thereby conceives), 'there still remains the *Arumburinga*, which may be regarded as its double.' Spencer-Gillen also speak of this as the double of the person himself, and as his guardian spirit.[2]

A man may be regarded as a dnal person because he is attended by an invisible protector. Such a conception is implicit in the European folk-belief about the guardian angel. This belief is extremely vague in its form, but it shows a tendency to regard the angel as a double of the person, his eternal counterpart, which after his death is, like even the Australian *Arumburinga*, 'changeless and lives for ever.'[3] The following example is a case of duplication by apposition, distinct in origin from other forms. The Japanese pilgrim to the Thirty-three Holy Places, or to the Eighty-eight Holy Places of Shikoku, wears a special hat with this inscription—'Two pilgrims travelling in company to such and such a shrine.' This reference to two persons is explained by the idea that the pilgrim is not alone, but is accompanied by the great saint Kōbō Daishi, or the Goddess of Mercy, who

'travels with him along the stony path, supporting his footsteps, encouraging his religious fervour, guarding him from evil all along the way. Therefore not one only but two walk under that broad-brimmed hat on the road to Paradise.'[4]

Similar ideas of the invisible Divine helper are found in most of the organized religions; and, where it is part of the general teaching that the worshipper may become a sort of incarnation of the god by following in his footsteps, we have an interesting case of duplication in the form of the individnal as microcosm and the god as macrocosm, the latter being indefinitely multipliable or indefinitely ubiquitous.

Thaumaturgic persons are sometimes credited with a similar ubiquity or power of self-multiplication. There need be no implication that the duplicate in such cases is a spiritual replica, or an entity of different substance. It is simple multiplication, without any question of the method or the vehicle. The ordinary limitations of ordinary humanity are merely suspended. The legends of many Christian saints refer to this power of being in two places at once—bilocation. Thus, it is recorded of St. Alfonso di Liguori, that

'a person going to confession at the house where Alphonsus lived found him there at the very time for beginning the sermon in the church. After he had finished his confession, he went straight to the church, and found Alphonsus a good way advanced in his sermon.'[5]

2. The spiritual double.—The special meaning of the term 'double,' as the so-called 'spiritual double,' is the 'wraith' or visible counterpart of the person, seen just before or just after, or at the moment of, his death. This belief is derived directly from the theory of the soul. Hallucination corroborates it. Few phenomena seem to be better attested than the subjective perception of a 'phantasm of the living' in the circumstances mentioned. It is a remarkable agreement between psychological fact and primitive psychological theory, but the latter is alone quite sufficient reason for the genesis of the belief.

The soul itself constantly tends to be a counterpart or duplicate, a spiritual-material double of the person. The reason for this tendency is to be found in the main source of the belief in the soul. This is the mental percept and the memory-image of an object, which is inevitably a replica of the sensational percept (though possibly not technically identical in its physiological causation), somewhat incomplete, but often vivid enough.[1] It is called up most vividly in dreams, but also in waking memory. It may include roughly the whole personality, or be confined to one aspect of it; but its general foundation is visual.

Some cases may be cited where the soul shows this tendency to be, or actually is, a double. It is to be premised that speculation frequently draws a distinction between this form of the soul and a later transcendental conception.

The *kelah* or *là* of the Karens 'cannot be distinguished from the person himself,' when, as sometimes happens, it appears after death. It is described as 'the individuality, or general idea, of an inanimate object. It is also the individuality of the animated being. It, in fact, personates the varied phenomena of life.' 'It is distinct from the body,' and 'its absence from the body is death,' yet it is not regarded as the soul proper, which is the *thah*. 'The body and the *là* are represented as matter and spirit, yet materiality belongs to the *là*.' It is also described as a guardian spirit, walking by a man's side or

'wandering away in search of dreamy adventures. If it is absent too long, it must be called back with offerings. When the *là* is absent in our waking hours, we become weak or fearful or sick, and, if the absence be protracted, death ensues. Hence it is a matter of the deepest interest with a Karen to keep his *là* with him. He is ever and anon making offerings of food to it, beating a bamboo to gain its attention, calling it back, and tying his wrist with a bit of thread, which is supposed to have the power to retain it.'

Not only every living creature, but also every inanimate thing—axes and knives, for instance, as well as all trees and plants—has its *là*, which is 'liable to wander away from the individual.' When, thus wandering, it is 'interfered with by an enemy of any kind, death ensues to the individual' to whom it belongs. If a man drops his axe while up a tree, he looks down and calls out, '*Là* of the axe, come, come!'

'When the rice-field presents an unpromising appearance, it is supposed that the rice-*kelah* is detained in some way from the rice, on account of which it languishes. It is recalled with this invocation—"O come, rice-*kelah*, come! Come to the field. Come to the rice. With seed of each gender, come. Come from the river Kho, come from the river Kaw; from the place where they meet, come. Come from the West, come from the East; from the throat of the bird, from the maw of the ape, from the throat of the elephant. Come from the sources of rivers and their mouths. Come from the country of the Shan and Burman. From the distant kingdoms come. From all granaries come. O rice-*kelah*, come to the rice."'

As distinguished from the *thah*, the *là* or *kelah* 'is not regarded as the responsible agent in human action. . . . When we sin, it is the *thah*, or "soul," which sins.' 'By some the *kelah* is represented as the inner man, and with others the inner man is the *thah*.' It may leave the body in sleep. Such an absent *là* may be caught by a wizard, and transferred to a dead man, who is thereby resuscitated. In this case the friends of the robbed man procure another *là* from another sleeping man, and so on. The same Karens hold that the world is more thickly peopled with 'spirits' than with men, and that 'the future world' is a counterpart of this. Lastly, every organ of the body has its *là* counterpart. Blindness is due to an evil spirit having devoured the *là* of the eye.

[1] Crawley, *Idea of the Soul*, London, 1909, pp. 73–78, 193–207.

The *là* in all cases, though not immortal, 'exists before man, and lives after him. It is neither good nor bad, but merely gives life.'[1] In analogous cases this last detail is negatived, and it is precisely a mystic unrealized element that is supposed to produce the phenomena of life.

The Lushai term *thla* is possibly connected with the Karen *là*. It is 'a sort of double.'[2]

The Chinese hold that the soul may exist outside the body, 'as a duplicate having the form of the body, as well as its solid consistency.' De Groot describes it also as 'the invisible duplicate' of a person, and speaks of 'a conviction which calls up the body immediately before their eyes whenever they think of the soul.'[3]

Some striking examples apply the principle so as to form a double creation. Thus, the Asabas of the Niger hold the following opinion:

'Every one is considered to be created in duplicate, and the representative, or, as it were, the reflection in the spirit world of the body and of its possessions, is the *chi* and its possessions. A man's *chi* marries the *chi* of the woman the man marries, and so on. In addition, the *chi* . . . acts as a guardian spirit. . . . *Chi i me jům*, "My *chi* has done badly," is a not uncommon expression.' 'Entirely distinct from his *chi*' is the spirit *mon*, which inhabits the man himself.[4]

The Ba-Huana believe in a soul, *bun*, and a double, *doshi*. Only adults have *bun*; animals and fetishes have *doshi*, but no *bun*. The *doshi* appears in dreams. The *bun* of a dead man may be seen only at night; it is in human form, white and misty.[5] The peasants of Sicily believe that 'every material thing has an impalpable image or double, which can be detached, and can penetrate other bodies.' The phenomena of dreams are thus explained.[6] The Zapotecs regarded the soul as a 'second self.'[7]

The tribes living at the southern end of Lake Nyassa believe that the *mzimu*, or soul, has the form of the owner, but is intangible and unsubstantial, though it can talk and act as well as the real man. It is visible only in dreams, and the shadow is a 'part of' it.[8] The Delawares used for 'soul' a word indicating repetition, and equivalent to a double or counterpart.[9] The Iroquois soul was 'an exceedingly subtle and refined image,' yet material, 'possessing the form of the body, with a head, teeth, arms, legs,' etc. The spectre or wraith was animated by the soul.[10] The Aht soul was 'a being of human shape and of human mode of acting.'[11] The Eskimo say that the soul 'exhibits the same shape as the body it belongs to, but is of a more subtle and ethereal nature.'[12] Andamanese souls 'partake of the form of the person to whom they belong.'[13] The Sihanaka hold that the mirage is the soul of the reflected scene.[14] The soul is regarded by the East Indian Islanders as like the person in every respect, with all his qualities and defects; it is a copy or abstract of him, but is always 'material.' In Java the term for soul is 'refined body'; in Celebes, 'image'; in Toumbulu, 'companion'; in Sangir, 'duplicate.'[15]

The Malagasy *ambiroa* and the Dayak *amirua*, *hambaruan*, and *bruwa* are connected with a word meaning 'two.'[1] Among the Karo Bataks the soul is 'the copy of the owner, his other self.' The soul which appears after death is the dead man's *Doppelgänger*.[2] Codrington describes the Melanesian *atai*, 'reflection-soul,' as an 'invisible second self.'[3] The soul of the Tongans was not 'a distinct essence from the body, but only the more ethereal part of it, and exists in Bolotoo (the spirit world) in the form and likeness of the body the moment after death.'[4] In the Hervey Islands the soul was regarded as an airy but visible copy of the man. 'The visible world itself is but a gross copy of what exists in spirit-land. If the axe cleaves, it is because the fairy of the axe is invisibly present.'[5] The Tahitian soul resembled the body; everything had a soul.[6] The *wairua* of the Maoris 'seems to have signified a shadowy form.' It was sometimes mistaken for the man himself, and only by melting into thin air was its 'ghostship' recognized. It is described also as a 'similitude.'[7] The soul of the Dénés is described as a double.[8]

Frequently the soul-double is regarded as a miniature duplicate, varying in size from half size, or that of a child-copy of the person, to microscopic dimensions. In Egypt it occurs as half-size.[9] In Fiji it is found as of 'a little child,' or of 'small stature.'[10] In Australia, tribes near Adelaide held it to be of the size 'of a boy eight years old'; elsewhere 'a little body.'[12] The Dayaks of Sarawak regarded it as a 'miniature human being.'[13] This is the prevalent notion in the East Indian Islands, as among the Minangkabauers of Sumatra, the Tontemboan of Minahassa, the Toradjas of Celebes; the Semang of the Malay Peninsula regard it as of the size of a grain of maize; the Malays as a kind of 'thumbling,' a 'thin, insubstantial human image,' or 'mannikin,' of about the size of the thumb.[14] The Hindus regarded it as of the size of the thumb.[15] The Nutkas, the Indians of the Lower Fraser River, the Hurons, the ancient Mexicans, the Macusis, certain South African tribes, the Greeks, the Teutons, and other early European peoples also held it to be a miniature copy of the owner.[16]

The Egyptian *ka* is a classic example of these beliefs (see BODY [Egyp.] and DEATH, etc. [Egyp.]). The *ka* could live without the body, but the body could not live without the *ka*. Yet the *ka* was material.[17] It is represented not only as a miniature duplicate of the person, but sometimes as half

the size, sometimes as full size.[1] After death it became the man's personality proper, being incorporated with the mummy. In 'the everlasting house,' the tomb, it dwelt as long as the mummy was there. It might go in and out of the tomb and refresh itself with meat and drink, but it never failed to go back to the mummy, 'with the name of which it seems to have been closely connected.' In hieroglyph it was 'represented by two upraised arms, the acting parts of the person,' with a depression in the centre of the horizontal bar which joins them, to suggest the head.[2]

Before discussing the relation between the full-sized and the miniature double, it is as well to repeat the fact that early thought insists very strongly on the principle of duplication, and extends the application very widely. It serves as a theory of the soul and of a future existence. It also serves as a theory of biological reproduction and of physical evolution generally. Without going into the subject of pre-scientific psychology, it is necessary to note the connexion between the belief in the miniature double and certain widely spread notions about the soul. Corresponding with the percept is the fact that the soul is invisible when its owner is visible, unless, as we shall see, there are special limiting circumstances. The comparative permanence and generalized nature of the memory-image of individuals correspond with the generalized idea of species, as an ideal of which individuals are copies. A belief which may almost be regarded as universal is that children are re-incarnations of the souls of parents or of ancestors. A connected and frequent belief is tantamount to a germ-plasm theory of the soul. Parallel with this is the notion that reproduction can be effected, even in the human species, by fission or budding. All these various beliefs are cases of duplication. They include good reasons why the soul should be regarded as a miniature, whether as germ or embryo, or as a child. A full-grown man develops from a smaller copy of himself, and this from an infinitesimally minute replica which has proceeded from another individual. The theory is applied in early thought far more than in a scientific age which professes practically the same theory. Thus, an Australian, rebuking his son, will say to him: 'There you stand with my body, and yet you won't do what I tell you.'[3]

The minute size of the soul is explained by the Australians as depending upon the necessity that it should be able to enter a woman's body. But there is also the widely spread recognition of the fact that it leaves the body, both in sleep and illness, and at death. The body remains. Two views are possible, and both are found. Firstly, the duplicate may be a film, easily separable from the body; this would correspond to an outer soul, the soul of the outer man. Or, secondly, the duplicate may be an inset, and therefore an eject. Small enough to leave the body by the mouth, or even by the fontanel, it is often regarded as expansible, filling the body as an inner shape, the soul of the inner man, or the 'inner man' himself. Its flimsy and insubstantial nature, whether in dreams, memory, or hallucinations, agrees well with this elasticity.[4]

The link between the soul as shape and the soul as inner movement may be found here, even if we do not identify the soul as germ and the soul as inner man. Each of the latter applies to its own peculiar circumstances, and neither is inconsistent with the theory of films. This last theory, in its converse aspect, has been made into a standard metaphysical theory of physical and æsthetic creation by Greek philosophy. It has even been elevated into a theory of vision and sensation generally. In the former application the filmy duplicate of savage thought becomes the transcendental Form, or εἶδος, which is impressed upon Matter, or ὕλη. Similarly, the savage theory of species and individual was canonized in the Ideal Theory of Plato.

The *oiaron* of the Iroquois[1] is paralleled in many rude philosophies. It is a permanent ideal duplicate of each individual of the species. When it is regarded as a reality, the difficulty of bilocation recurs, not to speak of the problem, Which is the essential reality, the original or the copy? —or, in other words, Which is the original? The Iroquois believed that the *oiaron*, the 'type or model,' was 'larger and more perfect' than any single member of the species. It was sometimes called 'the old one.' Thus, converting type into prototype, the Indian was perhaps more scientific than metaphysical.

The problem of personal identity (similar to that of original and copy in the case of duplicates) is raised in a curious way and with curious results by the duplication theory of reproduction. When the soul of a dead man is re-incarnated in a child, there is no practical embarrassment. But, according to Manu, the father is conceived in the body of his wife, and is himself re-born as his child.[2] A man is thus his own father and his own son simultaneously. Some analogous notion, combined with a fear of personal insecurity or loss of power caused by this division of personality, seems a not impossible factor in the superstitious form of infanticide.[3] A Kaffir will frequently kill one of his twin children, the belief being that otherwise 'he will lose his strength.'[4]

In some psychologies each part of the person has its 'spiritual' duplicate. The theory of *homœomeria* is foreshadowed so frequently in early speculation that we may fairly suppose it to be implicit in early atomic philosophy. When Chinese doctors speak as if the soul were breakable and divisible into molecules,[5] and when we read of Malay tin-magic that 'each grain of ore appears to be considered as endowed with a separate entity or individuality,' and that it possesses the power of reproduction,[6] it may well be that each atom is implicitly viewed as a minute replica of the whole.

Duplication by a process of fission or of budding (gemmation) is occasionally hinted at in early philosophy. The Central Australians tell how in the time of 'the ancestors' a man would shake himself, and spirit-children would then drop from his muscles. An ancestor suddenly found a duplicate of himself appearing at his side, and exclaimed, 'Hullo! that is me.'[7]

The development of dual personality by a process of division may be illustrated from Hindu theology. 'The One Being was not happy, being alone. He wished for a second. He caused his own nature to fall in twain, and thus became husband and wife.'[8] This duality is rather that of mirror-images; 'this (second) was only a half

of himself, as the half of a split pea is.' Combination produces completeness, 'as a split pea is (completed) by being joined with its other half.'[1]

Modern psychology has studied many cases where the unity of personality is disturbed. The so-called double personality of such cases adds one more apparent confirmation of the ancient theory of duplication by division of what may be described as a two-layered unity. In the ethical sphere the ancient distrust of 'double-mindedness' implies more than a mere tendency to deceit and treachery. It implies the existence of two souls, or a double soul, in one person. Cf. 1 Ch 12[33] 'that were not of double heart' (lit. 'without a heart and a heart'); Ps 12[2] 'with a double heart [lit. 'with a heart and a heart'] do they speak.' Duplication involves not only duplicity but instability; 'a double-minded man, unstable in all his ways.'[2] It is possible that one factor in the general desire for sincerity was a superstitious notion of the danger of unreality. If a man professes non-reality, he may become non-real himself. 'There is,' says Westermarck, 'something uncanny in the untrue word itself.'[3] Cicero observed: 'Nothing that is false can be lasting'[4]—a rhetorical remark which to a savage might express a physical law. It is a curious fact that in civilization a sort of specific insincerity or double-mindedness is popularly ascribed to the artistic temperament, particularly in the case of actors. As the actor is a double, and plays a part on the stage, so is he regarded in his own character. Cf. art. DOUBLE-MINDEDNESS.

The analogy of the soul to the portrait, reflexion, and shadow has led to certain curious examples of the pictorial double. The easiest method of induction is by similars, and early thought seems to have noted identity far more than difference.

This tendency is well exemplified in Chinese psychology, and has to be taken into account in estimating many cases of spiritual identification.

'When a Chinese sees a plant,' for example, 'reminding him, by its shape, of a man or some animal, . . . he is influenced immediately by an association between it and that being. This being becomes to him the soul of the plant, anthropomorphous, or shaped as a beast. . . . Thus, association of images with beings actually becomes identification, both materially and psychically. An image, especially if pictorial or sculptured, and thus approaching close to the reality, is an *alter ego* of the living reality, an abode of its soul, nay, it is that reality itself.' . . . This kind of association is the backbone of Chinese religion.[5]

The soul of the Yaos, we saw, bears to the body 'the relation which a picture has to the reality.' But the Chinese go much further. For all practical purposes the life-sized picture of a dead man is a duplicate personality. It enables the deceased 'to live on among his descendants.' There are stories of statues and portraits acting for the persons they represent, and even begetting children.

There once existed also an art, *Khwai shuh*, by which life could be infused into a statue or portrait. The living image was then made use of, as Frankenstein employed his monster.[6]

Animal-souls or fetish-souls, external souls generally, are frequently described by observers under the term *alter ego*. Tribes of the Niger believe that each person has

'an *alter ego* in the form of some animal, such as a crocodile or hippopotamus. It is believed that such a person's life is bound up with that of the animal to such an extent that whatever affects the one produces a corresponding impression upon the other, and that if one dies the other must speedily do so too. It happened not very long ago that an Englishman shot a hippopotamus close to a native village; the friends of a woman who died the same night in the village demanded and eventually obtained five pounds as compensation for the murder of the woman.'[7]

In the Euahlayi tribe of Australia the *yunbeai*, or individual totem, is an 'animal familiar,' 'a sort of *alter ego*.' 'A man's spirit is in his *yunbeai*, and his *yunbeai's* spirit in him.' A medicine-man 'can assume the shape of his *yunbeai*.'[1] The *tona*, second self, soul, or tutelary genius, of the Zapotecs was an animal.

'It was believed that health and existence were bound up with that of the animals, in fact, that the death of both would occur simultaneously.'[2]

Even a substitute may be similarly described. Among the Bataks a piece of wood the length of the sick man's body is left at the place where the evil spirit that has taken the man's soul is believed to reside. Snouck Hurgronje describes this log as a *dubbelganger*.[3]

Examples might be multiplied. It is natural that, when once the notion of 'spiritual' duplication has been formed, it may be applied to any thing that strikes the fancy. The origin of external souls generally cannot be ascribed to a desire for safeguarding the life of the owner. At least the method is a very dangerous one. The soul is far more likely to be safe when it is in, or in combination with, the body of the owner. Moreover, this external soul not only dies when its 'original' dies, but involves in its own death the death of the owner. Duplication here simply duplicates danger; and it is unlikely that the derivation of the external soul is from any notion of placing the actual soul of a man in an external hiding-place. In fact, the theory of the soul which involves the belief in the appearance of a man's double or wraith shortly before, or at, or just after, his death brings into very strong relief the danger of making the unity of the person into a duality.

The phenomena of this wraith or double might be illustrated at great length, but they present hardly any variation of detail. A curious and significant fact is the large number of carefully studied cases in modern civilization of such 'phantasms' of the living or the lately dead, which have been seen by educated and intelligent persons, quite free from pathological abnormality.[4] It is a no less curious fact that the appearances present precisely the same features as are mentioned in mediæval and savage folklore. There is no doubt about the modern appearances, as far as their subjective reality is concerned; nor can there be any doubt about appearances in earlier culture. They are, so far as we know, cases of visual hallucination. Such hallucination may be defined as 'the projection of a mental image outwards when there is no external agency answering to it.'[5] Hallucination is not to be denied for earlier stages of human evolution, but there is no probability that it increases inversely as mental development. Be that as it may, the remarkable thing is this, that the 'primitive' notion of the soul supplies in theory not only what actually happens in practice, but also adequate speculative reasons for such happenings, though these reasons are both pre-scientific and opposed to all scientific facts. It is unnecessary to enter into any definition of 'ghost,' 'wraith,' 'spectre,' 'phantom,' and similar terms. The occasion of the appearance of the double has been noted. It remains to supply some typical examples and to draw out their spiritualistic explanation.

In Teutonic folklore to see one's 'angel' was regarded as an omen of approaching death.[6] In English folklore the belief still obtains that at midnight of St. Mark's Eve one may see from the church porch all those who are to die in the course of the year.[7] Mr. Baring-Gould knew of a young carpenter in Devonshire who was firmly convinced he had seen his own double on St. Mark's Eve. He went to the church porch in a spirit of bravado. 'All he could say was that he had seen

himself go past him, thrust open the church door, which he knew was locked, pass inside, and shut the door after him. He could not be mistaken; the figure had turned and looked him full in the face, and he knew himself as surely as when he glanced into mother's looking-glass.' The young man took to his bed, though nothing ailed him, and died of sheer fright.[1] Shelley declared a few days before his death that he had seen his double. Goethe (who, by the way, practised the visualization of mental images) records his having seen 'an exact counterpart of himself coming towards him.'[2] Robert Perceval, second son of the Right Honourable Sir John Perceval, saw his own apparition, 'bloody and ghostly, whereat he was so astonished that he immediately swooned away, but, recovering, he saw the spectre depart.' Soon afterwards he was found dead, under mysterious circumstances, in the Strand.[3] In 1899, Mrs. Milman, wife of Mr. A. J. Milman, assistant clerk to the House of Commons, declared that her rooms in the Speaker's Court were haunted, and had been haunted for many years, by a spiritual double of herself, which had been seen by many people when she was elsewhere, though she herself had never seen it.[4] A well-known M.P. died suddenly when away from the House. It was stated that he was seen by several members in the lobby at the time he died.[5] In Alsace the belief is marked; *se voir soi-même, sich selbst sehen*, are familiar phrases. To see one's self, or meet one's double portends one's death. A Strassburg man returning home saw himself, and soon after died. It is noted that in Alsace the occurrence is rare compared with the appearance of a man to others. An interesting detail, recurring elsewhere, is that, after seeing his double, a man has 'no repose.'[6] A question implying the same belief was put to Shelley by the lady to whom he confided his having seen his double. Art and literature are full of examples which might well be founded on fact. D. G. Rossetti's *How they met themselves*, and Calderon's *Purgatory of St. Patrick*, are examples. Sir Walter Scott observed that increasing civilization had 'blotted out the belief in apparitions.' This was to reckon without the phenomena of vision on which they depend.

These phenomena explain both the fact of the appearance of doubles, and also the pre-scientific theory of it which is a part of the early doctrine of the soul. According to that doctrine, the soul is separable from the body. This separation occurs at death, and may occur in illness, and even in a mere attack of fright, in sleep, and in other circumstances which need not be considered here. The soul is more or less universally regarded as a material, but etherealized, visible duplicate of the owner, whether full-sized or miniature, and as constituting his life. When it is removed, he is either dead or in danger of death. Primitive philosophy would say, perhaps, not that when a man dies his soul departs, but that he dies because his soul has departed. The soul of another is invisible when the man himself is seen, alive and well. In this case of full perception there is no mental image. But, when the man is not perceived, the mental image of him in the mind of the subject may suggest possibilities of separation, of division of personality. From another point of view, the man's appearance in death, sleep, or illness suggests the loss of something. Here, too, there is a percept, but it does not answer to the completeness of other percepts of the same object. Thus, whether as a film of the man's outward appearance, or as an ejected but expansible inner duplicate, the soul is easily supposed to leave its possessor. To the former view correspond those cases in which it is said to 'loosen itself' from the body, to the latter those in which it slips away from the mouth or other apertures. Before death the Haida soul 'loosens itself from the body.'[7] Of course, one cannot press the meaning of such descriptive phrases. But the fact remains that the separated soul is, when seen, a filmy double. The general belief that the soul is away from the body during sickness is significant. The Chinese hold that even in a fainting fit a man's 'soul is not united with his body.'[8] The 'other self,' *netsin*, of Déné belief, 'was invisible as long as a man enjoyed good health,' but wandered away when he was sick or dying.[1] This account is very apt to the point. It explains how the spiritual counterpart of a man is sometimes described as invisible, sometimes as visible. It is invisible, in other words, when it is united with its owner. It may be visible, to himself or others, when it is no longer united. On this line of thought, combined with ideas of the life-giving property of the soul, is developed the notion that health and strength are the soul, or at least an outward show of it. The Minangkabau people of Sumatra regard the *sumange* as

'the cause of the impression a man makes on others: . . . it gives strength, splendour, and vitality to a man's appearance; it is expressed in his look and carriage. A man whose external appearance is weak or sickly, or who has little expression in his face, is said to have a feeble soul.'[2]

Similarly, the natives of the Congo identify health with the word *moyo*, and 'in cases of wasting sickness the *moyo* is supposed to have wandered away from the sufferer.'[3] The Malagasy supply a complete case. The *ambiroa*, or *ameroy*, the 'apparition' of a man, is, when seen, an omen of his approaching death. But this term is also applied to the soul of a man when there is no actual question of death; for instance, if a man is thin and does not thrive well on his food.[4]

It is clear from the above both why the soul should be away from the body just before, or at, or after, death, or even in illness, and also why it is then visible both to the owner and to others.

The double which appears after death might be supposed to be a duplicate of the man with the marks of death upon him. And so it is sometimes in early belief. Thus, among the Fijians the ghost is decomposed; it is the corpse 'walking.' But, with natural inconsistency, it 'can eat fruit, drink kava, throw stones, weep, laugh, compose poetry, and dance.'[5] So difficult is it for the mind to get away from the complete idea of the man. In a case already cited, the double appearing before death had the marks of the owner's violent end impressed upon it proleptically. But, as a rule, the 'spiritual' double is the exact counterpart of the owner as he was when last seen. Thus, by the natives of Paraguay

'the souls [*aphangak*] of the departed are supposed, in the ethereal state, to correspond exactly in form and characteristics with the bodies they have left. A tall man and a short man remain tall and short as spirits; a deformed man remains deformed. A kindly-natured man continues so in shade-land. . . . The spirit of a child remains a child and does not develop, and for this reason is not feared. . . . No punishment follows the murderer of an infant, nor is its murder attended by the ordinary superstitious fears.'[6]

The Polynesians were familiar with apparitions of the dead. These appeared also in dreams, and their 'shape or form resembled that of the human body.'[7] The natives of the Panjāb believe that 'the little entire man or woman inside the body retains after death the tattoo marks of the person whom it has left.'[8] Among the Nāgas the ghost is 'an exact image of the deceased as he was at the moment of death, with scars, tattoo marks, mutilations, and all—and as able to enjoy and to need food and other sustenance.'[9] In some cases the disembodied 'soul' after death is distinguished from the dead man himself, who is believed to 'walk.' The Australians speak of the ghost returning to the grave to contemplate its mortal remains.[10] But there are cases where it is practically the man himself, revived and as he was in life. The Ovaherero believe

that the ghost speaks to people, drinks their milk, and takes their food; also that he is apt to seduce women and girls, and can even marry and live with a woman without her being aware that her husband is a ghost.[1]

In the Gospel narratives of the appearances of the risen Jesus it is remarkable that various tests are employed to prove that the form was no ghost or double, but the Lord Himself (cf. Lk $24^{39.\ 43}$). A test frequently employed in cases of the double is to ascertain whether the form casts a shadow or reflexion. For the 'spiritual' double, being itself a sort of reflexion, a visible but 'immaterial' copy, obviously cannot produce a reflexion itself. Hence stories are found, the point of which is either that a supposed real person is unreal, or that a real person, casting no shadow, has *ipso facto* lost his soul. We are thus led to the principle that the 'spiritual' duplicate, while supplying life to its owner, is 'real,' but in a different genus from the body or from the complete person. More precisely, the difference is a question of degree; the dead or sick body is negatively, the life-double is positively, real; the truth of both is the total living unity.

Most significant, perhaps, of the phenomena of doubles is the fact that they are seen just before death, and by their owners in particular. A usual endowment of the medicine-man is that he can see a soul at any time. But this capacity is often limited by the accepted principles of the doctrine of the soul. Thus the shamans of the Thompson Indians are able to see the soul

'before and shortly after it leaves the body, but lose sight of it when it gets further away towards the world of souls. . . . When a shaman sees a soul in the shape of a fog, it is a sign that the owner will die.'[2]

The rescue and restoration of the straying duplicate is universally, in early culture, the business of the soul-doctor, as in civilization the restoration of health is the business of the physician. The fact that, though ordinarily invisible, it is seen away from its place of location is the best proof that its owner is threatened with its permanent absence. This contingency receives the strongest confirmation when the apparition is seen by the threatened person himself. The inconsistency of the fact that he himself is still alive is one of those which cause no difficulty to the unscientific mind. The soul is separated from the body; that is enough for an absolute proof.

The persistence of the belief in the apparition of the double is precisely one of those cases which cannot be explained by any theory of survival or tradition. The belief is kept alive by hallucinations, and in uncultivated minds by the normal phenomena of visualization.

LITERATURE.—This is fully given in the article.

A. E. CRAWLEY.

DOUBLE-MINDEDNESS.—It is clear that many things in morality and religion which are censured as insincerity and hypocrisy are more accurately describable in terms of double-mindedness. The difference is that in double-mindedness a certain fraction of the entire complex personality—a special set of related states and processes—is so 'split off' from the rest of the self that it acts on its own account and forgets its relation to the full round of diverse elements of the ego. In cases of hypocrisy, if such exist, during the inconsistent act or attitude which has momentarily taken possession of the field of consciousness there is a haunting sense that it is not in harmony with the deeper-lying currents of the selfhood.

1. **Pathology of the sense of self.**—The diseases conditioned by the splitting of the self are those of *double* personality, in which two fairly defined selves in turn struggle for the possession of the field of consciousness, or may exist side by side, each more or less ignorant of the other; *multiple* personality, with the condition just described, existing among more than two split-off parts illustrated in the work of a skilful hypnotist, who can call up in turn as many selves as he chooses; and *alternating* personality, in which the two or more selves, like Dr. Jekyl and Mr. Hyde, take turns at ruling the field of consciousness.

Among the remarkable cases that have been studied are: Lucie, Louise, and Léonie, described by Janet, *L'Automatisme psychologique*, 1889; Félida, studied by Azam, *Hypnotisme, double conscience et altérations de la personnalité*, 1887; Mary Reynolds and Ansel Bourne, cited by W. James, *Princ. of Psych.*[2], 1905, i. 383 ff.; the case of Sergeant F., described by Mesnet and quoted by Binet, *Alterations of Personality* (Eng. tr.), 1896; 'Miss Beauchamp' with her four personalities, the subject of Prince's exhaustive study, *The Dissociation of a Personality*, 1906; the autobiographical account of the restoration of a personality by Beers, *The Mind that Found Itself*, 1908; the instance of 'D. F.,' a patient of Sidis, reported in his *Psychopathological Researches: Studies in Mental Dissociation*, 1909; and many others.

These studies are in essential agreement on many points in regard to the nature of the self, and throw light upon the milder forms of double-mindedness. The central fact underlying them is that the conscious self at any moment is only a small part of the entire personality, the larger share of which is the subconscious self. This sphere of the subconscious consists in the sum of partially lapsed memories, plus the sum of dimly appreciated instinct feelings and organic experiences, past and present. The elements of the entire self are always somewhat imperfectly knit together, and at best become organized in spots and sections, as determined, for example, by harmonious instinct reactions or a relatively consistent set of vocational experiences, personal habits, and intellectual interests.

The conscious self really consists in the drifting to the surface, out of the submerged selfhood, of certain fairly well organized cores or nuclei of related states and processes. Self-consciousness is potentially bound up in any and all of the elements of the personality. The ego is not a fixed entity that stands apart and watches the life processes go on. The self-feeling, on the contrary, is latent in every psychosis, and emerges when any group of processes is sufficiently organized and so far intensified as to form a warm spot in the usually somewhat diffuse group of experiences that cohere in the single organism. Whenever such a warm spot is formed, the self-feeling crystallized about it and everything else is sharply severed from it and stands as object. There are in the normal personality certain deep-going lines of organization that are fairly constant, and give some stability to the selfhood. It is shown, however, by the use of hypnotic suggestion, that there is no part of the personality that may not in turn be made subject and object. The same subject may seem to himself to be in turn king and peasant, preacher and humorist, saint and sinner, child and adult, kindly and irritable, motor- and visual-minded. While each character is in the centre of the arena acting out its part, it gathers to itself allies from the entire range of the self, and works them out into seeming consistency, and is entirely oblivious to the existence of other selves.

Now, the condition underlying double-mindedness is that two or more centres of related processes, or selves, may drift above the threshold of clear consciousness in rapid succession, while each is imperfectly cognizant of the other. Indeed, it is certain that one set of central processes can be 'thrown out of gear' with the rest, 'so that the processes in one system give rise to one conscious-

[1] Viehe and Palgrave, in *South African Folklore Journal*, i. (1879) 656 ff.

[2] J. Teit, in *Mem. of Amer. Museum of Nat. Hist.* i. (1900) iv. 363.

ness, and those of another system to another *simultaneously* existing consciousness' (W. James, *Princ. of Psych.* i. 399). Let us represent the entire self, consisting fundamentally of a mass of subliminal processes, by a sphere S. Two smaller spheres, A and B, within the larger one may represent the integrated nuclei of conscious selves. In so-called normal consciousness, these two selves, A and B, will be so nearly coincident, due to the continuity and consistency in the stream of experiences, as to have almost everything in common, M. Although the quality of mentality at any moment or in any situation is different from that of the next moment or situation, so that A and B each has a region exclusively its own, the large common ground M carries over into each successive state of consciousness a rich stock of memories, and accordingly a sense of personal identity. If, however, in an impulsive or impressionable person the successive consciousnesses are inharmonious——call them A^1 and B^1—and so separated as to have only a small region M^1 in common, we have the typical case of double-mindedness. There lie beyond these the extreme instances described above, when, due to some lesion, or to hypnotic influence, the consciousnesses A^2 and B^2 are so thrown apart that they have no background of definite memories to unite them.

Among the advantages of considering double-mindedness as lying in a progressive series between a highly unified consciousness on the one hand and alternating personalities on the other, are: (*a*) it is normal, but may become pathological; (*b*) the progressive decline of the memory of other selves in pathological cases shows the distinction between double-mindedness and wilful deception and insincerity. A religious enthusiast and propagandist, for example, impelled by the combined effect of auto-suggestion and social-suggestion may at other times be morose, unkind, and even treacherous, and still be only faintly aware of the incongruity. (*c*) There is, however, a subconscious interaction between the selves. Binet and Janet have shown (Binet, *Alterations of Personality*, Eng. tr. New York, 1896, p. 215 ff.) that, although either member of a double personality may seem to be entirely oblivious of the existence of the other, there is, nevertheless, a leakage between them through the deeper strata of personality. (*d*) The integration of the self is best brought about, if not invariably, in terms of the subconscious. In chronic cases of double personality there seems to be no way so effectual of healing the cleavage as by a vigorous use of suggestion, the blending of the different selves into the deeper-lying regions of the submerged selfhood. From this point of view the success of religion in the world may be accounted for by its consistent appeal to the 'divided selves,' 'sick souls,' and all who hunger after the higher life, that they renounce the lesser selves and, by an act of faith, sink them into the absolute righteousness of a limitless personality.

2. **Sources of double-mindedness.**—Whether or not the self is fundamentally or transcendentally a unity, it is more just to concrete facts of the mental life to assume that self-consciousness is inherent in the separate psychic processes themselves. Rather than try to explain the incongruous obsessions of the self, therefore, it is more judicious to accept the multiplicity of streaks and strains that inhere in the same personality as the given fact, and then to regard the integrity of the self as a selected product of development. Its utility, let us say, is found in the value to the individual of a self-consistent history, and the increased efficiency of a social order whose units are somewhat similar. The most potent fact about the self is the constant mutations that are going on within it (cf. W. James, *Princ. of Psych.*, chs. ix. and x.; Bradley, *Appearance and Reality*[2], 1897, ch. ix.). In any normal individual there are ceaseless alterations and re-combinations of the elements of the self in response to the situations that call them into activity. Each person is in turn, especially and for the moment, a bodily self, a social self, a courageous, a blushing, a righteous, an ambitious, a passionate, a logical self, and so on through a long list. There are conditions which tend to fix these various selves and perpetuate them. In the first place, it is the fate of states of consciousness to be self-limited in proportion to their intensity. To see with rapt interest a bit of colour harmony in a landscape is for the moment to be blind to all else. To feel the thrill of a heroic encounter creates a soldier whose heart is closed to every other 'calling.' The laws of habit get in their work, while vocational activities and the fixity of social customs assist in building the texture of the personality into a seemingly constant and consistent type. The twists and strains of split personality now arise through

'the irruption into the individual's life of some new stimulus or passion, such as love, ambition, cupidity, revenge, or patriotic devotion' (W. James, *Var. of Rel. Exp.*, 1902, p. 176).

It may arise from an enforced change of occupation when the cross currents are aggravated by a psychopathic temperament. The condition existing in milder forms is best seen in abnormal cases.

'A young woman, early abandoned to a life of shame, and later placed in a convent, would pass, as the result of nervous disorders, through two periods, believing herself to be alternately prostitute and nun; and in each her tone, manner, dress, and speech were radically different and appropriate' (Baldwin, *DPhP* ii. 285).

One of the chief sources of split personality is the difficulty of a smooth readjustment, during the growth periods from childhood to maturity, to the new demands of later stages. This is most marked during the age of most rapid readjustment in the early teens. The old habitual self of childhood persists with great tenacity. The instinctive uprush of new life floods the youth with a feeling of new possibilities and a sense of awakening, though dimly appreciated, ideals. The struggle between the old self and the new is the crisis long known as 'storm and stress.'[1] The period is well characterized by W. James as that of the

'divided will, when the higher wishes lack just that last acuteness, that touch of explosive intensity . . . that enables them to burst their shell, and make irruption efficaciously into life and quell the lower tendencies for ever' (*Var. of Rel. Exp.* p. 173).

3. **Double-mindedness and immorality.**—It would seem that most blemishes of character and nearly all misdeeds and crimes might be traceable to split personality. A passionate, shamming, or partial self, either too callous or too sensitive, loses its connexion with, and setting in, the full round of life. Treacheries, for example, are the obverse side of little loyalties, just as are foolish loves and misguided philanthropies. It would appear, too, from the stress which moral codes and precepts place upon such virtues as integrity, sincerity, consistency, *temperantia*, and the like, that the normal evolution of character chiefly consists in the straightening out and unification of the inner self.

'As a fletcher makes straight his arrow,' says the *Dhammapāda* (33), 'a wise man makes straight his trembling and unsteady thought, which is difficult to keep, difficult to turn.' Something like this is, apparently, the purport of the golden mean of Aristotle, the middle path and the will of Heaven of Confucius, the harmony with the universe of the Stoics, and the straight and narrow way of Jesus.

The danger of a duplicity of the self has been almost universally recognized by morality and

[1] See, for a description of the accompanying phenomena, W. James, *Varieties of Religious Experience*, N.Y., 1902, chs. vi. vii. viii.; Starbuck, *Psychology of Religion*[2], 1901, chs. v xii. xvii. xviii.

religion. To heal up its ruptures and knit the entire life into a consistent whole has been their heroic task. Two extreme methods of unification have been advocated, with many gradations of the intermingling of both. At one extreme is the Stoical method of renunciation of everything which can disturb, distract, or tear asunder, so that the soul stands undisturbed in the midst of a changing universe, superior to all things in life or death. The opposite method is to extend the self until it is at one with all things in heaven and earth. Since the self, then, is at one with all-reality, there is nothing that can mar its serenity. One can distinguish at least four types of this latter method of unification: the mystical or baptismal or psychopathic, which would bathe in a limitless ocean of blessedness; the rational or Socratic, which would rise to higher definition and sink to profounder insight until the deeper wisdom catches up all virtue into itself; the æsthetic, as illustrated, for example, in Jesus, which is guided by a warm, refined sense of eternal values; and the practical or 'tough-minded,' represented by those who gird up their loins and preach and practise a doctrine of utmost consistency in thought and deed.

4. The value to morality of double-mindedness.—It is an instructive fact that the biography of so many moral and religious geniuses betrays a struggle between the cross currents of the self in the direction of good and evil. Like St. Paul and St. Augustine, what they would not, that they do, and, when the impulses lead towards the higher life, there is a stubborn inner resistance that is hardly overcome. It is probable that, just as an act of clear thought is bought of necessity at the price of severe mental tension, so a world of clean-cut moral values can exist only in the midst of conflicting inner impulses. It is 'when the struggle begins within himself' that 'man's worth something.' It is only then that 'the soul awakes and grows' (Browning, *Fifine at the Fair*).

'Of necessity every distinctly moral choice involves the previous presence of a certain tendency to choose the wrong. Yes, moral choice is essentially a condemnation of the neglected motive, as well as an approval of the accepted motive. Otherwise it could be no moral choice. A being possessed of but one motive could have no conscience. . . . You might as well try to define a king without his subjects as to define a moral deed without the presence in the agent of some evil motive' (Royce, in *IJE* iv. [1893–4] 57).

If, now, in the midst of the struggle the agent conquers the lesser motive, he may issue forth into a complex world of specific moral relationships and corresponding moral values, and so come to live victoriously in a 'two-storey universe' instead of floating along a misty stream of indefinite experiences into whose gloom the light of a bedimmed conscience can scarcely shed its radiance. The value of the conflicts, too, in the social order has long been recognized by students of ethics.

'The means which Nature uses to bring about the development of all the capacities she has given man,' says Kant, 'is their *antagonism* in society, in so far as this antagonism becomes in the end a cause of social order. . . . Men have a great propensity to isolate themselves, for they find in themselves at the same time this unsocial characteristic, and each wishes to direct everything solely according to his own notion, and expects resistance just as he knows that he is inclined to resist others. It is just this resistance which awakens all man's powers' (quoted in Dewey-Tufts, *Ethics*, 1908, p. 87).

The study of biographies would even suggest that, the greater the number of antagonisms and oppositions that play against each other, the more is the personality enriched, if only they can be so neatly balanced against each other as not to waste the energies, and if the central stream of life is so directed that the habit of conquering becomes the habit of growth. Luther, *e.g.*, is an instructive instance of a person containing what Ribot (*Diseases of Personality*, Eng. tr. Chicago, 1895, pp. 112, 126 ff.) designates 'successively' and 'even simultaneously contradictory characters.' He was jocose and serious, joyous and melancholy, submissive and independent, active and meditative, stoical and sensuous, warm-hearted and vindictive, mystic and hard-headed organizer, scholar and poet, and many things besides. The intimate relation between the presence, in such minds, of various cross currents and their moral strength is probably not an accidental one.

EDWIN D. STARBUCK.

DOUBT.—1. Definition and scope.—Doubt is the negation of belief, the condition of not having reached a positive conclusion for or against any proposition. In this negative nature doubt differs from *disbelief*, which is a positive conviction of falsity. Disbelief is a form of belief; it is a belief in some proposition which involves the falsity of another, with reference to which the attitude of mind is called 'disbelief.' We disbelieve the Ptolemaic theory because we believe the Copernican. Doubt, on the other hand, implies no such contrary belief. It implies suspense of judgment rather than a positive judgment to the contrary. It is the state of being unconvinced. In this sense an agnostic should be in the attitude of doubt, lacking knowledge (see art. AGNOSTICISM). Whether there is ever an absolute suspense of judgment may be questioned, but in the doubting attitude there is at least the absence of a categorical or of a settled judgment with reference to the idea in question. There may be the disjunctive judgment that A or B is true, but doubt as to which alternative is correct, or there may be an alternation of judgments, but no fixed conclusion. In the latter case doubt corresponds to deliberation, although expressing the negative element rather than the consideration of reasons.

As to the *objects* of doubt it is customary to distinguish between theoretical doubt and doubt as to values. The former may concern either (1) the evidence of sense, or (2) the truth of theories. The latter may be doubt as to the validity of our (3) æsthetic or (4) moral judgments. Since religion, as commonly understood, involves judgment as to both facts and values, religious doubt may be of either of the two main kinds.

The distinction sometimes drawn between *universal* and *particular* doubt is a verbal rather than a real one, the former being incompatible with sanity in things theoretical, and with life in things practical. The conscious life is essentially an active, assertive process by which objects are either assimilated, or neglected for those capable of assimilation. This limitation of doubt in the field of knowledge was shown by Descartes, and in the sphere of practice by Hume (see § 2).

The temporal relation of doubt to belief depends upon the conception of the nature of belief. If belief be taken as identical with the instinctive or immediate reality sense, doubt is a subsequent state arising from the conflict of primitive beliefs, especially as involving the disappointment of expectation and the checking of motor impulse. If belief be conceived as a reflective result dependent upon evidence, it is subsequent to doubt, and its legitimate outcome. The condition of doubt lasts as long as the idea in question fails to find its

place relative to the system which represents for us reality. When its position is discovered, the attitude towards it is one of belief—either positive as acceptance, or negative as rejection.

The resolution of doubt, consisting as it does in this determination of the place of an idea relatively to the reality system, involves the exercise of will. Yet this volition cannot be taken as a perfectly free or arbitrary action, without undermining the whole idea of truth. Doubt has significance only in so far as there is pre-supposed a system of conditions to which thought must adjust itself. There is doubt only where knowledge is possible, for doubt is always as to the judgment which ought to be passed if the purpose of thought is to be fulfilled. The resolution of doubt is therefore never a mere 'will to believe,' but a will to believe what conforms to given conditions of belief. The will is not absolute and alone in belief. See also articles BELIEF, FAITH, SCEPTICISM.

NORMAN WILDE.

2. The meaning and value of doubt as influenced by one's philosophical or theological position.—A person's attitude towards doubt and his conception of its meaning will depend much upon his philosophical or theological point of view. Apart from realism, whose psychological and epistemological ground-work is extremely varied, there are at least two general types of philosophizing, viz. absolutism and dynamic idealism, which directly influence one's estimate of doubt and its place in the moral and religious life; the former tending on the whole to disparage, and the latter to encourage, it.

(1) *Absolutism.*—Those who hold that truth or righteousness is of a fixed and changeless nature fall into several groups with a variety of shades of gradation among them. For our purpose it will be sufficient to mention two as types; (*a*) rationalists or a-prioristS, and (*b*) absolutists basing their views upon Divine authority.

(*a*) Absolutism of the rationalistic sort. There are those whose confidence in a fixed and static truth is so implicit, and who believe so firmly that this truth is of the nature of pure reason and can be attained through a logical process, that doubt is to them synonymous with ignorance. It means failure, up to any given moment of time, to have discovered the whole of truth. Such an attitude is often found among logicians, mathematicians, and theologians who have built upon a rationalistic psychology, although some of them take the matter of doubt more seriously, if, like Plotinus, they have a mystical temperament, or if, like Augustine, they are oppressed by the contrast between finite knowledge and infinite intelligence. Doubt is sometimes employed systematically as a helpful scientific or philosophical procedure by those who, like Descartes, use it as a means of sifting out from the manifold experience the pure elements of knowledge that are changeless. During the quest, rationalism has employed doubt consistently and whole-heartedly. Having established a system of truth or belief, it tends towards dogmatic certainty.

(*b*) A fixed and static truth or righteousness based upon an external authority. From this standpoint doubt means perverseness, waywardness, or even sin, and is dealt with by disapproval, censure, condemnation, excommunication, punishment, or execution.

When either of the types of absolutism just described exists in its relatively pure form, implicit faith is demanded within the range of the firm foundation of the system, while doubt may in all other matters prevail. There are many also, among Catholics, Protestants, and non-Christian devotees, who accept the finality of both reason and authority and insist upon their oneness. An instructive instance in point is the case of Cardinal Newman. He says (*Gram. of Assent*, pp. 214, 146):

'Now truth cannot change; what is once truth is always truth; and the human mind is made for truth. . . . ones certitude, always certitude. If certitude in any matter be the termination of all doubt or fear about its truth, it carries with it an inward assurance that it shall never fail.' 'The difficulty is removed by the dogma of the Church's infallibility. The "One Holy Catholic and Apostolic Church" is an article of the Creed. It stands in the place of all abstruse propositions in a Catholic's mind, for to believe in her word is virtually to believe in them all. Even what he cannot understand he can believe to be true; and he believes it to be true because he believes in the Church.'

(2) *Types of idealism with a dynamic or developmental conception of reality.*—This philosophical position, somewhat older than Aristotelianism, has arisen with new life during the last century and a half. It has been steadily undermining dogmatism and certitude, and not only accepting doubt as a wholesome mental regimen, but interpreting it as a necessary and intimate part of the growth process. Its representatives may be separated into two groups: (*a*) rationalists, who, like Hegel, abandon the law of identity and contradiction and posit a rational world-consciousness in a process of becoming or evolution; and (*b*) the large class, including pragmatists, voluntarists, and affectionists, to whom reality seems to be of a plastic, non-rational sort, which the thought-processes, since they are its products, can only symbolize, not reveal.

(*a*) Hegel may be taken as a representative of the idealists who hold a dynamic and teleological conception of reality, and insist that the 'cosmic spirit unfolds in a strict and vigorous logic, whose consummation is thought of thought' (Cushman, *Hist. of Phil.*, 1911, ii. 281). The absolute reason proceeds everywhere and always according to a law of negativity—passes over into its other or opposite only to return to itself enriched by the contradiction. There is always the threefold act, whether in the personal life or in history—affirmation, contradiction, and return-to-itself (the thesis, antithesis, and synthesis of Fichte and Schelling). The law of contradiction which formal logic and static rationalism respect is not 'true,' but only represents the second step in an endless process of becoming. The unfolding of the Absolute must of necessity, and by its very nature, have contradictions within it, as the condition of passing on to a richer synthesis. Doubt in the individual, therefore, and scepticism in history (see, *e.g.*, Hegel's discussion of the Sceptics, in his *Hist. of Philos.*, 1892–96) are not simply justifiable on account of their stimulating and intensifying power, but are wholly essential parts of the evolution of spirit.

(*b*) Non-rational idealism. Hegel's philosophical justification of negation was but the formulating of a world-attitude towards the value of doubt that had been developing during the Renaissance and has been gaining momentum to the present time. No reference is here made to its value in the way of mental clarification and as a means of arriving at certainty as in the Yes and No procedure of Abelard and Aquinas, or to the method by which Descartes doubted away everything possible in order to arrive at clear and distinct ideas and therefore dogmatic certainty; what we have in view is rather a growing conception that reality is of a non-rational kind which cannot be truly represented by the cognitive processes. The thought-life is one (among others) of the ways in which the world of being manifests itself. It is epiphenomenal. Its reports are suggestive and

symbolical, not final. Dogmatism is, from this point of view, no longer possible, and the *tentative* reliance upon a 'truth' so far forth apprehended, of which doubt is the wholesome sign, is fundamentally justifiable. Following upon the acute scepticism and criticism which culminated in Hume and Kant respectively, confidence in the power of pure reason to transcend itself and report objective reality was undermined, and with it the belief was displaced that the universe was constructed on logical principles. The conviction grew insistent that reality is plastic or dynamic, and is of the nature of feeling or will. Being so, its meaning is to be read out in terms of feeling or symbolized through ideation. Illustrative of the affectionists may be mentioned: Kant's faculty of taste and æsthetic judgment as the synthesizing principle behind reason and judgment; Schelling's notion that ideas have not *logical* worth, but are God's *intuitions* of Himself, and that æsthetics and religion contain the deeper wisdom which will resolve all contradictions; Schleiermacher's doctrine that religious ideas are forms of the manifestation of religious feeling; and Schiller's and Goethe's conception of the 'Beautiful Soul' revealed through 'disinterested contemplation.' The volitionists are equally numerous and commanding. Illustrations of these are the 'God-will' of Kant, the 'Deed-act' of Fichte, and the 'World-as-will' of Schopenhauer, with his teaching that Reason and Idea are indeed distorted expressions of this fundamental world-will. The doctrine of biological evolution is a concrete form of the prevailing passion (which had possessed the best minds for more than half a century before it was formulated by Darwin) for a developmental account of reality, and in turn has given vast impetus to the conception. Some of the modern forms into which it has become crystallized are pragmatism, radical empiricism, vitalism, and voluntarism. All these give up the possibility of the dogmatic certainty of a unified system of beliefs. As summarized by A. J. Balfour:

'No philosophy or theory of knowledge can be satisfactory which does not find room within it for the quite obvious but not sufficiently considered fact that, so far as empirical science can tell us anything about the matter, most of the proximate causes of belief and all its ultimate causes are non-rational in their character' (*The Foundations of Belief*, 365–6).

The attitude of all these towards doubt and certainty may be typified by the following from W. James:

'The safe thing is surely to recognize that all the insights of creatures of a day like ourselves must be provisional. The wisest critic is an altering being, subject to the better insight of the morrow, and right at any moment, only "up to date" and "on the whole." . . . "Heartily know, when half-gods go, the gods arrive." . . . I do indeed disbelieve that we or any other mortal men can attain on a given day to absolutely incorrigible and unimprovable truth about such matters of fact as those with which religions deal' (*Varieties of Religious Experience*, 1902, p. 333 f.).

3. **Doubt for its own sake.**—Most writers make a distinction between doubt as an end and its use in the growth of knowledge. Even those who justify it most unqualifiedly within its proper limits condemn it just as cordially as a chronic obsession.

James goes so far as to observe: 'It is often practically impossible to distinguish doubts from dogmatic negation. . . . Scepticism in moral matters is an ally of immorality. Who is not for is against . . . in theory as in practice, dodge, or hedge, or talk as we like about a wise skepticism, we are really doing volunteer service for one side or the other' (*The Will to Believe*, 1899, p. 109). Sir William Hamilton, who believes that 'doubt is the first step toward philosophy,' observes: 'Doubt, as a permanent state of mind, would be, in fact, little better than an intellectual death. The mind lives as it believes,—it lives in the affirmation of itself, of nature, and of God; a doubt upon any of these would be a diminution of its life—a doubt upon the three, were it possible, would be tantamount to a mental annihilation' (*Lect. on Met.* i. 91).

The danger of doubting is not only that it may become a fixed habit, but that interest may centre in the process itself as severed from the complex of normal mental activities and healthy enthusiasms and become a mania (doubting-madness; *folie du doute; Grübelsucht*). Pathologists have accepted this as a special type of insanity (see, for example, B. Ball's art. 'Doubt, Insanity of,' in Tuke's *Dict. of Psychol. Medicine*, 1892). Its symptoms are a state of persistent intellectual unrest, a devouring metaphysical hunger, a morbid anxiety for mental satisfaction, accompanied not infrequently by a Hamlet-like paralysis of the will.

4. **Doubt as the condition of knowledge and of its growth.**—The dictum of Hamilton, 'we doubt in order that we may believe' (*loc. cit.*), has been, as the result of modern psychological analysis of the nature of the thought-processes, settling into a truism. According to James, 'belief and disbelief are but two aspects of one psychological state . . . we never disbelieve anything except for the reason that we believe something else which contradicts the first thing' (*Princ. of Psych.*, 1890, ii. 284). Such a conception becomes self-evident through an analysis of the mental conditions involved in certitude. This is shown even in the simplest acts of cognition. No act of perception would be possible without selective attention, a narrowing of the field of consciousness, and a more or less sharp discrimination of the object perceived from related objects. Such an act often, if not generally, involves an artificial cutting away of the object from its setting, as hand from arm, leaf from branch, child from adult, day from night, and the like. Further perceptual processes almost invariably make cross-cuttings of these cuttings as hand-wrist-arm, leaf-twig-branch, normal-abnormal child, twelve-hours, six-months day, and the like. The growth of knowledge consists just in the healing of the cleavages, and the organization, through judgments, of the discrete elements of experience into wholes after they have been necessarily severed, as the condition of having clear images and states of consciousness. Without dissatisfaction with the accuracy and finality of the discrete perceptual images already experienced (which dissatisfaction is doubt in the making), the further organization, in terms of judgments, of which knowledge consists, would not be possible. All the higher acts of conception involve similar discriminations and artificial separations as the condition that they become clear. They are always interested in a *part* of experience at the expense of all the rest. Then, when general judgments are formed, it is inevitable that discord should arise between these and each and all the diverse details that they have sought to harmonize. Wenley, in a chapter on 'Pre-established Discord,' has given a faithful analysis of the principle as it concerns the limitation of science and the behaviour of scientists:

'Any science, that is, any body of judgments about a part of experience, becomes self-centred, if you insist that it transform itself into a rational account of experience *as a whole*. Nay, it may be maintained that, precisely in proportion as science conforms to the ideal of exactness, it declines in truth when universalized, just because it is able to grasp, or adjust, individual cases: advance in knowledge depends upon awareness of problems, of contradictions. Science as a process of investigation consists in an effort to erase these blots upon consistency' (*Mod. Thought and the Crisis in Belief*, pp. 200–210).

Without the intensification of consciousness resulting from clean-cut images along with their often necessary distortions, there would exist only a dim, confused state of general awareness or a 'feeling of simple reality.' All belief, in every case, has for its criterion, on the contrary, 'a feeling of resolved doubt.' 'What I believe has its pros and cons, and however vaguely, still really, I am better satisfied with the pros than with the cons. Now for the first time, therefore, we have belief' (Baldwin, *Handb. of Ps ch.*[6], 1889, p. 158). From

such a consideration it is evident that doubt is bound up necessarily with any act of faith. As expressed by Ladd :

'Skepticism and agnosticism remain legitimate and valuable (even indispensable) attitudes of the mind toward all the objects both of knowledge and of so-called faith. . . . To doubt and inquire, to refuse to affirm, and to deny, whether applied in the interest of conduct, of science, or of speculative thinking, are as essential to the process of cognition as are faith and affirmation of the most positive and undisturbed kind' (*Phil. of Knowledge*, p. 369).

The necessity of doubt to knowledge arises also from the retarding effect of a native inertia which causes a discord between thought and action ; and this condition is aggravated by the deadening effect of habit and custom, which must constantly be transcended and replaced by a habit of growth, or, in other words, the habit of readjustment. Foster has compared doubt to the moulting of a bird by which it accommodates itself to the rotation of the seasons, and to the process of elimination in digestion. Doubt is therefore the 'purgative, eliminative, excretive side of religious experience, as faith is its nourishing ; and therefore we are saved by doubt as well as by faith' (*The Funct. of Relig. in Man's Struggle for Existence*, p. 138 f.).

5. **Development of doubt in the personal life.**—A valuable suggestion as to the place of doubt in the constructive life of morality and religion is found in the fact that it is the rule rather than the exception, in the growth from childhood credulity, imitativeness, and external authority, into a personal grasp of spiritual verities, that men and women pass through, usually in the late teens, a stage of mental perturbation, and of inquiry into the groundwork of faith. The youth 'turns logician and proves everything, and accepts that only which seems to possess a reason.' A study of biographies and autobiographies seems to show that

'the higher life-purposes develop and intensify simultaneously with the growth of doubt. . . . Doubt is a process of mental clarification ; it is a step in the process of self-mastery ; it is an indication that all the latent powers are beginning to be realized' (Starbuck, *Psychol. of Relig.*, pp. 233, 242).

6. **The cultivation of the science and art of doubting judiciously and constructively.**—The number of recent sympathetic discussions by psychologists and theologians of the meaning of doubt would indicate that leaders of thought have come rather generally to accept a constructive interpretation of it when kept within certain limits. The art of judicious doubting was first formulated by Aristotle, who saw in it the golden mean between the scepticism of the Sophists and the dogmatism of the popular mind :

'It will contribute towards one's object, who wishes to acquire a faculty in the gaining of knowledge, to doubt judiciously, for a subsequent acquisition in the way of knowledge is the solution of previous doubts. . . . They who carry on an investigation without doubting first are similar to persons ignorant where they ought to walk. . . . There is a necessity that a person should be better qualified for forming a judgment who has heard all the reasons, as it were, of adversaries and opposing disputants' (*Met.* ii. 1).

It has been an advance over even that great thinker to discover the necessary relation of doubt to the acts of knowledge and belief, and so to find the element of faith which lies embedded in 'honest doubt,' provided one 'clings ever to its sunnier side.' In this view doubt is an index of the direction in which life's deeper problems lie. This has been tersely formulated by Royce :

'In these matters the truly philosophic doubt is no external opinion of this or that person ; it is the very essence of our thought. . . . The doubt is inherent in the subject-matter. This doubt is to be accepted as it comes and then to be developed in all its fullness and in all its intensity. For the truth of the matter is concealed in that doubt, as the fire is concealed in the stony coal. You can no more reject the doubt and keep the innermost truth than you can toss away the coal and hope to retain the fire. This doubt is the insight partially attained' (*Relig. Aspect of Philos.* p. 229 f.).

EDWIN D. STARBUCK.

DOUKHOBORS [in pronunciation the *k* is scarcely heard, and the accent is on the last syllable ; there are other forms of the name, but this is the form now usually employed].—The name Doukhobors was used at least as far back as the year 1785, and means 'spirit-wrestlers,' as the Doukhobors claim to fight not with carnal weapons, but armed with the Spirit of Truth. They regard as the founder of their sect a retired non-commissioned Prussian officer who lived and taught in a village of the Kharkof Government about the year 1740, and who, it is thought, was a Quaker. There is every reason to believe this anonymous leader to have been a man of high character, and devoted to the service of his fellowmen. Towards the close of the 18th cent. Doukhobors were scattered from the Volga southward and westward over Southern Russia, with adherents in various other parts of the Empire. The Czar Paul on his accession adopted a policy of toleration towards them, but changed his mind when, in 1799, some Doukhobors openly preached that rulers were not needed. Alexander I. allowed many of the Doukhobors to come together from various parts of Russia and to form a settlement of their own at the 'Milky Waters,' near the sea of Azof (1801–1824). This was a turning-point in their history. From being a religious sect held together by unity of beliefs, anxious to propagate their views among their neighbours, the Doukhobors became a community, and ceased to be propagandists. During the same period, moreover, their leader, Savely Kapoustin, gained such power over his followers that he could declare himself to be an incarnation of Christ, and could claim for himself and his successors Divine honours ; while, on the other hand, his adherents were forbidden to acknowledge that they recognized any earthly leader, so that, even to the present, they endeavour to confuse any outsider who may seek to study their beliefs. It would also appear that the successors of Kapoustin, all of whom gained control of great wealth by the introduction of communism among the Doukhobors, sanctioned the assassination of those who opposed them. At all events, the Russian Government made a thorough investigation of these charges, and in 1841 the Doukhobors were banished from the Milky Waters to the Wet Mountains in Georgia, where the wild hill-tribes were favourably impressed by their non-resisting neighbours, who, when molested, neither retaliated nor sought police protection. There they led a prosperous existence, and later numbered about 20,000. In 1887, when general conscription was introduced in the Caucasus, came the last crisis in their history. Not even the power of the whole Russian Empire

could induce them to join the army once they were persuaded that it is wrong for men to kill one another. Even when they endured it, the Doukhobors had regarded military service as a tyrannous imposition. Meanwhile Tolstoi and his friends, intentionally kept in ignorance of the theocratic claims of the Doukhobor leader, and believing the sect to be merely harmless Anarchists of the Tolstoi type, became interested on their behalf, and at last, in 1898, permission was given them to leave Russia. Far removed and destitute, they suffered much until rescued by the united efforts of Russian, English, and American philanthropists, who came to their assistance in defraying the expenses. Aided by the Canadian Government, 7363 Doukhobors were in 1899 established in Canada, leaving in the Caucasus about 12,000 who did not wish to emigrate. At present their number in Canada exceeds 9000. The welcome given to the first contingent in Canada was overpowering in its cordiality. A salute of artillery greeted them at the port, and the railway journey was a triumphal procession. They were in Canada three years before their leader, Piotr Verigin, was liberated by the Russian Government after sixteen years of exile. The Doukhobor settlements are situated in N.E. Assiniboia, about a day's drive from Yorkton; they stretch still farther to the N.E. over into Saskatchewan on the north, and touch slightly on Manitoba in the east.

The first known leader of the sect was Sylvan Kolesnikof (1750–1775). He was succeeded by Ilarion Pobirohin (1775–1785), and he by Savely Kapoustin (1790–1817), the founder of a Doukhobor dynasty, and the most remarkable of all the leaders. By him communism was also introduced among the Doukhobors. He was succeeded by his son Vassily Kalmikof (1817–1832), and he by Ilarion Kalmikof (1832–1841) and Peter Kalmikof (?–1864). Peter Kalmikof was succeeded by his wife Loukeriya, who proved an exceptionally able leader. She died in 1886, and was succeeded by Piotr Verigin, the present [1911] leader. But his accession provoked such hostility on the part of an important minority that the Government was forced to intervene and to send him into banishment. From his exile he issued mandates, influenced by Tolstoi's teachings, which seemed to the Doukhobors so severe that a considerable split took place in the sect. In consequence, as already noted, less than half of the Doukhobors followed Verigin, these being the ones who emigrated to Canada. Besides those Doukhobors who have been under the leadership of this dynasty, there are other bodies scattered throughout Russia, the extant accounts of whom are so fragmentary that it is difficult to present a consecutive history of them.

Their history shows that, unfortunately, their ills were not always from without. They did not always hold their faith with the same amount of zeal, and it is a history of constant backsliding and revivals. That these revivals were due to the advent of some worthy leader of men seems clearly demonstrated. Recognizing the Doukhobors as morally a race of giants, we must in speaking about them acknowledge the clearness of their perception of certain fundamental formal principles and the heroic tenacity with which they have upheld them. The sect has erred and split in pieces in the past, but the validity of certain principles to which they have testified will remain. The Doukhobor statement of truth is sometimes calm, moderate, persuasive, imparting a philosophic truth to conventional phrases, and at all dangerous points taking refuge in mysticism. At times, on the other hand, it is clear, resolute, radical, and contemptuous of all authority.

The tenets of these men, who will not acknowledge an earthly rulership, may be stated as far as possible to the following effect. There is one God. Their leader Pobirohin in the 18th cent. is said to have explicitly taught that God does not exist by Himself, but is inseparable from man. It is for the righteous in a way to give Him life—a curious doctrine, perhaps, but one which seems to be the mainspring of their innate character. They explain away rather than affirm the doctrine of the Trinity. Jesus Christ was the spirit of piety, purity, etc., incarnate. He is born, preaches, suffers, dies, and rises again spiritually in the heart of each believer. He is the Son of God; but in the same sense we also are the sons of God. The inward word reveals Him in the depths of our souls. It existed in all ages, and enlightens all who are ready to receive it, whether they are nominally Christians or belong to some other religious community. Our souls existed and fell before the creation of the material universe. The Church is a society selected by God Himself. It is invisible and scattered over the whole world; it is not externally marked by any common creed Not Christians only, but Jews, Muhammadans, and others may be members of it, if only they hearken to the inward word. The Scriptures must be understood figuratively to represent things that are inward and spiritual; and the Bible has less authority than 'the Living Word' (which may imply either an 'Inner Light' or the oral teachings of the head of the Doukhobors). The Christ within is the only true Hierarch and Priest. Therefore no external priest is necessary. The sons of God should worship God in spirit and in truth. The external sacraments have no efficacy. To baptize a child with water is unbecoming, but an adult baptizes himself with the word of truth by the true priest, Christ, with spirit and with fire. Confession is heartfelt contrition before God. The external sacraments are offensive to God, for Christ desires not signs but realities. The forms of worship of all Churches in the world are in themselves but dead signs, mere figures. To pray in temples made with hands is contrary to the injunction of the Saviour. Yet a son of God need not fear to enter a temple of any religious community. Icons are regarded as idols; the saints should not be prayed to; fasting should consist in fleeing from lusts. Marriage should be accomplished without any ceremonies; it needs only the will of those who are united in love to one another, and an inward vow in the souls of those who are marrying. An external marriage ceremony, apart from the inward marriage, has no meaning. The Doukhobors hold that no man and woman should continue to live together as man and wife unless they love and reverence each other. They wish to live up to their belief in 'peace at any price'; to go to war is forbidden. They refuse military service, which was the cause of their persecution in Russia and the reason of their emigration to Canada. Taxation, law courts, and all police regulations are condemned. Commerce is despised, and agriculture should be the great source of livelihood. All men are equal, and all rank and power is unnatural and mere usurpation. They believe that men gifted with reason should not use violence against others, but should influence one another by the appeal of mind to mind. Less violence, crime, vice, poverty (apart from the effects of persecution), superstition, luxury, or wretchedness is to be found among the Doukhobors than among their neighbours. They are sober, laborious, and frugal, clean and tidy in their houses and clothing, and attentive to their agriculture, which is their chief occupation. Those in Canada are almost all vegetarians, total abstainers, and non-smokers.

Under their present leader, Piotr Verigin, the

commune in Canada appears to be a financial success. He arrived there immediately upon his release from the Siberian mines, and has proved himself to be an eminently practical man. The Doukhobors adopted improved agricultural machinery, and established various mills, such as flour mills, oatmeal mills, saw mills, flax mills, etc. They also acquired a brick- and tile-making plant. The communism of their villages in Canada is centralized so that the communal funds of both the Doukhobor North and South Colonies are now all under the control of a Committee of Three. A large warehouse for the distribution of goods among the villages is situated in a convenient position on the Canadian Pacific Railway. The Doukhobor community is the largest experiment in pure communism that has ever been attempted. The Doukhobors of the Prince Albert Colony are more individualistic; they do not hold their land in common, and only to a small extent co-operate with the North and South Colonies.

Previous to Verigin's arrival in Canada, there was much confusion among the Doukhobors, who were too ignorant, under new conditions, to arrange their plans; and even after he had come there was some friction with the authorities owing to the Doukhobor reluctance to recognize any allegiance except to Verigin. It is about this question, indeed, that all the trouble of the Canadian Government with the sect has centred, and in consequence more than a thousand Doukhobors, forming the Prince Albert Colony, have formed a sub-sect, marked chiefly by their refusal to render to Verigin the honours to which he lays claim.

DRAMA (Introductory). — 1. **Definition and affinities.**—In the most primitive sense of the term, the word 'drama' denotes simply 'deed,' 'action,' as in Æsch. *Agamem.* 532 f.:

> . . . Πάρις γὰρ οὔτε συντελὴς πόλις
> ἐξεύχεται τὸ δρᾶμα τοῦ πάθους πλέον,—

but before long it had gained the signification which it was henceforth to bear: 'a representation by persons (less frequently by puppets and the like), usually suitably disguised by dress, masks, etc., of acts believed to have been performed, or supposed to be performed, by other beings, the effect often enhanced by appropriate scenery,' etc. That this is true was perceived centuries ago by the most rigidly analytic of all thinkers, Aristotle, in whose *Poetics* tragedy and comedy are among those arts 'which are all in their general conception modes of imitation' (*πᾶσαι τυγχάνουσιν οὖσαι μιμήσεις τὸ σύνολον* [i. 2]); 'hence, some say, the name of "drama" is given to such poems, as representing action' (*ὅθεν καὶ δράματα καλεῖσθαί τινες αὐτά φασιν, ὅτι μιμοῦνται δρῶντας* [iii. 3]; for the Aristotelian meaning of 'imitation' ['an idealized representation of human life—of character, emotion, action—under forms manifest to the sense'], see Butcher's discussion in his *Aristotle's Theory of Poetry and Fine Art*[3], London, 1902, ch. ii.).

Whether the idealization implied by Aristotle may fairly be sought in primitive drama, or in comedy as a whole at any period, or in certain specimens of modern tragedy, is not beyond question; but there still remains the fact that 'imitation'—and imitation only—accounts for the rise of drama and for the attraction which it holds to-day, as in the remote past when it originated. To-day, as in its primitive form, drama is designed to reproduce events which already have happened or which are supposed to be happening; and, since such reproduction normally requires the spoken word, it is obvious, as Aristotle already saw, that the drama is closely connected with the epic and the lyric, the difference being that the epic and the lyric require only the spoken word, while the drama always requires action and, except in rare instances, words as well. These exceptions are formed chiefly by the puppet plays, or marionettes (on which see Pischel, *Heimat des Puppenspiels*, Halle, 1900 [Eng. tr., London, 1902]; Magnin, *Hist. des marionettes*[2], Paris, 1862; Maindron, *Marionettes et guignols*, Paris, 1900; Rehm, *Buch der Marionetten*, Berlin, 1905), which, doubtless originating in India, have spread thence throughout Europe (finally degenerating into the 'Punch-and-Judy show') and also far into the East (cf. the interesting varieties discussed below in the 'Javanese and Further Indian' section). Another exception might possibly be considered to be formed by the modern 'moving pictures,' but these have no right to come under the dramatic category at all.

Drama is also linked to yet another art, the pictorial; but the imitation by means of pictorial art, besides lacking the spoken word, is static, whereas dramatic art is continuous throughout the time which the production may consume. Far otherwise is the case with two more of the fine arts—music (whether instrumental or vocal, or both together) and the dance (using this term in its widest connotation). Indeed, so closely connected with the drama is the dance that the Skr. term for 'drama' is *nātya*, which literally means 'dance'; and even on the modern stage an entire drama may be performed by pantomimic dance, without the utterance of a single word.

2. **Origin.**—By the Aristotelian definition of drama, which is neatly epitomized by Suidas and the *Etymologicum Magnum* as 'a doing, an action . . . and also those things mimetically performed by actors, as in a rôle' (*ποίημα, πρᾶγμα, ὡς καὶ δρᾶσαι, πρᾶξαι. λέγεται δὲ δρᾶμα καὶ τὰ ὑπὸ τῶν θεατρικῶν μιμηλῶς γινόμενα ὡς ἐν ὑποκρίσει*), it is an *imitation* of something. The question then arises, Of what or of whom? On the modern stage this imitation may be of some event known to have happened or supposed to have happened in past time, in both cases considerable elaboration, and even departure from strict historical or traditional accuracy, being allowable to heighten dramatic effect. Such

a drama may be represented by the *Herod* or by the *Ulysses* of Stephen Phillips. Or we may have an acted imitation of a purely fanciful series of events, as in the case of the greater number of Ibsen's plays. Yet it may well be questioned whether in origin the drama admitted any merely imaginary themes. This is, of course, a subject upon which it is extremely dangerous to dogmatize, and our knowledge of the mental processes of primitive man is by no means sufficient to warrant hard and fast conclusions.

The problem with regard to the origin of the drama is here precisely that which confronts us with regard to the folk-tales. It is perfectly true that at a relatively early period folk-tales may be told for the entertainment which they afford, and in like manner a primitive drama, because it chances to give pleasure to its spectators, may come to be regarded as pleasure-giving, and may conceivably be produced time and again for the mere purpose of pleasure. In spite of all this, it seems to the writer highly problematical whether any notion of pleasure, either to actors or to spectators, was intended by drama at its inception. The best evidence at our command seems to show that for primitive man life was by no means simple delight or poetic outlook upon the beauties of Nature, but rather a matter of deadly earnest, a struggle for existence, and a terror of mishap of which we, in modern days, can scarcely form an adequate conception. If such was the case, there can have been scant opportunity of amusement for amusement's sake. We have no right even to assume that the few carvings of primitive European man which have been preserved were made by him for his own delectation; for aught we know they may have been magical in purpose—the figure of a reindeer, for example, being drawn to gain power over reindeer; or they may have been historical—a picture of a reindeer that the particular artist had either tamed or killed (cf., for example, the American Indian 'winter counts'). This is a conjecture, but it is one that must be reckoned with. Again, in the popular stories told as fairy tales to children to-day there is unquestionably present an element—and that element the essential one—which was once believed to be no mere tale to amuse an idle moment, but a fact of grim and terrible reality. The story of Bluebeard is now a common nursery story which the most simple child knows was never 'really and truly so'; but there was undoubtedly a period when it was regarded as an historic and awful instance of the peril of broken tabu (see *CF*, ch. xi.). Throughout their history the drama and the folk-tale have been interlinked; and in India this was also true (cf. Gray, 'The Sanskrit Novel and the Sanskrit Drama,' in *WZKM* xviii. [1904] 48–54). Perhaps the 'dramatized novel' really reproduces at least a portion of the process through which the primitive drama passed. The same principle receives another exemplification from children's games. Without citing the mass of American Indian games to which Culin (*24 RBEW* [1907]) attributes a purely religious origin, it may here be sufficient simply to allude to the basal idea of the English and American game of 'London Bridge' (see *ERE* ii. 852[a]).

If stories, games, and the like were thus profoundly serious in their origin, may not the drama have been equally serious? It must not, of course, be forgotten that early man, like all his succeeding generations, was an imitative creature, and that within the sphere of everyday life he may have seen happening to his fellows events which awakened either his concern or his ridicule, and these he doubtless narrated to his companions with appropriate gestures. In the ludicrous events of this sort, and in the rough jests on his fellows which primitive man may have occasionally permitted himself, may well be found some of the germs of what was later to develop into comedy. Yet, on the whole, it would appear that drama took its origin, not from the imitation of men, but from the actions, whether legendary or mythological, of far more worshipful beings than men, that is to say, of Divine beings, the very gods themselves, as comes out most clearly in the masks worn in the Hopi *katcinas* (cf. below, p. 871 f.). Nor, if this hypothesis be correct, is the reason for such imitation far to seek. The motive was no idle one, nor had it merely a didactic end. It was probably rather one of the wide-spread manifestations of that homœopathic principle of primitive religion conventionally known as 'sympathetic magic.' By representation of an action believed to be performed, or in past time to have been performed, by worshipful beings, it was held that these worshipful beings would be constrained, were the ritual unerringly performed, to repeat the action in question. The drama would thus be, in origin, a part of magic, and, since the action represented by the drama would be desirable to the community, and since the chief needs of a primitive community are normally connected with the food supply and with other matters more or less conditioned by the powers of Nature, there is reason to suppose that the earliest drama was, in the main, associated with the worship of Nature-gods. The theory here advanced seems to receive confirmation from the development of the Egyptian drama (see *ERE*, vol. iii. pp. 99[b], 101 f.), especially when it is remembered that the ancient Egyptians were singularly tenacious of primitive concepts; so that in many ways they recall the far ruder religious principles which we may still find in vogue among the African *Naturvölker*. Yet more elaborate is the drama as a mimetic representation of the acts of worshipful beings among many American Indian tribes, such as the Kwakiutl (Boas, *Rep. U.S. Nat. Mus.*, 1895, p. 500 ff.), but more especially the Tusayans, the Hopi, and the Zuñi (Fewkes, *15 RBEW* [1897], p. 251 ff., *21 RBEW* [1903], p. 40 ff.; Stevenson, *23 RBEW* [1904], pp. 66 ff., 217 ff.). The actors are masked to represent the appropriate deities; and so important is the connexion of dancing with these primitive dramas that one is strongly tempted to seek in some similar phenomenon the origin of the designation of the Sanskrit drama by the simple term 'dance' (*nāṭya*). It is furthermore noteworthy that in the Hopi and Zuñi dramas religious ritual and mimetic representation are so interwoven that any strict limitation of the two is practically impossible. Indeed, Grosse (*Beginnings of Art*, New York, 1897, p. 224 f.; cf. von Schröder, *Mysterium und Mimus im Rigveda*, Leipzig, 1908, p. 13 ff.) goes so far as to declare that the drama 'appears, from the point of view of development of history, as a differentiated form of the dance.' In this connexion it is interesting to note that Hindu tradition declares that the first dramatic representations in the presence of the gods were of three sorts: *nṛtta*, simple dance; *nṛtya*, a dance with gestures, but without words; and *nāṭya*, a dance with words and gestures (von Schröder, p. 14).

There is yet another vital resemblance, not only between the American Indian and the Sanskrit drama, but also between both these and the Greek. This is song normally accompanied by instrumental music. Without here entering upon the theory of poetry, it will be sufficient to observe that the poem, so far as it relates to drama, falls into two large categories, which we may roughly describe as epic and lyric. Epic poetry is pre-eminently narrative, and originally it was perhaps simply a rhythmic narration of events first told in prose.

Lyric poetry, on the other hand, is produced under stress of some sort of emotion. The outworking of this dramatic use of epic and lyric may be seen at its best in the Greek tragedians; but in the Sanskrit drama, on the other hand, although the Hindus were well acquainted with the epic, we have what is in all probability a more primitive type than the Greek; for here we have, not epic and lyric, but prose and lyric, and the Hopi drama shows that, just as in the Sanskrit drama, the lyric is the essential portion of what we may term the text. A clear light is thrown on this matter by the Buddhist *jātakas*, in which the essential teachings of the tales are in verse, the prose being a mere expansion of them; and the same holds true of the *gāthās* in the northern Buddhistic *Lalitavistara*. There is, therefore, much to be said for the theory of Oldenberg (*ZDMG* xxxvii. [1883] 78–82; cf. von Schröder, p. 4 ff., and Geldner, *GIrP* ii. 29 f.) that certain hymns of the Rigveda and the Iranian *gāthās* originally contained a framework of prose, although only the verse, as being the most essential portion, has survived.

We have seen that drama is an imitation of the acts of worshipful beings; and this implies that, to the primitive mind, the actor is, for the time being, the deity whom he represents. It is for this reason that only those deities can be represented with whom the actor believes that he can become identified. In the most primitive stage of belief probably no deity would thus be excluded, but with the development of religion some Divine beings assume a character which no human being can hope to possess. It is universally recognized that the Greek drama was closely connected with the cult of Dionysus, and Miss Harrison is doubtless correct when she writes (*Proleg. to the Study of Gr. Rel.*[2], Cambridge, 1908, p. 568):

'Surely it is at least possible that the real impulse to the drama lay not wholly in "goat-songs" and "circular dancing places," but also in the cardinal, essentially dramatic conviction of the religion of Dionysos, that the worshipper can not only worship, but can become, can *be*, his god. Athene and Zeus and Poseidon have no drama, because no one, in his wildest moments, believed he could become and he Athene or Zeus or Poseidon. It is indeed only in the orgiastic religions that these splendid moments of conviction could come, and, for Greece at least, only in an orgiastic religion did the drama take its rise.'

The drama falls into two main types, which we conventionally term comedy and tragedy. In the very beginning there was probably no such division, for the acts of Divine beings are in themselves neither tragic nor comic; they are events, either desirable or undesirable, and consequently to be deprecated or sought; just as in life itself grave alternates with gay—all blended in one whole. Yet certain events, being more important than others, naturally receive emphasis, and certain seasons when the primitive dramas were presented lent their colour to the mimic action. It was particularly in the spring and at the harvest that the more joyous element was predominant. Many Sanskrit plays explicitly state that they were produced at the spring festival, and we know that the harvest feast was the time in ancient Italy when the *Fescennini* and other rude folk-dramas were enacted (Verg. *Georg.* ii. 385 ff.; Hor. *Ep.* II. i. 139 ff.; Tibull. II. i. 55 ff.; cf. also Liv. vii. 2), in which connexion it is noteworthy that the *Fescinnini* were also sung at weddings (Catull. lxi. 122 f.; for further refs. see Teuffel-Schwabe, *Gesch. der röm. Lit.*[6], Leipzig, 1886, p. 5). The Greek word κωμῳδία in itself means simply 'revel song' (Meyer, *Handbuch der griech. Etymol.*, Leipzig, 1901–2, ii. 345), and Aristotle was, therefore, right when he said that comedy originated from the leaders of phallic songs (*Poet.* iv. 12). Every trait of comedy points to the conclusion that it was a manifestation of happiness at the re-juvenation and re-birth of Nature, and an expression of joy that Nature had given birth to the crops: but, by the wanton and even indecent spirit which this joy often excited, it was doubtless believed that, through the principle of sympathetic magic, a genesiac energy would be inspired in the Divine wedlock of heaven and earth, that similar, and even richer, fertility might be experienced in seasons to come. It is evident that what we call indecency must not be regarded as a primitive motive of comedy at its beginning; yet it must be confessed that libidinous pleasure was doubtless aroused by witnessing or taking part in these comedies. With increasing forgetfulness of the primary purpose of the comedy, the salacity which had at first been a mere incident, and designed (from the point of view of primitive man) for a good and desirable end, came to be the dominating motive; and it is the indecency of the comedy that accounts for many of the protests which, from the days of Tertullian to the present time, have been levelled with only too much justice against the entire drama.

Far different, in all probability, was the origin of the second great type of the drama—tragedy. It is true that this, as well as comedy, has been derived by more than one classical scholar from the same source—the worship of Dionysus (Harrison, p. 568 ff.; Grnppe, *Gr. Mythol. und Religionsgesch.*, Munich, 1906, p. 1436; Farnell, *CGS* v. 229 ff.); but this theory rests on slender evidence. It is far more probable to suppose, with Crusius (*Preuss. Jahrbücher*, lxxiv. [1893] 394), Hirt (*Indogermanen*, Strassburg, 1905–7, pp. 477 f., 727), and Ridgeway (address before the Hellenic Society, 3rd May 1904 [cf. *Athenæum*, no. 3995, p. 660], and especially in his *Origin of Tragedy*, Cambridge, 1910 [see esp. ch. i.]), that the ultimate source of tragedy was in the funeral songs and funeral games celebrated in honour of deceased heroes, the whole being performed to honour and appease the dead. A noteworthy instance here was the case of Adrastus, a hero-king of Sikyon, where his ἡρῷον stood in the market-place. Regarding him, Herodotus (v. 67) writes that

'the Sikyonians were wont especially greatly to honour Adrastus. . . . Both in other respects the Sikyonians honoured Adrastus, and in addition they celebrated his misfortunes by tragic choruses (τὰ πάθεα αὐτοῦ τραγικοῖσι χοροῖσι ἐγέραιον), not honouring Dionysus, but Adrastus. But Cleisthenes gave away (ἀπέδωκε; for the force of this verb, see Ridgeway, *Tragedy*, p. 28 ff., and cf. the parallel ἀπελόμενος ἔδωκε in this same passage) the choruses to Dionysus, and the rest of the sacrifice to Melanippos.'

This theory finds a support in the hypothesis of Hazeu, to be cited below (p. 896), that the Javanese *wayang* was originally a form of ancestor-worship; and Forster (*Reise um die Welt*, ed. Leipzig, 1843, i. 330 f.) saw primitive dramas produced at funeral feasts on the Society Islands.

Here, at a funeral, two young girls danced to the music of three drums, and 'zwischen den Acten führten drei Mannsleute ein pantomimisches Drama auf, in welchem schlafende Reisende vorgestellt wurden, denen einige Diebe mit grosser Geschicklichkeit die Bagage wegstahlen, unerachtet sich jene, grösserer Sicherheit wegen, rund um dieselbe herum gelegt hatten.'

A further confirmation of the theory here advocated appears to lie in the essentially epic movement of the action of the Greek tragedy, and there may be more meaning than is commonly supposed in Plato's characterization of Homer (*Theætet.* 152 E) as 'the foremost poet of tragedy.' In fact, there seems to the writer to be scant reason for connecting the rise of Greek tragedy with the worship of Dionysus, who was essentially a revel god, or, indeed, with any other specific Greek deity. Primarily the son of Semele, an ancient Thracian goddess of Mother Earth, Dionysus was, it is true, later identified with Attis, Adonis, and Osiris, and in an obvious way he was regarded also as a chthonic deity and as releasing from the under world (see the full discussions in Harrison, ch. viii.; Gruppe, pp. 1407–1440; *CGS* v. ch. v.); but

all this seems scarcely sufficient to account for the rise of tragedy from this cult, whereas, on the principles set forth above, his connexion with comedy is readily explicable. At most his association with tragedy rests on the slender logic that, since comedy was (reasonably enough) connected with his cult as a Nature-deity, and since tragedy, like comedy, was a division of drama, therefore tragedy also must be associated with him. Cf. and ct. the 'Greek' art. below.

In this connexion it may not be out of place to consider the original meaning of the word 'tragedy,' which the writer hopes to discuss in fuller detail in the more appropriate pages of a technical philological journal, giving merely his summarized conclusions here. The conventional derivation of *τραγῳδία* from *τράγος* + *ᾠδή*, 'goat-song,' while possible so far as mere phonology and noun-composition are concerned, has long been felt to be unsatisfactory on any of the theories (1) that a goat was the prize for the best performance; (2) that a goat was sacrificed at or during the performance of the play; or (3) that the actors were dressed in goat-skins. It has accordingly been supposed by Miss Harrison (most recently in *Proleg.* p. 420 f.) that tragedy really means 'spelt-song' (from *τράγος* in its meaning of 'a mess of groats made of wheat, spelt,' etc.). This, however, seems little more satisfactory on the score of semasiology. Since comedy is repeatedly contrasted with tragedy, and since 'comedy' almost certainly means, as already noted, 'revel song,' one would expect 'tragedy' to have some meaning antithetic to 'comedy.' If, then, in view of the unsatisfactory derivations commonly assigned to the word, we may resort to the principles of comparative philology for a solution, it may be suggested that the first part of *τραγῳδία*, *τραγο-* (the second part, *ᾠδία*, plainly means 'singing'), is etymologically connected with O. Norse *þrekr*, 'strength, courage, daring,' Anglo-Saxon *þracu*, 'attack, fury, conflict, pressure' (for further, less certain, cognates, reference may be made to the projected article). This would be the second full grade of the Indo-Germanic base **tereg*, and the base meaning appears to be 'mighty, bold, terrible,' or the like. On this hypothesis, the meaning of *τραγῳδία* would be 'the singing of bold (or terrible) things'—a signification that would not only contrast admirably with the 'revel song,' but would also correspond with all known characteristics of the tragedy, as well as harmonize with the theory of the origin of this type of drama favoured in this article, that it was primarily connected with the funeral rites of deceased heroes (cf. also the noteworthy passage of the *Etymologicum Gudianum*, *s.v.* *κωμῳδία*: *Κωμῳδία τραγῳδίας διαφέρει· κωμῳδία γὰρ ἔστι βιωτικῶν πραγμάτων διήγησις· τραγῳδία δὲ ἡρωικῶν παθῶν*).

The original functions of the drama, as here outlined, were soon obscured among all those peoples, as the Greeks and Hindus, with whom it became a distinct form of literature and amusement. The two features which now became prominent, and which have remained the most important ever since, were the light vein of comedy and the heavy vein of tragedy, while the religious foundation survived only in isolated and obscure fragments. Thus comedy became, as with Aristophanes, a means of satire, whether of the 'suffragettes' of his day (as in the *Ecclesiazusæ*) or of the radicalism of Euripides, whom he lashed, and with very good reason. With the rise of the 'New Comedy,' as represented by the fragments of Menander and, most fully, by Plautus and Terence, we have a comedy of manners which finds its analogues in many of the better-class comedies of the present day. India is conspicuous for having no tragedy, though there are scenes, as in the *Nāgānanda* and the *Mālatīmādhava*, which closely approach the tragic, just as in our melodrama.

3. Divisions.—It seems scarcely necessary to enter here into a discussion of all the possible subdivisions of the drama, whether of Polonius's 'tragedy, comedy, history, pastoral, pastoral-comical, historical-pastoral, tragical-historical, tragical-comical-historical-pastoral,' of the minute Skr. classification into ten 'forms' (*rūpakas*) and eighteen 'sub-forms' (*uparūpakas*; see Lévi, *Théâtre indien*, Paris, 1890, i. 140 ff.), or of the more technical division into classic and romantic tragedy, romantic drama, melodrama, emotional drama, spectacular drama, musical drama, classic and romantic comedy, comedy of manners, farce, burlesque, burletta, comedietta, and vaudeville (Hennequin, *Art of Playwriting*, New York, 1890, chs. vii.–ix.); nor is it needful to consider the problems of the unities, climaxes, catastrophes, scenery, 'business,' and the like. It is, however, worth while to note two forms of drama—opera, and the morality. The opera, which is a drama accompanied by music, and often by an elaborate ballet, is a survival of the very primitive type in which the dialogue was regularly associated with instrumental and vocal music and with dancing; and the writer has elsewhere ventured to suggest that the whole Sanskrit drama 'is to be compared with an opera rather than with a play' (*JAOS* xxvii. [1906] 5). The other type of play, the morality, is of particular value for the student of religion, for in it there is a deliberate effort to present, under allegorical form, a distinct moral or religious teaching. This form of play, to which more special attention will be given in art. MIRACLE PLAYS, is found not only in Europe, but also in India, as is evinced by the Skr. *Prabodhachandrodaya* ('Rise of the Moon of Intellect,' tr. J. Taylor, Bombay, 1812, ²1893); and that the morality has not ceased to charm in our own day is shown by the welcome accorded, both in Britain and America, to the charming production of *Everyman*. Finally, it may be noted that, as the writer once heard Brander Matthews say in a lecture, the most primitive form of drama to be found at the present day is that in the lowest type of music hall, with its rough jests and horseplay, its dances (all often of a somewhat questionable character), and its scanty plot.

4. Actors.—The position of the actor in the primitive drama is, of course, a most honourable one; for, where the player is enacting the rôles of the gods themselves, he cannot be other than a most highly respected person; the esteem accorded him is precisely what is accorded, *e.g.*, to the actors in the Passion Play of Oberammergau. But this position of honour does not last long; and in China, Japan, India (cf. the Skr. proverbs given by Böhtlingk in his *Ind. Sprüche*, St. Petersburg, 1870–73, nos. 1593, 2235, 2278, 3165, 5315, 6284), and Rome the actor was regarded as an outcast, this, doubtless, being due, as Krause (*Pariavölker der Gegenwart*, Leipzig, 1903, p. 3 f.; cf. Beneke, *Von unehrlichen Leuten*, Leipzig, 1863, p. 21) says, to the fact that the actor's profession demanded a roving life, so that he could not belong to any regular community, while his subordination of his own personality to the rôles which he was to play robbed him of respect in the eyes of the spectators. In consequence, the actors suffered certain civic disabilities, as when they were debarred from being witnesses in courts of law, or when, as in China, their descendants were forbidden to compete in public examinations for three generations (cf. also Post, *Afrikan. Jurisprudenz*, Oldenburg, 1887, i. 171 f.). Equal contempt was manifested towards actresses, so that in India they were classed among courtesans and bawds (Schmidt, *Beitr. zur ind. Erotik*, Leipzig, 1902, pp. 283, 778 f.); and, as in India and China, many peoples have forbidden women to appear upon the stage, their rôles being taken by men and boys. More or less social ostracism still attaches to the great majority of those connected with the stage, and it is unfortunately true that the lives of many players, with their flagrant disregard of social conventions, and even of common morality, have given only too much reason for disfavour. To the peculiar temptations of stage life, increased greatly by the wanderings to which the actor is normally doomed, only allusion is necessary. Yet it must not be forgotten that this darker side is, in reality, nothing but an unhappy incident; only the faults are generally known, and the brighter and nobler side of the actor's life is too little recognized. Accurate statistics of the moral and intellectual standard of the

acting profession would, doubtless, compare favourably with similar standards of many other professions.

5. The ethical aspect of the drama.—Outside the Christian world this problem seems to have received slight consideration. The Buddhist 'Ten Precepts' for monks include 'abstinence from the sight of dancing, singing, music, and shows' (*naccagītavāditavisūkadassanā veramaṇī* [*Khuddakapāṭha*, 3; cf. the citations in Lévi, ii. 54]); but the history of Buddhism proves that this interdict was ill obeyed (Lévi, i. 319–323). The theoretical position of Jainism against the theatre was the same (*Āyāraṁgasutta*, II. xi. 14), with the same disregard of it in actual life; and we have not only the fine Buddhistic drama *Nāgānanda*, but also such Jain plays as the *Rājimatiprabodha* (Lévi, i. 323 f., ii. 57).

The chief objection to the drama from the ethical standpoint has arisen from Christianity. In the case of the pagan dramas this can readily be understood. They were pagan, and countenanced idolatry (Tertullian's first objection to them in his *de Spectaculis*); they were frankly immoral; and the ascetic tendency of Christianity was against such idle amusements (cf. 'Roman' art. below). With the decay of paganism and the creation of a purer sentiment the first two objections disappeared, while the value of the stage as an educational factor led the Church to encourage the drama; nor is there any doubt that the theatre was a powerful agent in bringing the less educated to a knowledge of Bible history and in enforcing the Church's moral teachings (see MIRACLE PLAYS). The whole tradition of the Catholic Church, whether Roman or Anglican, has been, like that of Lutheranism in Protestantism, distinctly favourable to a pure and lofty drama. Far different was the position of Reformed Protestantism. The most fervent admirers of Calvin, Zwingli, Knox, and their followers would be the most unwilling to deny that these men, one and all, set their faces against everything that they deemed folly; nor can the warmest advocate of the theatre deny that much had come into the drama to arouse antagonism even from men of more compromising type. But, unfortunately, they, as the German proverb has it, 'shook out the child with the bath,' and condemned the theatre utterly. In England, attacks on the stage have come almost entirely from the Puritans, as in Northbrooke's *Treatise wherein Dicing, Dauncing, vaine Playes or Enterluds . . . are reproved* (1577–79, ed. Collier, for the Shakespeare Society, 1843), Gosson's *School of Abuse* (1579, ed. Collier, 1843), Stubb's *Anatomie of Abuses* (1583, ed. Furnivalle, New Shakespeare Soc., ser. vi., 1876–82), and especially Prynne's *Histrio-Mastrix* (1632; on all these see Ward, *Hist. of Eng. Dramatic Lit.*, London, 1899, i. 459–461, iii. 239–245). But suppression of the theatre was hopeless, and has ever since remained hopeless. The Reformed Church has, nevertheless, maintained its position; and in this it has been followed by the Wesleyans and, on the whole, by the Baptists, as well as by many of the smaller sects of the United States, though here, too, practice lags far behind precept. On the other hand, the Anglican Church, by its Actors' Alliance, has set an example which other communions might do worse than follow.

But is the suppression of the theatre desirable? The writer is inclined to doubt it. That there is much represented on the stage which is utterly vile is only too apparent; and that should be crushed (cf. also art. CENSORSHIP). On the other hand, there is an abundance that is of the highest ethical value, and this becomes the more important when it is remembered that the theatre is largely patronized by the non-churchgoing classes. Without entering into a technical discussion of Ibsen, it would seem that his dramas are full of moral lessons of a Puritanical sternness: the fearful consequences of the sins of the fathers in *Ghosts*, the need of absolute confidence between husband and wife in *A Doll's House*, or the scathing condemnation of hypocrisy in *The Pillars of Society*. And Ibsen is but one of a host of dramatists who for centuries have conveyed through the stage lessons of value for mankind who might otherwise never have received them. There is, moreover, in humanity a real need for the stage; had it not been so, the long-waged war on the theatre would have been crowned with success. From this point of view the question of attending the theatre merges into that of amusements (*q.v.*). The theatre has perhaps yet another *raison d'être*, often overlooked. In a famous passage (*Poet.* vi. 2) Aristotle defines tragedy as 'an imitation of an action that is serious, complete, and of a certain magnitude . . . through pity and fear effecting the proper purgation of these emotions' (*μίμησις πράξεως σπουδαίας καὶ τελείας, μέγεθος ἐχούσης . . . δι' ἐλέου καὶ φόβου περαίνουσα τὴν τῶν τοιούτων παθημάτων κάθαρσιν*); and this has been admirably explained by Butcher (*op. cit.* ch. vi.) as meaning that the witnessing of a tragedy rouses in the spectator emotions of fear and pity which expel those same emotions that are lying latent within himself, while 'in the pleasurable calm which follows when the passion is spent, an emotional cure has been wrought.' On this principle, the attendance on any good drama would, in like manner, effect a pleasurable and healthy excitation, and a discharge of emotions, latent indeed, but so seldom aroused as to be in danger of atrophy.

LITERATURE.—The bibliography of the drama is enormous, though much is irrelevant in the present connexion, and more special branches will be given in the literature appended to the following special sections. This section has been intentionally restricted to problems of the origin, primitive purpose, and general ethics of the drama; and the history—here omitted—will be more appropriately discussed in the following sections. There is no complete history of the drama, the most important works on which are Klein, *Gesch. des Drama's* (14 vols., Leipzig, 1865–86); Prölss, *Gesch. des neueren Dramas* (Leipzig, 1880–83); Petit de Julleville, *Histoire du théâtre en France* (Paris, 1880 ff.); Berendt, *Schiller—Wagner* (Berlin, 1901); Ward, *Hist. of Eng. Dramatic Lit. to the Death of Queen Anne* (3 vols., London, 1899); Seilhamer, *Hist. of the American Theatre* (Philadelphia, 1888–91). For interesting studies of some of the great modern dramatists, see Archer, *English Dramatists of To-Day* (London, 1882); Huneker, *Iconoclasts* (New York, 1905); Hale, *Dramatists of To-Day* (New York, 1905). Special attention is due to the edition and commentary on the *Poetics* of Aristotle by Butcher (*Aristotle's Theory of Poetry and Fine Art*[3], London, 1902), and Ridgeway, *Origin of Tragedy, with Special Reference to the Greek Tragedians* (Cambridge, 1910). The technical side is conveniently treated by Freytag, *Technique of the Drama* (tr. MacEwan[3], Chicago, 1900); Woodbridge, *The Drama, its Law and Technique* (Boston, 1898); Price, *Technique of the Drama* (New York, 1892); Hennequin, *Art of Playwriting* (New York, 1890). For an interesting form of primitive drama among the Manses of N.W. Siberia, see Gondatti, *Traces of Paganism among the Aborigines of N.W. Siberia* [Russ.] (Moscow, 1888; epitomized by Schmidt, in *Cultur der Gegenwart*, i. part 7 ['Die orientalischen Literaturen'], Leipzig, 1906, p. 21 f.).

LOUIS H. GRAY.

DRAMA (American).—In America, particularly in Mexico and Peru, the drama reached a relatively high degree of development. Even at an earlier stage, North American Indian pantomimic dances, usually named after the animals imitated, show an approximation to the drama. Thus, among the Dakotas, a youth on admission to full tribal rights was clothed in a bearskin and pantomimically hunted by the members of the tribe—a scene which reminds one of the Greek mimetic dance described by Xenophon (*Anab.* vi. 1). Among the Puebloan Tusayans and Hopis an elementary form of drama is found in the *katcinas*, which are primarily 'spirits of the ancients of the

Hopis, and personations of them by men bear the symbols which are supposed to have characterized these ancients' (Fewkes, 'Hopi Katcinas,' p. 16). In a secondary meaning *katcina* also connotes a dance in which these heroes are impersonated; and such dramas are presented at stated festivals in honour of the arrival or departure of the heroes or gods. Other *katcinas*, while equally religious in origin and spirit, are given only occasionally. Some *katcinas*, such as the *powamû*, or bean-planting, are performed partly in the open air, and occupy a number of days; but others are given in the *kivas*, or assembly-houses, and approximate more closely to the drama proper. One of the latter class, described in considerable detail by Fewkes (*op. cit.* pp. 40–51; *Proceedings of the Washington Academy of Sciences*, Washington, 1900, ii. 607–626), is noteworthy for its elaborate mimetic dances, while dialogue, as in the Polynesian dramas, plays but a minor part. In the Hopi play, moreover, scenery is employed and stage properties are used, while marionettes are not unknown. Costume is, of course, an important feature of the *katcinas*, and the masks are a characteristic part of the entire ceremony (cf. the collection reproduced by Fewkes, *op. cit.* plates i.–lxiii.).

In Yucatan a form of drama was known, in which 'buffoons' (*balzam*) represented ancient legends, interspersed with jests at the expense of local dignitaries; but such plays seem to have had no connexion with religion (Fancourt, *History of Yucatan*, London, 1854, p. 122). Both in ancient Mexico and in Peru mimetic dances were known (Klein, *Gesch. des Drama's*, Leipzig, xi. [1874] 97 f.), the former being in great part fertility-ceremonies, and accompanied with phallic gestures. The Aztecs also had, however, a more developed drama, of which an example has survived in the *Rabinal-Achi*, a sort of ballet with dialogue. This play is concerned with the tragic fate of Prince Cavec Quiche Achi, who is captured after a long struggle by the hero, Rabinal-Achi. As a dramatic production the *Rabinal-Achi* is of little value, excepting as an interesting example of a play produced by a people devoid of contact with other nations possessing a developed drama.

The Inca *amantas*, according to Garcilasso de la Vega, ii. 26 (tr. by Markham, Hakluyt Society, London, 1869, xli. 194), composed both comedies and tragedies, which were presented at important festivals before the king and high nobles, while the actors, who received rich presents for their services, were themselves men of rank. The tragedies 'always related to military deeds, triumphs, and victories, or to the grandeur of former kings and of other heroic men. The arguments of the comedies were on agriculture and familiar household subjects. . . . They did not allow improper or vile farces; but all the plays were on decorous and important subjects, the sentences being such as befitted the occasion.'

The only Inca drama which has survived in its entirety, however, is the play of *Ollanta*, which seems to date from the reign of the Inca Huayna Ccapac, in the first decade of the 16th century. The scene is laid in the reign of the Inca Yupanki, in the early part of the 15th cent., and the theme is one of love. Ollanta, raised from a humble station to the dignity of a chief by the Inca Pachacutek, falls in love with Cushi Ccoyllur, the daughter of Pachacutek, but his suit is denied by the Inca. Ollanta then declares war upon his sovereign, and, though at first successful, is at last betrayed to his enemy. Meanwhile the princess had been imprisoned, and in her cell had given birth to a daughter, who, however, was allowed her freedom. The captive Ollanta, condemned to death by Yupanki, who had succeeded Pachacutek in the course of the ten years' war, is later spared, and even declared the heir-apparent to the throne. At this juncture, Ollanta's daughter, learning that her mother is a captive, implores the Inca to release her, whereupon he repairs to the cell, accompanied by his retinue, and in the happy *dénouement* Cushi Ccoyllur is re-united with Ollanta. The drama may well have a historic basis, and it is noteworthy that it contains songs which strikingly correspond to the Greek chorus.

Another Inca drama has been preserved, the *Usca Paucar*, treating of the love of its hero for the beautiful Ccori-ttica; but it has been so changed by later interpolations that it is of relatively little value for a knowledge of the Inca drama. While a generalization on such scant data may be deemed hazardous, it may perhaps be suggested that in the bloody fate of the Aztec Rabinal-Achi, who dances to his death on the sacrificial stone amid twelve eagles and wild beasts, as contrasted with the beauty and pathos, with a happy ending, of the drama of *Ollanta*, there is a suggestion of the cardinal traits of the ancient Mexicans and Peruvians themselves. Dramatically, moreover, the Aztec play is far inferior to the Inca—the former a mass of repetition, the latter a work of art, which is most closely paralleled in its supreme devotion to the theme of love, as Klein has well pointed out, with the drama of ancient India. In the number of acts, exceeding the conventional five, and in the disregard of the 'unities,' the *Ollanta* presents another point of similarity with the Sanskrit drama.

LITERATURE.—Gerland, *Anthropol. der Naturvölker*, iii. 210 (Leipzig, 1862); Fewkes, 'Tusayan Katcinas,' in *15 RBEW* (1897) 251–313, 'Hopi Katcinas,' *21 RBEW* (1903) 1–126; Klein, *Gesch. des Drama's*, iii. 513–598 (Leipzig, 1866); Preuss, 'Phallische Fruchtbarkeits-Dämonen als Träger des altmexikanischen Dramas,' in *AA*, new series, i. 129–188; Brasseur de Bourbourg, *Gramm. de la langue quichée* (Paris, 1862; containing the text and a French tr. of the *Rabinal-Achi*); Tschudi, 'Ollanta, ein altperuanisches Drama,' in *DWAW*, philos.-hist. Classe, xxiv. 169–384; Fletcher, 'Dramatic Representation,' in *Bull. 30 BE*, part 1, p. 400 (Washington, 1907).

LOUIS H. GRAY.

DRAMA (Arabic).—It is a strange feature of Arabic literature (otherwise so rich, developed even to the point of degeneration) that the art of the drama has never advanced beyond the very crudest beginnings.[1] Even to-day there is no Arabic drama; there is only a drama in the Arabic language; for all plays that have appeared in the language of Muhammad during the last fifty years are nothing but translations, or, at best, imitations, of European works; and, before this period, all that was written and played in the form of dialogue can hardly be called drama in the real meaning of the word; it was simply a rudimentary form of it.

The earliest traces of Arabic dramatics are to be found, as Horovitz says, in the art of the *ḥākī*,[2] or *muqallid*, the imitator of dialectic[3] and personal peculiarities. This individual, though not now known under the same name, is still to be frequently seen in modern Egypt. A certain Aḥmad Fahîm al-Fâr in Cairo, for instance, enjoys a wide-spread popularity because of his ability to reproduce the cries of different animals and to depict comic scenes of all kinds, especially those of harem and peasant life.[4] Women, in particular, are very fond of such

[1] Richard F. Burton, in the terminal essay of his tr. of *The Thousand Nights and a Night* (Benares, 1885), vol. x. p. 166, says: 'Turkey is the only Moslem country which has dared to produce a regular drama.'

[2] Horovitz, *Spuren griech. Mimen im Orient* (Berlin, 1905), pp. 18–21; Sachau, *Am Euphrat und Tigris* (Leipz. 1900), p. 65.

[3] Dialectic peculiarities still play an important part in the Arabic farce, the shadow-play, and the puppet-show.

[4] Aḥmad al-Fâr, known under the name Ibn Rabiya, works with a troupe of about 12 persons, exclusively men, who also play the female rôles. His most popular pieces are the *faṣl eṭṭurugî*, a most indecent farce picturing the deeds of a charlatan who expels a devil, an *'afrit*, from a woman; the *faṣl eṣṣa'îdi*, wherein

performances. A similar figure in the streets of Cairo is the well-known, but nowadays rarely seen, fun-maker, *'Alī Kākā*,[1] who appears occasionally at *mūlids* (birth festivals), and at the fair held every week on the open square below the Citadel. He is the prototype of the coarse, half-idiotic, clownish peasant who, to the music of two flutes and a *darabukka* (earthenware drum), performs ape-like, obscene dances and makes absurd jokes. He goes barefoot, and wears a bent tail of stiffened cotton; in one hand he holds a long peasant's stick (*nabbūt*), and in the other a so-called *fargilla*, a kind of long, thick, noisy, but harmless, whip of twisted cotton, with which he constantly lashes his musicians, and even his audience.

The recitations of the story-tellers (*rāwī*), who were formerly to be found throughout the Arabic Orient, and who related in public places tales from the *Arabian Nights*, had without doubt, as the manner of the stories themselves proves, a dramatic character;[2] and this is certainly so in the case of the recitations of the modern epigones of the *rāwīs* —the *šu'ara* and *muḥaddithīn*,[3] who, to the accompaniment of the *rubāba* (a kind of stringed instrument), recite in coffee-houses the stories of 'Antar, Abū Zaid, Ẓāhir Bībars,[4] and other national heroes. Worthy of note is the fact that Dozy,[5] quoting Pedro de Alcala, gives for the word *šā'ir* the meaning 'acteur, qui joue un rôle (representador de comedias, de tragedias).' Female reciters are also occasionally, though not often, seen at fairs in Cairo.

Of this kind of folk-literature the classical and highest expression was reached by the poets of the *Maqāmāt*, by Ḥamadhānī[6] (967–1007), Ḥarīrī[7] (1054–1122), and many others. The *maqāma*, called by Chenery[8] 'a kind of dramatic anecdote,' relates, in a most vivid and animated but somewhat artificial style, the deeds and speeches of wandering scholars, beggars, and jugglers, and has not even yet entirely disappeared from modern Arabic literature.[9]

In spite, however, of all these preparatory mimic and dramatic elements in their literature, the Arabs, as has already been stated, have never found their way to the actual drama. At all events, there seems to be no positive proof of the existence of an early Arabic stage. If, occasionally, we meet with the word *ḫijāl* or *ḫajāl*,[10] it means, in all probability, nothing more than the already mentioned *taqlīd*,[11] the mimicry of comical personal characteristics, or the presentation of short, loosely connected scenes, not a theatrical piece. The complete lack of all dramatic texts, the absence even of the description of any dramatic representation, would be, when one considers the numerous chronicles of mediæval Arabic amusements, an altogether too remarkable omission to be regarded as possible, had there been a stage. The earliest description of an Arabic drama known to the present writer is that given by the famous Danish traveller, Carsten Niebuhr,[1] who visited Cairo a hundred and thirty years ago; but even this performance, which bears a close resemblance to the scenes of Aḥmad al-Fār, seems to correspond in form only, not in substance, to our conception of the drama.

The reasons for this curious failure of the Arabic mind to produce anything really dramatic have been discoursed upon at length by Jacob in his history of the shadow-play.[2] He points out that the Muhammadan view of life, with its autocratic idea of God and fate, has absolutely no comprehension of individual conflict, of rebellion against the 'eternal mover,' the Muḥarrik, or of any combat between will and duty, and has therefore no comprehension of the dramatic. Joy in tragedy, that most individualistic form of dramatic art, must seem to the passively feeling and thinking Arab a very great absurdity. The artistic pleasure which we feel in the beauty of the awe-inspiring, in magnificent decline, in the grandeur of the desperate battle of life, without hope and without success, is entirely foreign to the Arab. His ideal hero is too practical to allow himself to be useleasly conquered, and no Arab poet would venture to represent him in such a manner. He does not defy fate: he gets round it! It never occurs to the Arab to try to determine the main lines of his own life, for 'there is no strength or power but in God the Great'; his eye is turned towards that which lies nearest, to the detail, that which is decorative only; all Arabic art is nothing but detail work, merely putting on the finishing touches; it is never original creating; the great decisive tendencies and forms of art have always come to the people of Muhammad from other lands.[3] Their manner of thinking, too, is epic, and opposed to all rapid development. For them accumulation, repetition of the same *motif*, is not tiring or an evidence of bad taste; on the contrary, they consider it a most effective artistic principle. Quick action in the progress of a story, that which is really dramatic, is therefore actually unpleasant to the Arab. He relates everything with epic breadth, never referring to an already related incident without repeating the whole story to the point of tediousness. Tension in the plot is unknown to him; when he has found a theme that pleases him, he makes variations upon it until the subject is completely exhausted. This is well illustrated by Arabic music. A European listener, after half an hour of such music, with its constant reiteration of the same series of tones, its interminable variations of the same melody consisting of scarcely a dozen notes, sinks into a state of despair, whereas the Oriental never has enough of it.

The only form of dramatic art which, though probably not originated by the Arabs, has nevertheless been developed to a certain degree by them, is the shadow-play, the *ḫajāl eddill*.[4] The history of the Arabic shadow-play, thanks to the thorough investigations of Jacob,[5] and to the publications of Littmann,[6] Kern,[7] Prüfer,[8] Wetzstein-Jahn,[9] and, lately, those of Kahle,[10] is now, in its essential points, very well known. There is undoubtedly no question that the shadow-play was brought to the Muhammadan peoples of the Orient from the Far East.[11] Which of those peoples was the first to cultivate this curious kind of theatrical art, it is

are described the adventures in Cairo of a stupid, yet shrewd, peasant of Upper Egypt; and the *faṣl el-Ḥigāz*, the pilgrimage to Mecca. Aḥmad al-Fār's performances are given only at weddings and other private festivities.

1 See Kern in the Appendix (p. 104) to Horovitz's work cited above.

2 Burton (*op. cit.* x. 9, note 1): 'No wonder that the *Nights* has been made the basis of a national theatre amongst the Turks.'

3 An exact description of the *šu'ara* and *muḥaddithīn* and of their performances is to be found in Lane's *Manners and Customs of the Modern Egyptians*, 1836, chs. 21–23.

4 The subjects of these recitations have all been published in romance form. See, for example, *Sīret eẓ-Ẓāhir Bībars* (Cairo, 1908, 50 vols.); *Sīret Banī Hilāl* (Beirūt, 1891, 52 vols.); *Tagrībet Banī Hilāl* (Beirūt, n.d., 26 vols.); and *Sīret 'Antara* (Cairo, A.H. 1306–11, 24 vols.).

11 Cf. Jacob, *Gesch. des Schattentheaters* (Berlin, 1907), p. 4: 'Die Forschung der letzten Jahre hat darüber jeden Zweifel benommen, dass die Heimat des Schattentheaters im fernen Osten zu suchen ist' (p. 4).

difficult to say, but there is no great probability that the credit belongs to the Arabs. The earliest mention of the shadow-theatre in Arabic literature is found in the verses of Wagīh ad-Dīn Dhijā' b. 'Abd al-Karīm el-Munawī (13th cent.), quoted by Ghuzūlī and translated by Jacob.[1] It is obvious, however, that the play must have been known in Egypt before that time, because Ibn Ḥigge[2] speaks of a shadow-player who performed before the Sultan Ṣalāḥ ad-Dīn (1169–1193) in Cairo. From this time onwards the existence of an Arabic shadow-stage, especially in Egypt, which, as Jacob observes,[3] seems always to have been the land where the *ḫajāl eḍḍill* has flourished the most, has been proved by several passages in Oriental and Occidental literature.[4] If Kahle,[5] influenced by statements made by a modern shadow-player of Cairo, and by the self-glorifying poetry of the father of the same player, thinks that the *ḫajāl eḍḍill* was unknown in Egypt from the beginning of the 19th cent. until about 1860, the present writer fears that his opinion is not wholly tenable. There is evidence that the shadow-play existed during this period of time in Egypt. Lane, for instance, of whom Kahle asserts that he does not mention the shadow-play with a single word,[6] speaks of such a play, although the *khayal ed-dill* (sic !) which he mentions was given in the Turkish language.[7] It is not clear from the statement of Didier,[8] who saw a 'lanterne magique' (*kara-gueuz*) in Cairo, in the year 1859, whether he witnessed a Turkish or an Arabic performance, but at all events it was a shadow-play at which he was present. The probable truth of the matter is that the play did in fact become for a time almost obsolete in Egypt, and that Ḥasan el-Qaššāš, the father of Kahle's informant, the self-styled re-inventor of the play in this country, came into possession, in some manner, of the old manuscripts, and may thus very likely have acquired an influence on the development of the play. Certain it is that the Egyptian shadow-performers of to-day regard Ḥasan el-Qaššāš and his son Derwīš as their masters.[9] Some of the manuscripts are now in Kahle's hands.[10]

Kahle's texts and three pieces written by the Egyptian physician, Muḥammad ibn Dānijāl,[11] in the 12th cent. A.D., are up to the present time the only two known shadow-play manuscripts. The poetic form that is common to both has given place, in the modern productions, to a prose dialogue, which is only occasionally interrupted by songs and passages in rhymed prose. In the Syrian pieces, published by Littmann, the poetic lines seem to be entirely lacking. The pieces of Ibn Dānijāl have disappeared from the present shadow-stage, while Kahle's plays, although in essentially different form, are still given in Cairo. The répertoire of the Cairo shadow-players is not very large; only the *li'b eddēr*,[1] consisting of many acts (*faṣl*), and the much shorter *li'b elmarkib*,[2] undoubtedly influenced by the Turkish Karagöz-play, *Kajyk ojunu*,[3] are still frequently produced. The other pieces mentioned by Prüfer and Kern[4] are very seldom given, and then only by special request. The above-mentioned Syrian plays are, in material and *dramatis personæ*, much nearer to the Turkish Karagöz than are the Egyptian pieces.[5]

The shadow-theatre, as a folk-amusement, can now hardly be said to fill an important rôle in the Arabic Orient. In fact, most of that which is indigenous, including native art-ideas, is slowly disappearing behind a thin veneering of European culture. The Europeanized *efendi* snobbishly prefers the Frankish theatre, even though it bore him, to his own native stage; and the *šēḫ* and small bourgeois do not dare to risk their reputations by letting themselves be seen in the obscure dens in which the shadow-play has been obliged to take refuge from European innovation. Thus there now remains only the lowest class to form an audience for a production, of which an unknown Arab poet has written:[6]

'A meaning deep is in the shadow-play
For him who sits on wisdom's highest throne.
Figures and forms pass by and fade away,
Then all is gone, the ruler stays alone.'

The scenic apparatus ('*idda*) of the *ḫajāl eḍḍill* is the simplest imaginable.[7] The player (*usṭa*) sets up his *kušk*, a movable wooden booth, wherever he wishes it; there he sits behind a tightly stretched muslin curtain (*šāš*), which is lighted from behind by a primitive oil lamp (*šī'la*), and presses the transparent leather figures against the curtain by means of wooden sticks fastened to the figures at the back, and serving at the same time to move their limbs. The player is supported by his troupe (*gōg*), who help him with the manipulation of the figures and in reciting the different rôles.

The only shadow-stage where continual performances were given, the little theatre in the ill-famed Cairo Fish Market, has been closed, by order of the police, since the beginning of the summer of 1909; so that, for the time being, at any rate, the play can be seen only on the occasion of folk-festivals, or, sometimes, at weddings and other family merry-makings.

As Kahle[8] tells us, figures older than forty years are not to be found in the hands of the Egyptian shadow-player of to-day, and one can hardly judge from the present figures what the old ones were like. Derwīš shows, with pride, pictures and fashion-plates of the early seventies, and says that they were the models for the modern figures.

Besides the *ḫajāl eḍḍill*, there exists in Egypt a marionette show, whose hero bears the same name as the protagonist of the Turkish shadow-play—Karagöz, pronounced in the Cairo vernacular, *Aragōz*.[9] Under this name the puppet-show is mentioned in the *Description de l'Egypte*.[10] Carsten Niebuhr[11] also describes at length the Cairo marionettes. The picture, however, which he

[1] Cf. Jacob, *op. cit.* p. 30 f. [2] *Ib.* p. 32 f.
[3] *Ib.* p. 33.
[4] Jacob gives an exhaustive index of the shadow-play literature in his *Erwähnungen des Schattentheaters in der Welt-Litteratur* (Berlin, 1906). It may be added that the shadow-play was mentioned in a work written at the end of the 17th cent., the *Hazz el-quḫūf* of Serḥinī (Būlāq, A.H. 1274 [A.D. 1857]), p. 39.
[5] See Kahle, *Zur Gesch. des Schattentheaters in Egypten*, p. 4 f. Kahle himself, in his very important *Islamische Schattenspielfiguren aus Egypten* (1911), modified his former opinion somewhat.
[6] *Ib.* p. 3.
[7] Lane, *Manners and Customs of the Modern Egyptians*, p. 359. 'Les ombres chinoises' are mentioned also in *Description de l'Egypte*, vol. xviii. p. 441.
[8] *Les Nuits du Caire*, Paris, 1860, p. 353: '. . . et a côté la lanterne magique, *kara-gueuz*, ravissait la foule par de fabuleuses obscénités. . . .'
[9] Parts of the texts of the shadow-player Mūsā Eššā'ir are in Kern's possession.
[10] Derwīš is still in possession of a number of fragments of shadow-play manuscripts.
[11] An extensive study of these three pieces may be found in Jacob's *Gesch. des Schattentheaters*, pp. 34–75. Besides the two manuscripts of Ibn Dānijāl's plays described by Jacob, another exists in Cairo. It is in the hands of Aḥmad Bē Teimūr, who kindly gave the present writer permission to have it copied. The manuscript, which is not clearly dated, seems to be not much older than 300 years.

shows on plate xxvi. does not give a correct idea of the modern marionette stage, and very likely not of the old one. Didier[1] speaks of 'polichinelle arabe.' But an exact description of the Egyptian Aragōz-play[2] has never been published, nor have its texts ever appeared in print.

The only Aragōz-player known to the writer at the present time [1911] is the *usṭa* Aḥmad 'Alī el-Ḫuḍarī, who lives in Būlāq, in the Turgumān quarter. His little theatre is even simpler than that of the shadow stage; it consists of a folding booth of cloth, not much higher than a man's head; the front side is somewhat lower than the other sides, and the player sits inside this *kušk*, moving on his fingers, just above the edge of the front side, the roughly made wooden figures, which are dressed in bits of coloured cloth, the puppets being visible to their hips. More than two figures cannot appear at the same time. The répertoire is very limited, and, just as in the Turkish shadow-play, but in contrast to the Egyptian *ḥajāl eddill*, some types of the *dramatis personæ* re-appear in every play (if these loosely strung scenes and dialogues can be called plays): *e.g.* Aragōz, the cruel, stupid, yet sly clown, similar to the characters Punch, Kasperle, and Pulcinello, and the dialect types,[3] such as the loud-mouthed Turkish soldier, the uncouth Nubian, and the Italian or Greek priest; then the saucy beggar, and the different female figures from the lively Ezbekīje quarter. A characteristic feature of Aragōz is the high, nasal voice, produced by the player by means of the *zummara*, a little whistle which he holds in his teeth. Aragōz wears the *ṭarṭūr*,[4] or pointed fool's-cap. The player has an assistant who joins the audience and carries on the conversation with Aragōz when the latter is alone on the stage and addresses the public.

Considered æsthetically and as an element in the development of Arabic culture, the Aragōz-play stands on a much lower plane than the *ḥajāl eddill*. Written texts apparently do not exist, and the tradition has therefore not much stability. Improvised jokes and the mood of the player change the wording of the piece without let or hindrance. The show is occasionally to be seen at fairs and at weddings of the lowest order.

The following is a *faṣl*, or marionette play, dictated to the writer directly by Aḥmad el-Ḫuḍarī:

Aragōz: essalām 'alēkum naḥārak sa'id wēmubārak salāmāt šarraftūna[5] wāgarrastūnā.[6] āh jāna min gharāmuh win kunt aḥibbak lam 'alai ja malāma.	Peace be with you! May your day be happy and blessed! My compliments! You have honoured us and disgraced us. Woe be unto me because of my love for you! But if I love you, I cannot be blamed for it [a very obscene Turkish curse].
Gindī (a Turkish soldier who had been asleep): abradana sana sitikihim[7] fallāḥ ḫaššāš ḫanzīr jabn elkalb jin'al abū ummak.	You peasant! You hashish-smoker! Pig! Son of a dog! May your mother's father be cursed!
Aragōz: inta magnūn wallā masṭūl.[8]	Are you crazy or drunk?
Gindī: ana ba'dēn amauwitak.	Later I shall kill you.
Aragōz: taijib rūḥ liḥālak.	All right! Go about your business.
Gindī: win ma-kuntiš arūḥ. (Aragōz beats him.) ti'mil ē jā wād ba'dēn amauwitak.	And if I won't go? What are you doing, boy? Afterwards I shall kill you!
Aragōz: šarraftūnā wānistīnā jā sī mauwitak.	You have honoured us and made us happy, Mr. I-shall-kill-you!
(The soldier beats him and goes away.)	
Aragōz (to the audience): mauwitūnī wāḍarabūnī wāmazza'ū minna 'esakkō wazza'būt.[1]	They have killed me, and beaten me, and torn my jacket and my smock-frock!
Voice from the audience: wāba'dēn baqā.	Well, and then?
Aragōz: aqūl limrātī.	I shall tell my wife!
Voice: ismihā ē.	What's her name?
Aragōz: Baḥita jā bint jā Baḥita jā mara jā Baḥita.	Baḥita. Girl! Baḥita! Woman! Baḥita!
Baḥita (who is not his wife, but a woman of a public-house): ṣabbāḥak ḫēr.	May your day be happy!
Aragōz: a'ūzu billāh jā Baḥita.	God save me, Baḥita!
Baḥita: mā lak jā ḥabībī mā lak jā ṣalāt ennabī 'alēk wa 'ala ṭarṭūrak jā ḥabbet 'ēnī ta'āla jā ḥabībī nerūḥ genēnet el-Ezbekije nitfassaḥ sauwa.	What is the matter with you, my dear? What is the matter with you, oh you, on whom and whose *ṭarṭūr* be the prayer of the prophet! You pupil of my eye! Come, my dear! Let us go to the Ezbekije garden, and take a walk there together.
Aragōz: rūḥī 'tfassaḥī fī harrāra imšī min hina jā mara jalla.	Go to walk in the cesspool! Go away from here, woman! Go!
Baḥita: ana wiḥša ana muš a'gibak.	Am I ugly? Don't I please you?
Aragōz: inti wiššik zaijē wišš abū šabat.[2]	Your face is like the face of a centipede.
(Aragōz beats Baḥita off the stage, and knocks with his *nabbūt* on the wall.)	
Aragōz: jā bint jā Dūdū (calling another woman).	Girl! Dūdū!
(Dūdū, abominably ugly, appears, coughing excessively.)	
Aragōz: bass bass 'ala bēt abūkī 'ala 'ṭṭūl.	Enough, enough! [curse] upon the house of your father at once!
(He beats her away from the stage.)	
Aragōz: (knocking again) jā wuled jā barbarī.	Little boy, Berberine!
Barbarī (from inside): jā Aragōz mā lak.	What's the matter, Aragōz?
Aragōz: fēn hūwa 'lbarbarī (the Berberine appears) da barbarī iswid wamukaššar tiḥdim jā barbarī.	Where is the Berberine then? That is a Berberine, black and sullen! Are you in service, Berberine?
Barbarī: ḫaddām markūbak 'ala ḥabbet 'ēnak min fōq.[3]	Servant of your shoe! Upon the pupil of your eye from above.
Aragōz: elbadawīje[4] jā salām 'alēk wā'alaija.	Oh, ye saints! Mercy on us, you and me!
(Berberine disappears.)	
Saḥḥāt (beggar): 'āgiz maskīn ardabbē bāmja[5] wānuṣṣ lillāh.	[I am] infirm, poor! For the sake of God, one and a half *ardabb bāmja*!
Aragōz: wādē de kamān.	Now what's this again?
Saḥḥāt: šaḥḥāt 'āwiz jākul.	A beggar, who wishes to eat.
Aragōz: tākul ē.	What do you wish to eat?
Saḥḥāt: ākul ruzzē wūruzz.	I would like to eat rice and rice.
Aragōz: ruzzē ē wūruzzē ē.	What kind of rice and what kind of rice?
Saḥḥāt: ruzzē bilaban wūruzzē mefalfil.	Rice with milk and rice *pilav*.
Aragōz: (imitating his accent) wūruzzē mefalfil.	And rice *pilav*!
Saḥḥat: wābitingān qūta.	And tomatoes.
Aragōz: (beats him) ḫud ruzzē wūruzz.	Take some rice and rice!
Gindī: kamandūr[6] nimritak tili'et fī 'l 'askarīje tāḥud rutbet šawīš riglak eljemīn gamb eššimāl imsik elbarūda.	Who is there? Your number came out for military service. You will have the rank of a *šawīš*. Your right foot beside the left! Take the musket!
Aragōz: tōb[7] 'alaija jā rabb.	Lead me to repentance, O Lord!

[1] *Les Nuits du Caire*, p. 353: '. . . et tout près le polichinelle arabe débitait aux badauds ses lazzi grivois, car le théâtre de guignol n'est pas le privilège exclusif des Champs-Elysées.'

[3] Dialectic peculiarities form an essential part of Egyptian folk-humour, just as they do in Turkish folklore. Cf. Jacob, *Türk. Litteraturgesch. in Einzeldarstellungen*, pt. i. 'Das türk. Schattentheater,' Berlin, 1900, pp. 29–37.

[4] See Prüfer, *Ein ägypt. Schattenspiel*, p. 40, note 3.

[5] A comical over-politeness such as one often finds among ignorant Egyptians. Cf. Prüfer, *op. cit.* p. 38.

[6] Said jokingly for *ānistūnā*, 'we are glad to see you.'

[7] Barbarous Turkish for *ōrada anasyny sikidim*.

[8] 'Intoxicated' (Spiro, *Arab.-Eng. Vocabulary*, Lond. 1895).

[1] 'Sarrau de laine brune, ouvert depuis le cou jusqu'à la ceinture et ayant les manches larges, que les hommes du peuple portent en Egypte, surtout en hiver' (Dozy).

[2] Instead of *šabath* ('millepieds, scolopendre' [Dozy]).

[3] The meaning of this sentence is very ambiguous. It may mean the expression of obedience as well as that of a curse.

[4] The derwishes of the order of Saiyid Aḥmad el-Badawī.

[5] One *ardabb*, a measure for cereals, is equal to 197·75 cubic litres. *Bāmja*, hibiscus (leguminous plant) (Spiro, *Arab.-Eng. Vocabulary*).

[6] For *kindir*.

[7] For *tauwib*.

Gindī: hāz dūr bir bik.[1]	Present arms! One, two!
Aragōz: hāz dōr (kills him).	Present arms!
Voice from audience: mauwittuh.	You have killed him!
Aragōz: wana mā lī jā ḫūja .na mā-mauwittūš.	That is all the same to me, my brother! I haven't killed him!
(He brings a bier, on which he puts the dead body. A priest appears and sings a parody of a mass.)	
Priest: morto buona sera addio sī jorji.	Dead! Good evening! Adieu, Mr. Jorji!
Aragōz: lā ilāha illa 'llāh wă-Muḥammad rasūl allāh qūl kida jā 'akrūt.	There is no God but God, and Muḥammad is the apostle of God. Say that, you scoundrel!
Priest: lā ilāha illa 'llāh.	There is no God but God!
(Exit Aragōz.)	
Priest (singing): morto, morto, morto!	Dead, dead, dead!
(Enter Aragōz.)	
Aragōz: kaffartīna jā šēḫ (kills him).	You have made us infidels, old chap!

Real dramatic art, in the European sense of the word, is, as we said before, a foreign and comparatively recent phenomenon in the Arabic literature. The farce which Carsten Niebuhr saw in the house of an Italian in Cairo, and which had to be broken off prematurely owing to its lasciviousness, seems, according to his account, to have been nothing more than a series of lewd-comic scenes without any kind of plot or catastrophe, in the manner of the Thu Rābiya performances, manifestly neither more nor less than an Aragōz representation, played by living persons.[2] The piece described by Lane,[3] giving a vivid picture of the corruption of public officials of the time of Muḥammad 'Alī, is of a little higher order, and is of the same type as the modern Arabic comedy, the *faṣl muḍḥik*, as it is played in Cairo to-day. All that Lane, that unrivalled observer of Egyptian folk-life, has said about the *Mohabbazeen*, the actors of such dramatic performances, is true now of the *faṣl muḍḥik*: 'Their performances are scarcely worthy of description. It is chiefly by vulgar jests and indecent actions that they amuse and obtain applause.' To-day, too, the 'actors are only men and boys,' the latter appearing in female rôles;[4] and the *faṣl muḍḥik*, like Lane's example, still has some didactic elements, even when the only lesson taught is that of getting the better of a European by beating and cheating him. A shade better are the productions of the Syrian *faṣl muḍḥiks* from Beirūt or Damascus.[5] A Syrian troupe, with women taking the female rôles, was playing, until a little while ago, in Cairo in the Syrian Café Kāmil; but there is no great difference between the performances of this company and those which one could see, up to a short time ago, in the two small theatres that were formerly in the Fish Market but are now in the Sāri' Wagh el-Birke.

The *faṣl muḍḥik* last seen by the present writer in one of these cafés consists of a number of clownish scenes, that always end in the whipping of one of the participators. The chief character of the flimsy plot is the servant Ḥusēn, who appears in a pierrot costume.[6] He makes a dupe of his master (an officer) by entering into illicit relations with the latter's wife. The deceived husband notices from time to time, of course, the love-making that is going on behind his back, and the result is a series of roughly ludicrous mistakes and mystifications. For instance, the servant embraces his master, who has seated himself, unnoticed by the servant, in his wife chair, and receives as a reward a box on the ear. A boastful, silly European—a Greek (dialect type), with a battered tall hat and a bright red British uniform—is beaten continually throughout the play. The other characters are a saucy beggar woman, a cook, and three *ḥarāmīje* (robbers); the last named, with the help of the servant, steal the clothes of the officer from his body while he sleeps. The dialogue, as is always the case in a *faṣl muḍḥik*, is in prose, and in the vernacular of the lowest elements of the population. It is full of invectives and obscenities. Sometimes the *faṣl muḍḥik*, of which there is a great variety, are preceded by a performance of the famous *dance de ventre* or by a *faṣl* of the shadow-play.

A number of such farces in the vernacular have been published in Cairo of late;[1] but they are very seldom played, as they naturally do not contain the flagrant indecencies which would make them popular with the public. One of the best of these pieces is *Hāt lī min de*, 'Give me some of That,' by Aḥmad Ḥamdī er-Rašīdī. The piece, a modern variation of an old fairy-tale subject, shows clearly the characteristics of the *faṣl muḍḥik*. Nadīm Efendī has engaged the Syrian Amīn as a servant and watcher for his daughter Farīda. Amīn displays a very impudent manner towards his master, and falls in love with Farīda. The three friends of Nadīm—Sī Gara, Sī Fōn, and Sī Finga—come one by one to sue for the hand of Farīda for their sons 'Azīz, Gamīl, and Farīd. Nadīm gives his consent to each one provided he presents a bridal gift of unsurpassable value. The curious names of the guests ('Cigarette,' 'Siphon,' and 'Sponge') are a source of rude jokes for the jealous Amīn. In the second act the three suitors meet by chance in a hotel in Malta. Each displays his bridal gift. Gamīl has a mirror in which one can see things at a great distance; Farīd has lemons that can waken the dead; and 'Azīz has a carpet upon which one can ride through the air. In order to test their presents they look into the mirror and see Farīda upon her death-bed, whereupon they travel quickly on 'Azīz's carpet to Cairō, and by means of the lemons bring Farīda back to life. Then (third act), since they cannot agree among themselves as to who shall marry her, they go to the *qāḍī* Sī Bōja, whose daughter gives a *fetwa* (judgment founded on canon law) in favour of Farīd, and, in characteristic Oriental manner, consolingly advises the other two suitors to sell their bridal gifts. The servant, who acts the clown throughout the piece, also goes with the others to the *qāḍī*, but his suit naturally meets with no success.

Besides these more or less original Arabic works, there is to-day a European drama that has been consciously and artificially transplanted into the Arabic Orient. The initiative herein came from Syria. Mārūn b. Iljās b. Mihā'īl-Naqqāš (born 1817 at Saida in Lebanon) was the first who tried to make this innovation. Of the life and works of this man we have an excellent account in the records made by his brother and follower Niqūlā.[2] While he was still a boy, Mārūn's family moved to Beirūt, which was then, as now, the intellectual centre of Syria. Here he was brought up according to old-fashioned Arabic ideas, his naturally good taste being therefore quickly spoiled by the forced learning of syntax, grammar, stylistics, metrics, and all the rest of the huge chaos of scholastic knowledge. When he was but eighteen years of age, he began to compose poems. This did not prevent him, however, from studying European book-keeping and commercial law, and from learning Turkish, French, and Italian. In his thirtieth year he went to Italy, where he saw for the first time a large European theatre. The play so impressed him that, after his return to Beirūt in the year 1848, he wrote a drama in the Euro-

[1] Military terms in barbarous Turkish.

[2] Almost the same description is found in *Description de l'Egypte*[2] (1825), p. 172 f.

[3] *Manners and Customs*, pp. 357–359.

[4] See Kern, *Das ägypt. Schattentheater*, p. 103 f.

[5] See Kern, 'Neuere ägypt. Humoristen und Satiriker' (*Mitteilungen des Seminars f. orient. Sprachen*, ix. [Berlin, 1906]). A Syrian *faṣl muḍḥik* is the *Riwāyat elguḥalā elmudda 'in bil'ilm*, by Ibrāhīm Bēk eṭ-Ṭabīb, Beirūt, n. d.

[6] The European fool's costume of Ḥusēn points to the Frankish origin of the *faṣl muḍḥik*, and, just as in the Aragōz-play, which is without doubt nothing but a Pulcinello theatre orientalized by the influence of the Turkish Karagöz, some of the *dramatis personæ* are the same types for all pieces. From these types one easily recognizes Italy as the home of the *faṣl muḍḥik*. The Arlechino of the Italian *commedia dell' arte* is the stupidly bold, sly servant; and the cowardly boasting Greek we also find in Scarramucia; the coquettish, amiable little woman, who is not altogether too scrupulous in keeping her nuptial vows, is the Columbine type. The dialectic humour is perhaps the result of shadow-play influence.

[1] *Riwāyat hāt lī min de*, by Aḥmad Ḥamdī er-Rašīdī (Cairo, 1907). Other pieces of this kind are: *Riwāyat Ba'gar*, by Muḥammad Efendī Ḥusnī (Cairo, n. d.); and the *Riwāyat ezzawāg binnabbūt walbaḫīl el'akrūt* (Cairo, anon. and n. d.). The latter is a variation of the popular type of *L'Avare*, who is cured of his greed after great money-losses. The same theme is treated by Muḥammad Efendī Safiq, in the *faṣl elbaḫīl*. Still other pieces are *Ṣadr elbaghāša*, by Amīn Saiyid Aḥmad 'Abd el-Wāḥid ez-Zaiyāt (Cairo, n. d.), a piece in which the different beggar-types are shown; a play with a purpose of the kind described by Lane is the *Riwāyat elmuḥaddamīn*, by Muḥammad Bē 'Oṯmān Galāl, printed after the death of the author. This little comedy scourges the deceptions and tricks of servant-intermediaries.

[2] After the death of his brother, Niqūlā published three of his theatrical pieces under the title *Arzat Lubnān* (Beirūt, 1869). He gives an extensive biography of his brother in the preface. A strangely mistaken remark concerning this book is found in C. Huart's *History of Arabic Literature* (Eng. ed., London, 1903), p. 420: 'Nicolas Naqqāš, who was born at Saida in 1817, died at Tarsus in 1855, having written a play called *Arzat Lubnān*.'

pean style, called it *Elbaḫīl*[1] ('The Miser'), and soon afterwards produced it in his own house before an invited audience, amongst whom were all the foreign consuls and the governor of the Lebanon Province. The actors were young friends of the author. This attempt was followed by a second in 1850, *Abū 'l-Ḥasan el-Mughaffal*, a dramatic version of the well-known story of Hārūn ar-Rašīd and Abu 'l Ḥasan from the *Arabian Nights*; and then, encouraged by the success of this piece (which, by the way, is still given), Mārūn Naqqāš, with the permission of the Sultan, founded in Beirūt a permanent stage, where he brought out his *Riwāyat elḥasūd* ('The Jealous Man'). The plays of his brother Niqūlā, *Eššēḫ elgāhil* (written 1840) and *Rabī'a ibn Zēd elmukaddam* (written 1852) also made their first appearance in this theatre. In 1855, while on a business trip, Mārūn died of fever in Tarsus, and two years later his body was transferred by his family to Beirūt and there buried with great ceremony.

After Mārūn's death the theatrical art suffered a decline,[2] and it was not until 1860 that Niqūlā Naqqāš resuscitated the *Ḥasūd* on his brother's old stage. In the same year Niqūlā published, in one book,[3] Mārūn's three pieces, which are a kind of light opera, comedies with musical accompaniment and interspersed with numerous songs and dances.

We give, as an example, the contents of the first piece. The extremely miserly, rich Qarrād, a man of advanced years, had made an agreement with the greedy old Tha'labī to marry the latter's daughter Hind, a young widow. He comes for the wedding to the house of Tha'labī, but Hind loves young 'Īsā, the friend of her brother Ghālī. These three, and the old servant Umm Rīša, slyly plot together to make Qarrād give up his plans of marriage, and at the same time to part with some of his beloved money. Hind makes such extravagant demands of Qarrād that he finally wishes nothing more ardently than to be rid of her. Hind, however, now declares that she will not release him; in the meantime Ghālī appears, disguised as a Turkish *agha*, with his secretary 'Īsā and several soldiers. By means of threats and thrashings they force Qarrād to pay to 'Īsā a large sum of money as a compensation to Hind, who thereupon marries 'Īsā. Finally, the supposed Turks confess their deception to Qarrād, who is by this time very much ashamed of himself, and freely forgives them.

The language of the play is affected and heavy, the piece itself, with its five weak acts, extremely tiresome. When the author makes a joke, the publisher thinks it necessary to call the reader's attention to the fact in a footnote. Here again we have, as the comic elements, the dialect types—Umm Rīša the peasant woman from Lebanon, Ghālī the Turk, and 'Īsā the Egyptian secretary.

Under the influence of the brothers Naqqāš, several theatrical companies were formed in Syria; but, as there were no trained actors to be had, the authors or translators saw themselves obliged, if they wished to have their plays produced, to form and train a troupe of amateurs. Famous as author, director, and *régisseur* all in one person, were especially Sēḫ Abū Ḫalīl el-Qabbānī in Beirūt, and Iskander Farah in Damascus. The latter, more organizer and actor than author, was born in Damascus in 1855, the year of the death of Mārūn Naqqāš. He attended the Jesuit school in that city and there became acquainted, through amateur school dramatics, with European drama. Encouraged by Midhat Pasha, who lived at the time in Damascus, he produced, in a public garden, his first play, a translation from the French. He then moved to Beirūt, where he joined with Sēḫ Abū Ḫalīl in forming a theatrical enterprise; but owing to intrigues his licence was taken from him, so that he saw himself compelled to settle permanently with Abū Ḫalīl in Cairo (in 1882), where he and his partner had already made successful tours. From this time dated the existence of a theatre in European style in Egypt. In the *Gōq elmiṣrī el'arabī* (in the Šārī 'Abd el-'Azīz in Cairo) a great many pieces—mostly translations and only a few original works—have appeared above the footlights.

This theatre has not proved to be a success of late, owing partly to the death of Iskander Farah's partner, Abū Ḫalīl, but especially because of the attitude of one of the actors, Sēḫ Salāma el-Ḥigāzi, whom Farah himself had taught. Salāma separated from his master and founded a theatre of his own,—the *Dār ettamthīl el'arabī*,—and induced a number of Farah's actors to accompany him. In contrast to the Christian Syrian Iskander Farah, Salāma was a Muslim and an Egyptian, and that was enough to secure him the affections of the Cairo public. Then, too, he laid more weight on the musical part of his performance than his old master had done, and the Egyptians love nothing so much as singing and the music of their national orchestra. In 1909, Sēḫ Salāma had an apoplectic stroke, which partially paralyzed him, so that his acting days are probably over.

A number of small wandering theatrical troupes have branched off from the theatre of Iskander Farah. One often stumbles upon them in Syria and Egypt. The best known in Egypt are the companies of 'Auwaḍ Farīd, Aḥmad Ḥigāzī, Ibrāhīm Aḥmad, and Sēḫ Aḥmad eš-Šāmī. The last named was to be seen in the winter of 1908 in Luxor in *Romeo and Juliet*. The late Nagīb el-Ḥaddād, one of the most prolific translators of European plays, also experimented with a troupe of his own. In Syria, 'Azīz 'Īd and Raḥmīn Bībis are the chief followers of Iskander Farah's school; the only one of Farah's pupils who went to the Maghrib—Solīmān el-Qirdāḥī—died in the summer of 1909 in Tunis.

Amateur theatrical clubs have been started in several places in Egypt. The most important of these is the *Gam'īyet el-Ma'ārif* in Cairo; it was founded by Iskander Farah in 1886, and is still under his direction. There was a similar club by the name of *Gam'īyet taraqqī 'ttamthīl el'adabī* in Manṣūra.[1]

It is utterly impossible to give an approximately complete bibliography of the Arabic dramatic literature of to-day, as there is an unusually great productivity along this line at the present time. Most of the works are translations, of which the only really valuable ones are the excellent renderings, in the vernacular, of some of the writings of Racine and Molière by the late Muḥammad Bē 'Othmān Galāl.[2] Unfortunately these pieces, in which the highly talented translator has shown his ability to render the tone of the originals in the idiomatic peculiarities of his own language, have never been recognized by the stage. The stiff, ridiculous Shakespeare translations[3] do not show the least trace of the spirit of the great British master, and still less worthy of mention are the childishly Arabized French dramas[4] of the Romance period. A little better are the different dramatizations of the stories from the *Arabian Nights*[5] and

[1] See *Arzat Lubnān*, p. 4: '. . . The play *Elbaḫīl*, which was the first drama given in our Arabic tongue. . . .'

[2] *Ib.* p. 5: 'Hereafter this kind of art was buried with its initiator and nearly forgotten.'

[3] *Arzat Lubnān* (Beirūt, 1869)

[1] We are indebted to Mr. Taufiq Farah, the brother and manager of Iskander Farah, for the greater part of these statements.

[2] See Nallino, *L'Arabo parlato in Egitto* (Milan, 1900), pp. 349–351. The translations of Muḥammad Bē 'Othmān Galāl are as follows:—*Eššēḫ elmatlūf* (*Tartuffe*, by Molière), Cairo, 1873, reprinted in 1890 with *Ennisā' ul 'ālimāt* (*Femmes savantes*); *Madraset el 'azwāg* (*Ecole des Maris*); and *Madraset ennisā* (*Ecole des Femmes*) under the title *El'arba' riwāyāt min nuḫab ettijārāt; Erriwājāt elmufīda fī 'ilm ettaragīda* (*Esther, Iphigénie* and *Alexandre*, by Racine), Cairo, 1893; *Riwāyat ettuqalā* (*Les Fâcheux*, by Molière), Cairo, 1896. The *Sēḫ matlūf*, the *Madraset el 'azwāg* and *Ennisā' ul 'ālimāt* have been published in European transcription. See Vollers, 'Der neuarab. Tartuffe' (*ZDMG* xlv. [1891] 36–96); Sobernheim, *Madraset el 'azwāg; arab. Comödie transkribiert und ins Deutsche übersetzt* (Berlin, 1896); Kern, *Innisā' ul 'ālimāt: neuarab. Bearbeitung von Molière's Femmes savantes transkribiert, übersetzt*, etc. (Leipzig, 1898).

[3] For example, *Romeo and Juliet*, *Hamlet*, and *Othello*.

[4] *Hernani*, *Marie Tudor*, by Victor Hugo; *Katherine Howard*, by A. Dumas; *Fernande*, by Sardou; *Sevère Torelli*, by Ohnet; *L'Africaine*, by Scribe, and many others. The chief translators, besides the already mentioned Nagīb Ḥaddād, are Taniūs 'Abduh, Ḫalīl Miršāq, Farah Anṭūn, Bišāra Kan'ān, and Sam'ān el-Ašgar.

[5] From the *Arabian Nights* have been dramatized, among others, the stories of Hārūn ar-Rašīd and Qūt al-Qulūb, by Maḥmūd Wāṣif, and Uns al-Galīs, by Ahū Ḫalīl el-Qabbānī.

from the Arabian history and hero-legends.[1] The only other class that is somewhat worthy of notice is the drama with a political purpose.[2] Here genuine feeling has succeeded in instilling a little life into the inflexible, stilted, Arabic literary style.

Whether a well-developed branch will ever grow from the scion of Western dramatics that has been grafted upon the Arabic literature seems to the present writer to be somewhat doubtful, and it is not only the lack of dramatic feeling, natural to the Arab through race and religious peculiarities, that prevents him from finding the way to dramatic art; it is also the character of his language. The Arabic literary language is petrified—an artificially preserved corpse, which pleases only its preservers, the literary gild and the *'ulamā*. The people hardly understand this language, and do not recognize themselves or their feelings when so presented to them. The living idiom, on the other hand, that in which the Arab thinks and speaks, is scorned and regarded as vulgar by priests and pseudo-learned men, who see the end of their own glory in the decay of that idolized, thousand-year-old mummy, the fetish of the holiness of God's language. Before anything great can be created, either in the province of the drama or in Arabic literature in general, the modern writer must cease to work with forms, words, and metaphors of the language of nomadic desert tribes of fifteen hundred years ago.

LITERATURE.—The literature has been given fully in the footnotes.

CURT PRÜFER.

DRAMA (Chinese).—Music and dancing are frequently mentioned in the Chinese classics. For instance, in the days of Confucius we read of the services held in the ancestral temples of princes and great nobles, when there were men arranged in rows, who moved in time with the music, and brandished feathers, flags, or other articles. Moreover, in those times, and even later, dancing of a slow and dignified character formed part of civil as well as of religious ceremonies. Thus at public feasts there were performances representing the joys of harvest, the fatigues of war, the pleasures of peace, and suchlike subjects. According to one theory, the regular drama was gradually evolved from these displays; but there are persons who maintain that it was purely exotic, having been introduced into China from the West. One writer says, perhaps with some boldness:

'The whole idea of the Chinese play is Greek. The mask, the chorus, the music, the colloquy, the scene, and the act are Greek.' 'The Chinese took the idea, and worked up the play from their own history and their own social life.' 'The whole conception of the play is foreign, while the details and language are Chinese' (J. Dyer Ball, *Things Chinese*[4], p. 707).

The highest literary authorities among the Chinese agree in dividing the history of their drama into three distinct periods. The first of these is the latter part of the T'ang dynasty (A.D. 720–906); the second, the Sung dynasty (A.D. 960–1126); the third, the Chin and Yüan dynasties (A.D. 1126–1367). One very great writer of the 13th cent., Ma Tuan-lin, gives 581 instead of 720 as the earliest date; but it is generally agreed that his view was based on a misconception.

No specimens of the T'ang dynasty plays have been preserved; but it is said that they were historical in character, and also that pieces were played of which the prologue was recited by an actor called 'the introducer of the play.'

In the time of the Sung dynasty, it was customary to sing the greater portion of the play. The plot was very simple, and everything was sacrificed to the lyric parts. Further, the action was hampered by a convention limiting the number of the actors in the play to five.

The third, or Yüan, period is the golden age of the Chinese drama. The plays written at that time, or shortly afterwards, not only surpassed their predecessors, but have never been equalled by later writers. Moreover, the alterations and novelties then introduced have since remained unchanged. Indeed, it may be said that the drama of the Yüan times 'is to all intents and purposes the drama of to-day' (H. A. Giles, *Chinese Literature*, p. 258).

The list of the Yüan dramatic authors comprises 85 persons, of whom four were women ('actresses,' as the name by which they are described should probably be translated). There are extant 564 plays, of which 105 are by anonymous writers. Practically all kinds of subjects are represented among them. There are mythological, historic, religious, and domestic plays; comedies of character, and comedies of intrigue. There is no formal division into tragedy and comedy; but a play belongs to one class rather than to the other, according to the subject and the way in which it is treated. Every rank of life is represented, from the Emperor to the humble slave girl. Even gods and goddesses appear and speak. It is nominally illegal to put on the stage Emperors, Empresses, and great men of old; but the law is entirely disregarded. The dialogue is in the ordinary spoken language, varying in some degree according to the social position of the character speaking. In the historical plays it is further removed than in the others from the language of common conversation. There is no chorus, but the actors constantly break out into song. These songs express the most passionate parts, and therefore they are given only to the leading characters.

A play consists usually of five acts, or rather of four acts and an introductory part, called 'the opening,' in which the principal characters come on, describe themselves, and give any information that may be necessary as to former doings. If there is no 'opening,' the descriptions and information are given in the first of the four acts, and the unfolding of the story is left to the second. But, as there is no curtain to fall, and no stopping at the end of the acts, the distinction between them is hardly noticeable on the stage. Entries and exits are marked in the books, and so are the 'asides,' for which there is a technical name. The famous play called the *Pi-pa-ki* consists of 24 scenes, or, according to another arrangement, of 42 scenes.

In theory every Chinese play should have a moral object, and the serious drama is supposed to place on the stage scenes which will lead the spectator to the practice of virtue. Actually, their tendency is on the side of justice and morality; and, as regards decency, they are, at any rate in their written form, entirely free from objection.

In addition to the serious pieces, which form the bulk of the plays acted, there are also farces, which are generally brought in at the conclusion of the bill, and are highly appreciated by the audience. They 'depend for their attractiveness upon the droll gesticulations, impromptu allusions to passing occurrences, and excellent pantomimic action of the performers' (S. W. Williams, *Middle Kingdom*, i. 715). In these farces there is much 'gagging,' and the actors often lapse into coarseness.

To return to the serious drama. It is true that Chinese plays do not, as a rule, possess much intricacy of plot; but we think that their merits, in many respects, will not be denied by any one who

[1] *e.g. Riwāyat Ṣalāḥ addīn*, by Nagīb el-Haddād, Alexandria, 1898.

[2] The most prominent are *Riwāyat el-'Azhar* (Cairo, 1909), and *Riwāyat Denšawāi* (Cairo, 1907), by Ḥasan Marʿī. The latter is reviewed in the *Revue du Monde musulman*, vol. iii. Nov.-Dec., nos. 11–12, Paris, 1907, pp. 504–509. The representation of both pieces is forbidden by the Egyptian Government.

can keep in mind that both Chinese ideals and Chinese modes of expression often differ considerably from our own. They are certainly remarkable in both distinctness and consistency of characterization. As regards other qualities, a very high authority has recently said of the famous 'Story of a Lute' (*Pi-pa-ki*), that 'it is not only truly pathetic in the conception and the main situations of its action, but includes scenes of singular grace and delicacy of treatment' (A. W. Ward, in *EBr*[11], viii. 486). Of another great play, 'The Sorrows of Han,' its distinguished translator, Sir John Davis, wrote that 'the grandeur and gravity of the subject, the rank and dignity of the personages, the tragical catastrophe, and the strict award of poetical justice, might satisfy the most rigid admirer of Grecian rules' (*China*, p. 92). In order to give the reader some idea of what the Chinese historical drama is like, we insert here a short sketch of this play. The events described in it are partially founded upon fact. The scene is laid in the 1st cent. B.C., at a time when China was weak and the Tatars were strong.

The play opens in Tartary. The Tatar Khan appears, and announces that, in accordance with an hereditary right, he has sent to demand of the Emperor of China the hand of a princess in marriage. The second scene is in China, and shows the Emperor entrusting a minister with the task of selecting beauties for his harem. The minister discovers a maiden of surpassing loveliness. He demands from her parents a large sum of money as a bribe, but they are too poor to give it to him. He therefore contrives that, though the maiden is admitted to the palace, her charms shall remain unknown to the Emperor. A chance causes them to be discovered, and she becomes the Imperial favourite. The faithless minister is condemned to death; but he escapes, and takes refuge at the court of the Khan. To revenge himself, he shows the Khan the lady's picture, declaring that she would have come in response to the Khan's demand, but the Emperor would not permit her; he (the minister) had remonstrated with his master for thus embroiling two nations, and had been forced to flee for his life: let the Khan demand the princess, and she must be given to him. Overcome by the beauty of the portrait, the Khan despatches an envoy with a threat of war, and prepares for the invasion of China. Next, the lady, now a princess, is adorning herself in the palace; the Emperor comes in, and shows his admiration. The chief minister enters and reports the arrival of the envoy with the Khan's demand. The envoy is received. After the audience the Emperor takes counsel with his ministers. He wishes to appeal to arms; but the case is adjudged hopeless. The princess declares her willingness to sacrifice herself for her country's sake, in spite of her love for the Emperor. The Emperor at last consents, and the sad parting takes place. The Khan is seen at the head of his troops, leading away the princess. The army is on the march. It arrives at the bank of a river, the boundary of the Chinese empire. The princess addresses the Khan: 'Great King, I take a cup of wine and pour a libation towards the south, my last farewell to the Emperor.' She pours the libation, and cries, 'Emperor, this life is finished. I await thee in the next.' She throws herself into the river and is drowned. The Khan laments, orders her burial, and declares that he will maintain peace with China. Now we are back again in China. The Emperor is wandering in the palace at night, still overwhelmed with grief, and unable to attend to affairs of state. He sleeps, and we see the princess, escaped from her captors, appearing to him in a vision. A Tatar soldier comes in and carries her off again. The Emperor awakes to fresh grief. The arrival is announced of a Tatar envoy. He is come to tell the sad story and bring back the faithless minister. The traitor is led away to execution.

We think the reader will acknowledge that this story is one well fitted for dramatic representation.

The scenery of a Chinese theatre is very simple. It consists of a few mats, perhaps rudely painted, arranged at the back and sides of the stage, and some tables, chairs, and couches, which serve for many purposes, and are brought in from the robing rooms as required. The imperfections of the scenery are made good by simple devices: a courier, on being despatched, seizes a whip, and lifts his leg as though he were mounting a horse; passing over a bridge is indicated by stepping up and then down, crossing a river by imitating the rolling motion of a boat. The actors are dressed in costumes appropriate to their parts, and of antique style. The robes are very splendid, made of bright-coloured silks and satins and really magnificent embroideries, which have cost large sums of money; but in the humbler theatres they are much tarnished and worn.

Only in Peking and the great towns of the North are there permanent play-houses. The simplicity, however, of Chinese theatrical arrangements enables performances to be given without difficulty all over the country, even in small towns and villages. Subscriptions are collected on the occasion of a festival, or a rich man wishes to give his neighbours a treat. A travelling company of players is engaged; and, in a couple of days, sheds, which serve their purpose sufficiently well, are erected, at little cost, with rough planks, poles, and mats. The humbler members of the audience stand in the pit, without any protection from the weather. The performances frequently last for three days, with intervals only for eating and sleeping. This does not mean that the plays are long. In the acting editions they are usually short, but a very large number are produced on such occasions.

As was the case not long ago in France, the profession of an actor is, at least nominally, considered disreputable. Members of it are classed with barbers and domestic servants, and, with their sons and grandsons, they are not allowed to compete in the public literary examinations.

Translations into French of several Chinese plays will be found in the published works of A. Bazin and Stanislas Julien.

T. L. BULLOCK.

DRAMA (Greek).—1. Origin of the drama.—From the time of its origin down to the days of its latest representatives, Greek drama was closely associated with religion. A Greek tragedy or comedy was a religious service rendered by the State to one of its gods. Plays were performed only at the festivals of Dionysus—at the *Lenæa*, the festival of the wine-press in January; at the country *Dionysia* held in the villages in December; and at the city *Dionysia* in March (this the most important and brilliant). There was no long season, and plays were given all day long during the festivals, the spectators paying no admission fee except what the State provided, and often bringing their own lunch and cushions. Not until the 3rd cent. B.C. did the drama, as was natural, become a secularized performance arranged by the head of a troupe and often financed by private liberality.

The development is paralleled in mediæval times by the Mystery and Miracle plays, which at first were attached to the Church but in time became dissociated from religion and formed a true dramatic literature, the actors, like Thespis, wandering about and performing their plays wherever convenient, whether in church or inn-yard. In modern times we have the Passion Play at Oberammergau, which is beginning to be more than a merely religious performance, although the Bavarian peasants have refused an enticing offer to play in America. Just as the old Greek play always began with a sacrifice to Dionysus at the altar or *thymele*, so to-day at Oberammergau every performance is preceded by Mass, in which all the actors and members of the Greek-like chorus participate.

That the spirit of the Greek drama was strictly religious is evident from its early history. In a larger, more philosophical sense, it is the outgrowth of the mimetic or play instinct in humanity, and the sense of the pathetic. The mimetic element is well illustrated in the dances and burlesques on Greek vases from the 7th to the 4th cent. B.C., especially on Corinthian, Cæretan, Bœotian, and Attic vases. The sense of the pathetic Croiset (iii. 24 f.) finds in the legends of heroes and the religion of Dionysus. As Plato (*Rep.* 394, 595, 598 f.) and Aristotle (*Poet.* ch. 4 f.) say, Homer is the real author of tragedy, which is a novel all dialogue, or an epic all speeches, wherein the poet omits his own narrative comment and leaves in the amœbean speeches. Æschylus (cf. Athenæus, 347 E) said

that his tragedies were but crumbs from Homer's table. But historically the drama, though latent in the epic and drawing upon it for subject-matter and retaining much of the epic technique, especially in the messenger's speeches, developed out of the lyric—not the personal passionate lyric of Archilochus, Sappho, and Alcæus, but the choral lyric of a disciplined chorus chanting in unison to the measure of the dance. This choral lyric of Alcman and Stesichorus, which later reached its zenith in Simonides, Bacchylides, Pindar, and the choruses of the Greek drama, flourished chiefly among the Dorians of early Sparta, Sicily, and Magna Græcia. There were many forms, such as hymns to the gods, marching songs, dancing songs for boys and girls.

We have preserved to us, on a papyrus discovered by Mariette in Egypt, a partheneion, or highly dramatic virginal song, by Alcman, which consisted of 140 verses in ten strophes, of which the first two and part of the third are missing. This song gives a pretty picture of a dance of Spartan maidens in honour of Artemis, by the banks of the Eurotas, such as we see on a beautiful Attic red-figured crater in the Museo di Villa Papa Giulio at Rome (cf. Furtwängler-Reichhold, *Griech. Vasenmalerei*, Munich, 1904, pls. 17–18). The chorus addresses the poet, and the poet speaks to the whole body of dancers or to an individual.

This kind of choral lyric combined with its praise the epic recital of a local or national or religious legend.

The specific and immediate origin of the Greek drama, however, is in one form of this choral lyric —the dithyramb or hymn, usually to Dionysus, though not confined to his ritual. The word 'dithyramb' first occurs in Archilochus (fl. *c.* 670 B.C.), who was the first to use to any great extent the iambic trimeter and trochaic tetrameter, the two chief metres in Greek tragedy. We do not know its derivation. Many etymologies might be given, each more absurd than another. Originally it may have been an epithet of Dionysus, the name not of the hymn but of the god to whom the hymn is sung, commemorating possibly his double birth from Semele and from the loins of Zeus—the scene on Greek vases which perhaps was the prototype of the Christian representations of Eve springing out of Adam's side (cf. Eurip. *Bacch.* 519 f.). More probably 'dithyramb' is connected with *thriambos*, meaning 'mad song.' It appears from Archilochus that the dithyramb was either a banquet song or more probably a popular rude rustic hymn in honour of Dionysus, who introduced from Thrace the wild orgiastic ceremonies so foreign to Greek soberness. Out of these rustic dithyrambs—not always licentious, but often solemn hymns—after they had received a systematic form under the Dorian choral lyric, tragedy grew (cf. Aristotle, *Poet.* iv.). The dithyramb, pathetic as well as comic, flourished throughout Greece long before Arion of Lesbos (600 B.C.) gave it a distinct artistic and recognized form, fixing the number of the chorus at fifty and dressing them in the likeness of satyrs, half-animal, half-human, with the legs, ears, and snub-nose of a goat; although, according to Herodotus (i. 23), who tells the famous dolphin story about him, Arion was the best lyrist of his time and the first to compose, name, and teach the dithyramb at Corinth. His chorus had fifty satyrs or goat-men, the same number as we find in the earliest play of Æschylus, the *Supplices*, noted for its depth of religious feeling. The chorus of satyrs or goat-men (singers clad in goat-skins) danced and sang about a circular orchestra, and so were called a cyclic chorus (from κύκλος, the orchestra) or tragic chorus (from τράγος, a goat or satyr; cf. Æsch. fr. 207). Of course, this chorus of satyrs was replaced in later times by a chorus appropriate to the plot, except in the Satyr-drama, which retained the satyr chorus; but tragedy originally meant a goat-song rather than a spelt-song, as Miss Harrison (*loc. cit. infra*) argues. This is also more likely than that the goat was the prize, as might be argued from a vase in the British Museum, which, however, is not Attic. It is more likely than that the goat was the sacrifice, because other prizes were given, and the bull was equally associated with Dionysus. Dionysus was a bull-god as well as a goat-god, and often appears in Greek art with bull's horns. He had no monopoly of the goat-skin, which was the primitive costume in ancient times, and is worn by peasants in Greece to-day and at modern Dionysiac plays in Thrace (cf. *JHS*, 1906, p. 191 ff.) and at the performances of rude dramas in Thessaly and elsewhere. It is difficult, then, to agree with Farnell that the origin of Greek tragedy is an ancient European mummery which was a winter-drama of the seasons, in which the Black Personage, Dionysus Μελάναιγις or Μέλανθος, killed Xanthus, the Fair One, the actors wearing the black goat-skin of their god. The word 'tragic' did not mean at first dramatic or pathetic, and Aristotle (*loc. cit.*) says that the grotesque diction of earlier times was not discarded till late for the statelier manner of tragedy. But tragic soon became associated with the pathetic, because the habitual theme of the dithyramb was the adventures and sorrows of Dionysus, the new religion which had to struggle to win its way. The limitation to Dionysus was not essential, as the story in Herod. v. 67 shows. About 600 B.C. the people of Sikyon honoured their local hero Adrastus and celebrated his sufferings in tragic choruses, but Cleisthenes, being hostile to the cult of Adrastus, restored the chorus to Dionysus.

Ridgeway makes large use of this to support his theory that the origin of Greek tragedy was in the worship of the dead. There is, to be sure, much of this in our extant dramas, since they naturally deal with death for the most part, and undoubtedly the worship of the dead, the Orphic and Eleusinian Mysteries in which Dionysus or Iacchus was associated with Persephone, the farces and burlesques, as at the later sanctuary of the mystic chthonic Cabiri near Thebes, who became closely connected with Dionysus, and the rude choral songs and mimetic dances contributed much, but they were all swallowed up by the coming of Dionysus, whose cult spread over the whole Greek world and was easily grafted on the native worship. Cf. and ct. art. DRAMA (Introductory).

Many elements, therefore, combined to make the Greek drama, but the main one was the worship of Dionysus, the god of wine, vegetation, and moisture. Dionysus, the youngest of the Greek gods, a mystic Phrygian deity, came into Greece over the mountains of Thrace, met with opposition in Thrace and Bœotia, but finally reached Delphi and the villages of Icaria and Eleutheræ. From the country he made his way into the town of Athens under Pisistratus, although legend said that, under king Amphictyon, Pegasus of Eleutheræ had introduced him into Athens (cf. Paus. i. 2. 4, and schol. to Aristoph. *Acharn.* 243). Dionysus is already known to Homer, by whom he is mentioned twice in the *Iliad* (vi. 132, xiv. 325) and twice in the *Odyssey* (xi. 325, xxiv. 74). The opposition to his worship in Thrace is embodied in the story of his harsh treatment by Lycurgus (*Il.* vi. 132); in Bœotia in the legend of Pentheus, the subject of lost plays by Thespis and Æschylus, and of the most Dionysiac play of Euripides, the *Bacchæ*, written at the court of Archelaus at the very birthplace of Dionysiac performances. The village of Eleutheræ claimed to have been founded by Dionysus and to have been his birth-place, whence the archaic wooden image, or ξόανον, of the god was brought to Athens by Pegasus to the precinct beside the Dionysiac theatre on the southern slope of the Acropolis, where in the front row is still to be seen the seat of the chief priest, ἱερεὺς Ἐλευθερεύς, so named from Eleutheræ. At Icaria, where Thespis, the founder of Greek tragedy, was born, there was a story, of which there are many illustrations in art, that Dionysus came and was hospitably received by the farmer Icarius. Dionysus gave

him wine, which the people thought was poison, and they slew Icarius. Erigone, his daughter, hanged herself, and Dionysus sent a plague, which was appeased by instituting the festival of the swing.

The Americans excavated Icaria in 1888 and found many inscriptions illustrating the origin of the Greek drama and many traces of the worship of Dionysus (cf. Dyer, *Gods in Greece*, 1891, pp. 104–117; Frazer, *Pausanias*, ii. 461 f.; *Papers of American School at Athens*, v. [1892] 43 f.; Nonnus, *Dionysiaca*, bk. xlvii.).

The story was a favourite subject in the Greek drama. Phrynichus, Philocles, Cleophon, and others treated the theme, although it was avoided by the three great dramatists. Naxos, where the story of the waking of Ariadne is laid, Crete, Corinth, Athens, and other places are also intimately associated with the beginnings of the Greek drama and Dionysus. Dionysus was the god of life, enthusiasm, and rustic merriment, the liberator of men's lips and hearts, rightly called Dionysus Eleutherius. His orgiastic and religious influence was connected with the resurrection of life and immortality (cf. Wheeler, *Dionysus and Immortality*, 1899). Legends told how the god slept in winter and awoke in summer, or was bound in winter and released in spring. Flogging also filled an important rôle in the rites of Dionysus, as in the Dionysiac rites in Thrace to-day. Even women were flogged in being initiated into the Dionysiac rites (cf. Paus. viii. 23. 1, and the recently discovered Pompeian painting, *Notizie degli Scavi*, 1910, 4, pl. xvii.). At Delphi, the centre of Greek religion, where a ceremony described by Plutarch represented his mystical resurrection and the waking of the new-born child after his winter sleep, he was important enough to have his coffin beside the image of Apollo and to share with him the pediment of the temple. So Dionysus was also the god of sorrow and pathos, acquainted with grief. What more natural than that tragedy and comedy should arise in the worship of a deity the thought of whom covered the whole field of human emotion, whether grief or gaiety, 'a complete religion, a complete sacred representation of the whole of life'? Even before the coming of Dionysus there were the crude beginnings of the drama. If we seek the ultimate and final source, perhaps we can find it mainly, but not entirely, in the cult of the dead. The main real historical source was the poetic and literary inspiration of the wine-god, especially as exhibited in the dithyramb. Aristotle rather than anthropology should guide us in this question.

The dithyramb of Arion was, if not dramatic, mimetic, and the chorus by its dancing illustrated the story told in words. The drama proper, however, began to evolve when the choral chant was interrupted by a rude dialogue, perhaps improvised, between the leader and the chorus. The dithyramb was sung at the spring festival of the wine-god, and at any time the coryphæus may have stepped out and spoken to the chorus as a whole. When that happened, the song became dramatic, and drama was born. Pollux (iv. 123) and the *Etym. Magnum* (*s.v.* θυμέλη) say that there was a kind of table on which, before Thespis, one mounted and answered the chorus. This rustic use of tables as extemporized platforms is confirmed by illustrations on Greek vases (cf. Cook, *ClR* ix. [1895] 370 f.; Ridgeway, p. 44 f.). While tragedy developed out of the dithyramb, the dithyramb continued at Athens and elsewhere. The intermediate forms have been lost, and only a few notices and a list of poets from Arion to Thespis remain to fill the gap. Pindar is said to have composed seventeen tragic dramas in addition to his dithyrambs, but we know almost nothing of their character. A few years ago, however, a new piece of evidence was found in the newly-discovered eighteenth poem of Bacchylides—a short dramatic lyric dialogue, which some call a dithyramb, between Ægeus and the chorus. Although written about the time of Sophocles, it illustrates the development from the dithyramb to the drama. The evolution of the drama consists, as Croiset says, in the elimination of the satyric element, the transformation of the primitive narrator into an actor, and the constitution of a regular plot. Thespis did this and employed a regular actor. Thus the element of acting was now added to that of impersonation, that is, he himself stepped out and recited to the others, for in early days the poets were also actors. Thespis was born in Icaria, where, as we have seen, the worship of Dionysus flourished and where tragic choruses performed in his honour. Thespis first produced his tragedies at the city *Dionysia* in 534 B.C. He is also said to have invented the mask, which is ritualistic and reflects the origin of tragedy in a Dionysiac festival. The successors of Thespis and immediate predecessors and rivals of Æschylus were especially Pratinas, Chœrilus, Phrynichus.

According to Suidas, Pratinas was the first to compose a satyr-drama. During the performance of one of his plays in competition with Æschylus (499 B.C.), the temporary wooden seats collapsed, leading to the erection of a regular theatre at Athens. His son Aristeas wrote among other satyr-dramas one called *Cyclops*—the title also of the only extant satyr-drama, written by Euripides and translated by Shelley. Chœrilus also distinguished himself in the satyr-drama, and won for himself the title of king among the satyrs. The satyr-drama, illustrated by the satyric masks with semi-bestial features, was originally a gross licentious Dionysiac rite, which with its Sileni and satyrs came down into Greece from Thrace. There dwelt a tribe called Satræ, among whom was the chief sanctuary of Dionysus, and who were thought to be lax in their morals and given to wild orgiastic rites. Even to-day in Thrace and Greece one may see phallic and Dionysiac dances [the writer has witnessed them in Bœotia and Thessaly], which resemble the scenes on Greek vases which were inspired by, and inspired, the satyr chorus (cf. Furtwängler-Reichhold, pls. 47, 48). So from the Satræ perhaps arose the name 'satyrs,' the constant companions of Dionysus in art and literature. It was necessary only to change the costumes of the chorus to widen the scope of subjects. This was done, and Greek tragedy got further and further away from Dionysus; and almost the whole of Greek mythology was drawn on for the plots of the Greek plays. Even the chronicle-play, or drama of contemporary events, was invented. The only extant example is the *Persæ*, in which Æschylus avoided the fate of Phrynichus (who was fined a thousand drachmas for his *Sack of Miletus*) by mentioning no contemporary Greek name in the play, and by placing the scene at the remote court of Susa. But the Dionysiac element was kept to a large extent in the coarser satyr-drama, which every tragic poet must present after a trilogy, or set of three dramas. Sometimes, however, a tragedy of a comic character, like the *Alcestis* of Euripides, could be substituted, and later only one satyr-drama instead of three was given at each festival, to remind one of the origin of tragedy in the worship of Dionysus. Then, as we know from inscriptions, it had the least important place, namely, at the beginning of the festival, and not at the end as previously. The satyr-drama, like tragedy, was a regular ritual supported by the State.

2. Tragedy.—The three great Greek tragedians were Æschylus, Sophocles, and Euripides, whose plays are full of religious and ethical ideas (discussed in the articles about them in this Encyclopædia). Æschylus added a second actor, thus introducing true dramatic action, and diminished

the songs of the chorus. Of about seventy dramas by Æschylus we still have seven, among them the only Greek trilogy preserved, the *Oresteia*, the masterpiece of Greek drama, produced in 458 B.C. Æschylus, born at Eleusis in the strong religious atmosphere of the Mysteries, extended the bounds of tragedy to deal with the great moral and religious problems of life and the relation of man to man and to God. He developed the plot, made tragedy a dignified instructor in ethics and religion, and laid down the principles followed by all succeeding Greek tragedians with few changes. One of the great features of Æschylean theology is the predominance of Zeus, to whom even Destiny is coadjutor. This is perhaps best seen in the *Supplices*, which has been pronounced 'one of the most truly religious poems in ancient literature' (Adam, *Rel. Teachers*, p. 142). Æschylus verges almost on monotheism, or rather pantheism (fr. 70: 'Zeus is æther, Zeus is earth, Zeus is heaven; Zeus in truth is all things and more than all'). Sin is ὕβρις, or insolence, and must be expiated by suffering; and punishment is for the most part retributory. He protests against the doctrine of the envy of the gods (cf. *Agamemnon*, 749 f.), and emphatically affirms that the world is governed by Justice. As is well expressed in Abbott's *Hellenica* (1880, p. 66), 'the undertone of Divine vengeance running through the dramas of Æschylus seems in Sophocles to pass away into an echo of Divine compassion, and we move from the gloom of sin and sorrow towards the dawning of a brighter day in which strength is made perfect in weakness.'

Sophocles, who added a third actor and raised the number of the chorus from twelve to fifteen and employed scene-painting, in contrast to Æschylus, is the poet of reconciliation and not of strife between right and wrong. He was the most religious of the Greek poets, and piety is the basis of his religion. In Euripides, the gnomic poet of everyday life and realism, there is much polemic against popular religion, much scepticism and cynicism. He robbed tragedy of its idealism, but brought in romance and pathos and melodrama, which made him very popular in his own and later times. Euripides still further diminished the importance of the chorus as an organic part of the drama, made the prologue serve to tell who the persons were, and largely employed the *deus ex machina* to close his dramas, of which we still have nineteen, including the doubtful *Rhesus*. After Euripides, new tragedies continued to be written, down to the 3rd cent. A.D., and old tragedies of the 5th cent. were reproduced along with the new. But there was little growth or innovation except in better stage-machinery and improved scene-painting. Professional actors took the stage in the 4th cent. B.C., and troupes were sent out to the villages by the gilds of the Dionysiac artists. Almost every town after the 4th cent. B.C. had its theatre and its performances. For Delos, Samos, Delphi, and other places we still have several of the choregic inscriptions.

3. Comedy.—As in the case of tragedy, the origin of Greek comedy is connected with the worship of Dionysus, and especially with the Dorians. Comedy arose in the phallic song of Bacchic dancers and revellers, a comus-song (from κῶμος, 'a revel,' not κώμη, 'a village,' as Aristotle says). One sees such a phallic procession in honour of Dionysus in Aristophanes' *Acharn.* 237 f., and on many Greek vases. The primitive rude impromptu performance was developed by Susarion of Megara, who substituted verses of his own, and introduced into these indecent performances the abuse of individuals. Susarion brought these comic performances from Megara first to Icaria, where, as we have seen, tragedy also was born. Till Epicharmus, comedy was only a series of unconnected episodes and burlesques; but Epicharmus, the Sicilian father of Greek comedy, introduced unity of subject and plot, though he seems not to have had the comic chorus, which developed out of the comus. He was the first to bring forward the character of the parasite. His comedies were of two kinds—mythological travesties, and comedies with scenes from daily life, which developed into comedies of intrigue. But the comus of Attica was combined with the episode-comedy of Epicharmus and Sicily to form Attic comedy, though, of course, the *agon*, or contest, also played an important part, as Zielinski has shown. But the *agon* theory, according to which comedy arose from γεφυρισμός, or the jibing at one another at the bridge passed over by the initiates on their procession to Eleusis (cf. Gildersleeve, in *AJPh* x. [1889] 383, xviii. [1897] 243), would make comedy belong to Demeter and Persephone rather than to Dionysus. Whichever theory is right, Attic comedy in its origin certainly was clearly separated from tragedy and the satyr-drama, which were regarded as regular rituals by the State. But comedy grew out of mere buffoonery, and had no claim to religious respect, though it was given unofficially at festivals of Dionysus. The State did not take it up until comedy was developed on the lines of tragedy as a legitimate form of drama. Probably about 487 B.C., as Capps thinks,—and not so late as 467, as Wilamowitz argues,—comedy was officially recognized at the city *Dionysia*. Chionides and Magnes are the first great names, and from their time onwards comedy developed after the pattern of tragedy. Three comedies were given at the *Dionysia* and *Lenæa* by five separate poets. From 425 to 405 B.C. the number was only three. The number of actors who could take part in the discussion at any time was three, as in tragedy (though, as Rees has shown, this does not mean that only three actors were employed to give a tragedy or comedy). The number of the chorus was twenty-four—double the number in tragedy before Sophocles. Comedy, like tragedy, had its prologue, *parodos*, *exodos*, and choruses; but two features, the *agon* and *parabasis*, are peculiar to comedy alone. The *agon* is a debate between two antagonists and the chorus, and often seems to be the essence of the comedy. So, in the *Clouds* of Aristophanes the *agon* is the contention of the Just and Unjust Arguments for the Athenian boy. The *parabasis* is the part where the chorus faces the spectators and addresses them in the name of the poet.

Three periods of comedy are distinguished—the Old (down to, say, 390 B.C.), the Middle (from 390 to, say, 324—the date of Menander's first play), and the New (from 324 onwards). The Old Comedy, of which Cratinus, Eupolis, and Aristophanes are the three great poets, ridiculed with gross abuse and obscenity an individual or any subject, whether from mythology, literature, Utopias, daily or public life. Imitations of animal life were common, and there were choruses of snakes, wasps, fishes, or birds, as in the *Birds* of Aristophanes, the prototype of Rostand's *Chanticler*. Such choruses existed even before Aristophanes, since a vase in the British Museum of the 6th cent. B.C. shows men dressed as birds dancing to the sound of the flute. Great licence was allowed in ridiculing statesmen and politics, but for a while it became necessary to curb the satire and forbid the comedians to satirize individuals by name. The plays of the middle period of Aristophanes are not so pungently political as the earlier ones, and the *Plutus* belongs to Middle Comedy. Aristophanes was the greatest representative of the Old Comedy, and of his fifty-four plays we have eleven preserved entire—the

only extant examples of a complete Greek comedy. The Middle Comedy, best represented by Alexis and Antiphanes, in which political and personal satire hardly appears at all, is a period of transition to the more refined and less personal New Comedy, which developed the comedy of manners with its stock characters and with the every-day interests of eating, drinking, and intrigue. The greatest poets of the New Comedy were Philemon (who in a life of ninety-nine years produced about ninety plays), Menander, Diphilus, Apollodorus, and Posidippus. Recently considerable fragments of four plays of Menander have been recovered in Egypt (cf. Capps, *Four Plays of Menander*, 1910), but we still get our best idea of the Greek New Comedy from the Roman comic poets Terence and Plautus, who took their plots from the Greek, and led the way to the comedy of Molière and modern Europe. See DRAMA (Roman).

4. The structure of the theatre.—It is impossible even to touch on all the subjects connected with the Greek drama in this article, but something should be said about the form of the Greek theatre, which to-day is the most conspicuous ruin throughout Greek lands. The best preserved auditorium is that of the beautiful and harmonious theatre of Epidaurus; the best preserved stage-building is that of Priene. All date after the middle of the 4th cent. B.C. The first stone theatre in Athens dates from the time of Lycurgus,—long after the days of Æschylus, Sophocles, and Euripides,—and would seat about 15,000 people. With the semi-circular auditorium rising in tier after tier of seats divided into κερκίδες, or wedges, by aisles, the theatre of Lycurgus probably reproduces the plan of the temporary structure in which Æschylus acted his own dramas. The performance was always out of doors, and the spectators sat on the slope of the hill, which was made into the form of a semi-circle with the ends extended. Generally even in later times the side of a hill was used for the auditorium of stone, but at Eretria an artificial embankment had to be heaped up. The chorus and actors performed in a circular orchestra at the bottom of a semi-circular auditorium. Here was an altar of Dionysus, at which every performance was begun with sacrifice; and, as the Greek drama was essentially a religious service, not far away there often was a temple, generally of Dionysus, in whose precinct the theatre was. Part of the 6th cent. temple of Dionysus remains even to-day, to the south of the stone theatre of Dionysus in Athens, although the later 4th cent. temple is better preserved. However, we must remember that, while Dionysus was the usual deity associated with the theatre, we sometimes find others. So the stage-building of the theatre at Oropos, which seems to have had wooden seats, with the exception of a few stone ones for the priests and dignitaries, bears an inscription to Amphiaraus. At first there was no scenic background, but, when painted scenery had been introduced, a *skēnē* was erected behind the orchestra containing dressing rooms, and was later adorned with a proscenium of half columns, originally wood, but later stone, between which were slabs, or *pinakes*, on which the scenery was painted. These slabs could be removed when the actors came out into the orchestra. Even when there was a stone *skēnē* and proscenium, most scholars now agree that the actors performed in the orchestra, where even a whisper could be heard by the topmost row, as the writer can bear witness from experiments at Epidaurus. The gods, of course, appeared on top of the proscenium, or *theologeion*. Ghosts, like that of Darius in the *Persæ*, would appear by 'Charon's stairs,' which descended in the middle of the orchestra and connected with an underground passage to the *skēnē*, as at Eretria and Sicyon. The actors were distinguished from the chorus by their costume, often padded, and by their wigs and masks. It used to be thought that their height was increased by the *cothurnus* on the feet and the *onchos* on the head. But it is likely that the *cothurnus* was unknown till late times. Doubt has also been thrown on the use of the *eccyclēma*, or machine to roll out the corpse, since no murder could be represented in full view of the spectators. But there seems to be evidence for its use. Men played the part of women. There was no curtain, as in the Roman theatre, so that there was rarely a change of scene; but the three unities of time, place, and action were often violated, and not consciously formulated by the Greeks.

LITERATURE.—Cf. the different histories of Greek Literature, esp. Croiset, *Hist. de la litt. grecque*, iii. (1891), tr. in abridged form by Heffelhower (1904); Christ, *Gesch. der griech. Litteratur*[4], 1905; Fowler, *Hist. of Ancient Gr. Literature*, 1902; Capps, *From Homer to Theocritus*, 1909, pp. 182–300, 414–440 [one of the best accounts of the subject]; Wright, *Short Hist of Gr. Literature*, 1907; Verrall, *Student's Manual of Gr. Tragedy*, 1891; Barnett, *Gr. Drama*, Temple Primers, 1900 [an excellent little book, with a good account of the origin and early history of the drama]; Haigh, *Tragic Drama of the Greeks*, 1896, *The Attic Theatre*, 1889 (3rd ed. by Pickard-Cambridge, 1907); Moulton, *Ancient Classical Drama*, 1890; Weil, *Études sur le drame antique*, 1897; Campbell, *Guide to Gr. Tragedy for English Readers*, 1891; Ridgeway, *The Origin of Tragedy*, 1910 [the most recent and important treatment]; Farnell, 'The Megala Dionysia and the Origin of Tragedy' (*JHS* xxix. [1909] p. xlvii), also *Cults of the Greek States*, v. [1910], *s.v.* 'Dionysus'; Reisch, 'Zur Vorgesch. der attischen Tragödie' (*Festschrift für Gomperz*, 1902, p. 459 f.). For the religious side, cf. esp. J. Adam, *The Religious Teachers of Greece*, 1908; Campbell, *Religion in Greek Literature*, 1898; Dyer, *Gods in Greece*, 1891; Foucart, *Le Culte de Dionysos en Attique*, 1904; J. E. Harrison, *Proleg. to the Study of Greek Religion*[2], 1908 (esp. pp. 359–453); Pater, *Greek Studies: A Study of Dionysus*, 1895; Wernicke, 'Bockschöre und Satyr-drama' (*Hermes*, xxxii. [1897] 290 f.). For the ruins of theatres and their interpretation, cf. Dörpfeld, *Das griech. Theater*, 1896; Puchstein, *Die griech. Bühne*, 1901. On the dramatic inscriptions, cf. Wilhelm, *Urkunden dramat. Aufführungen in Athen*, 1906, and the artt. by Capps cited there, esp. the 'Introduction of Comedy into the City Dionysia' (*Chicago Decennial Publications*). Other important works are the editions of Aristotle's *Poetics* by Butcher (1898) and Bywater (1909); O'Connor, *Chapters in the History of Actors and Acting in Ancient Greece*, 1908; Rees, *The So-called Rule of Three Actors*, 1908; Smith, 'The Use of the Buskin in Greek Tragedy' (*Harvard Studies*, xvi. [1905]); Hains, 'Gr. Plays in America' (*Classical Journal*, vi. [1910] 24 f.). Other books on the Greek drama are being prepared by Capps, Harris, Harry, Flickinger, and others.

DAVID M. ROBINSON.

DRAMA (Indian).—**1. The classical Indian drama.**—The extant masterpieces of the Indian drama belong to the most flourishing period of classical Sanskrit literature, which may be supposed to begin with the establishment of the Gupta Empire in A.D. 319, and to extend to about the year 800, though the literature of the next three or four centuries, which may be regarded as the silver age, includes a number of dramas of considerable interest and importance; and this species of composition has continued to be cultivated in India even down to the present day. But these later productions are destitute of originality. They are either imitations of the old models, or exercises constructed in accordance with the rules of the rhetoricians and the writers on the dramatic art. Recent discoveries have, however, shown that the antiquity of the classical drama is much greater than is represented by the extant literature. Fragments of Indian palm-leaf MSS found in Central Asia show that a dramatic literature possessing substantially the same chief characteristics (§ 2) was flourishing several centuries earlier in the Kuṣana period (§ 3).

Like all other works of the classical period—such as the romances, the literary epics, and the lyrical poems—the Sanskrit dramas are of an artificial and highly elaborated character. The rules which govern their language, their structure, the choice of their *dramatis personæ*, and their plots are

those which had been already fixed by grammarians and theorists. Dependent as they are for their interest, not so much on originality of plot or a life-like portrayal of character, as on their power to excite emotion, on refinement of language, and on subtlety of expression, they can have appealed only to cultivated audiences. We thus find the drama, at its first appearance in literature, to be a perfected work of art, the form of which, already definitely settled, does not subsequently undergo any important modification.

This drama must have had a history; but such earlier forms as might have enabled us to trace its origin and growth directly were either not committed to writing or have disappeared in the course of time. References in early literature prove, indeed, that a drama of some kind flourished in India at least as early as the 4th cent. B.C. (see § 8); but there is nothing actually extant in Indian literature which stands to the classical drama in the same relation as the early epics, the *Mahābhārata* and the *Rāmāyaṇa*—the oldest portions of which probably go back to *c.* 500 B.C.—stand to the later epics of the classical period. All that can be now known of the history and development of the Indian drama must be inferred: (1) from the plays themselves, (2) from works dealing with the arts of dramatic composition and dramatic representation, (3) from references in other literature, and (4) from a consideration of the popular theatre which continues still to flourish in India.

2. Chief features.—Some of the most important characteristics which are common to all Sanskrit plays are the following:—

(1) *The benediction.*—Every play begins with a solemn prayer in verse, addressed to some deity—usually Śiva or Viṣṇu or some Divine personage connected with them. In the case of one drama, the *Nāgānanda*, Buddha is invoked.[1] This prayer, called the *nāndī*, was pronounced by the manager of the theatre (*sūtradhāra*), who was also usually the principal actor. It formed part originally of an introductory religious ceremony called the *pūrvaraṅga*, and remained prefixed to the drama as a sign of its religious origin.

(2) *The prologue.*—At the conclusion of the *nāndī*, the manager calls to his side one of the actors or actresses; and the dialogue which follows is adroitly used to bespeak the good-will of the audience, to give some account of the piece to be performed, and to lead up to the action of the opening scene by calling attention to the character or characters who now appear on the stage. This introduction (*ānukha* or *prastāvanā*) differs from the prologue in the Latin, French, or English comedy, in so far that it is not definitely separated from the play itself, and is intended to set the plot in motion.

(3) *The acts.*—The play thus begun divides itself naturally into acts (*aṅka*), each forming, as it were, a chapter in the story. The hero appears in each act; and an act comes to an end when all the characters have gone off the stage. The unity of time is preserved only within each act and not throughout the whole play; and even within the act the rule is liberally interpreted by a proviso that the events described must not be supposed to have lasted more than twenty-four hours. The time supposed to elapse between one act and another is, in theory, limited to a year; but in practice a longer interval is sometimes permitted.[2] The audience is made acquainted with events which have taken place between acts by means of interludes (*viṣkambhaka* or *praveśaka*), which take the form of monologues or duologues. The unity of place is not observed. Journeys from one spot to another, or from the earth to the sky, for instance, may be represented dramatically within the act.

(4) *Expression of emotions.*—The object of the dramatic art is to produce emotion in the mind of the spectator; and to this end everything else is subordinated. In the course of a play all the emotions (*rasa*), enumerated as eight,[1] may be excited; but those of love and heroism should preponderate. Death and fighting must not be represented on the stage; and every play must have a happy ending. Tragedy, therefore, in the ordinary sense of the word, finds no place in the classical Hindu theatre. These characteristic aims and limitations produce in Sanskrit plays a sentimental and conventional atmosphere which distinguishes them in a very marked manner from the tragedies and comedies of ancient Greece and Rome.

(5) *Verse and prose mixed.*—A no less striking contrast is presented by their form. Sanskrit plays are written partly in verse and partly in prose. The verse portions consist of short lyrical poems descriptive of the beauties of Nature, the charms of women, feelings of love, joy, despair, etc., and these are connected by a prose dialogne. The action of the plot is carried on almost entirely in prose, while the personal feelings of the characters inspired by their surroundings are expressed in the most formal verse. These lyrics, couched in a great variety of metres, and adorned with all the devices of rhetoric, are highly polished specimens of the poetic art such as could have been appreciated, or even understood, only by a cultured audience. It seems probable that, in the earlier stages of the drama, the verses only were fixed, while the connecting dialogue was left to improvisation, as in the popular plays at the present day.

(6) *Sanskrit and Prakrit.*—The *dramatis personæ* speak either the literary language (Sanskrit) or one or other of the popular dialects (Prakrit). The distribution of languages among the various characters may be given as follows from the *Daśa-Rūpa* ii. 97–99 (ed. and tr. Haas, p. 75):

'Sanskrit is to be spoken by men that are not of low rank, by devotees, and in some cases by female ascetics, by the chief queen,[2] by daughters of ministers, and by courtesans. Prâkrit is generally [to be the language] of women, and Śaurasenī in the case of male characters of low rank. In like manner Piśâchas, very low persons, and the like are to speak Paiśâchī and Mâgadhī. Of whatever region an inferior character may be, of that region is his language to be. For a special purpose the language of the highest and subsequent characters may be changed.'

This diversity of tongues would seem to indicate that the drama assumed its final form at a period when the educated classes were in the habit of using Sanskrit as an ordinary means of communication, while the uneducated classes still continued to employ their own dialects. But, though the classical drama may thus show conventionalized a state of things which must at one time have had its basis in actual fact, its Prakrits are no longer the genuine language of the people. They, too, have become conventional; that is to say, they are merely Sanskrit changed into the various Prakrits in accordance with what were supposed to be the phonetic peculiarities of each, in much the same way as the Scotch and Irish characters on the English stage are often made to speak a jargon which is nothing more than perverted English—the work of a dramatist who has no knowledge of the living dialects. These dramatic Prakrits are, further, assigned to different classes of characters, and applied to different uses in the plays, in a manner which is also purely conventional. The Prakrits thus represented most commonly are three in number—Śaurasenī, Māhā-

[1] See § 3; cf. also the fragments of plays discovered in Central Asia (*ib.*). These are definitely Buddhistic in character.

[2] See Jackson, 'Time Analysis of Sanskrit Plays,' in *JAOS* xx. [1899] 341–359 xxi. [1900] 88–108.

[1] For an elaborate study of the *rasas*, see Regnaud *Rhétorique sanskrite*, Paris, 1884, pp. 267–364.

[2] In the extant plays the queen regularly speaks Prakrit.

rāṣṭrī and Māgadhī; but a number of others are found occasionally. Śaurasenī, the dialect of the region of the Mathurā (Muttra), is used in prose by the queen and her attendants and by the higher subordinates generally. In verse the same characters use Māhārāṣṭrī, the language of the Mahratta country. The lower subordinate characters speak either Māgadhī, the dialect of Magadha (Bihar), the country around Pāṭaliputra (Patna), or some peculiar *patois* of their own. A fourth Prakrit, Paiśāchī, spoken in certain districts of N.W. India, is said by the grammarians to have been used in the drama, but is known at present only from their quotations, and has not been found in any extant play.[1]

The predominance in the plays of Śaurasenī, the dialect of the country of Mathurā, the holy land of Kṛṣṇaism, lends some support to the theory, which is not improbable otherwise, that the drama had its origin in religious performances celebrating the life and exploits of Viṣṇu-Kṛṣṇa.

(7) *The characters*, etc.—The characters in a play may be either semi-Divine or human; and, as according to Hindu ideas there is no very definite line of demarcation to be drawn between these two classes, they are often brought into association, as, for instance, when a king falls in love with an *apsaras*, one of Indra's nymphs.

The plot may be taken from legend or from history, or it may be founded on contemporary life and manners. In any case, the main interest almost invariably centres in a love-story. For a rare exception, see § 3, vi. '*Mudrārākṣasa*.'

The scenes are predominatingly, though by no means exclusively, those of court life; and the persons most frequently represented are kings and queens and their *entourage*. There can be no doubt that the classical drama was developed mainly under the influence of royal patronage, and that the dramatists were usually also court poets. The dependants of the court, too, supplied certain types which are especially characteristic of the Indian stage. The most noteworthy of these are the *vidūṣaka* (who appears in nearly all the plays except those of Bhavabhūti), the *viṭa*, and the *śakāra* (who are known chiefly from the *Mṛchchhakaṭikā* [see § 3] and the text-books).

The *vidūṣaka*, who has often been compared with Shakespeare's clown, is the king's confidant and go-between. His gluttony, his stupidity, and his foibles make him the comic character of the piece. Although a Brahman, he speaks Prakrit, like the uneducated characters. This fact probably denotes that the type has been borrowed by the literary drama from the popular stage.[2]

The *viṭa*, another associate of the king, is a person of wit and refinement, who combines the graces and the subserviency of the courtier.

The *śakāra* is the brother of one of the inferior wives of the king, and is represented as an insolent, overbearing upstart. The name, according to the grammarians, denotes a person of Śaka descent (Patañjali, *Mahābhāṣya*, *ad* Pāṇini, iv. i. 130). As Sylvain Lévi (*Le Théâtre indien*, p. 361 f.) has pointed out, this etymology is historically important, as showing that the character in question first found a place in the Indian drama at a period when Śaka princes were ruling in India, and matrimonial alliances between royal houses of Hindu and Śaka nationality were possible. The peculiar language spoken by this character is also said to be that of the Śakas (*Sāhityadarpaṇa*, 81, 85).

Historically interesting also on account of their name are the *yavanīs*, who attend the king as armour-bearers. These must have been originally Yavana ('Greek') women, although, like the French word *suisse*, the term may at a later date have been used to denote any attendant of a particular kind.[1]

(8) *Buildings and stage-properties.*—From the prologues to the dramas we learn that they were usually performed on the occasion of a festival—most frequently the Spring Festival (see § 10). The simple arrangements of the Indian stage required no building fitted with special contrivances like our own theatres or the Greek *θέατρα*. The plays were, as a rule, given in the hall of a royal palace which was used for exhibitions of singing and dancing (*saṃgīta-śālā*).

No doubt the hall was sometimes specially intended for dramatic representations, and was, therefore, called *prekṣāgṛha*, 'play-house.' Such buildings are described in the *Nāṭyaśāstra* (see § 4). Inscriptions in a cave at Rāmagadh seem to indicate that it was intended to be used as a theatre (see Bloch, *ZDMG* lviii. [1904] 455; *Ann. Rep. of the Archæol. Survey of India*, ii.).

The stage was open to the audience in front, while the background was formed by a curtain divided in the centre. The tiring-room (*nepathya*) was immediately behind the curtain. When characters came on the stage in a dignified manner, the two halves of the curtain were drawn aside by attendants; but, when haste was to be indicated, the actor entered 'with a toss of the curtain' (*apaṭī-kṣepeṇa*).

One of the names for this curtain, *yavanikā*, was supposed by Weber (*ZDMG* xiv. [1860] 269, *Ind. Stud.*, Leipzig, 1868, xiii. 492) to mean 'the Greek cloth,' and the etymology was used by him to support his theory of Greek influence in the Indian drama. The word, however, more probably denotes some fabric made by the Yavanas. If so, it is, like *śakāra* and *yavanī*, interesting as evidence of the period in which the drama assumed its form.

Stage-properties of the most obvious description only, such as thrones and chariots, were used; and there was no scenery in the ordinary sense of the word. Its lack was supplied by lyrics describing the imaginary surroundings, supplemented by mimetic action, and by an elaborate system of gesture to which a conventional significance well understood by the audience was attached, somewhat in the style of the modern ballet.

3. The most important plays.—

The earliest specimen of the Sanskrit drama was formerly supposed to be the *Mṛchchhakaṭikā*, which was referred to the 4th cent.; but, since the appearance of Sylvain Lévi's *Le Théâtre indien*, it is now generally believed to belong to a later period (see below, iii. '*Śūdraka*'). The earliest complete plays which have been published would seem to be those of Kālidāsa, who probably lived in the reign of the Gupta monarch Chandragupta II. Vikramāditya (A.D. 401–415). But, in the prologue to what is usually regarded as Kālidāsa's earliest drama, the *Mālavikāgnimitra*, he records the names of some 'far-famed' predecessors—Bhāsa, Rāmilla, Saumilla, and Kaviputra. Until recently only fragments of plays by these dramatists were known; but, in May 1910, Pandit T. Gaṇapati Śāstri discovered, in an old library in Travancore, MSS of ten dramas of Bhāsa, including the *Svapna-vāsavadattā*, of which Bhāsa was previously known to be the author, and the *Daridra-chārudatta*, from which the plot of the *Mṛchchhakaṭikā* was borrowed. Editions of these plays may be expected to appear shortly in the Trivandrum Sanskrit Series (see Sylvain Lévi, *JA* xvi. [1910] 388).

Fragments of Indian (Buddhist) dramas of a much earlier date have been discovered in Central Asia. These belong to the early Kuṣana period, when Central Asia formed part of the Indian Empire; and one of them is actually the work of Aśvaghoṣa, the court poet of Kaniṣka. The chronology of the Kuṣana period is at present in an unsettled state; and the age of these fragments will be variously estimated according to the different views which scholars hold as to the epoch of Kaniṣka

[1] For a fuller account of the Prakrits, see R. Pischel, *Gram. der Prakrit-Sprachen* (*GIAP* i. 8, Strassburg, 1900); on the Paiśāchī, see also Konow, 'The Home of Paiśāchī,' in *ZDMG* lxiv. [1910] 95–118.

[2] Pischel (*Home of the Puppet-play*, Eng. tr., London, 1902) supposes the *vidūṣaka* to be the original of the buffoon who appears in various forms in the popular theatres of mediæval Europe. It is perhaps more probable that some such character is inevitable wherever a popular drama is developed. A nearer parallel to the *vidūṣaka* would seem to be supplied by the friar, who was often represented as a comic character. On the *vidūṣaka*, see especially Huizinga, *De vidūṣaka in het indisch Tooneel* (Groningen, 1897). Cf. also Schmidt, *Beiträge zur ind. Erotik*, Leipzig, 1902, pp. 200–203.

[1] For the period to which these foreign invaders belong, see § 10.

That is to say, while some will suppose them to belong to the 1st cent. B.C., others will assign them to the 1st or to the early part of the 2nd cent. A.D. These dramas are of the conventional form (see § 2), and do not differ essentially in language or style from the well-known examples of the classical period. Their evidence is extremely important, as showing that the structure of the drama was already settled at a period which may be from three to four and a half centuries anterior to Kālidāsa (see § 10 (4)). See *Königlich Preussische Turfan-Expeditionen: Kleinere Sanskrit-Texte*, Heft 1, 'Bruchstücke buddhistischer Dramen herausgegeben von Heinrich Lüders,' Berlin, 1911; *Das Śāriputra-prakaraṇa, ein Drama des Aśvaghoṣa*, by Heinrich Lüders, Berlin, 1911 (*Sitzungsber. der König. Preuss. Akad. der Wissenschaften*, Phil.-Hist. Classe, p. 388).

The number of extant plays recorded in Schuyler's *Bibliography of the Sanskrit Drama* exceeds five hundred, but a great number of these are late and purely imitative productions of little interest or literary value. The following list contains the titles, with short descriptions, of the most important:

i. Kālidāsa.—(1) *Mālavikāgnimitra*: the story of King Agnimitra and the Princess Mālavikā (repeatedly translated, *e.g.* Tawney[2], Calcutta, 1891). The play is historical in the sense that some of the characters are known to history. Agnimitra was the second member of the Śuṅga dynasty, which succeeded the Mauryas in the kingdom of Vidiśā (E. Malwa), *c.* 178 B.C. Incidents referred to in the play, such as the war with Vidarbha and the defeat of the Yavanas, are also perhaps historical. (2) *Śakuntalā* (the most popular of Skr. plays; first tr. Jones, Calcutta, 1789): the story of King Duṣyanta and the nymph Śakuntalā, taken from bk. i. of the *Mahābhārata*. (3) *Vikramorvaśī* (repeatedly translated, *e.g.* by Wilson): the story of King Purūravas and the Nymph Urvaśī, which goes back to Vedic times. A dialogue between these two personages is found in the Rigveda (x. 95).

ii. Harṣa (reigned A.D. 606—*c.* 648).—(1 and 2) *Ratnāvalī* (Eng. tr. by Wilson) and *Priyadarśikā* (tr. Strehly, Paris, 1888; Eng. tr. in preparation by A. V. W. Jackson), named after their heroines. The plots are taken from the cycle of stories about the adventures of King Udayana of Vatsa. (3) *Nāgānanda*: founded on the Buddhist story of the Bodhisattva Jīmūtavāhana (Eng. tr. by Boyd, London, 1872). In the opening benediction Buddha is invoked.[1]

iii. Śūdraka.—*Mṛchchhakaṭikā*, 'The Clay Cart': a comedy of middle-class contemporary life. The plot gathers around the love of the rich courtesan Vasantasenā for the poor but well-born Chārudatta (Eng. tr. by Wilson, and especially Ryder, Cambridge, Mass., 1905). This, the most human and amusing of Sanskrit plays, is now known to be an adaptation of Bhāsa's *Daridra-chārudatta*, 'Poor Chārudatta.'[2]

iv. Bhavabhūti (flourished at the court of Yaśovarman of Kanauj, *c.* A.D. 690).—(1 and 2) *Mahāvīracharita* (tr. Pickford, London, 1871) and *Uttararāmacharita* (several translations, *e.g.* by Wilson): founded on the story of Rāma. (3) *Mālatīmādhava*: a comedy of contemporary life named after the two chief characters Mālatī and Mādhava (Eng. tr. by Wilson).

v. Bhaṭṭa Nārāyaṇa (before the second half of the 9th cent.). —*Veṇisaṃhāra* (Eng. tr. by Tagore, Calcutta, 1880): the plot is taken from the *Mahābhārata*.

vi. Viśākhadatta or Viśākhadeva (about the same date as the last).—*Mudrārākṣasa*: a political drama with no principal female characters and no love interest (Eng. tr. by Wilson). The plot is historical. It turns on the fall of the Nandas and the coming to power (*c.* 315 B.C.) of Chandragupta, the founder of the Maurya dynasty, the Σανδρόκοττος of Alexander the Great's historians.

vii. Rājaśekhara (lived at the court of Mahendrapāla of Kanauj, *c.* A.D. 900).—(1) *Viddhaśālabhañjikā*, 'The Pierced Statue' (Eng. tr. by Gray, *JAOS* xxvii. [1906] 1-71); (2) *Karpūramañjarī*, 'The Camphor Cluster' (ed. and tr. Konow and Lanman, Cambridge, Mass., 1901); (3 and 4) *Bālarāmāyaṇa* and *Bāla-bhārata*. The first of these is, in some respects, an imitation of the *Ratnāvalī*; the second is noteworthy as being the only extant example of a play written altogether in Prakrit; the third and fourth are founded respectively on the stories of the *Rāmāyaṇa* and the *Mahābhārata*.

viii. Kṛṣṇamiśra (11th cent.).—*Prabodhachandrodaya*, 'The Rising of the Moon of Wisdom': an allegorical play in which the characters are abstract ideas, virtues, or vices.[3] Its object is to glorify the Vedānta philosophy and to inculcate the worship of Viṣṇu (Eng. tr. by Taylor[3], Bombay, 1893).

For dramas inscribed on stone, see Kielhorn, 'Bruchstücke ind. Schauspiele in Inschriften zu Ajmere' (*GGN*, 1901); and Hultzsch, *Epigr. Ind.* viii. [1905-6] 96.

4. Works on the theatre.—Of the Sanskrit treatises which deal with dramatic composition and theatrical representation the following are the most important:—

The *Nāṭya-Śāstra* is an encyclopædia dealing with the theatre and all the arts associated therewith. It is regarded as the highest authority, and is supposed to be of Divine authorship. It is said to have been revealed as a fifth Veda by the god Brahmā to the sage Bharata, who is often mentioned in the plays as the stage-manager of the gods. It is at least as old as the earliest extant dramas, and may be much older. The list of foreign invaders of India mentioned in it—Śakas, Yavanas, Pāhlavas, Bāhlīkas—seems to indicate the same period as the dramas themselves (see Sylvain Lévi, *op. cit.*, Appendix, p. 3).

The *Daśa-Rūpa* (ed. and tr. Haas, New York, 1911) of Dhanaṃjaya, who lived in the reign of Muñja or Vākpatirāja, king of Malwa (last quarter of the 10th cent.), deals only with the dramatic art, which it analyzes under four headings: (1) the plot, (2) the hero and the other characters, (3) the prologue and the various species of dramatic composition, (4) the poetry and the sentiments to be expresssed.

The *Sāhityadarpaṇa* (ed. and tr. Ballantyne and Mitra, Calcutta, 1875) of Viśvanātha, of uncertain date, treats not only of the drama but also of the whole art of poetry.

These works show a subtle power of analysis which is characteristically Indian; but the analysis is rather of the form than of the spirit, and is as alien as possible from what has, since the days of Aristotle, been regarded as dramatic criticism in the West. Thus, the principles in accordance with which dramas are classified are founded on what we should consider accidents rather than essentials; for example, the rank of the hero, the number of the acts, the kind of language (whether partly in Sanskrit and partly in Prakrit, or altogether in Prakrit, etc.). According to such principles, all dramas are divided into two main classes—a higher (*rūpaka*), of which there are 10 varieties; and a lower (*uparūpaka*), of which there are 18 varieties. Of the *rūpaka*, the first variety is the *nāṭaka*, which must consist of not fewer than 5 and not more than 10 acts, and in which the hero must be a god or a prince, e.g. *Śakuntalā*. The next variety is the *prakaraṇa*, a love-story of real life, in which hero and heroine must be of good family, e.g. *Mṛchchhakaṭikā*. Of the *uparūpaka* the chief variety is the *nāṭika*, which has the same type of hero as the *nāṭaka*, but is confined to 4 acts, e.g. *Ratnāvalī*. Another variety, the fourth in the enumeration, is the *saṭṭaka*, which (according to the *Sāhityadarpaṇa*) is like the *nāṭika*, except that it is written entirely in Prakrit, e.g. *Karpūramañjarī*.

[In addition to the *rūpakas* and *uparūpakas* just noted, the following types described by the Indian dramaturgists are also accessible, though the majority of them are still untranslated.

I. Rūpakas.—(i.) The *Bhāṇa*, or monologue, descriptive of the passing throng or of a rascal's exploits (e.g. *Vasantatilaka* of Varadāchārya, ed. Vidyāsāgara, Calcutta, 1872; Eng. tr. in course of preparation by L. H. Gray). (ii.) *Prahasana*, or farce (*e.g.* Jyotīriśvara's *Dhūrtasamāgama*, tr. Marazzi, *Teatro scelto indiano*, Milan, 1871-74, ii. 189-231). (iii.) *Dima*, or presentation of terrible events, the effect of the combats, etc., often being enhanced by sorcery, eclipses, and the like (*e.g.* Rāma's *Manmathonmathana*, ed. R. Schmidt, *ZDMG* lxii. [1909] 409-437, 629-654). (iv.) *Vyāyoga*, or military spectacle, from which the sentiment of love is excluded (*e.g.* Kāñchanāchārya's *Dhanaṃjayavijaya*, ed. Śivadatta and Parab, Bombay, 1895).

2. Uparūpakas.—(i.) The *Troṭaka*, merely a variety of the *nāṭaka* (*e.g.* the *Vikramorvaśī* [§ 3, i.]). (ii.) *Śrīgadita*, in which the name of the goddess Śrī ('Fortune') is frequently mentioned, or the divinity is imitated by the heroine (*e.g.* Mā-

[1] Although these three plays bear the name of King Harṣavardhana Śīlāditya of Thanesar, and each contains a verse asserting the royal authorship, it is probable that they were the work of a court poet, perhaps Bāṇa, to whom also a play entitled *Pārvatī-pariṇaya*, 'Parvati's Wedding' (tr. Glaser, Trieste programme, 1886), is attributed (on this whole problem, see Ettinghausen, *Harṣa Vardhana, empereur et poète*, Paris, 1906).

[2] King Śūdraka, to whom this comedy is attributed, is the central figure of a group of legends, from which no exact information as to his date or locality can be obtained. As in other similar cases, it is probable that the actual author was some court poet. The *Mṛchchhakaṭikā* may perhaps belong to the 6th or 7th century.

[3] Allegorical characters are also found in one of the Buddhist plays of which fragments have been discovered in Central Asia.

dhava Bhaṭṭa's *Subhadrāharaṇa*, ed. Durgāprasāda and Parab, Bombay, 1888). (iii.) *Bhāṇikā*, a comic piece in one act (*e.g.* Rūpa Gosvāmī's *Dānakelikaumudī*, ed. Jīva Gosvāmī, Murshidabad, 1881).

To these should be added, though unmentioned by the native dramaturgists, the very interesting *Chāyānāṭaka*, or 'shadow play' (*e.g.* Subhaṭa's *Dūtāṅgada*, tr. Gray, *JAOS* xxxi. [1911]; see below, § 6).—L. H. GRAY.]

In the same spirit the theorists delight in arranging into divisions and sub-divisions—according to rank, character, and circumstances—all the conceivable types of hero and heroine, and all the possible varieties of plot. Artificial and meticulous as is the theory of drama thus presented, it is substantially observed in all the plays extant, and it acquires a more binding power as time goes on, so that the later productions are no longer works of art, but exercises written to illustrate rules.

5. Prakrit nomenclature a sign of popular origin.—The whole nomenclature of the drama, however, as employed and expounded by the theorists, supplies indisputable evidence of its popular origin. The terms denoting acting and actors, the different kinds of plays, theatrical appliances, etc., are predominatingly Prakrit and not Sanskrit, as they must have been if the drama had been literary from the first. The very root *naṭ*, 'to act,' is the Prakrit equivalent of the Sanskrit *nṛt*, 'to dance,' in the Indian sense, that is, 'to express by mimetic action.' It occurs in Pāṇini's grammar (IV. iii. 110, 129; 4th cent. B.C.), and both Pāṇini himself and, still more explicitly, his commentator Patañjali (2nd cent. B.C.) show that, at their respective dates, the educated classes spoke Sanskrit, while the common people still continued to use their native dialects. The drama, then, had its origin among the common people; and, at the later period when it assumed a literary form, its nomenclature was so firmly established as not to suffer change through the influence of its new surroundings.

6. Influence of the puppet-play.—Further evidence of a popular origin has been seen in the titles *sūtradhāra* and *sthāpaka* applied to the manager and to his principal assistant. The word *sūtradhāra* means literally 'the holder of the strings,' and *sthāpaka* 'the placer.' These terms are supposed to have been borrowed from the puppet-play, which was undoubtedly a very ancient form of dramatic representation in India, and is alluded to by Nīlakaṇṭha in his commentary on *Mahābhārata*, XII. ccxcv. 5 (Shankar Pandit, in notes to *Vikramorvaśī*, p. 4, Bombay Sanskrit Series, 1879; Pischel, *Home of the Puppet-play*, and 'Das altind. Schattenspiel,' *SBAW* xxiii. [1906] 482–502; Gray, introduction to his tr. of the *Dūtāṅgada*, in *JAOS* xxxii. [1912]).

The *sthāpaka*, who is well-known from the text-books, has almost vanished from the stage. He probably, however, appears in the *Karpūramañjarī*, although the MSS are not in agreement on this point (see Konow and Lanman, *Karpūramañjarī*, p. 196, Harvard Oriental Series, vol. iv. [1901]).

7. Popular plays (*yātrās*).—The classical drama is, therefore, a popular product which has received a literary development. This development took place, as is, indeed, true of classical Sanskrit literature generally, under royal patronage. The plays, as we learn from the prologues, were most frequently performed at palaces on the occasion of the Spring Festival; the characters represented are most commonly kings and queens and the *personnel* of the court; the dramatists are usually court poets; and the authorship of a number of plays is attributed to the kings themselves.

The popular drama, however, did not cease to exist because it assumed a more polished form at courts. While the works of a Kālidāsa or a Bhavabhūti were being performed before a courtly audience in the hall of the palace, the popular plays were appealing to humbler folk in the open air. They still survive in India under the name of *yātrās*, a name which declares their religious origin; for *yātrā* means a festival in honour of some deity. The plots, too, of these popular plays are still religious in character. They are still taken from the legends of the gods and heroes of the *Mahābhārata* and *Rāmāyaṇa*. The striking similarity between the *yātrās* and the 'mysteries' of mediæval Europe has been pointed out by Nisikānta Chattopādhyāya (*The Yātrās, or the Popular Dramas of Bengal*, London, 1882, p. 3; *Ind. Essays*, Zürich, 1883, p. 3), and there can be no doubt that the theatre in India, as in Europe, had its origin in religion.

8. References to drama in early literature.—The earliest certain mention of a dramatic literature appears to occur in Pāṇini's grammar (*c.* 350 B.C.), IV. iii. 110–111, where he gives rules for the formation of the names denoting the followers of two text-books on the drama—those of Śilālin and Kṛśāśvin. These treatises are lost; it is probable that they and all other works of the same nature were superseded by the *Nāṭya-śāstra* (see § 4). Pāṇini's commentator, Pataũjāli (*c.* 140 B.C.), often refers in his *Mahābhāṣya* to actors, and mentions two plays by name—*Kaṃsavadha*, 'the Slaying of Kaṃsa,' and *Balibandhana*, 'the Binding of Bali'—with the additional information that in the former the adherents of Kaṃsa and Vāsudeva respectively reddened and blackened their faces (Weber, *Ind. Studien*, xiii. 487; cf. also Keith, *ZDMG* lxiv. [1910] 534–536). As both of the earliest recorded plays celebrated the exploits of the god Viṣṇu, it has been suggested that the drama may have taken its origin from religious performances in his honour. There are also other indications that this view may possibly be correct (see § 2 (6)).

9. Dramatic character of some early literature.—The earliest literature of India, extending back to a period *c.* 1200 or 1500 B.C., includes certain compositions which are to some extent dramatic in character, and which may well have supplied the germ of a regular drama. In the Rigveda there are fifteen hymns written in the form of dialogues, which, if recited with appropriate action and with the parts assigned to separate actors, would make diminutive plays.[1]

The ancient epic poems, the *Mahābhārata* and *Rāmāyaṇa*, contain many scenes which might well be acted. The step from the epic to the drama, if such a development had taken place in India, would have been a short one, since the change of speaker in the epic is denoted by a short prose statement, which is little more than a stage direction—'A. spake'—and not by a line of verse incorporated in the poem, as in Homer.

The Brāhmaṇa literature, dating from *c.* 800 B.C., also contains accounts of performances of a dramatic character which took place in connexion with certain religious ceremonies:

'On solemn occasions, such as that of the sacrifice of a horse, it was the custom in Vedic times to recite old histories and songs; and the performers, the priests of the Rig-veda and the Yajur-veda spoke turn and turn about' (Hillebrandt, *Ritual-Litteratur* [*GIAP* iii. 2], Strassburg, 1897, p. 150). On the day of a Mahāvrata an Ārya and Śūdra appeared, who disputed about a skin (Hillebrandt, *Roman. Forsch.* v. [1890] 327); and at the ceremony of the purchase of soma a buyer and seller were introduced, who held an animated conversation about the price. The buyer made his offer, the seller raised his price. If the soma-dealer proved refractory, the purchaser was bound to tear the soma from him, and also to take away the gold and the cow which he had given for the soma. If the dealer resisted, the buyer had to beat him with a leather strap or with billets

[1] For these '*saṃvāda*' hymns, see Oldenberg, *ZDMG* xxxvii. (1883) 54, and xxxix. (1885) 52; Sylvain Lévi, *op. cit.* 301; von Schröder, *Mysterium u. Mimus im Rig-veda*, Leipzig, 1908, p. 1; Winternitz, *WZKM* xxiii. [1909] 102; Hertel, 'Ursprung des ind. Dramas und Epos,' *ib.* xviii. (1904) 59–83, 137–168; Keith, in *JRAS*, 1911, p. 979.

of wood (Hillebrandt, *Vedische Mythologie*, Breslau, 1891-1902, i. 75; Pischel, *Home of the Puppet-play*, p. 12).[1]

10. Origin of the drama.—The foregoing paragraphs contain a summary of such evidence as bears on the question of the origin of the drama. From a consideration of the evidence thus summarized, the following four points would seem to be established:

(1) The drama was of popular, not of learned, origin (see § 5). It is, therefore, difficult to suppose any connexion between it and the *saṃvāda* hymns of the Rigveda (see § 9).

(2) The drama is of lyric, not of epic, origin. The actual plays are essentially lyrical. Their frame-work consists of a number of little poems about the beauties of Nature, or personal feelings, somewhat after the manner of Heine's *Lieder*. The prose dialogue which connects these is of minor importance, and originally was probably left to improvisation (see § 2 (5)). It is probable, then, that the drama arose from songs associated with gestures, *i.e.* 'dancing,' in the Indian sense. Its form could not be explained if it were supposed to be of epic origin (see § 9).[2]

(3) Its origin was religious. This is inferred from the existence of the *nāndī* (see § 2 (1)), from the analogy of the *yātrās* (§ 7), and from the titles of the earliest recorded plays (§ 8). The fact that dramas were regularly performed at the Festival of Spring would seem to indicate that the rites from which they derived their origin may have been originally associated with some primitive form of Nature-worship, like those which are found incorporated in Brāhman ritual (§ 9). It is quite possible that, in certain parts of India, the worship of Viṣṇu-Kṛṣṇa, with which the drama would appear to be especially connected (§§ 2 (6), 8), may have been at a later date superimposed on some popular festival of the kind.

(4) A drama of some kind certainly existed as early as 350 B.C. (see § 8), and, at some period between this date and the date of the fragments found in Central Asia (see § 3), the form of the classical drama was stereotyped. The peoples of foreign nationality who have left their traces in the drama, and who are mentioned in the dramatic text-books, are those who occur in the other literature—epics, grammatical works, law-books, etc.—and in the inscriptions which fall within this period (Rapson, *B. M. Cat.*, 'Andhra Dynasty,' etc., London, 1908, p. xcviii).

11. The question of Greek influence.—The view, formerly widely accepted, and most fully expounded by Windisch ('Der griech. Einfluss im ind. Drama' [*Verh. d. 5 Internat. Or.-Cong.*, Berlin, 1882, II. ii. 3]), that the Indian drama had been influenced by the Newer Attic Comedy of Menander and Philemon (340–260 B.C.), probably finds few supporters at the present day. The arguments of Windisch are carefully considered one by one by Sylvain Lévi (*op. cit.*), who finds none of them convincing; and, as has been pointed out (§§ 2, 10), there are so many fundamental differences between the Indian and the Greek drama that, *prima facie*, they have all the appearance of being independent developments.

LITERATURE.—The standard work on the Sanskrit drama is Sylvain Lévi, *Le Théâtre indien*, Paris, 1890; the best collection of English translations is still that of H. H. Wilson, *Select Specimens of the Theatre of the Hindus* = vols. xi. and xii. of *Works of H. H. Wilson*, London, 1871; the best *Bibliography of the Sanskrit Drama* is that of Montgomery Schuyler, vol. iii. of the Columbia University Indo-Iranian Series, New York, 1906. A survey of Indian dramaturgic literature, with references to parallel passages, is given by G. C. O. Haas, in his ed. and tr. of the *Daśa-Rūpa* in the same series (New York, 1911). Reference may also be made to A. V. Williams Jackson, 'Certain Dramatic Elements in Sanskrit Plays, with Parallels in the English Drama,' in *AJPh* xix. (1898) 241–254, and 'Children on the Stage in the Ancient Hindu Drama,' in *Looker-On*, v. (1897) 509–516; and to L. H. Gray, 'The Sanskrit Novel and the Sanskrit Drama,' in *WZKM* xviii. (1904) 48–54.

E. J. RAPSON.

DRAMA (Japanese).—1. Origin.—The Japanese themselves do not hesitate to carry back the drama to mythological times.

The *Kojiki* tells us how the great sun-goddess Amaterasu-ō mikami-no-mikoto, angry with her mischievous and turbulent brother Susa no wō, god of winds and storms, hid herself in a cave and refused to come forth. The gods, distressed by the eclipse of light which ensued, sought to lure her from the cavern, and at last succeeded in doing so by means of a simple play. A young and beautiful deity, Amatsu-uzume-no-mikoto, clad in moss from the mountain of Kayou, garlanded with flowers from the spindle-tree, and hearing in her hand a bunch of bamboo-fronds, was set to dance a hieratic dance at the entrance to the cavern. The dance (it is still exhibited at Ise and Nara, and in Izumo) was found vastly amusing by the crowd of gods assembled at the cave to witness the success or failure of the experiment, and a roar of delighted laughter went up from them. The sulking sun-goddess was filled with woman-like curiosity, peeped out from her hiding-place, and was finally presuaded to return to her proper sphere. Thus the *Ama-no-iwado-no-kagura*, or 'play before the celestial gate,' came to be looked upon as the germ from which has sprung the classical drama of old Japan.

The value of the above legend depends on the view taken as to the historic value of the *Kojiki*, a compilation of the 8th cent. A.D., to which few foreigners would assign the same high position that is accorded to it by the Japanese. Under the year A.D. 671, however, the *Nihongi* speaks of a *tamai*, or 'rice-field-dance,' connected with the ingathering of the harvest; and this, by the beginning of the 11th cent., had developed into a more or less formal pantomime under a Chinese name *dengaku*, which signifies the same thing as *tamai*. The *tamai*, however, seems to have been a purely Shintoistic dance, connected with the indigenous Nature-worship: the *dengaku* was more or less buddhicized, and was performed by men with shaven crowns who were called *dengaku-bōshi*, or teachers of the law connected with the rice-field-dance, and who belonged (doubtless irregularly) to the Buddhist clergy. We have here a point of contact with the history of Buddhist developments in Japan. During the 9th and 10th cents., when the miseries of the country were very great, and when little, if anything, was done for the amelioration of the people by the selfishly cultured monks whose chief seats were in Nara, Kyoto, Hieizan, and a few other seats of monastic piety, travelling priests belonging to no particular sect of Buddhism itinerated throughout the country, gathering the people round them by simple dances and religious performances, and teaching the elements of popular religion. These men were known as *odori-nembutsu*, 'dancing reciters of prayers.' They were also *dengaku-bōshi*. The most famous of these men was Kūya Shōnin (9th cent.), a prince of the Imperial blood, who travelled all through the country with his mystery plays and dances. It is in these itinerating preachers that we find the true successors of that faith in Amitābha alone, which, developed in the 7th cent. by the Chinese patriarch Zendō, and encouraged by Shōtoku Taishi, disappeared for a while under the ritualistic burdens of the systems in vogue at Nara and Kyoto, to reappear in the simpler Jōdo systems of Hōnen and Shinran.

But the 'rice-field-dances' developed in another direction. By the side of the solemn and sedate *dengaku*, with its religious tone, there arose the *sangaku*, or 'Chinese dance,' full of humour and comedy, and hence changed in popular parlance to *sarugaku*, or 'monkey-dance,' which presently became the most popular of all the forms of

[1] To the reference given by Pischel add von Schröder, *Mysterium u. Mimus*, and Keith, *Śāṅkhayana Āraṇyaka*, London, 1908, Appendix on the Mahāvrata, p. 73.

[2] An extremely polished form of the primitive *yātrā* probably exists in Jayadeva's *Gītagovinda* (12th cent.), made accessible in Sir Edwin Arnold's *Indian Song of Songs* (London, 1875).

dances, and eventually developed into the '*nō*' *par excellence*.

The word *nō* presents certain difficulties. Used as a verb it means 'to be able,' 'to have the power'; as a noun it signifies 'power,' 'faculty,' 'capacity,' 'talent.' It is much used in Buddhist philosophy, though this fact does not throw much light on its employment as a designation for lyrical dramas. Péri (*op. cit. infra*) quotes Motoori (1730–1801) as suggesting that the character is a contraction for *waza*, a term frequently used to denote 'actions,' 'liturgies,' 'dances.' We have *kami-waza*, 'liturgies'; *mai-waza*, 'dances'; *oko-waza*, 'comic spectacles'; and Fujiwara Akihara (1020–1068) even speaks of *sarugaku-no-waza*. There is much to be said for this theory, but it still leaves untouched the problem as to how the pronunciation *waza* came to be changed to *nō*. Can it be that there lurks in *nō* some echo of the Indian word *nāṭa* ('nautch')? The *nō* came into vogue in Japan at a time when Japan had close intercourse with China, when China was greatly influenced by India; and there is much in the *nautch* that reminds one of the *nō*. Motoori's theory, that *nō*=*waza*, is strengthened by the fact that the principal actor in a *nō* drama is called *shi-te* (lit. ποιητής).

2. The '**nō.**'—Apart from the philological difficulty involved in the name, the *nō* is a lyric drama composed mainly of two factors—singing and posturing. Of these, posturing is the more ancient. We have seen that the Japanese assign the origin of the *nō*, as of the temple-dance itself, to that original *kagura* dance which was performed at the cave of the sun-goddess, and which is still perpetuated in the *kagura* dances at shrines and temples. The *tamai* was also mainly a dance, probably not unlike the country dances which still survive in remote country districts, wherever the police can be persuaded to shut their eyes, in connexion with the Feast of *O-bon*. These dances are almost invariably accompanied by some rude instrumental music, and it is almost inevitable that singing should ensue when the bodies of a company of men and women are set in harmonious motion by the sound of some simple instrument. The country dances of all peoples are accompanied with song. The dialogues connecting the various songs and dances came in later, but so subsidiary is the place assigned to what in Europe would be considered the most important portion of the drama, that they are frequently omitted altogether from the *utaibon*, or printed copies of the *nō* dramas. The place where the dialogue should come in is indicated by the simple addition at the end of the song of the words *shika-jika*, 'and so forth,' or *serifu ari*, 'there are words spoken' (Péri, *op. cit.* 263).

When the *nō* appeared in its perfected condition during the Nambokuchō and Muromachi periods (1332–1603), it had a libretto, or book of words, many of which have come down to us. Over a thousand *nō* dramas are known to have existed: they were divided into two classes—*uchi*, the inner circle, the plays most commonly represented; and *soto*, the outer ring of less familiar, because less popular, plays. Common parlance speaks of *naigwai* (=*uchi soto*) *ni-hyaku ban*, 'the 200 pieces inner and outer,' but the number extant is a little in excess of that. There are about 250 which are now actually current (for their names see Péri). A new *nō* play occasionally finds its way to the stage even now, but rarely with great success.

The *nō* are classified according to their subjects, as follows: (1) *Kami nō*, or *shinji nō*, dramas which concern the gods or things divine, *i.e.* mythological pieces or pieces relating to the legends connected with some particular god or temple. These pieces are also termed *waki nō*, though the reason for this term is not quite clear. (2) *Shūgen nō*, or 'dramas of good wishes,' written for the purpose of celebrating heroes, famous men, emperors, etc. Some dramas evidently are capable of being treated as either *kami nō* or *shūgen nō*. This class includes nearly all the so-called *otoko mono*, or *shūra mono*—pieces relating to warriors, whom Buddhism relegated to the path of the *Shura* (or Asuras) as a punishment for the bloodshed connected with their lives. (3) *Yūrei nō* and *seirei nō*, dramas connected with apparitions, ghosts, spirits—the former class referring to the spirits of warriors or women; the latter, to the manifestations of the spirits of animals, plants, flowers, etc. In these plays (hence called *jo* or *onna mono*) the principal actor, or *shi-te*, is always a woman, the name *katsura mono* being also given to them from the *katsura* head-dress worn by the female character. Many of the plays classified as *kami nō* or *genzai nō* may be put down as *onna-mono* as well. (4) *Genzai nō*. Whilst all the dramas hitherto considered have dealt with problems of another world, the gods great and small, the spirits and souls of the righteous and unrighteous, the fourth class deals with problems, not of the present time, but of the *present world*. It represents the human side of the lyrical drama, scenes more or less historical, illustrations of manners and customs, etc.

A second classification, dating apparently from the Tokugawa period (1603–1868), gives a fivefold division—*jin*, *dan*, *jo*, *kyō*, *ki*, 'god, man, woman, folly, demon'—the fourth practically corresponding to the *genzai nō* of the classification just given.

3. The '**kyōgen.**'—The writers of the *nō* dramas were all either Buddhist monks or persons impregnated with the spirit of Buddhism. The present world is to Buddhism nothing but 'folly,' and it is easy to see how the plays of the *genzai nō* came to be classed as *kyō*, 'folly.' But the present world has a constant tendency to assert itself even in the most monastic of minds, and not only do we find the *kyō*, or *genzai mono*, occupying their own position among the legitimate dramas of the *nō*, but we find evolving out of them a new species of theatrical composition, the *kyōgen*, or satirical farce, which came to form a pendant to the lyrical drama, just as a satiric drama was appended to the conclusion of a Greek trilogy.

Nō and *kyōgen* are acted on the same stage, but never by the same actors. In the *nō* the actors wear masks, in the *kyōgen* they wear none; the dances are the same, but the manner of execution is different. In the *nō* everything is solemn, stately, impressive; in the *kyōgen* there is a sound of laughter, mixed with an undertone of sadness. In the *nō* we have the Buddhist clergy preaching their highest doctrines of life, and setting up an ideal which shall influence society; in the *kyōgen* there is the sense of the ridiculous and the sense of sadness which both alike come from the consciousness of failure to attain to an ideal. If the *nō* gives us the high ideals of life as dreamed of by the recluse priesthood of the period, the *kyōgen* gives us a true picture of the degenerate national life of the Ashikaga (or Muromachi) age. It would be possible to re-construct a picture of the social conditions of the age from the texts of the extant *kyōgen*. Following the analysis given by Florenz, we should see, in the sketches made by these anonymous satirists, a nobility and clergy effeminate and worldly, and meriting the disdain of the fighting classes whose hand was uppermost in the affairs of the distracted empire, a low state of social morality, much poverty and distress, no efficient system of police, and, above all, a general callousness and indifference to suffering which acquiesced in the ridiculing of the blind, the maimed, and the suffering. Read in connexion with works like the *Tsurezure gusa* and the voluminous correspondence of men like Nichiren, Rennyo, and others, now being gradually made accessible to Western readers, the *kyōgen* texts are invaluable for all students of Japanese life and society during the Middle Ages.

4. The '**kabuki.**'—The *nō* and *kyōgen* were never popular performances. They were composed for the amusement of certain privileged

classes in the capital and elsewhere; they were patronized by Shōguns and courtiers; and, when the *kyōgen* had lost their sting by reason of the *pax Tokugawica* introduced by Iyeyasu (1603–32), almost every *daimyō* of any importance or wealth kept his own troupe of actors at his little court. But for the common people, the merchant, the farmer, and the artisan, the lyrical dramas were never intended.

About the year 1569 there appeared in Kyoto a woman named Izumo no O Kuni, whose genius produced a remarkable revolution in the dramatic world of her country. O Kuni was the daughter of an Izumo blacksmith, and, being a girl of prepossessing appearance, was early engaged as a *mikō*, or *kagura*-dancer, at a temple in the village of Kitsuki. The temple was destroyed by fire, and O Kuni started on a quest for money to rebuild it. It is probable that she went first to Sado, where gold had recently been discovered, and where money was readily spent. Soon afterwards, in 1569, she made her appearance at Kyoto, where she set up a booth (or *shibai*) in the dry bed of the Kamogawa, and began giving performances which speedily became very popular. She was dressed in the black robe of a priest of the Shinshu sect of Buddhists, and her dancing was of the style known as *yaya-odori*, or *nembutsu-odori*, the pantomimic sacred dance which, as we have seen, Kuya Shōnin and others used in their itinerating preachings through the country. She accompanied her dancing by rude songs on the impermanency of this transient world. Her performances attracted much attention, and her quest for the temple was soon accomplished. In the meantime she had discovered her vocation. To this she was helped by a certain Nagoya Sanzaburō, the son of a *samurai* in Owari, who had been educated by monks at Odawara, and adopted later by Gamo, lord of Aidzu, one of the political supporters of the Taikō Hideyoshi. Nagoya was a handsome and brave man, with a great reputation as a lady-killer. It was said that the fair Yodogimi was one of his conquests, and that Hideyoshi's reputed son, Hideyori, was in reality his. Gamo died in 1595, and Nagoya, now a *rōnin*, or masterless knight, came presently to Kyoto, where he became attached to O Kuni, who was some fifteen years his senior. Under his influence, she changed her methods. She discarded her priest's robe for the dress of a two-sworded *samurai*, sang popular ditties instead of *nembutsu* hymns, and began to act on themes of a purely secular nature. Her popularity increased still more. Nobunaga, Hideyoshi, and Hideyoshi's son, Hideyasu, invited her to act in their presence, and there is an old print in the Museum at Uyeno, which represents her performing before a crowded house in which several Europeans are to be seen. This touch of the West in contact with the East is not without its significance. Every resident in Japan knows how marvellously quick the Japanese are to adopt the latest ideas from foreign countries, and it is quite possible that the modernized drama which was thus instituted by O Kuni and Nagoya contained elements derived from the European drama. Shakespeare was in the zenith of his power when O Kuni was acting, and there were but few Englishmen in Japan who could have told the Japanese of him. Corneille was not yet born; but the Spanish drama had been at its topmost point of fame for many years, and there were many Spaniards, clerical and other, in the Imperial city. It is possible that the Europeans represented in the old print in the Tokyo Museum are Spaniards.

The popular name for these representations was *shibai*, a name still in universal use to denote a theatre, the secular drama, or a secular play. The name chosen for it by its founders was *kabuki*, a word originally signifying comedy and licence, but in later days ennobled so as to denote 'the art of singing and dancing.' Tokyo still boasts of a *kabuki-chō*, or street devoted to this sort of drama, and of a *kabuki-za* theatre, which has hitherto attracted to itself some of the greatest names of the Japanese theatrical world.

The year 1604 marks the height of O Kuni's personal popularity. About that year, Nagoya, who had returned to his *samurai* life, was killed in a brawl, and O Kuni, who was getting on in years, retired to a nunnery in her native place, where she died in obscurity, nine years later.

5. The 'onna-kabuki.'—Imitation is always one of the greatest tests of popularity. Before O Kuni retired from the histrionic life, her theatres had already found imitators in various cities, notably at Osaka and Yedo, and the movement showed signs of permanent vigour. But the *onna-kabuki*, as it was called, fell into disgrace with the Shōgunate, and its prominent feature was prohibited by the police of Iyeyasu in 1629. One of the chief novelties of O Kuni's representations had been her bold assumption of male attire. But when she fell in with Nagoya she was no longer a young woman, and it does not seem that there were other women directly associated with her in the enterprise. What was probably harmless in her case became a precedent of doubtful character in the hands of others. Women of uncertain reputation were brought on the stage in the rival *kabuki* theatres; with them were associated men of low life, and the result seemed very dangerous to the public morals. The employment of women in *kabuki* plays was therefore prohibited by the Shōguns' police. No woman was employed as an actress in a theatre from the year 1629 until the début, in the so-called *sōshi-shibai*, of Sada Yakko, at the end of the 19th century.

6. The 'ningyō-shibai.'—The prohibition of women actors was, for the time being, an almost crushing blow to the *kabuki*. The place of the women, banished by the decree of 1629, was taken by young boys, who played the women's parts; but the moral consequences of the so-called *wakashū-shibai* were worse than those of the *onna-shibai* had been. Besides, the boy-actors had not yet been trained, and some time had perforce to elapse before the *kabuki* could regain its former popularity. In the meantime a new species of dramatic performance got an innings, which its promoters used to great advantage. The visitor to Japan will still sometimes meet with a travelling mendicant, carrying on his back a portable shrine containing some religious image or symbol which is the pilgrim's object of devotion. It is probable that in these mendicant vagrants we have a relic of the ancient *odori-nembutsu*, and that the itinerant preachers carried with them an idol, before which they performed their simple religious dances, and which they used as a visible emblem of the faith they preached. O Kuni had discarded the emblems, whilst retaining for a while the religious dance and song; but there were (and still are) travelling priests who retained them. The founders of the *ningyō-shibai*, or 'dolls' theatre,' made these dolls or images the central feature of their art. The itineration ceased, and the idol, settled in a permanent abode, developed into a marionette, or set of movable dolls. The marionettes of the *ningyō-shibai* were extremely popular during the whole period of the Tokugawa government, and performances of this sort are still to be met with, especially in Osaka. Strange to say, the marionettes had a considerable influence on the subsequent developments of the *kabuki*.

'Among the things,' says Balet, in a lecture delivered before the Alliance Française at Yokohama, Feb. 1911, 'which strike and shock us most in the popular theatre must be placed the singular gesticulation of the actors. Stiff, and moving by brusque starts, their gestures completely lack the ease and naturalness of real life; one would say they were marionettes, and not without good reason; for the actors of the *kabuki* took the marionettes of the booths in the fairs as their models. By an incomprehensible aberration, the Japanese have imitated these gestures, have elaborated them, and have fixed them permanently in the drama—except in comedy,—thus keeping aloof from the true imitation of life, falsifying the expression of even the simplest sentiments, to the point of making them a pure pantomime. From the theatre, these gestures passed insensibly into daily life. It is not difficult to find traces of them in the current expression of certain emotions; anger, scorn, especially defiance, are often expressed among the Japanese in the manner of the actors of the *kabuki*. Apart from this influence of gestures, the other—that of the manners and morals preached up *ad nauseam* in bloodthirsty tragedies—has not been the least effective in the formation of the Japanese mentality.' It is not necessary to follow Balet in all his conclusions and inferences. The main thing is to note the effect of the marionette theatres on the gestures of the *kabuki* actors.

7. The 'jōruri.'—Japan, like every Oriental country, has always had its story-tellers and wandering minstrels, whose répertoire included stories and legends of gods, heroes, and personages famous in national history, such as Benkei, the fighting monk. One of the most popular of these stories was the history of Jōruri, the famous mistress of Yoshitsune—a story belonging to the same cycle of epos as Benkei (see *Saitō Musashi-bō Benkei*, by de Benneville, Yokohama, 1910). The story of the loves of this celebrated woman was so popular that it overshadowed all the rest and gave its name to the whole class of minstrel narrative, so that a *jōruri* came to be the generic name for this class of recitals. The *jōruri* stories were originally unwritten, handed down from minstrel to minstrel in substance but not in letter. Ōta Nobunaga, the rival of Hideyoshi, and a man of considerable literary judgment, is said to have suggested that it would be an improvement to the *jōruri* to have an established written text, and his mistress, Ono no O Tsu, is said to have been the first person to commit a *jōruri* to writing. A few years later, about A.D. 1600, a *jōruri* singer, Menukiya Chōzaburō, conceived the idea of a partnership with the master of a marionette show near Osaka, and the result was a form of *ningyō-shibai*, which soon gained the popular favour. In 1685, a certain Takemoto Gidayū opened a marionette theatre, bearing his own name, in Osaka, and the *jōruri* came to be equally well known under the new name of *gidayū*.

8. The Genroku theatre.—The influence of the marionette show on the legitimate drama is seen in the fact that some of the greatest dramaturgists of Japan under the Tokugawas, notably Chikamatsu and Takeda (middle of 18th cent.), were also writers of *gidayū*. From the marionette theatre they had learned the value of the literary side of the drama. They appreciated the fact that it was something more than a mere collection of lyric songs loosely strung together by words which were scarcely worth recording, more than a mere exhibition of gestures and movements such as could be done by marionettes quite as well as by living men—above all, that it was more than the diversion of the passing hour by realistic, but motiveless, imitations of scenes of real life. Chikamatsu Monzaemon (1653–1724) stands a very long way behind Shakespeare, but he understood, as Shakespeare and his contemporaries had done, the vocation of the dramatic poet. He aimed at, and to a certain extent succeeded in, putting the dramatic poet into his proper place as the creator of a drama with ideals, representing life, and forming manners. The mediæval *nō* had been the sole property of the ruling military and cultured classes; O Kuni's work had been an appeal to the vulgar; Chikamatsu and his school, without excluding the educated or despising the ignorant classes, made their appeal to the great common-sense *bourgeoisie*, which forms the mainstay of every nation. That their appeal was not made in vain, may be seen in the immense influence exercised by Takeda's *Chūshingura* in keeping alive in the people's heart the spirit of loyalty to the Imperial throne.

9. Difficulties besetting the 'kabuki.'—One of the great difficulties in the way of realizing the highest dramatic ideals lay, and still lies, in the despised position of the actors. The *kabuki* has never quite effaced the bar sinister in its escutcheon. Its founders, O Kuni and Nagoya, were deemed none too respectable; the *onna-kabuki* were performed mostly by prostitutes; the lads who acted in the *wakashū-kabuki* were connected with vices which flourished in one of the 'cities of the plain.' There was reason in abundance for the Tokugawa government to take alarm: there was not merely the love of pleasure and the increase of luxury among the people to be feared, but also the danger to the social order, and the confusion of classes and castes. The Shōgunal government did not weaken in the carrying out of what it conceived to be its duty. In 1609, Iyeyasu prohibited all theatres in Shidzuoka, which was at that time his residence; in 1610 certain court ladies at Kyoto were sent into exile for going to a theatre, the manager of the theatre being executed. In 1629 every performance in which women appeared was forbidden. In 1641 a manager who had allowed his 'young men' to appear as women on the stage was severely punished. A few years later, under strict regulations, a few actors were allowed to appear in female characters, but they were forbidden to wear silk or brocades, and had to shave the front of their head. Theatres, like brothels, were relegated to certain quarters, *samurai* were forbidden to attend them, and the actors were not allowed to associate with the ordinary citizens. They were classed apart, like the *eta*, and the numeral substantive used for them classed them with animals rather than with men, as though one should say, 'so many head of cattle,' 'so many head of actors.' The term *kawara-mono* refers to the origin of the *kabuki* amongst the heap of broken 'tiles' and rubbish in the dry river-bed of the Kamogawa. Under such circumstances it was extremely difficult for the *kabuki* drama to struggle into respectability.

10. Earliest written 'kabuki.'—We have already seen that the writing of *jōruri* influenced the production of regular dramas. It is worthy of notice that, in 1655, a theatre in Yedo produced a consecutive drama of several acts, entitled *Soga no Jūban Kiri*, which required 15 actors. Another play, in 1666, also produced in Tokyo, was written by Kawara Jonnosuke, and was entitled *Soga no kyōgen*. One may see from the titles of these plays how strong was the appeal made to the national imagination by the stirring events of the Middle Ages, which have furnished Japan with a genuine, if informal, epic poem.

11. Actor families.—One of the results of the Tokugawa legislation, which compelled the actors to live by themselves, apart from their fellow-citizens, was the formation of an actor class. This was quite in accordance with ancient Japanese tradition. Japan has, from the earliest times, had castes of doctors, wrestlers, sword-makers, painters, etc., and the result of the system may be seen in the specialized skill of production combined with a marvellous lack of creative power, which marks almost all Japanese work, especially in the various departments of art. In the Japanese drama, we observe the rise of great actor families, *e.g.* that of Ichikawa Danjurō, which has, as it were, stereo-

typed the dramatic art along certain definite lines, and thereby produced an article perfect in its own way, but which has stifled originality and well-nigh killed the art of the playwright. Judged by its own standards, the Japanese *kabuki*, with its posturings and intonations reminiscent of the recitatives of the *nō* and the *jōruri*, its stilted language, and its simple dignity, is a thing as perfect as an art influenced by very imperfect ideals can make it. But what playwright could do his best, if he were 'bossed' from the beginning to the end of his composition by a clique of hereditary actors, who said that things had always been just so in their family?

12. The Meiji theatre.—Like everything else in Japan, the drama stagnated from about the end of the second decade of the 18th cent. to the end of the seventh decade of the 19th. The actors were a class of social outcasts, but they had the supreme sway in their own little kingdom, where things went leisurely along the old grooves. The Meiji Restoration swept away all class distinctions, and the actors emerged from their isolation. In 1876, at the opening of the Shintomiza theatre in Tokyo, the Foreign Ministers and members of the *corps diplomatique* accepted invitations to be present at the opening performance. It was a great shock to Japanese conservatism, but it proved to be a wholesome example; in 1886, Count Inoue ventured to give a performance at his own residence, at which Ichikawa Danjurō acted, in the presence of the Emperor himself. The visits of distinguished personages, *e.g.* Prince Arthur of Connaught, gave opportunities for official recognition of the dramatic profession; and, in 1903, Prince Ito delivered a funeral oration in honour of the popular Danjurō. The old ostracism has not yet quite gone; a statue of Danjurō, erected a few years ago in front of the Kabukiza theatre, had to be removed; but it is abundantly evident that the actors are winning for themselves a recognized position in the Japanese world.

13. The 'sōshi-shibai.'—One of the most hopeful signs connected with the modern Japanese stage is that the monopoly of the great actor families has been broken. The *sōshi-shibai*, born some 25 years ago, presents many points of resemblance to the earlier enterprise of O Kuni and Nagoya, coming into the world, as did its predecessor, at a time when 'a fever of reform and innovation' was raging throughout Japan. Kawakami Otojiro, the flighty son of a toy-dealer, had an undistinguished course at school at Fukuoka, and then flung himself into political stump-oratory, after the fashion of young Japan in the early days of Meiji. He had many fellow-travellers along the paths of stump-oratory; the Japanese of the day invented a word to denote these political adventurers. They were known as *sōshi*; they were oftener than not impecunious. Kawakami and a few brother-*sōshi* formed themselves into a sort of amateur dramatic company, and their plays were called *sōshi-shibai*. They gave representations of actual life, and gained many hearers. Their first object was to make money, but success gave them higher ambitions. They declared war against the *kabuki* school, and announced a programme of theatrical reform. In this they have not succeeded. Kawakami has been ably seconded by his wife, Madame Sada Yakko, and the Kawakami troupe has been well received in Europe and America. They draw their material from many quarters: from Dumas and Maeterlinck, from Shakespeare and Ibsen. But they have presented crude, ill-adapted matter, strongly impregnated with a Western flavour, to an audience that can only relish the sauces of Japan, and they have not yet succeeded in capturing the popular taste. The dramatist is lacking who can draw, as did Shakespeare, on all the wealth of accessible literature, and yet present it to his audience in a thoroughly native form. The lack of a dramatist has been acknowledged in many quarters. Writers like Fukuchi, Tsubouchi, Ihara, and Masuda have tried to supply the vacancy. They are undoubtedly on the right track; but a Shakespeare is born, not made, and Japan may perhaps still be said to be waiting for the 'mother of Shakespeare.'

Efforts have also recently been made to conform the architecture of Japanese theatres to European ideas and requirements. This is notably the case in Tokyo with the Yurakuza (built 1909) and the Teikokuza (opened 27th Feb. 1911). It is impossible as yet to say what effect these buildings are likely to have on Japanese dramatic developments. A recently established training school for young actors and actresses will, if successful, be a step in the right direction, as eliminating the hereditary principle which has done so much in the way of fossilization. It also provides a way by which a young woman of respectable family can adopt the stage as a profession in an honourable manner without the loss of caste.

14. Actors in the 'nō.'—The *nō* is essentially a piece to be acted by two players, and this fundamental idea is maintained, however great may be the number of players actually employed in the performance of any particular piece. The principal personage is the *shi-te*, the *ποιητής*, or actor. His duty is both to dance and to sing, and his rôle is the pivot on which the whole piece turns. We may call him the protagonist. By his side is the *waki* ('side'), who may be compared with the deuteragonist of the Greek classical stage. As the name implies, his rôle is secondary to that of the *shi-te*; but he is nevertheless a necessary adjunct, because it is his presence on the stage that gives the requisite stimulus to the activities of the *shi-te*.

Some plays require the presence of only two actors; and we may with justice consider them as types of the primitive drama. When more actors are required, they are considered as assistants or companions to the *shi-te* or *waki*. They are designated as *tomo*, 'companions,' but more frequently as *tsure*, and appear as *shi-te-dzure* or *waki-dzure*, according to the part they represent. But they can scarcely be said to have an independent personality: 'ce sont deux voix qui se répondent, et non deux personnages qui se parlent' (Péri). In some pieces there appears another actor, known as the *kogata*, or 'child,' whose rôle is occasionally of some importance, as when, *e.g.*, he represents an emperor or nobleman; and in a few places we find indefinitely designated personages, *otoko* and *onna*, 'man' and 'woman.' Again, in one or two plays we have companies of people representing, *e.g.*, pleasure-seekers, or attendants. These are known as *tachi-shū*. The clown's part is assigned to a personage known as *kyōgen* or *okashi*. He is sometimes entrusted with comic parts during the play itself, but more frequently with the comic interlude, *ai*, which separates the first act of a *nō* drama from the second. This *ai no kyōgen* is not to be confounded with the independent *kyōgen* which comes between two distinct *nō* dramas. He had his part in these also.

15. The chorus.—The chorus, *ji* or *ji-utai*, consists of from 8 to 10 musicians, under the command of a *ji-gashira*. The musicians wear the ordinary clothes of the citizen, and have no functions beyond those of music and singing. The chorus sometimes takes part in the *nō* drama by acting as a substitute for a *shi-te* in the rendering of some song, and sometimes it will take part, in a sort of impersonal way, in the dialogue. It has some of the functions of a Greek chorus, but it never represents

a definite group of persons, such as, *e.g.*, the Phœnician women.

In addition to the actors and chorus, there are two persons whose functions are of the greatest importance in the performance of the *nō*—the *kōken* and the *mono-kise*. The former, in plain clothes, has the duty of looking generally after the performance, bringing in swords, fans, etc., as required, and removing them unostentatiously when no longer needed. The *mono-kise* has the superintendence of the wardrobe, and assists the actors in their changes of costume, etc.

16. The orchestra.—This is composed of three, sometimes four, instruments. These are: (1) *fue*, (2) *ko-tsutsumi*, (3) *ō-tsutsumi*, (4) *taiko*. The first is a flute; the second and third are a small and a large drum, struck with the hand, the former carried on the right shoulder, the latter on the left knee. The fourth, which is a species of tambourine, is used only when something awe-inspiring is going on, such as the appearance of a demon or spirit, or the 'lion-dance.' The general name for the musicians is *hayashi-kata*, each individual being designated by his instrument—*fue-kata*, *taiko-kata*, etc. It is extremely probable that a comparison of these instruments with the musical instruments in use in ancient China, India, etc., might throw much light on the origin of the *nō* dramas.

17. Schools of 'nō' actors.—We have seen that the *nō* actors are divided into three classes—*shi-te*, *waki*, and *kyōgen*. These are further subdivided into various schools, or *ryū*. The most important are the schools of the *shi-te*—*kwanze*, *hōshō*, *komparu*, *kongō*, and *kita*—which between them furnish most of the *shi-te* and *shi-te-dzure*, also the *tomo*, *kogata*, *ji*, *kōken*, and *mono-kise*. These five 'schools' are by far the most important. The *waki* are also subdivided into five schools—*harufuji*, *fukuō*, *shindō*, *takayasu*, and *hōshō*. There is a further distinction made in these two classes, which is of some importance. They are divided into *kami-gakari*, and *shimo-gakari*, according as they base their acting on traditions derived from Kyoto (*kami*) or Nara (*shimo*). We shall see the importance of this distinction if we remember that the Kyoto Buddhism, mainly that of the Tendai sect, with its offshoots, is of Chinese origin, whilst the Nara Buddhism was predominantly Hindu. The *kyōgen* actors are subdivided into three classes, each named after its founder—Sagi, Izumi, Ōkura—as indeed are also the various classes of the *shi-te* and *waki*. All these families of *nō* actors were originally connected with the *kagura* dances of the Shinto and Ryōbu-Shinto rites, and it is in the *kagura* that the origin of the *nō* drama as found in Japan must be sought.

18. The 'nō-kyōgen' stage.—The *nō* was originally intended, like the *kagura*, for outdoor performance, and this fundamental theory is still preserved in the arrangement of the stage. It is a perfectly simple platform about six yards square, with three of its sides open. The fourth side is a wall of plain wood panel, with a painting of an old pine-tree to suggest an open-air performance. The actors have their exits and entrances on the right hand of the stage, the chorus on the left. One of the pillars supporting the roof is called the *kōken bashira*, and it is from behind this pillar that the *kōken* keeps a watchful eye on the performance. The green room or vestry is behind the wood-panelled wall.

19. Sung forms.—The *nō* drama is a metrical composition, the measure adopted being known as a *kusari*, or 'chain,' for the structure of which the reader is referred to Péri's solid treatise already quoted. Terms especially noticeable are, *e.g.*, the *shidai*, very often used as an introduction, and containing a statement of the general purpose and 'circumstances' (*shidai*) of the piece. The *issei* is very similar to it, only more definite, the *shidai* giving, as it were, only a general statement, while the *issei* explains some particular point. The *uta*, or 'song,' is the prerogative of the *waki* and his assistants; it has nothing in common with the *tanka* of later Japanese literature. To take an example: in the *uta*, the *waki* and his friends will describe the journey they have taken in order to reach the scene of action. The *sashi* and *kuri* are two minor forms: the former a simple recitative, which is not used by the *kami-gakari* schools, the latter a lively song, serving as an introduction to the *kuse*. The *kuse* may be looked upon as the form out of which the *nō* has developed. It is accompanied by a dance, and is a remnant of the ancient *kuse* dances which have been so popular in Japan since the 10th century. It is the *kuse* which brings us into touch with the itinerating *odori-nembutsu* preachers. The *rongi*, or 'discussion,' a dialogue chanted by *shi-te* and chorus, is another remnant of the Buddhist influence. It is a relic of the scholastic discussions of the Buddhist monasteries, especially of those in the Kyoto schools of Buddhism. In the *waka*, which follows the *rongi*, we have, it is said, the remnants of the popular songs chanted by the *shirabyōshi*; and the gestures of the actors at this point are generally suggestive of the same origin. The *kiri* is the closing song, and is often closely connected with the *waka*.

20. Spoken forms.—The spoken forms are the *nanori*, or 'announcement of the name,' spoken by the actor on his first appearance, or, for a woman, by the chorus; the *mondō*, or dialogue; the *yobi-kake*, or words addressed to a person supposed to be at some distance from the speaker; and the *katari*, or narration. In the *kyōgen* we have also various forms of *ai*, 'interludes.' In the *katari-ai* the *kyōgen* actor gives a new exposition, sometimes with considerable variations, of the plot of the drama. The *tachi-ai*, while ultimately connected with the development of the drama, is spoken by outside personages, as, for instance, by a *deus ex machina* in the form of a god or spirit. The *ashirai-ai* is an interlude in which a servant, boatman, etc., plays a principal part.

21. Masks used in the 'nō.'—There are about thirty masks in common use for *nō* representations—though there are, of course, special masks for use in the rarer pieces. The particulars of these masks are given in Kamen-fu, Nōgaku Unnōshū, and Nōgaku Shōzoku.

The introduction of masks into Japan is generally attributed to Shōtoku Taishi (†621), the great patron of Buddhism. This is another indication of a point made elsewhere in this article, that the *nō* is of Indian origin, for the Buddhism which Shōtoku favoured was notoriously of the Indian variety. Other famous mask-makers of primitive times are Tankaikō, Kōbō Daishi, and Kasuga—all well-known carvers of Buddhist images. These were succeeded by the Jissaku, or ten mask-makers, of the Heian (800-1186) and Kamakura (1186-1332) ages, and these by the Rokusaku and Chūsaku schools, who bring us down to the end of the Ashikaga period. We then come to the well-known Kawachi, who at one time worked as a saddler in the retinue of the great Taikō Hideyoshi (1536-98). Hideyoshi was a great patron of the lyrical drama, which he treated with almost religious respect. One day Kawachi peeped from behind some curtains at his master robing himself for a dramatic performance. Before he donned his mask, Hideyoshi held it over his head and did obeisance. From that moment Kawachi determined to abandon the calling of a saddle-maker and devote his energies to the making of masks.

22. Fans.—The fans used are of two kinds—*suyehiro* and *shimai-ōgi*. The former seem to correspond with the rôle of the actors. Thus we have *okina-ōgi*, the 'grown man's fan,' with a representation of waves and of *hōrai*, the Elysium of perpetual felicity, which, like the classical Islands of the Blest, is supposed to exist in the midst of the Ocean. Another, the so-called *shūra*

ōgi, represents the world of the Asuras, the Buddhist world of bloodshed and slaughter. Significantly enough, there are two forms of *shūra-ōgi*, the *genji-shūra* and the *heike-shūra*, which thus perpetuate the memory of Japan's most famous period of internal strife. Other memorials of that sad time may be found in the *kyōjo-ōgi* and *kyōjo-ironashi-ōgi* (respectively, the 'insane woman's fan,' and the 'insane woman's colourless fan'), the latter with its sad pictures of the heron amongst the snow, and the ill-omened crow sitting on a withered tree. It would be beyond our scope to describe all these varieties. The *shimai-ōgi* does not present so many varieties. The simplest form, the *midzumaki-no-ōgi*, 'water-sprinkler's fan,' is used by the lowest grade of actors, whose humble performances are fitly symbolized by the unobtrusive but necessary work of the 'water-sprinkler'—an important functionary in hot dusty countries. When the actor-student has been promoted to a higher grade, and is allowed to dance for the first time, he uses a *midzuhiki* fan, *i.e.* the fan of the 'water-drawer'; while the next promotion, to the rank which permits him to perform the *mochidzuki* dance, is marked by the use of a fan known as *chidori*. Buddhist influence, chiefly of the Hosso and Kegon schools, may be seen in the clouds—five, seven, or nine, according to circumstances—which distinguish other fans of a higher order. But the gradation of actors, dramas, and dances is very clearly due to Chinese thought.

It would take us too long, for the purposes of this article, to trace the connecting points between the Japanese lyric drama and the drama of the Hindus. But there certainly are such points of connexion, traceable through fans, masks, musical instruments, dresses, and dress-materials, not only with India, but with the Levant. Thus, for instance, there are two names for dress-materials much used in the *nō—donsu* and *shu-su*, translated by Brinkley as 'damask' and 'satin'—which are said, though perhaps not with much probability, to point to a Damascene and Syrian origin for these materials. But these are points which still await investigation.

23. Peculiarities of construction of the 'kabuki' theatre.—The word *shibai* means 'a lawn,' or 'on the lawn.' There is an old tradition, connected with the Nan-yen-dō temple at Nara, which says that, at a very remote period, the earth opened with a yawning cavity right in front of the temple, with much exhalation of poisonous gases and smoke. It being evidently advisable to propitiate the incensed deities who had brought about this calamity, the Government of the day ordered that the *okina* and *sanbasō* dances should be performed in front of the chasm. This was done on the smooth grass before the temple, and with the desired effect. This incident is still commemorated by the *Takigi-no-Nō* at Nara, which is always performed 'on the lawn.' It is possible, therefore, that O Kuni, in inaugurating the *shibai* or *kabuki* drama, meant it to be a resurrection, as far as possible under altered circumstances, of the primitive dances of pre-historic times.

The first theatre in Kyoto was erected in 1632; in Osaka, in 1633; in Yedo, in 1624; and the construction of these places of amusement was speedily followed by others. The first theatrical building in Yedo was the Saruwakaza, which was the outcome of the philanthropic efforts of a certain Saruwaka Kanzaburo. The Genna period (A.D. 1615–1643), whilst enjoying the firm hand of the Tokugawa Shōgunate, was still one of considerable confusion and unrest. The cessation of the long-continued civil wars and the subsequent dissolution of many of the opposition clans had filled the country with unemployed men-at-arms (*rōnin*), who flocked to the larger cities in search of employment. Yedo was naturally their chief place of refuge, and in the crowded quarters of Asakusa, Ryōgoku, and Shiba, they might be seen in their hundreds, concealing their faces beneath large straw hats, and waiting for any chance opportunity of congenial occupation. When they could do nothing else, they beat drums and sang ballads, and thus gained a few *rin* from the good-natured citizens. Saruwaka saw that these unemployed fighting men constituted a real danger to the State, and set to work to find safe outlets for their superfluous energies. He built himself a large villa, the construction of which gave employment to many hands; he lived luxuriously and ostentatiously, and kept large retinues of servants; at last, the idea occurred to him of founding a theatre as an institution by which many of these unemployed warriors might gain a living, and all might find recreation and amusement. The idea was very well received, the *rōnin* organized themselves *con amore*, the Government gave its consent to the undertaking, and a dream in which Saruwaka saw a crane flying towards him, with the leaf of an *ichō* (*Ficus religiosa*) on a plate in its bill, was interpreted as an omen of the best sort. Saruwaka's theatre was the first permanent *kabuki* building in Japan, and gave a model which all subsequent *kabuki* theatres have followed. The *nō* dramas in the Middle Ages were performed in the most flimsy of temporary booths.

The construction of the old *kabuki* theatres may be understood by the consideration of certain theatrical words which are still in use, but which cannot be made clear except by reference to old usages and peculiarities. Thus the word *haneru*, 'to turn aside,' is, in theatrical parlance, 'to finish a performance.' In Saruwaka's building, the entrance was protected by a hanging mat, which the spectators had to push aside in order to enter. When the performance came to an end, the mat was 'turned aside' to facilitate egress, and left so. Similarly, *futa wo akeru*, 'to open the lid,' is used of the opening of a theatre—the heavy, lid-like shutters all round the building being tightly closed when there was no drama in course of performance. The quasi-military character of the actors in Saruwaka's theatre showed itself in the *yagura*, or castle-tower (now disused), erected on the roof to give the building something of the appearance of a feudal castle. On two sides of the *yagura* were suspended *zai*, the baton used by a Japanese general in the direction of a battle. But these theatrical *zai* were known as *bonten*—the name given by Buddhists to Brahmā, the greatest of the guardian deities—and replaced the Shintō *gohei* which O Kuni had used in her temporary erections. The use of the *bonten* and *gohei* is a proof of the existence of a certain amount of religiosity, but need not be pressed further.

While certain of the minor structural features of the early *kabuki* have disappeared, certain others remain. Thus the modern Japanese stage is distinguished by: (*a*) the *hanamichi*, or 'flower-way'—a raised platform or corridor by which the actors have access to the stage from the other end of the theatre, passing right through the spectators in the pit. The *hanamichi* was at one time bordered with flowers, hence its name. It is always on the left hand of the spectators; on their right there is sometimes another passage of the same sort, called the *karibanamichi*, or 'temporary flower-bridge.' (*b*) Between the *hanamichi* and the stage is a space called *hashi-gakari*, 'bridge-space,' sometimes also known by a term derived from the usages of the camp—*musha bashiri*, 'warriors running.' It is through this space that warriors reach the stage. Near it is the *okubyō-guchi*, 'coward's hole,' the significance of which is obvious. (*c*) The *butai-ban*, or 'stage-watch,' with its reliefs of sentinels, again betrays a quasi-military origin. (*d*) The central part of the stage is made to revolve (*mawari-butai*)—an arrangement which calls to

mind the ἐκκύκλημα of the Greek stage; the machine which works this is situated in the *naraku*, 'hell,' below the stage, where is also to be found the *seriage*, or *seridashi*, by which actors are 'pushed up' through the flooring of the stage. There are two or three trap-doors for this purpose (*kiri-ana*) on the stage itself, and a similar one (*suppon*) on the *hanamichi*. Only the larger theatres were allowed to have *mawari-butai*—possibly only they could afford the luxury. (*e*) The *kōken* calls to mind primitive conditions in the history of the European drama. He is the attendant (supposed to be invisible) of the principal actors, wears black clothes, removes articles that are not required, adjusts the actors' robes, and holds a candle for them. (*f*) The *tedai*, who represents the proprietor and is charged with the business of the theatre, sits, during the performance, near the main entrance of the house. When there is nothing on, his office is in the *shikiri-ba*, or accountant's room. The *tōdori* has the supervision of everything connected with the performance and the actors. His office (*tōdori-ba*) is in the back part of the building, as are also the *hayashi-beya*, or room for the musicians, the *gakuya*, or 'green room,' for the actors, and the *sakusha-beya*, or 'authors' room.' This last calls for a few words. The Japanese have scarcely any dramatic writers, and none of great note. Very few of the *nō* dramas can be assigned to any particular writer, and the same remark holds good of the *kabuki* drama. The actors themselves, sitting in committee, compose the play as a joint-effort, and it is this, perhaps, more than anything else that has helped to keep the Japanese stage so stagnant and unprogressive. Recent efforts at reform, such as Kawakami's *sōshi-shibai* and the construction of the new Imperial Theatre, must be looked upon as so many efforts to overthrow the tyranny of the player-actors. The student of English literature will see here the point of analogy with the pre-Shakespearean dramatists of the Elizabethan age.

24. Influence of the drama on the development of 'Bushidō.'—The *nō* drama had its first glory in the Middle Ages, when the military and chivalrous spirit of Japanese knighthood was at its prime. We may seek for its origin in the oldest religious sentiment of the people, in the Buddhism of the Nara age, in Chinese and Indian influences. But the fact still remains that the drama never took root until the spirit of the nation was moved by the incidents of that great national epic (for it was nothing less) which gathers round Yoshitsune, Benkei, Yoritomo, and the great warriors of the Genji and Heike. Then it was that the heart of Japan went forth in sympathetic response to the great ideals set before it during that period of national distress. It was then that the imagination was quickened, and the image formed of the ideal hero, brave, loyal, patient, quick in honour's quarrel—and yet a religious mystic, whose poetic insight enabled him to see, dimly perhaps, but with faith, the underlying verities of existence. This is the ideal set before us in the *nō*, and the idealization was much assisted by the quietistic teachings of the Zen school of Buddhism.

The ideals were, however, indistinct, and the principles underlying *Bushidō*, or the 'Way of the Ideal Knight,' were felt rather than understood. It was reserved for a later age to elaborate the philosophy of life with which *Bushidō* presents us, and Yamaga Sokō (born 1622), the disciple of Hayashī Razan, and the instructor of Ōishi Kuranosuke, who headed the celebrated band of the forty-seven *rōnin*, has been often singled out as the first formal exponent of *Bushidō*. According to Yamaga (the present writer is here following the Rev. J. T. Imai, who in his turn follows Prof. Inouye Tetsujirō), *Bushidō* may be summarized somewhat as follows:

To know one's proper work or duty, to have the will to do it, and to carry out one's good intentions with diligence and zeal. True manliness is shown by not being moved by poverty, wealth, or power. In order to reach that ideal, there should be acquired large-mindedness, a noble ambition, gentleness, courtesy, contentment; a power of discerning right from wrong, gain from loss; uprightness, honesty, constancy. These virtues are to show themselves in the deportment, in gravity, in the care taken in seeing, hearing, and speaking, in the expression of the countenance, in temperance and propriety in dress, houses, furniture, diet. The knight must have a right way of using his time, his wealth, his pleasures (J. T. Imai, *Bushidō*, Tokyo, 1910).

It has been said that the old-fashioned *Bushidō* of the mediæval knights gave its last expiring flicker in the deaths of Ōishi Kuranosuke and his band of *rōnin* in 1703. Certainly the *pax Tokugawica* which lay on Japan from the middle of the 17th to the middle of the 19th century was no favourable soil for the production of so delicate a flower. But Yamaga Sokō and his Confucianist successors were in the meantime busy laying the foundation of a new *Bushidō*, and in this they were ably aided and abetted by the dramatists, both of the *kabuki* and of the *ningyō-shibai* (marionettes).

'It was at this period,' says Imai (*op. cit.*) 'that the historic dramas began to be produced by Chikamatsu, Takeda, Izumo, and later writers. They were exponents of *Bushidō* to the mind of the people, to men and women alike of all classes, just as Sokō and others were to the learned. It was through these historical plays . . . that *Bushidō* influences acted and re-acted on the Japanese people.'

We can scarcely over-estimate the influence that the stage has had and still has in forming popular ideas of religion and morality in Japan, but we must remember that the words 'honour,' 'loyalty,' 'duty,' 'honesty,' and 'truth,' which these plays directly and indirectly illustrate, are not quite the equivalents of the same words when found in Christian writings. They must be interpreted according to the standards of morality which were generally accepted in 18th cent. Japan.

LITERATURE.—Students desiring to pursue their studies beyond the limits traced by this article are recommended to consult, for European and American authorities, the very complete Bibliographies published by von Wenckstern, in 1894 and 1904; and, for Japanese writers, the list given by Péri in *Bulletin de l'École Française de l'Extrême Orient*, vol. ix. pp. 254–273. The writer's own obligations are to the works of W. G. Aston, esp. *History of Japanese Literature*, London, 1898; K. Florenz, *Geschichte der japanischen Literatur*, Leipzig, 1901; M. Revon, *Manuel de la littérature japonaise*, Paris, 1910; Péri, articles in *Bulletin de l'École Française de l'Extrême Orient*, 1904–5; Balet, articles in *Japan Daily Herald*, Yokohama, Nov.–Dec. 1910; and B. H. Chamberlain, *Things Japanese*[5], London, 1905; also to various articles which have appeared from time to time in the *TASJ*. A. LLOYD.

DRAMA (Javanese and Further Indian).—The Javanese drama is one of the most interesting of the entire Orient, particularly through its high development of the 'shadow-play.' Seven distinct forms of drama in Java are enumerated by Juynboll (*AE* xiii. 4–5): (1) *wayang purwâ*, which are played with puppets of buffalo leather, which cast their shadows on a curtain, and draw their themes from the *Mahābhārata*, the *Rāmāyaṇa*, or the Javanese *Manik Maya*; (2) *wayang gĕdog*, the same as the preceding, except that the subjects are drawn from the native Javanese *Panji*-cycle; (3) *wayang kĕlitik* or *kĕrutyil*, which are played with flat unclothed wooden puppets, and draw their themes from the cycle of *Damar Wulan*; (4) *wayang goleq*, which are played with round clothed puppets, and draw their themes from the *Damar Wulan* and the Muhammadan *Amir Ambyah* cycles: (5) *wayang topeng*, with a répertoire identical with that of the first three classes, but played with masked actors; (6) *wayang wong*, the same as the last, except that the actors are unmasked; and (7) *wayang beber*, with the same répertoire as the preceding, but represented by a pictured scroll which is unrolled and explained by the *dalang*. The usual mode of presentation of a

wayang is as follows:—A white sheet (*kĕlir*) is stretched on a wooden frame (*panggung*). At the top of this frame a lamp (*bleñcon*) is placed so as to cast its light upon the screen, and on the same side as the lamp the 'director' (*ḍalang*) squats, having on his left a chest (*koṭak*) containing the puppets (*wayang* or *ringgit*). On the side of this chest are a few small plates of metal, which are struck by the *ḍalang* to imitate warlike sounds. Near him, moreover, is a bowl of incense, and also a basin containing the offerings (*sayen*) for the spirits. The men in the audience are seated on the same side of the curtain as the *ḍalang*, while the women are placed on the opposite side, so that they do not see the puppets, but only their shadows. All the lines are recited by the *ḍalang*, who varies his voice or gives other indications of the change of character. This holds good, at least in some cases, even in the *wayang wong*, or plays with unmasked human actors. In the *wayang topeng*, played with masked actors, on the other hand, the players themselves speak the lines. Both women and men may act, as in the ancient Sanskrit drama.

The *ḍalang* of the Javanese drama corresponds closely to the *sūtradhāra* of India (cf. Pischel, *Heimat des Puppenspiels*, Halle, 1900, pp. 8–10), both being primarily 'thread-pullers (of the puppets),' although the word *ḍalang* itself seems to connote originally much the same as the English 'stroller' (Hazeu, *Bijdrage*, pp. 23–24).

The Javanese *wayang* was undoubtedly religious in origin, as has been elaborately shown by Hazeu (*op. cit.* pp. 39–59), who calls attention to the offerings (*sayen*) to the spirits, to the incense offered before the presentation begins, to the fact that the plays are given at night, when the spirits are abroad, and to the circumstance that the presentation is a meritorious act on the part of the patron who hires the troupe, and that a *wayang* should be given by all means at certain important periods in the life of the individual, such as the festivals at the seventh month of pregnancy and the cutting of the navel-string. According to him, moreover, the entire shadow-play sprang from a desire to represent the ghosts of departed ancestors by what resembled them most closely, that is, by shadows, while the *ḍalang*, who causes the puppets to cast their shadows on the screen and recites lines for them, is primitively a priest performing a religious ceremony of ancestor-worship. The religious character of the Javanese *wayang* is also confirmed, perhaps, by the phallic character of many of the puppets, since nudity is not only a well-known fertility-charm (cf. Serrurier, *De Wajang Poerwâ*, pp. 187–203), but also a potent means of frightening away demons (Hazeu, *op. cit.* p. 43; cf. Crooke, *PR*, 1896, i. 68–72). At a later period this phallicism may, of course, degenerate into mere obscenity, as in the Turkish *karagöz*.

The age of the drama in Java is uncertain, but it is at least clear from allusions to it in the literature that it was popular by the beginning of the 11th cent. A.D. Its origin is still more problematical, the leading authorities on the subject holding views diametrically opposed. Serrurier, Hageman, Poensen, and others believe that the Javanese drama was profoundly influenced by the Hindu; while Crawfurd, Niemann, Brandes, and especially Hazeu, deny that Hindu plays formed the model of the *wayang*. An absolute decision of the matter is not easy, but in the present state of knowledge it would seem that the Javanese drama is indeed an original device. India, it is true, numbers among its dramatic categories a 'shadow-play' (*chāyānāṭaka*), which has been elaborately discussed by Pischel in his 'Das altindische Schattenspiel' (*SBAW*, 1906, pp. 482–502; cf. his *Heimat des Puppenspiels*), with the conclusion that the shadow-play in the technical sense of the term was known in India. Nor is there any inherent impossibility that the *Dūtāñgada* of Subhaṭa (produced in Feb.–Mar. 1243; tr. Gray, *JAOS* xxxii. [1912] 1–20)—the only *chāyānāṭaka* thus far edited—was produced somewhat like the Javanese *wayang*; nevertheless, the difference in spirit between this and other plays of the Rāma cycle in India (cf. Lévi, *Théâtre indien*, Paris, 1890, pp. 267–295), as compared with the Rāma plays of Java (Juynboll, 'Indonesische en achterindische tooneelvoorstellingen uit het Rāmāyaṇa,' in *Bijdragen tot de Taal-, Land-, en Volkenkunde van Nederlandsch-Indië*, 6th series, vol. x. pp. 501–565), must be taken into serious consideration. The profound influence of the literature of India upon Java is too well known to require emphasis (cf. Lassen, *Ind. Alterthumskunde*, Leipzig, 1861, iv. 524–531), and it is obvious, moreover, that both Hinduism and Muhammadanism have given themes to the Javanese drama. If a conclusion may be hazarded, one may say that the Javanese *wayang* is indigenous, and that foreign influence is manifested only, or at least chiefly, in the subjects of many of the Javanese plays.

From Java the drama seems to have spread to Burma, Siam, and Cambodia (cf. Serrurier, *op. cit.* pp. 170–186; Hazeu, *op. cit.* pp. 28–37). In all these countries the Rāma cycle forms the favourite theme, although Buddhistic plays are also frequent in Burma. The Burmese drama is divided into *zaht-pwés*, in which men and boys (but never women) act, and *yoht-thays*, or puppet-plays. Here again the drama is partly religious, not only in subject, but also in occasion, as at the birth of a child. It is, furthermore, produced chiefly at night, and is thus obviously designed to frighten away demons. The Siamese plays, in many of which only the verse is written, the prose being improvised, deal chiefly with the theme of Rāma, while the classifications recall those in Java, the chief ones being *len khon* (plays by masked actors), *len hun* (puppet-plays), and *len nang* (rolls of ox-hide pricked with patterns through which the light of a fire is allowed to shine).

Among the Malays, finally, the *Rāmāyaṇa* is likewise an important theme, and the drama shows the influence not only of Siam and India, but also of China. Here the religious basis of the plays is strongly evidenced both in the invocation (*lagu pĕmanggil*), which is performed by a *pawang* ('magician') to the accompaniment of various musical instruments, and in the propitiation of spirits (*būka panggong*). The Malays are extremely partial, moreover, to shadow-plays, where, as in Java, the showman repeats all the lines, while in Siam this monologue becomes a real dialogue between two persons. Throughout Java and Further India, then, the drama is characteristically either a shadow-play or a mask. There seems, therefore, to be little association with the mimetic dance-drama of the Polynesians; while, on the other hand, masks are undoubtedly one of the most primitive forms of all drama, as is clear from the analogies of the American Indian and of Greek tragedy, to say nothing of the early Roman *fabulæ Atellanæ*. So far as evidence now accessible goes, it would seem that the dramatic art of Java and Further India is an indigenous product, despite later undoubted influence from India.

LITERATURE.—Serrurier, *De Wajang Poerwâ* (Leyden, 1896); Hazeu, *Bijdrage tot de Kennis van het javaansche Tooneel* (Leyden, 1897); Juynboll, 'Wajang Kĕlitik oder Kĕrutjil,' in *AE* xiii. 4–17, 97–119, also 'Das javanische Maskenspiel,' *ib.* xiv. 41–70, 81–111; Hazeu, 'Eine "Wajang Beber" Vorstellung in Jogjakarta,' *ib.* xvi. 128–135; Bohatta, 'Das javan. Drama,' in *Mitt. anthropolog. Gesellsch. Wien*, xxxv. [1905] 278–307; Shway Yoe, *The Burman, his Life and Notions* (London, 1882); Bastian, *Reisen in Siam* (Jena, 1867); Hallett, *A*

Museum für Völkerkunde zu Berlin' (supplement to *AE* viii.); Moura, *Le Royaume du Cambodge*, ii. (Paris, 1883); Skeat, *Malay Magic* (London, 1900); Knosp, 'Théâtre en Indochine,' in *Anthropos*, iii. [1908] 280–293; Jacob, *Erwähnungen des Schattentheaters in der Welt-Litt.* (Berlin, 1906), also *Gesch. des Schattentheaters* (Bsrlin, 1907), pp. 9–15.

LOUIS H. GRAY.

DRAMA (Jewish).—Dramatic literature among the Hebrews, as among all Semitic peoples, was scanty. Attempts have indeed been made to interpret the song of Moses (Dt 32^{1-43}), the song of Miriam (Ex 15^{20-21}), and, above all, the Song of Songs (cf. *HDB*, *s.v.*), as dramatic; but these endeavours have been unsuccessful. Nor is the Book of Job a drama in any true sense of the term. Whatever the Jews accomplished in the drama was, and is, due to imitations from the Indo-Germanic races with whom they have come in contact. The earliest Jewish play dates from the 2nd cent. B.C., when Ezekiel of Alexandria attempted to dramatize the events of the Exodus. Fragments of his play have been preserved by Clem. Alex. (*Strom.* i. 23, 155) and Eusebius (*Praep. Evang.* ix. 29); and Schürer (*GJV*[3] iii. 373–376) believes that this drama was intended for the stage, although it is difficult to imagine its production. In Ezekiel's work the influence of the spirit of Euripides is evident, and his object seems to have been not only to instruct the Alexandrine Jews in Biblical history, but also to wean them away from Gentile plays.

The general attitude of the Jews, however, towards the drama was extremely hostile, in conformity with their policy of self-imposed isolation, and their bitterness was increased by their hatred of the Romans and their suspicion of the Greeks. It was not until the middle of the 17th cent. that the increased scope allowed to Jews gave rise to a Neo-Hebrew drama, modelled, of course, upon the theatre of the Christians by whom they were surrounded. The first of these plays was the *Yesodh 'Olam*, by Moses Zacuto, a Marano, or renegade crypto-Jew, of Amsterdam, and its theme is the Talmudic legend of Abraham's destruction of his father's idols. The plots of the Neo-Hebrew drama are either religious or ethical, as in the *Asire ha-Tiḳḳoth* of Joseph ben-Isaac Penzo (Amsterdam, 1673) and the *La-Yesharim Tehillah* of Moses Ḥayyim Luzzato (Amsterdam, 1743), the former play having as its theme the attempts of Understanding, Providence, and an angel to lead back to the path of rectitude a king distracted, against his will, by his impulses, his wife, and Satan; while the latter drama is an allegory designed to show the victory of truth over falsehood. No fewer than forty-six Neo-Hebrew plays are enumerated by Seligsohn, the majority of them based on Biblical or ethical themes.

Many foreign plays have also been translated into Hebrew, including, for instance, the *Gemul 'Athalyah* of David Franco-Mendes—an adaptation from Racine and Metastasio (Amsterdam, 1770)—and versions of Racine's *Esther*, Schiller's *Die Räuber*, Lessing's *Nathan der Weise* and *Die Juden*, and Shakespeare's *Othello*, *Romeo and Juliet*, and *Macbeth*. The Yiddish dramatists are active, and many great cities support one or more Yiddish theatres which cater to the Jewish population. These plays are, however, for the most part translations or adaptations of dramas by non-Jewish authors. The Jewish drama must, therefore, be regarded merely as a literary parasite; even its apparently original productions are really copied from Indo-Germanic sources.

DRAMA (Persian).—The drama of Persia is both scanty and late, due in part, at least, to Muhammadan rule, which has never been favourable to the development of this art, reflecting herein the dramatic poverty of the entire Semitic race. There are, however, two categories of Persian plays, exclusive of the marionettes or shadow-plays (*karagöz*), which are of Turkish origin. The native Persian drama, then, may be divided into comedies (*tamāšā*) and mysteries (*ta'ziya*, lit. 'consolation, condolence'). The comedies are, for the most part, improvised by *lūṭīs*, or itinerant buffoons, and offer little of interest. It is very different, however, with the *ta'ziya*, which is the most striking mystery-play of the entire Orient, and possesses a sway over the Shī'ite Persians comparable with that of the Passion-Play of Oberammergau over Christians. The individual *ta'ziyas* are comparatively short, and are concerned entirely with religious subjects, especially with the martyrdom of Ḥasan and Ḥusain, the sons of 'Alī, who was the first cousin of Muhammad and the husband of the Prophet's youngest daughter Fatima. 'Alī, the rightful successor of Muhammad, was rejected in favour of Abu Bakr at the instigation of 'A'isha, and was later assassinated, while Ḥasan's own wife poisoned him in obedience to the Sunnite Muawiyah, and Ḥusain was later slain in battle with the adherents of the rival sect. The Persians, being Shī'ites, have accordingly adopted Ḥasan and Ḥusain as martyrs of the faith, and commemorate their death annually during the first ten days of the month of al-Muḥarram. In each house that can afford it a place is constructed for the representation of the mystery, and on the side towards Mecca is set the model of the tombs of the martyred Ḥasan and Ḥusain. The actors of the drama are not specially trained for the purpose, but their deep religious feeling, and their regard for their performance as for a sacred duty, lend a power to the presentation which works the audience into a frenzy and renders it necessary to provide for the safety of the hated Sunnites whom they may meet as they go in procession through the streets. These processions occur especially on the fifth, seventh, and tenth days of al-Muḥarram, the most important being the two last, symbolizing respectively the marriage of Kasim with Fatima and the death of Ḥusain. The concluding day is often marked by bloody conflicts between the Shī'ites and Sunnites.

Dramatically the mystery-play of Ḥasan and Ḥusain, which is essentially a series of *ta'ziyas*, is rude but effective, gaining strength from the very popularity and vulgarism of its style. Its length is prodigious, and the unities of time, place, and even action are set at defiance. The author of the play as a whole or of its parts is unknown, and it is doubtless a product of the people, revised and altered according to need by those who act it, rather than a definite dramatic work. The number of *ta'ziyas* composing it varies, but it would seem that the play is of comparatively recent development, possibly as late as the beginning of the 19th century. As an independently developed Passion-Play, untouched, apparently, by non-Persian influence, the drama of Ḥasan and Ḥusain is one of the most remarkable dramaturgic creations in the history of the religious stage.

DRAMA (Polynesian).—Among the Polynesians, rudiments of the drama may be traced. While these embryo plays were often comic in character and analogous to the early Roman *fabulæ Atellanæ*, particularly in Raiatea (Cook, *Voyage towards the South Pole and round the World*, London, 1777, i. 173–176), they were evidently derived ultimately from religious sources. This is distinctly affirmed by Moerenhout (*Voyages aux îles du Grand Océan*, Paris, 1837, i. 133–134), who states that the dramas were presented under the auspices of the *Arii*, while the plays themselves were devoted to the description of the two principles, Taaroa and the matter with which he unites, the creation of the universe, the gods, elements, spirits, plants, and other productions of the earth; then the life of the demi-gods or heroes, their journeys, combats, and the like; then love-themes, dialogues between lovers (laments, quarrels, true comedy-scenes); and the presentations invariably ended in dances. It is also noteworthy that, according to the same traveller, the 'musicians, singers, and declaimers' at these plays had an orchestra slightly elevated above the rest, while the 'actors or dancers' occupied a special place before or in a house. It would therefore seem that the function of the Polynesian actor was primarily that of the mimetic dancer, the words being supplied by separate reciters, a proceeding for which parallels may be found elsewhere, as among the Javanese. The religious basis of the Polynesian drama receives an additional confirmation in the fact that plays were also presented in connexion with funerals.

LOUIS H. GRAY.

DRAMA (Roman).—**1. Native Italic drama.**—The Roman critics were deeply interested in the Italic beginnings of their drama, and investigations of the subject seem to have begun as early as the time of Accius (*c.* 100 B.C.). Two generations later the whole subject was taken up and examined anew by Varro, notably in his lost *Origines Scænicæ*. His views, so far as they survive, are found in the treatises of Diomedes and Donatus *de Comœdia*. The intermediary was probably Suetonius. Apart from scattered references in various authors, we also have Horace (*Epist.* ii. 1. 139 ff.) and Livy (vii. 2). It is quite clear, however, that the Roman critics discovered nothing very definite.[1] This is shown by their lack of agreement on any given point, by their inconsistencies and incredible combinations; above all, by their frequent appeals to etymology, that last resort of the desperate investigator. It is impossible, for example, to reconcile Livy's famous account with facts, probabilities, or even possibilities. Jahn saw that it was the result of ætiology and of mere philological 'combinations'; Leo pointed out that there was a more than suspicious parallelism with Aristotle's *περὶ κωμῳδίας*, the standard work on the origins of the drama at this time; Hendrickson [2] followed and elaborated Leo by showing that Livy goes back to Accius—perhaps by way of some Annalist (Valerius Antias?). Horace's account adds something to Livy's, but seems to have been derived more or less indirectly from the same source. Varro, as Hendrickson shows, was inclined to distrust the earlier (Accian?) account, and appears to have concluded that the Italic origins were a *terra incognita*.

Such were the views of the greatest Roman scholar; and, on the whole, we are still constrained to agree with them. Neither for him, however, nor for us do they preclude the existence of a native Italic drama in the wider sense. The Romans, like the Greeks, were gifted with a keen dramatic instinct and a large modicum of the mimetic faculty.

The liturgies of the Salii and of the Arval Brothers, the *carmina triumphalia*, the *versus Fescennini*, the songs of beggars and of shepherds—all indicate clearly enough that the temperament which is responsible for the modern *Commedia dell' Arte* is the same as that which greets us at the very dawn of history on the Italian Peninsula. Irrespective of the character and credibility of the testimony offered by the Roman critics, we may safely agree with Mommsen—and so far as the present discussion is concerned this is quite sufficient—that the simplest elements of the mimetic art were in Latium and Hellas altogether the same. The dance (*triumphus*, *θρίαμβος*, *διθύραμβος*), the use of masks or their equivalent, the accompaniment of the pipe, the rude songs ceremonially abusive and obscene (to avert the evil eye, as the *carmina triumphalia*, and the *versus Fescennini* at weddings), the wearing of the phallus for the same purpose—all in honour of the gods and associated from the first with rustic festivals—this protoplasm of the drama, to which Horace gives the indefinite name of *Fescennina licentia*, may be assumed for Italy quite as much as for Greece. In fact, if *Fescenninus* in this connexion (*Fescenninus versus*) is to be derived from *fascinum*, *Fescenninus* literally = *φαλλικός*, and the parallelism is complete between *Fescennina licentia* and *τὰ φαλλικά*, the phallic verses characterizing Aristotle's first division of the Comedy. The derivation from Fescennium (another antique theory) might have been suggested, though this is more than doubtful, by a trustworthy tradition that this old Latin town, so long under the influence of Etruria, was a centre of the worship referred to.

It is neither possible here nor necessary to discuss the vexed and vexing question of the dramatic *satura*, the name given by Livy to a play with a more or less amorphous plot and rude improvised dialogue assumed by his authority as the second stage in the development of dramatic art on Latin soil. It is not unlikely *per se* that a play of the type described did develop in Latium as it did in Greece, but, if *satura* is the traditional name of such a play instead of being (as Hendrickson suggests) merely a later invention, we should agree that the word was a corrupted form of *σάτυρος*, and look to Southern Italy for its ultimate origin.

However that may be, it is fairly certain that the Romans were affected at an early period by the Dorian comedy of their neighbours to the South. This is shown by Bethe's investigations,[1] and is in harmony with Livy's statement (vii. 2), under the year 364 B.C., that *histrio* is an Etruscan word, and that the artistic beginning of the drama came from Etruria. This means ultimately Magna Græcia, for in such matters Etruscan influence was Greek influence at second hand. Etruria was not creative in the sphere of art, it was not even a first class imitator; but it was a good purveyor.

2. The 'Palliata.'—Let us turn, however, from the crude beginnings of mimetic art, Italic or otherwise, to a brief consideration of the Roman drama as a literary production. From this point of view the Roman critics, especially after Varro, agreed that the first definite event in the history

[1] For the remains of antique discussion and criticism of the drama, see esp. G. Kaibel, *Comic. Græcor. Frag.*, Berlin, 1899, vol. i. 1, p. 3 f. For the early period of the Roman drama the most important literature is cited by Schanz, *Röm. Literatur*, I. i., 1898, par. 9.

[1] *Proleg. zur Gesch. des Theaters im Alterthum*, Leipzig, 1896.

of the department was associated with the year 240 B.C. The long war with Carthage had just been brought to a successful termination, and it is a matter of record that, in order to indicate its especial gratitude for Divine protection, the Government, among other things, commissioned the Greek freedman Livius Andronicus to enlarge the usual scope of the *Ludi Romani* by the presentation of two plays, a comedy and a tragedy, translated, or, more properly speaking, adapted from the Greek for a Roman audience. For the one he resorted to the New Comedy, which, being both contemporary and cosmopolitan, was best fitted to reach the hearts of another nationality; for the other he had a large body of old favourites from which to choose. The experiment was eminently successful, and it is characteristic of Roman conservatism, especially in connexion with any religious rite, that the types thus established were in certain respects rigidly adhered to. The *Comœdia Palliata* (from *pallium*, a Greek soldier's cloak) is always the adaptation of a play from the sphere of the New or occasionally (as perhaps in the case of the *Amphitruo*) of the Middle Comedy; the scene, the characters, and, as the name indicates, the costumes, are all Greek. The Greek atmosphere is not always consistently preserved, especially in Plautus; but even here, though the man lived and wrote during and immediately after the blazing excitement of the Second Punic War, deviations are for the most part unimportant and, so to speak, accidental. Comparison, however, with fragments of the Greek originals, wherever available, shows that the poet treated his exemplar with great freedom, both in content and in form, changing what was originally a dialogue in trimeters into the lyric measures of a *canticum*, abridging here, expanding there, and otherwise manipulating his text to suit his taste and that of his Roman audience. Frequently, too, he enlivened the action of his play by constructing an underplot from a certain number of scenes supplied by a second Greek exemplar. This process was technically known as *contaminatio*. On the whole, however, the *Palliata* is a faithful representation of the New Comedy of Greece. Indeed, owing to the loss of all complete originals, it is our only representative. The characteristics of this comedy of manners, or, as Ben Jonson would say, of 'humours,' are familiar to all.

The popularity of the *Palliata* and the creative period of its existence belong in round numbers to the century lying between 240 and 140 B.C. The names of at least twelve comic dramatists belonging to this period are known, and the number of *Palliatæ* written by them must have been not less than four hundred. We now have the six plays of Terence and twenty plays, more or less complete, of Plautus. Of the remainder, we have the names of about one hundred and forty plays, and fragments amounting in the aggregate to about eight hundred lines. Apart from Plautus and Terence, the great names of the department were Nævius and Cæcilius Statius. In the famous canon of Volcacius Sedigitus—which from time to time some scholar claims to understand—the order of merit is Cæcilius, Plautus, Nævius, Licinius, Atilius, Terence, Turpilius, Trabea, Luscius Lanuvinus, Ennius. Apparently the latest of the group was Turpilius, who died at Sinuessa in 103. He had already outlived the popularity of his department by nearly a generation.

The *Palliata* was carefully studied in the two great eras of Roman scholarship—the age of Varro and the age of Suetonius. Many plays of that type were doubtless composed, especially by 'persons of quality,' in the time of Domitian, when it was the fashion to write books. But, after the first great period of its existence, the stage tradition of the *Palliata*, so far as we are now able to trace it, is largely the stage tradition of Plautus and Terence. Indeed, the only Roman comedy to survive, apart from these two authors, is a reworking of the *Aulularia*, belonging probably to the second half of the 4th cent. A.D., and known as the *Querolus*.[1]

3. The 'Togata.'—This was the successor of the *Palliata* in public favour. Its *floruit* belongs to the two generations between the fall of the *Palliata* and the time of Sulla, and the great names of the department are Titinius, L. Afranius,[2] and T. Quintius Atta. Little is known of these men personally, except that Atta died in 77 B.C., and that Afranius was an older contemporary. Seventy titles and about four or five hundred fragments, mostly lexical, are all that remain of this type.

According to the ordinary Roman definition (*e.g.* esp. Horace, *Ars Poetica*, 288), which we have inherited, the *Togata* was the Roman parallel of the *Palliata*. It was a Roman comedy of manners, representing Roman life, as the *Palliata* was a Greek comedy of manners representing Greek life. The scene was Roman and the costumes were Roman; hence, of course, the name. Thanks to Varro, however, we learn that this is not a definition of the *Fabula Togata* as a whole (which ought to mean any play distinctively Roman), but of its most important sub-variety, the *Tabernaria*. The distinction is valuable to us, because the word itself is more significant and descriptive than is *Togata*. Moreover, Diomedes adds that 'tabernariae dicuntur et humilitate personarum et argumentorum similitudine comoediis pares, in quibus non magistratus regesve sed humiles homines et privatae domus inducuntur, quae quidem olim quod tabulis tegerentur communiter tabernae vocabantur.' This statement is amply supported by the titles and, so far as they go, by the fragments. The scene was generally (perhaps always) outside of Rome, and for the most part in the small towns of Southern Latium. Indeed, Mommsen claimed that the scene had to be laid in a town of the Latin league, because the poet was not allowed to represent either Rome or a Roman citizen on the stage. Hence Mommsen would connect the death of the *Togata* in Sulla's time with the extension of citizenship to the Latin towns at that date. If so, why was it that the *Togatæ* of the great masters were popular on the stage until late in the Empire?

The fifteen titles of Titinius represent what was originally about twenty thousand lines of text. About one hundred and eighty fragmentary verses survive. So far as form is concerned, the model was the *Palliata*. In his metrical art, Titinius followed the greater regularity of Terence, but in language and temperament he seems to have had more in common with Plautus. His plays were all family pieces, and it is clear that the life depicted was that of the lower classes and of the country folk. The prominence of women, noticeable not only in Titinius but in other authors of this type, is itself characteristic of Italian life. There is no sign of the kidnappers, and very little of the slaves which Festus tells us were standard characters in these plays. The only type suggesting the *Palliata* is the parasite. The others are more Italic, and remind us rather of the *Atellana* and the mime than of the *Palliata*.

By far the greatest, the most prolific, and the best known of the trio was Afranius. Indeed, like Molière and Ben Jonson, Afranius seems to have

[1] *Querolus sive Aulularia*, ed. by R. Peiper, Leipzig, 1875, etc.

[2] F. Marx, in Pauly-Wissowa, i. 708 f. For the *Togata* as a department, see esp. Edmond Courbaud, *de Comœdia Togata*, Paris, 1899.

been an excellent illustration of Gildersleeve's statement that 'in literature as in life the greatest borrowers are often the richest men.' Cicero (*Brut.* 167) says that he imitated G. Titius the orator, and even in the disjointed fragments now surviving we hear echoes of Pacuvius, possibly even of Cato, but above all of Menander. In fact, enough is left of his prologue to the *Compitalia* to show not only that he followed Menander, but that he was criticized for it. His reply was that 'he borrowed not alone from Menander, but from any other writer, Greek or Latin, whenever he found something suitable to his purpose.' 'Why not? Is any Latin writer comparable with Terence in either language or wit? At the same time, was there ever such a borrower?' Evidently we have here the echoes of a lively discussion among the critics of the Gracchan Age—one which was doubtless taken up in some of the lost satires of Lucilius. Cicero (*de Fin.* i. 7) explains the nature of the debt to Menander. It concerned not plots, or scenes, or characters, but *locos quosdam*, detached passages; it was the same relation which Ennius bore to Homer that every first-class Roman poet bore to his Greek models. But in itself the genius of Afranius seems to have had much in common with that of Menander, and Horace's (*Epist.* ii. 1. 57)

'dicitur Afranii toga convenisse Menandro'

was evidently the prevailing opinion of critics in his time. Doubtless, he did not entirely accept it; nevertheless, he quotes it without comment. Forty-three titles and over four hundred lines of fragments survive. Noticeable in Afranius as compared with Titinius, and in Atta perhaps as compared with Afranius, is the steady growth towards the literary *Atellana* and mime, those rivals of the *Togata* which were already at hand.

The *Togata* was much read and admired as a classic in the age of Hadrian and the Antonines. After that we hear little of it. In all the great library of antique realism, now gone beyond recall, there is probably no department, at least so far as Rome is concerned, which we could so ill afford to lose. The literature of Rome as it now survives is largely the literature of a great capital—in other words, that portion of the written word which was capable of appealing to the common denominator of taste for a long stretch of time in a universal empire. Whatever was local or peculiar in form or content was for that very reason heavily handicapped in the struggle for existence all through the arid waste which lies between the 3rd or 4th century and the Renaissance. The *Togata* was the artistic comedy of the Roman *bourgeoisie*. It must have been an incomparable picture of the ordinary life of the Italian countryside, of old towns like Præneste or Veliternum, with all their local ambitions, characters, and peculiarities, during the 2nd cent. B.C. As it is, our knowledge of this aspect of antique Italian life must be derived for the most part from the priceless fragments of Petronius, and the great palimpsest of Pompeii written over by the hand of Vesuvius.

4. Tragedy.—The rules of the Roman tragedy founded by Livius Andronicus and developed by his followers are practically the same as those already stated for the *Palliata*. The great names are Ennius, his nephew Pacuvius, and Accius. Accius survived until the youth of Cicero, but it is clear that even then the stage tradition of the tragedy lived in the fame of the great actor Asopus rather than by the popularity of the department as such. The tragedy of this period, the only great period of its existence on Roman soil, is now represented by nearly one hundred titles and about twelve hundred lines of fragments. Among the numerous lost tragedies written in later times the famous *Thyestes* of Varius and the equally famous *Medea* of Ovid were the most important. Irrespective of such monstrosities as the *Medea* of Hosidius Geta (a Vergilian cento [see *Anth. Lat.* 17, R]), the only survivors of this department are the plays of Seneca, belonging to the time of Nero. It has often been said, though the statement is really quite without warrant, that they were never intended for the stage. However that may be, it is certain that their influence on the early tragedy of England and France is one of the most important chapters in the formative history of the modern drama. Their connexion, if they have any, with the tragedy of the Republican period cannot be stated definitely. Formally speaking, the choruses go back to the school of Horace, and the plays throughout were deeply affected by contemporary rhetoric.

5. The 'Prætexta.'—The *Prætexta*, the Roman parallel to the *Tragœdia* of Livius and his followers, as the *Togata* was the Roman parallel to the *Palliata*, was the invention of Nævius, the greatest constructive genius, perhaps, of Roman poetry. But, owing in part, no doubt, to the comparative poverty of native Roman legends, the idea was not especially fruitful. One example, however, survives. This is the *Octavia*, a play by some unknown author, probably of the Flavian period, and possibly connected in some way with the house of the Annæi, inasmuch as it has come down to us in the corpus of Seneca's tragedies.

So much for a brief survey of the Roman drama as a purely literary production from beginning to end (*Palliata* and *Togata*, *Tragœdia* and *Prætexta*). It remains to consider those types of the drama which had a popular as well as a literary history. The most important of these, and the only ones with which we need to be concerned in the preseut inquiry, are the mime and the *Fabula Atellana*. Strictly speaking, the *Atellana* should be considered a variety of the mime. Here, however, we take it up first, not only because as a literary form it is the immediate successor of the *Togata* in public favour, but also because as a popular form it is probably the oldest dramatic entertainment known to have existed on Roman soil.

6. The 'Atellana.'—The *Fabula Atellana*[1] is the 'play from Atella,' a little town in Campania. Campanian origin is also attested by the fact that the play was known as 'Oscan,' and the characters as 'Oscae personae' (Diomedes, i. 490, *i.e.* Varro). Generally speaking, of course, these plays were acted in Latin, but Strabo (v. 233; cf. Sueton. *Jul.* 39) tells us that in his time (the Augustan Age) they were still acted in Oscan κατά τινα ἀγῶνα πάτριον, 'during the national festival.' This statement, so far from being incredible, as many have thought, is merely an excellent illustration of the well-known tendency of liturgy to linguistic conservatism (compare the use of Sumero-Akkadian by the Babylonians; of Greek in the Roman worship of Ceres, as attested by Polybius, xxx. 14, and Cic. *Balb.* 55; of Greek in the Russian, and of Latin in the Roman Church, etc.). It proves beyond a doubt not only that the play was Oscan, but that the Romans took it over in the first place in consequence of some vow or in connexion with some special occasion, and acted it at 'the national festival.' It is, therefore, reasonable to suppose that the small and obscure town of Campania recorded in the title *Atellana* was either the centre of the worship commemorated or in some way associated with its adoption. The date, though uncertain, was at least anterior to the time of Livius Andronicus, and probably by a considerable period. This is shown in two ways. The first is

[1] F. Marx, in Pauly-Wissowa, ii. 1914 ff., with ref.; A. Dieterich, *Pulcinella, Pompejanische Wandbilder und römische Satyrspiele*, Leipzig, 1897.

derived from the special and peculiar privileges of the actors. The first actors hired by Livius Andronicus were either slaves or freedmen. Hence the invariable rule of later days that no Roman citizen could go on the stage without *ipso facto* incurring *infamia*, i.e. the loss of certain important civic rights (as exemplified, for instance, by the famous case of the mimograph Laberius in Cæsar's time). The one exception was the *Atellana*. Here and here only the actor was not obliged to remove his mask, and a citizen could take part without incurring any legal disability. This can only mean that the *Atellana* was introduced at a time when the Romans had no professional actors, and probably no festival at which theatrical performances were regularly given. The *Atellana* had been acted by Campanian citizens. The Romans followed their model, and acted the play themselves as best they could. When the Greek drama was introduced in 240 B.C. with its professional actors (slaves and freedmen), the business ceased to be honourable, and Roman citizens gave it up. But that they had once taken part in the *Atellana* was reflected in the freedom from *infamia* which ever after remained a privilege of the actors in this particular type of drama. The special privilege of retaining the mask also shows that the *Atellana* came early to Rome; not, however, because the professional played without a mask in early times, but because of the extreme antiquity of masks in the religious rite.

The second argument for the high antiquity of the *Atellana* among the Romans is derived from the well-known principle that, unless the ground is already occupied, the play always brings its theatre with it. Now, Bethe (*Proleg. zur Gesch. des Theaters im Alterthum*, Leipzig, 1896) has shown, we think conclusively, that the peculiar shape of the Roman stage, about which so much has been written, is not due to the fact that it was a modification of the Hellenistic type. On the contrary, it reflects the type associated from time immemorial with the *Atellana*. In other words, when Livius Andronicus brought out his first Greek plays, the *Atellana* was already in possession, and he adopted its stage as a matter of course. The same rule and the same line of investigation applied to the stage of the *Atellana* itself tend to prove that this play was not an Oscan invention. It was a popular Oscan representation of the φλύακες, one of the oldest types of the ancient Dorian comedy in Southern Italy.

The importation of the *Atellana* to Rome may have been due to some incident in connexion with the fall of Campania in 338. Perhaps, too, Livy's description of the play which he calls a *satura* may go back ultimately to a confused recollection of the Roman *Atellana* in those early days.

Like all genuine folk-dramas, the *Atellana* was not committed to writing. The actors merely agreed upon the plot. The dialogue was improvised. The characters were confined to a certain number of fixed types, each with a generic name, and there were no women. These features are all typical of genuine folk-drama the world over, and the last two, especially, indicate the high antiquity of the play. The use of masks has already been mentioned. This and the wearing of the phallus are ceremonial, and show the antiquity of the type. The use of masks also accounts for the extreme liveliness of gesture characteristic of the *Atellana* (Juvenal, vi. 71). They were also peculiarly applicable for 'Oscae personae,' for a play in which all the characters were fixed. The plot, whatever it happened to be, attached itself to these familiar personified types, and represented their various adventures in the given situations. As befitted the roaring farce, the situation was always ludicrous and the plot full of intrigue. In fact, 'intrigue' is derived from *tricæ* (Dieterich, *Pulcinella*, 98, n. 2), and *tricæ*, 'tricks,' was the word used to describe the action of these plays (Varro, *Sat. Men.* 182 B; cf. Ribbeck, *Leipzig. Stud.* ix. [1886] 337). The language was conversational, and the life depicted was the life of ordinary people (Varro, *de Ling. Lat.* vii. 84). Obscenity was notably prominent (Quint. vi. 3. 47, etc.); but this, too, was ceremonial and traditional as well as a matter of choice. The most striking and instructive modern parallel—in fact, if we may believe Dieterich, the actual descendant and representative of the *Atellana* in the world of to-day—is the Neapolitan *Commedia dell' Arte*.

The four fixed characters of the *Atellana* are Maccus, Bucco, Pappus, and Dossenus. Maccus (probably Oscan and borrowed from μακκοᾶν, to sit 'mooning') is stupid, greedy, and lustful—the butt of every one. He corresponds to *Stupidus* in the mime. His weapon is the 'clava scirpea' (Novius, 79 R), for which we have a striking parallel in Bajazzo (of the *Commedia dell' Arte*), *i.e.* Pagliazzo, the man with the 'hay club' (Dieterich, p. 112). Bucco (a popular derivation from vulgar Latin *bucca*, as the name indicates; cf. Gr. Γνάθων) is a great eater, a huge talker, an unconscionable braggart, an arrant coward. 'Over-large jaws,' as we learn from the old *Scriptores Physiognomonici* (i. 412, 7 Foerster), 'betoken a blockhead, a babbler, a well-spring of words, words, words,' a man who 'talks with his mouth' (*bucca*), as our popular expression goes. Bucco is the talkative and aggressive fool, the 'cheerful ass,' as opposed to Maccus the great gaby, the simple and confiding blockhead. Pappus (from Greek πάππος) is the 'old man,' avaricious, surly, lustful, foolish, conceited, therefore always being overreached: in short, Pappus is Pantalone. Dossenus (from *dorsum*, a pure Latin word) is 'the man with the back,' *i.e.* the hunchback. In the popular conception this affliction has always implied wisdom and cunning (cf. Æsop) as well as certain powers more or less uncanny. Hence, in the *Atellana*, Dossenus, like his modern representative *Il Dottore*, in Pulcinella, is the sly and cunning rascal, the 'professor,' the caricature of the scholar and philosopher. His second name of Manducus (cf. *manducare*, *mangiare*, *manger*) shows that, like Bucco, he is also a great eater.

Such were the standard characters, and such seem to have been the main characteristics of the *Atellana* in its traditional and purely popular form.

For a brief period this old folk-drama was raised to the dignity of a literary department, and succeeded the *Togata* in public favour. The period is the time of Sulla, and the great names are Pomponius of Bologna and Novius. The lines upon which they worked out the problem were doubtless suggested in no small degree by the dramatic studies of Accius and his contemporary, C. Iulius Cæsar Strabo. These men investigated the Roman drama in connexion with Greek models, the question of correct titles (Varro, *de Ling. Lat.* x. 70), of masks, etc. Influence of the *Palliata* and *Togata* is suggested, though not proved, by occasional identity of titles. We also hear of *cantica* in Galba's time (Suet. *Nero*, 39, *Galba*, 13), and it is natural to suppose that in raising the old farce to the dignity of a literary product something was borrowed from the higher types. It is clear, however, that the essential characteristics of the folk-drama were all preserved. The dialogue was now written out, of course, and the statement of Terentianus Maurus (vi. 396 K), that the metre used was the *septenarius*, is borne out by the fragments. In other words, there was no recitative, the play was all comic. Indeed, in language, humour, and situation these plays were more distinctly

Aristophanic than anything else in Roman literature. Equally Aristophanic was the habit of personal criticism, the ὀνομαστὶ κωμῳδεῖν, of which we hear during the Empire from Tiberius to Trajan (Tac. *Ann.* iv. 14; Suet. *Tib.* 45, *Calig.* 27, *Nero*, 39, *Galba*, 13, etc.).

With the rise of the *Atellana* to a literary form, we have to deal with a confused and confusing tangle of testimonies regarding the *Atellana*, the *Exodium*, the *Rhinthonica*, and the Greek Satyr-drama.

The conclusion seems to be (cf. schol. Juv. iii. 175, vi. 71; Suet. *Tib.* 45; Cic. *Fam.* vii. 1, ix. 16) that the literary *Atellana* was used as an *exodium*, and the first mention of the word in Lucilius (180–103 B.C.) coincides with its development in this sphere. A short piece of three to four hundred lines, and with only a few actors (Ascon. on Cic. *Verr.* 15), it seemed hardly worth while, so to speak, to put it on the stage by itself. Apparently, therefore, it was the analogy of the Satyr-drama that suggested the use of the literary *Atellana* as an *exodium*, an after-piece. By later critics it actually was identified with the Satyr-drama (schol. Juv. vi. 71; Porphyr. on Hor. *Ars Poet.* 221, etc.). But it is hard to see how the two could coalesce. The literary model for the *Atellana* to follow ought to be the *Hilarotragœdia*, the *Rhinthonica* (Porphyr. *l.c.*; schol. Juv. *l.c.*), and that it actually did so is suggested by certain titles of Pomponius (Vahlen, *Rhein. Mus.* xvi. [1861] 472). As Rhinthon's plays were travesties of Euripides, so the *Rhinthonicæ* of Pomponius and Novius were travesties of Pacuvius and Accius. Were the *Rhinthonicæ* of Pomponius and Novius *Atellanæ*, or is this idea of later critics due to the fact that Pomponius and Novius wrote both kinds and used both kinds as *exodia*? We believe Marx is right in adopting the second alternative. In fact, the loss of all these departments, the similarity in type, use, titles, and characters, make it extremely difficult to decide whether the *Atellana*, *Rhinthonica*, and Satyr-drama ever did coalesce to any extent. Probably not. The explanation seems to be that Pomponius and Novius wrote all three and used them for *exodia*.

The *Atellana* was evidently popular under the Empire; the old folk-drama was never forgotten, but as a living department of literature it seems to have been largely the creation of these two men, and as early as 55 B.C. (cf. Cic. *Fam.* vii. 1, 3 [written in 46]) the literary *Atellana* as an *exodium* had already given way to the mimes of Decimus Laberius and Publilius Syrus, the only two men of note who raised the mime to a literary form in the Latin language. If this were all, or if this chapter could be dealt with independently, the mime might be dismissed with the few phrases usually accorded to it. We have learned from Reich,[1] however, that this cannot be done, and with his general conclusions we must agree in the main. The literary productions of Laberius and Syrus, like the *Atellana* by which the mime was preceded, are a mere branch of the parent stock.

7. The mime.—In its larger sense the mime is the most important phenomenon in the history of dramatic art; it appears in a dozen different forms, it is responsible for a dozen others; the history of it is the history of the growth of realism, of the rise of the democracy; it has popular periods and literary periods, a Greek history, a Roman history, a Græco-Roman history, a modern history. Indeed, after reading Reich one may sum up the whole story of the antique drama with the simple phrase, 'Mime thou wert, to mime didst thou return.' For the complete and detailed discussion of this long and interesting development, the reader is referred to Reich himself. Here it is manifestly impossible to give anything more than some of the important facts in outline.

The earliest appearance of the word 'mime' is as a title for the famous compositions of Sophron (5th cent. B.C.). These dramatic presentations of single incidents or situations, according to Suidas, were in prose and written in the Doric dialect. The substitution of the *scazōn* for prose gives the form and the atmosphere of the *miniambi* of Herondas, the Teniers of Alexandrian life. A more elevated metre, on the other hand, starts us, by way of Sophron's imitator Theocritus, on the long history of bucolic poetry. A convenient generic term for this type is Reich's *mimologia*, i.e. the mime as a recitation.

There were also purely lyric mimes, which were sung. To these Reich gives the generic title of *mimodia*. Particular species of it are *magodia*, *Simodia*, *hilarodia*, *Lysiodia*. Between the two we have *kinaidologia* and *Ionikologia*, all in verse, but partly recited, partly sung. Finally, in the Alexandrian period, comes the fully developed mimetic drama, which was a combination of *mimologia* and *mimodia*, and retained the characteristics of both. With a fully developed plot, it had prose parts and iambic parts, like the *mimologia*, and lyric parts—*cantica*—like the *mimodia*. With the conquests of Alexander this new invention began to spread in the Greek East, and soon took entire possession of it. Indeed, the time came when it ruled the stage, even to the exclusion of its ancient rival, the comedies of Menander.

Toward the end of the 2nd cent. B.C., after the Romans conquered the East, and especially after Sulla's time, they brought the dramatic mime to Rome. From Rome it spread over the West, and thenceforth held possession of the entire Græco-Roman theatre until the fall of the Empire. The irruption of the Barbarians upon the West made an end of the theatre. Only the *mimi* survived, and they did so by returning to their primitive original function of θαυματοποιοί and γελωτοποιοί. Such were those tumblers, jugglers, etc., of later times who went on with the ancient art of the *mimus*. It was thus that the mime of antiquity was enabled to survive the Middle Ages and reach modern days alive. In the Greek East the mime was not subjected to the same strain. For centuries the Byzantines clung to the classic dramatic mimes of Philistion. They also produced a large number of mimographs, and a number of new mimic types and figures were added to the old stock inherited from classical times. Here, as in the West, the regular classical drama had long since disappeared from the stage. When Byzantium fell, the remains of Greek culture took refuge in Italy, to reappear there at the Renaissance. Only the mime remained, and in a debased form survives to-day in the Turkish popular drama known as the *karagöz*. Two distinguishing features of the mime from beginning to end and in all its types and variations have been the mimic dance and the wearing of the phallus. The mime of all times and forms is also realistic; the very name implies it. Of course, all poetry was properly defined as μίμησις, but the mime was felt to represent a specific type; to give the substance of Diomedes' definition (i. 491 K), it was realism unmitigated and undiluted. We get an idea of the relentless realism of the mime when we see how much of it is still left in the refined literary representatives of it furnished by Theocritus and Herondas. Without the restraint of higher genius and literary form, it was easy for the realism of the mime to sink to mere obscenity and its wit to mere dullness.

The realism of the mime is also seen in its characters. Many of them, perhaps all, were creations of the ancient folk-mime, and had long been familiar to all classes from this source. As early perhaps as the 6th or 7th cent. B.C. we have the first development of this species of folk-composition by quasi-professionals, those θαυματοποιοί, jugglers, rope-dancers, ventriloquists, and other homeless nomads who had been wandering about through Greece and elsewhere from time immemorial. They must soon have seen the advantage of the mimic dance, and of the mime itself, whether spoken or sung, for getting together an audience. In this way, thinks Reich, sprang up a new profession, that of the wandering *mimi*.

Among all the varieties of dramatic composition

[1] Reich, *Der Mimus, ein litterar-entwickelungsgeschichtl. Versuch.* vol. i., Berlin, 1903.

the mime was the lowest, as it were, in the social scale. The same was true of the actors. Even the players of the *kithara* and flute were admitted to the Dionysiac gild, but never the *mimus*; he was always looked down upon by his more distinguished colleagues. The difference was marked from the first by the fact that the actors wore no masks, and that women's parts were taken by women. Doubtless, this was inherited from their early days as jugglers, but the 'regulars' even in their own later and evil days would never join the *mimi* on account of the women.

A convenient division of the mime as a whole is afforded by the words *παίγνιον* and *ὑπόθεσις*. The mimic *ὑπόθεσις* is the developed mimic drama, the regular dramatic mime; the *παίγνιον* is everything below it, i.e. *hilarodia, magodia*, etc., mentioned above, *kinaidologia, Ionikologia, φλύακες*, even the works of Sophron, etc., none of which were regular dramas. Frequently the *παίγνιον* is what we should call a music-hall 'turn.' It was extremely popular in both Greece and Rome; and there were many varieties, such as educated animals (Vopiscus, *Carinus*, 19; Plutarch, *de Sollert. Anim.* 19, etc.), and special feats of imitation. Imitation of pigs seems to have been particularly popular (Phædrus, v. 5; Plutarch, *Mor.* 674 B; *Paræm. Græc.* ii. 84, etc.). Plato (*Rep.* iii. 8) speaks of performers who could give perfect imitations of animals, the sound of running water, the sea, thunder, etc. See also Friedländer's *Petronius*, 1891, pp. 64, 68, 69, and 293 (note). These varieties of *μίμησις* are eternally popular.

The most important figure in the history of the department is Philistion, who lived and wrote in Rome during the 1st cent. A.D. He is the classic of the mimic *ὑπόθεσις*, the regular dramatic mime; hence the comparison of him with Menander, the classic of the New Comedy.[1] The statement of Cassiodorus (*Var.* iv. 21), that he invented the (dramatic) mime, is doubtless due to the fact that he was the first to write it all out, *i.e.* the dialogue as well as the songs. Evidently he was the culmination of the mime among the Greeks. But the beginnings of it take us back to pre-historic times. The mime of Sicily and Italy came from the Peloponnesus with the early Dorian settlers. It was extremely popular in Sicilian Megara and Syracuse. Tarentum was especially fond of the Italic mime, the *φλύαξ*. All these cities were founded near the beginning of the 8th cent. B.C.

The original kernel of the mime, the source from which it sprang, was the mimic dance, the beginnings of which belonged to the Stone Age, and may be seen to-day among all peoples who still belong to that stage of civilization. The ancients never forgot the connexion between the two. The mimic dance survived in all types, and the *mimus* himself was always a trained dancer. The *kinaidologi*, for instance, were originally dancers who thus accompanied their *ἄσματα ἰωνικά* (cf. Petron. 23); Hesychius describes the *magodia* itself as *ὄρχησις ἀπαλή*, the Romans designated the action of the *ὑπόθεσις* by *saltare*, and the actresses were known as *saltatriculæ*. The use of *gesticulatorius* in the same connexion indicates the *kind* of dance.

The development of troupes of regular professional *mimi* from the old wandering *γελωτοποιοί* of primitive times seems to have taken place about the 3rd cent. B.C. These primitive ancestors of the mediæval *jongleurs* had gradually taken up all the types and themes of the old rustic mime. They travelled everywhere, they were great favourites at the court of Philip, and hordes of them followed Alexander into Asia Minor. Here the Dorian mime met the Ionian mime, and the result was the *ὑπόθεσις*, the regular dramatic mime. The Dorian mime was originally prose (hence Sophron), although great artists like Epicharmus put it into metre. The dramatic mime (*ὑπόθεσις*), however, was noted for its *cantica*, and this combination of Dorian prose (*mimologia*) and Ionian song (*mimodia*) is what ensured the lasting success of the dramatic mime. Great emphasis was laid upon *mimodia*, and this brings the dramatic mime near to the modern opera or operetta. In this way, too, we get a substitute for the missing chorus of the *Palliata*. Plautus took over *mimodia*, and the result is the mimic *canticum* of his comedies. Pomponius and Novius seem to have done the same thing for their *Atellanæ*.

Now, the Ionian *mimodia* itself, like the *ὑπόθεσις*, throughout its entire history, falls into a mythological and a 'biological' type (cf. Aristox. *ap.* Athen. xiv. 621 C), the one, *hilarodia* (and *Lysiodia*), dealing with mythology and the gods (paratragic and burlesque), the other, *magodia*, with real life. Both were entirely melic, and in both singing was accompanied and supported by mimic dance and gesture; but the accompaniment of *hilarodia* was stringed instruments, of *magodia*, drums and cymbals (Athen. 620 D–621 D), and the choice of instruments itself indicates that the dancing of the latter was much freer and more lascivious.

Hilarodia and *magodia* were wide-spread and very popular in Ionia, and acquired literary form —*hilarodia* through Simos of Magnesia, *magodia* through Lysis. Hence these new literary types were called after their founders *Simodia* (*hilarodia*) and *Lysiodia* (*magodia*). Through famous poets and a regular class of actors these two types of Ionian *mimodia* survived into Roman times. Sulla's friend Metrobius was an actor of the *Lysiodia*.

Kinaidologia, or *Ionikologia*, was another type of the Ionian mime. This was not really sung, although accompanied by the mimic dance (hence it was more *mimologia* than *mimodia*). This also was very popular in Ionia, and was cultivated by such famous poets as Sotades, Alexander Aetolus, Pigres, etc.

It will thus be seen that we have an unbroken connexion between the mimic-dramatic dances of the primitive Greeks, the ancient folk-mimes of the Dorians, the Italic *φλύακες* of the 8th cent. B.C., and the dramatic mime of later times (not only in its popular form, but in its literary form; Laberius and Syrus on the Latin side, Philistion and his successors on the Greek side).

The relation of Rome to Greece in the matter of the mime now becomes more definite. Antiodemis (Antipater Sidon. *Anth. Pal.* ix. 567), the actress of *Lysiodia*, came to Rome in the 2nd cent. B.C.; Metrobius, as we have seen, in the 1st cent. B.C. In 211 B.C. an old *mimus* (Festus, 326) danced to the flute in the Roman theatre. His dance was an intermezzo, but his mere presence shows that the *mimi* had already reached Rome. The *mimi* who satirized Lucilius and Accius (150 B.C.) from the stage were following an old-established custom of the dramatic mime (*ὑπόθεσις*). The fact that they took such liberties shows that even then they must have been in Rome for a long time. The satire in question must have taken place at the *Floralia* (April 28–May 3), which was the special feast at which mimes were given. The *Floralia* were first celebrated in 238 B.C., and every year after 173. It is quite possible that the mime was connected with this feast from the first. In that case, the dramatic mime, which was established in the Greek East by the 3rd cent. B.C., was already settled in Rome in connexion with the *Floralia* by the end of the same century. Thus we see how the mimodic portion of the dramatic mime was the suggestion

[1] Σύγκρισις Μενάνδρου καὶ Φιλιστίωνος, ed. Boissonade, *Anecd. Græca*, 1829, i. 147–152; and by Studemund, *Lektionskatalog*, Breslau, 1887.

of the *cantica* of Plautus and Cæcilius Statius. The introduction of the mime and of *mimi* at that time was facilitated by the fall of Tarentum in 272, and by the fact that in 190 Scipio Asiaticus returned from Antioch, a centre of the dramatic mime, just as long afterwards Verus (Capitol. viii. 7) came back from his Parthian campaign with shiploads of *mimi*.

The early *mimi*, of course, acted in Greek, and the *scæna Græca* remained in Rome until Theodoric.[1] One is reminded of such modern parallels as the *Théâtre italien* in Paris, etc. The Latin mime was a copy of the Greek (technical terms, rules, etc.).[2]

Having traced the history of the department as a whole, let us pause a moment upon the fully developed dramatic mime of the best period. We have already seen that it inherited dialogue in prose and iambic verse, also lyric portions (*cantica*), accompanied by music and the traditional mimic dance. The same principle also justified the introduction of *παλγνια*, such as trained animals, imitations, etc. In plot, too, and in length it was fully equal to the old classical drama; in compass and variety it was superior.

A good example of the type is an old favourite, well known to Ovid, and still popular in the days of Chrysostom and Chorikios.[3] The name of the piece has not survived; we might, however, for convenience call it *Divorçons*, as it is an early exploitation of the inevitable 'triangle.' In the first scene we have the facile young wife and the jealous husband. Then the lover, the *cultus adulter* as he is called, appears, and with the help of Thymele's faithful abigail, the *cata carissa*, gains an interview with her mistress in the absence of Corinthus. In the following scenes the jealous husband is subjected to all sorts of tricks and mystifications, *artes mimicæ*. Finally, the lover has to hide from him in a large chest (*perituri cista Latini*). He is discovered. The husband, breathing fire, tells the slave to fetch him a knife, large and very sharp, as he proposes to render the *cultus adulter* harmless. Then he changes his mind, and decides to air his wrongs in court. Then comes the court scene, and the piece is brought to an end in some farcical fashion.

The final tableau of *Divorçons* requires not only the three principal characters and the judge to be on the stage at the same time, but also a throng of slaves, witnesses, court officials, supernumeraries, etc. Other plays show even more clearly that in the mime, as in the modern drama, with which, in fact, it has much in common, the actor played but one part and the number was unrestricted. It is also clear that the 'unities' were disregarded.

Variety in form was accompanied by variety in characters. True to its composite origin, the mime is hospitable to all, from thieves and prostitutes to emperors and gods.[4] The same was true of costume. The *Stupidus*, or clown (a typical character inherited from the primitive stock), wore the regular clown's costume, the *centunculus* (cf. the mediæval 'motley'), a shaved head, an *apex*, a mimic club (like Maccus and Bajazzo), and always the phallus. The old women, too, wore a burlesque costume. Otherwise, as in the modern drama, the dress was according to the character and the situations.

So, too, the whole gamut of human emotions was played upon: comic and tragic, humour and sentiment, go hand in hand, as in the Romantic comedy of the Elizabethan Age. The titles of Laberius suggest realistic plots for the most part. It is doubtful, however, whether such mimes as his *Necyomantia* and *Lacus Avernus* were altogether realistic. In fact, even when the mime dealt with contemporary life and was purely realistic, great emphasis was laid on the unusual, strange, and astonishing. Nothing indicates more clearly the really popular origin of the mime.[5] A favourite character was the beggar who suddenly becomes rich (Cic. *Phil.* ii. 27); another, the rich man who becomes a beggar (Sen. *Epist.* 113. 6). Shipwreck was a favourite *motif* (Sen. *Dial.* iv. 2, 5; Petron. 114 and 115). The *Laureolus*, a favourite mime of Domitian's time, gave the romantic adventures of a robber chieftain, and ended with his execution. Especially characteristic of the mime was some serious crime, something unusual and horrible, like parricide or incest or poisoning. Trials for perjury or poisoning are frequent, and generally serve for the *dénouement*. An interesting example, which will also illustrate the part occasionally taken by animals (cf. such titles of Laberius as *Catularius* and *Scylax*, and see Petron. 95), is given by Plutarch, *de Sollert. Anim.* ix. 7.

This was a mime with a large number of characters and a complicated plot, which he saw in the theatre of Marcellus. Vespasian himself was present. The intrigue centred in what purported to be a poison, but was in reality a sleeping potion. As in the case of Juliet, whoever took it apparently died, but after a time revived. One of the star actors was a trained dog, and the most important incident of the mime, because it doubtless led to the *dénouement*, was trying the effect of the supposed poison upon him. As soon as he had eaten the piece of bread upon which the poison had been placed, he began to tremble and stagger, his head grew heavy, and he finally stiffened out as if dead, and allowed himself to be carried about in that state. When it was time to recover, he imitated perfectly all the phases of returning consciousness, and, while the actors indicated their astonishment at the fact that the supposed victim of a deadly dose had come to life again, the dog himself ran to his master and joyously fawned upon him.

The connexion of this incident with the plot is not stated, but we may believe with Reich that there was a connexion, and that the probable nature of it is illustrated by (the mime from which was derived?) the famous story of Apuleius, *Met.* 10. 2. A rich old grandee took for a second wife a young and very beautiful woman. She fell violently in love with her stepson, but was rejected by him, and her passion was turned to hatred. (Note that this *motif* has been a popular favourite ever since the days of Joseph and Hippolytus. It appears constantly in folk-tradition, in the mime, in that echo of the mime, the rhetorical *controversiæ* and *suasoriæ*, in the Italian *novelle*, etc.) A slave procures her a sudden and deadly poison, she drops it in a cup of wine, and the pair leave it where the young man will take it without arousing suspicion. Presently, however, her own son returns from school, and, being thirsty—as small boys always are—drinks the wine and falls dead on the spot. (Here is the unexpected turn of fortune which the mime, that faithful interpreter of the popular mind, so dearly loves.)

It is, of course, clear to all that the child has died of poison. The woman accuses her stepson of the deed, and alleges as a cause that he had attempted incest with herself. The young man is arrested, there is a great trial scene in court, and, after much oratory on both sides, he is condemned to death. At this point, however, we have another unexpected turn. An old judge, who is also a skilful physician, has been quietly listening to the trial all this time. At this point he rises to his feet and informs the court that he himself had sold the drug to the slave, and that it is not a poison at all, but a sleeping potion. 'Let us go now to the tomb,' said he, 'the child will soon be waking up.' Thus the woman's guilt was discovered; but, true to the mime, she was merely turned adrift, not executed.

Another plot eminently characteristic of the mime is Phædrus, *App.* xiv. 'The two suitors,' which reappears in an old French *fabliau* known as 'Le vair Palefroi,' 'The grey Horse.'

This is Romantic comedy. So, too, the mime takes us into the world of phantasy. Witches, warlocks, magicians, prophets, ghosts, are all favourite characters. In the old Dorian mime popular demons were presented, and the metamorphosis of men into animals, which is well attested for the mime of all periods, takes us straight into the fantastic land of 'the Frog King,' of 'Beauty and the Beast,' of 'the Golden Crab,' of 'the Three Citrons,' and the like. In this function the mime is a curiously complete prototype of Carlo Gozzi's famous experiment with the fairy tales of Italy. To the same category belong the mythological mimes, *Priapus*, *Anna Perenna*, *Anubis Moechus*,[1] *Kinyras and Myrrha* (Jos. *Ant.*

[1] Cicero, *Fam.* vii. 1; Suetoo. *Jul.* 39, etc.

[2] See Reich, *op. cit.* p. 561 f., for details.

[3] Ovid, *Trist.* ii. 497 f., etc.; Juvenal, viii. 196, vi. 42; Chrysost. ii. 318. 13; Chorikios (Reich, p. 204 ff.). In Juvenal's time the wife was acted by Thymele, the husband by Corinthus, the lover by Latinus. They were all famous 'artists.' Thymele well might be called the Mrs. Bracegirdle of the Flavian period.

[4] See esp. Cyprian, *de Spect.* 6. Many titles of Laberius and Syrus speak for themselves in this respect.

[5] The Latin mimes were carefully studied in the rhetorical schools during and after the Augustan Age. To this fact is due the survival of the *Sententiæ* of Syrus. These were extracted from his mimes at an early date, and published as a sort of *vademecum* for the use of students and professors, from which might be drawn those sententious observations so dearly loved by the rhetoric of the Silver Age. For those who wish to recover the plots, scenes, and *motifs* most characteristic of the mime, the practice declamations of the rhetorical schools probably afford the richest field for investigation.

[1] See esp. Zielinski, *Die Märchenkomödie in Athen*, St. Petersburg, 1885; Weinreich, *Trug des Nektanebos*, Leipzig, 1911, p. 25.

xix. i. 15), *Paris and Œnone* (cf. Suet. *Dom.* 19), Philistion's *Deukalion and Pyrrha*, etc.

It will be seen that in form and type the mime was not subject to the restrictions of the classical drama most familiar to us. It may be added that the same was true of many details of its presentation. First and most important, the actors, as we have already seen, never wore masks. It is not necessary to explain what this means for dramatic art. The *mimus* wore his own face only; indeed, one of the principal characters of the mime was known in Latin as *Sannio* (Cic. *de Orat.* ii. 61), *i.e.* 'the man who makes faces'—a speciality of the mime.[1] So, too, as we have seen, only in the mime were women's parts always taken by women. And, as there was no restriction of type, the characters included women of all ages and kinds. It is characteristic of the mime as a whole, however, that old women should be a speciality. This enabled a talented actress to keep on indefinitely (Pliny, *HN* vii. 48).

The original stage of the mime, as we see from old vase paintings of the φλύακες,[2] was a platform on props about three feet from the ground, and with steps in front by which the actor mounted. Change to the regular stage was very slow. With the beginning of the theatres the mime was acted on a small platform in the orchestra and in front of the regular stage. It was thus given as an *emboliarium* (Diomed. 490) or intermezzo. The next step was to the regular stage, upon which in Cicero's time the mime took the place of the *Atellana* as an *exodium* (Cic. *Fam.* ix. 16). At the *Floralia*, however, it had always been acted independently, and it gradually drew away from its function as an *exodium* (Diomed. 491 f.), until in the early Empire it took to the regular stage, upon which, together with the pantomime, it finally ruled alone. One distinction, however, survived. The mime was acted in front of the *siparium*, and it was through this that the actors made their exits and entrances. The stage was dressed as in Shakespeare's time, but, as also in Shakespeare's time, there was no scene-shifting. Claudian (*Epig. Græc.* 6) shows that there was, as we might assume, a regular *corps de ballet*. Doubtless it filled the same place and did much the same thing as in our times.

In view of what has been said, it is not difficult to understand why the fully developed dramatic mime, in spite of its faults, finally ruled alone. If the drama springs from the people, and if its highest function is to represent their life and their point of view, then the dramatic mime has a greater right to be called the national drama of the Græco-Roman world than has the classical drama of Greece or its short-lived and always more or less exotic representative in Rome. It is likely that Quintilian's verdict of 'in comoedia maxime claudicamus' might have been applied with equal justice to the Roman tragedy. Cicero was a notorious lover of the mime, a man of judgment and taste in such matters, if there ever was one. It is true, of course, that the mime was the drama of the age, and that the age was an age of realism. For that reason alone the average man of to-day would doubtless have agreed with him. But, after all, the realism of Cicero's time, however relentless, was not the realism of our time. The mimograph of those days, realist though he was, still possessed the vivid imagination, the nimble fancy, and, therefore, the sentiment of his race and time—those qualities without which the bubbling well-spring of humour and invention must soon dry up. Moreover, his audience was endowed with the same qualities. It still believed in ghosts and magic, it still had a folk-lore, it still possessed an incomparably rich mythology. Hence the real world of antiquity finds its parallel in the age of Elizabeth rather than in our own. It was only partially real after all. And so the mime, like the Elizabethan 'tragi-comedy,' was now wildly humorous, now fantastically horrible. The Romantic and the real, humour and pathos, comic and tragic, fact and fancy—all these and more were called upon to picture a life which, real as it once was, is no longer ours and will never be ours again.

The dramatic mime, however, seems never to have taken its position as a great literary department. In the long run the habit of leaving the dialogue to the actors proved to be inveterate, and this alone would have been fatal. But the most serious menace to the mime was its own splendid inheritance of versatility. Dialogue and plot, music, singing, dancing, an occasional weakness for 'specialities'—the combination is unstable, and, except in the hands of a great genius like Philistion, one or another was sure to be magnified at the expense of the rest. Audiences are uncritical, playwrights are human, actors are —actors. Between the three the mime of the 4th cent. A.D. no doubt deserved the adverse criticism bestowed upon it by Donatus and Cassiodorus. But, whatever its faults and virtues, the vitality of the mime was amazing. Time and change, national ruin, ecclesiastical fulmination and anathema—nothing could prevail against it. We cannot ignore a dramatic type which finally ousted both Euripides and Menander from the stage, and ruled alone for over half a millennium.

8. State control of the theatre.—The Roman theatre,[1] like the Roman play, and, for the most part, the details of its presentation, were a continuation and development of the Greek prototypes as they existed in the Alexandrian period. All derive ultimately from the one fact that the Roman play, like its predecessor, was clearly and distinctly an act of worship to the gods. It was, therefore, given at festivals, more especially at those festivals which the State religion, hence the State itself, had set apart for purposes of public worship. The plays were merely one item of the ritual observed. Other items were the races, gladiatorial combats, etc., which gave the general name of *ludi* to these occasions. In the time of Augustus, the regular annual *ludi*, during which plays were given, were the *Megalenses* (April 4–10), the *Ceriales* (April 12–19), the *Florales* (April 28–May 3), the *Apollinares* (July 6–13), the *Romani* (Sept. 4–19), the *Plebeii* (Nov. 4–17). Other *ludi* of the Augustan Age, during which plays were or could be given, were generally sporadic and meant to commemorate some special occasion, such as a great victory or the death of some distinguished man. Later in the Empire the tendency to increase the regular annual *ludi* became very marked, and serious attempts to reduce the number were made by several of the Emperors, notably Nerva, Septimius Severus, and Macrinus. Nevertheless, according to the calendar of 354, not less than 175 days in the year were given to *ludi*, and 101 of this number to plays.

The play was managed by the State. It is true that *ludi* were given by persons more or less in private life, but they were still an act of worship, the consent of the State had first to be secured, and, lastly, they were supposed to be under the

[2] See Bethe, *op. cit.* ch. 13, for the full discussion.

[1] The best authority for Rome here is L. Friedländer in Marquardt-Mommsen's *Handbuch der röm. Altertümer*, vi. [1885] 482 f. See also G. Oehmichen, 'Das Bühnenwesen der Griechen und Römer,' in Müller's *Handbuch der klass. Altertumswissenschaft*, Munich, 1890, v. 3, pp. 181–304. For colours in theatrical tradition, see especially Donatus, *de Comœdia*.

general supervision of State officials. At no time apparently was the antique theatre a purely private enterprise; still less was it ever a purely financial one. One or two exceptions under the Empire are mentioned by Tacitus, but with such disapprobation that they illustrate rather than invalidate the rule.

Until the time of Augustus five of the six great annual *ludi* mentioned above were in charge of the various ædiles. The sixth, the *Apollinares*, which occurred in July, was managed by the *prætor urbanus*. The officer in charge had everything to do. Indeed, in earlier times, as we learn from Plautus, he even attended to the matter of costumes. He also built the theatre, and afterwards had to clear it away and put the place in order. Oddly enough, Rome never seems to have had but two permanent theatres—the theatre of Pompey, built in 55, and the theatre of Marcellus, which belongs to the Augustan Age. The ædile also had charge of the audience during the performance. In this he was assisted by his corps of *designatores*, or ushers. The *designator*, however, was a vastly more important person than is the modern usher. He was a regular deputy of the civil magistrate in charge, and as such the majesty of the law was with him. He had lictors, and was expected to move or remove people whenever necessary. In the 2nd cent., as we learn from the jurist Ulpian, this office was in the gift of the Emperor, and was of great value. The ædile had a regular sum allowed him from the State treasury to meet the bills incurred. But this *lucar*, as it was called, had been fixed as early as the Second Punic War, and was far from keeping pace with the growing expenses of the function for which it was designed. Nevertheless, the office of ædile as *maître de plaisir* made one so prominent and popular that it was much sought after by the aristocracy as a means to further advancement, and they spent fabulous sums in giving the shows devolving upon them. But at the accession of Augustus no patricians could be found who were willing to accept the office. He, therefore, transferred the management of theatrical matters to the prætors, and this remained the law under the Empire.

It is well known that one's seat at the theatre was determined by one's position in the State, and that it was regulated by law. The theatre was a religious institution, in charge of the Government. Such being the case, a seat at the theatre, like a right to vote or to bear arms, was a privilege of citizenship, and therefore to be assigned according to that principle. For that reason, in the earlier days of the Republic, slaves could not attend the theatre; and the same must have been true of strangers unless they were guests of the State. But in the time of Augustus these restrictions had ceased to be in force. The law on the subject of seating as it existed under the Empire rested for the most part upon enactments of Augustus, although these had been largely anticipated by generations of growth in Republican times. The orchestra, though the name reflecting its original use was and still is retained, was set apart for the senators. This rule had been in force since 194 B.C. Representatives of foreign States and, under the Empire, certain members of the reigning house were allowed to sit here. The position of the knights was finally established by the *Lex Roscia Theatralis*. This famous law was pushed through by L. Roscius Otho, tribune of the people in 67 B.C. Among other things it provided that the property qualification of a Roman knight should be raised to 400,000 sesterces, and that the first fourteen rows behind the orchestra should be set apart for the exclusive use of this order. The law also provided that even within these rows careful distinctions should be made among the knights themselves. For example, the first two rows were reserved for those knights who had served as military tribunes or land-commissioners. The younger knights also had a separate section, which under the Empire was known as the *Cuneus Germanici*. Even insolvent knights, *decoctores*, were obliged to sit in a group by themselves.

Previous enactments were extended and strengthened by the *Lex Iulia Theatralis* of Augustus. This law, which was much affected by Greek theatrical ordinances, prescribed the place of every one in all parts of the house. The general public sat according to *tribus*, or wards. But even here distinctions were made—for instance, in favour of husbands and fathers as against bachelors and spinsters. The women, and with them the young children, had to sit by themselves on the back rows. The one most notable exception was the Vestals, who had seats of honour near the front. So the various colleges of priests and other officials had seats of their own, often of a special form, with backs, arms, etc. Sometimes a certain seat was given a man *in perpetuum*, usually in return for distinguished services rendered to the State. Such a seat was also used by his family and could be inherited.

The usual time for a play to begin was early in the morning. A play of Plautus, including the music, would take about three hours. Whether two or more should be given in succession, as was sometimes the case, was left to the official in charge. Plays were never given at night except for ceremonial reasons. This was always the case when mimes were acted at the *Floralia*. Other details, so far as they bear upon the present discussion, have already been dealt with elsewhere.

9. **The Roman drama not truly national.**—In view of what has been said in the previous pages, we might perhaps conclude that as a literary production the life of the Roman drama was surprisingly brief, its great authors comparatively few, its genuine popularity problematical. We cannot agree, however, that the reasons for it were that the *Palliata* died of too much Greek, that the mimic sorrows of the tragedy could not appeal to an audience steeped in the bloody realities of the arena, that idealism does not and cannot reach a generation of realists. These are all true, but they are symptoms, not causes. There were plenty of men in the Golden Age of Pericles who preferred cock-fighting to comedy, and athletics to Æschylus. Nevertheless, the drama really did reach the hearts of the people. This was because it was theirs, because it was truly national. The Roman drama, on the contrary, both as an institution and as a department of literature, was profoundly affected by the intrusion upon it at an early date of the fully developed Hellenic tradition and the long-established Hellenic masterpieces. The consequence was that the Roman drama as we know it, and as the Romans themselves knew it during the historical period, was not really national, and had no deep roots in the national life. The atmosphere of the *Palliata* was foreign, the material of the tragedy was not only foreign but comparatively remote; even the worship of Dionysus—god of the drama—was an exotic, and the feeling of mistrust entertained by the genuine old Roman is clearly indicated by the famous *Senatusconsultum de Bacanalibus*. His affections, his traditions, his beliefs were deeply rooted in his own deities, the old rustic deities of the Italian countryside. Foreign gods, above all foreign gods with 'mysteries,' did not appeal to him. He was opposed to Dionysus, as long after-

wards he was opposed to the Christians, and it was the same feeling which prompted him to ignore for generations the intrusion of the Hellenistic week of seven days, each under the protection of a planetary deity. The actor, too, as we have seen, was a foreigner or its equivalent. In other words, the profession which in Greece was a consecration, involved in Rome the loss of civic rights. Who shall say how far the development of histrionic talent and the appreciation of it as such were affected by this absurd but entirely logical rule?

We have seen that two types of drama among the Romans remained popular for an indefinite period. The statements just made, however, are proved, rather than disproved, by these exceptions. The *Atellana* was a folk-drama, which in itself ensures longevity; it was also very old, and for the average Roman it was Roman from the first. The mime also was very old, but in its developed dramatic form it was neither Greek nor Roman, but really the child of the new era. It was Græco-Roman, and belonged to the Empire. The mime, too, as was said above, maintained itself for an indefinite period. In the long run, however, its vitality was due not to its superiority as an organic play, but to its enormous flexibility and to its power of adapting itself to the tastes of the passing hour. It always had a residuum of folk-elements, such as a few fixed characters and the habit of improvising dialogue; it could introduce popular songs and dances, also imitations and other music-hall 'turns.' In short, whatever it was capable of or had once been under Philistion and his compeers, it survived only as a theatrical performance, not as a high-class dramatic composition.

10. Parody of Christian rites.—Hatred of the Christians, for example, was long popular, and the consistent appeal of the mime to the populace is seen in the fact that as early, perhaps, as the beginning of the 2nd cent. the 'Christian' (ὁ Χριστιανὸς κωμῳδούμενος [Greg. Naz. *Orat.* ii. 84]) had become a regular character in the mime. The favourite act was parodying the rites of the Christian Church, especially baptism. The candidate was brought on the stage accompanied by bishops, priests, and deacons; and all the ceremonial was gone through with.[1] A number of early saints were *mimi* who in the course of time had been converted then and there by the Divine power of the rite they were parodying, had confessed their faith from the stage, and had suffered martyrdom soon after. The most famous was Genesius in Diocletian's time. His speciality had been to imitate the 'working of the spirit' with a pretended fit, after which he proceeded to baptism. A church was erected to him, and to this day Saint Genesius still remains a specialist on epilepsy.[2] Even martyrdom was depicted in the most realistic fashion. But this was nothing new. In the old mime of *Laureolus*, the robber chieftain was (apparently) nailed to the cross, and, as Josephus tells us (*Ant.* XIX. i. 13), the realism was heightened by a large supply of blood brought in for the occasion. In fact, Domitian once put the last touch to this delectable speciality by substituting the genuine crucifixion of a condemned criminal. That such an entertainment could still remain a burlesque is partly due to the fact, as Reich observes, that the sufferer was the clown. It is expressly stated that Saint Gelasinos was the μῖμος δεύτερος, *i.e.* the μωρός or *stupidus*.

Occasionally the *mima* was converted. The famous case was that of Pelagia by Bishop Nonnos.[3] As a rule, however, the *mima* was a much harder nut to crack. The Christian Fathers were especially fond of designating her as a πορνή (Chrys. vii. 665 f. etc.).

It is only just to add that the *mimus* was not really to be blamed for his parodies. Throughout paganism he had ridiculed the ancient gods. This was characteristic of Hellenism, and no one thought anything of it. In their case, however, the Christians objected to it—a new point of view had come in from the East. And, when Christianity won the upper hand, the mime returned again to the old gods of paganism.

11. Christian opposition.—Attacks on the theatre begin with the first Christian writers (so Minucius Felix, Tatian, Arnobius, Augustine, Lactantius, Gregory Naz., etc.). Special works aimed at the theatre alone were written by Tertullian and Cyprian; and Chrysostom rarely forgets this his special vessel of wrath. In the course of time all this bitter polemic was systematized, supported, and connected by the dialectic of the law and of the Church.

All the old gods are devils (Tert. *Spect.* 19): Dionysus the old god is the lord of the theatre; therefore, the theatre belongs to a devil, *the* devil. He built it himself, and says expressly that it belongs to him (Tert. *op. cit.* 26). In the same way all dramatic arts come from the devil (pseud.-Cypr. *Spect.* 4; Tatian, *Orat. ad Græc.* 22). This is a favourite topic for Chrysostom: through the mouth of the monks Christ speaks, through the mouth of the *mimi* the devil speaks (vii. 675 B). The songs of the mime are Satan's own, the dances of the mime are not otherwise (vi. 77 B, viii. 422). Πομπὴ πάντα ἔστι, etc., the whole show and all that is said and done by and during the same is inspired of hell, a demon's litany, a devil's sacrament (viii. 6 C, ix. 323 B). All who go to the mime become the devil's own (viii. 114 C). Therefore the Christian who goes to it is a perjurer, for when he was baptized he swore to renounce the devil and all his works (viii. 6 C). Everything about the mime shows that it comes hot from hell. Dissembling, disguise, imitation, μίμησις, is the devil's stock-in-trade, his reason for existence, the origin of his name. The chief aim of the mime is to raise a laugh. But laughter and gaiety come not from God—θεὸς οὐ παίζεται—but from the devil (x. 590, vii. 97).

Long and fiery passages are given up to the various actors, above all to the *mimæ*. They curl their hair, they paint their cheeks, they roll their eyes, they glitter in jewels and gold—and who are these *mimæ*? The daughters of butchers, of shoemakers, even of slaves! Most seductive of all is the beautiful voice with which they know how to sing their ᾠδαὶ πορνικαί, their ἄσματα σατανικά, their 'ballads of the brothel,' their 'devil's own ditties.' Then, too, the language is common, vulgar, frivolous, full of oaths, not even intelligible, eking out its meaning with shouting and squealing! Yet the Christians are forever talking about the actresses, what they say, how they look, what they wear. Which one of these Christians can repeat the Psalms or passages from the Scriptures? Which one of them does not know all the songs from the mimes? The young people are singing them the entire day long. The mime is the theatre of concupiscence, an incurable plague, a poison, a snare of death (vii. 172), the training school of immorality, the seed of iniquity, the haunt of impurity and lewdness, the fiery furnace of the Babylonians heated to seventy times seven by the devil himself, etc. etc.

The above is a fierce arraignment, but of no great value except to indicate why Bishop Johannes was given the name of 'Chrysostomos.' As a matter of fact, the anathema of the Church was utterly powerless. Indeed, the Church actually lost ground, as there was evidently a large body of more or less conscientious Christians that saw no such harm in the mime as Chrysostom would have us suppose. Until the very end of the Eastern Empire interest in the mime never abated in the slightest degree, and it is well known that the metres, if not the music, of these same ᾠδαὶ πορνικαί and ἄσματα σατανικά attacked by Chrysostom actually entered into the hymnology of the Greek Church. Arius was accused of the same thing by Athanasius. Every hymnology bears traces of a similar process, and, as a matter of fact, this is by no means the only indication that neither time, nor change, nor creed has ever been able finally to sever the ancient bond between the Church and the theatre.
